# The Literary Digest

VOL. XXII., NO. 1 NEW YORK, JANUARY 5, 1901. WHOLE NUMBER, 559

Published Weekly by
FUNK & WAGNALLS COMPANY,
30 Lafayette Place, New York. 44 Fleet Street, London.
Entered at New York Post-Office as Second-Class Matter.

**TERMS OF SUBSCRIPTION.**

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

OWING to an unavoidable delay, the Index for Volume XXI. will be mailed with next week's instead of with this week's issue.

## TOPICS OF THE DAY.

### THE BOER INVASION OF CAPE COLONY.

THE situation in South Africa during the past fortnight is declared by some of the leading English newspapers to be graver than at any other time since President Kruger issued his ultimatum. Whether that be so or not, the invasion of Cape Colony by the Boer forces, accompanied by renewed disaffection and by General Kitchener's proclamation of martial law in the disturbed localities; the aggressiveness of the Boers in the Transvaal and Orange River "Colony"; De Wet's escapes and exploits; and the despatch of yet more reinforcements from England, have all helped to keep the South African conflict very prominently before the public eye. Says the New York *Tribune*:

"When Lord Roberts turned the tide of war northward, and Kimberley and Ladysmith were relieved, and Bloemfontein and Pretoria were captured, it was confidently supposed that thenceforth what little fighting was still to be done would be done on Boer soil or the soil that was once the Boers'. But now, many months later, the tide of war is turned back again to Cape Colony itself. Far within the borders of that colony British railroads are cut and British troops are captured by the Boers, and it is thither that reinforcements are to be hurried. The struggle is not to conquer and pacify the Boer states, but to repel the Boer invasion of the British colony, and, indeed, to prevent the Boers from effecting the conquest of that colony."

On December 14, General Methuen captured a Boer laager, with a large store of supplies, near Lichtenburg, in the Transvaal. Three days later, two Boer commandos in the neighborhood of Thaba-Nchu, in the Orange River "colony," sustained defeat at British hands; but General De Wet, in company with ex-President Steyn and a few followers, succeeded in breaking through the encircling British lines. His feat is described as the "boldest exploit" of the war, and represents his ninth escape from imminent capture. On December 17 began the Boer invasion of Cape Colony, which has caused such discomfiture in England and which was the subject of an urgent message from Sir Alfred Milner to the British War Office calling for more troops. The Boer detachments, under command of Botha, Hertzog, and Hasbroek, occupied strong positions at Philipstown, Colesberg, and Burghers' Dorp, blocking all the British railway connections and even threatening Kimberley itself. At the same time, the Boers developed unexpected strength in the vicinities of Johannisburg, Pretoria, and Winburg. "This purely and distinctively Boer campaign," declares the Chicago *Inter Ocean*, "organized and directed from first to last by Boers, is marvelous; but the marvel increases when it is remembered that the Boer columns have no base lines, no supply depots, no railways, and that Winburg is one hundred and fifty miles from Pretoria; that from Pretoria to Colesberg is fully three hundred miles, and from Colesberg to Kimberley two hundred miles." Lord Kitchener's arrival at Naauwpoort, a few miles from Burghers' Dorp, and the subsequent defeat of the Boer forces near-by at Steynsburg; together with the occupation of Britstown by Thorneycroft's mounted troops and the flight of the Boer commando toward the border, are believed to have broken the strength of the Boer invaders. A series of slight reverses to Boer arms on December 27 was offset by the reported capture of a squadron of yeomanry. A despatch from Naauwpoort on December 28 reports further reverses to the invading commandos, which, however, were reinforced on the next day by two additional detachments.

The situation in Cape Colony at the beginning of the year is not an encouraging one, with De Wet still at large, Kimberley isolated, and little progress being made against the invaders; while to the North the Boers are aggressive and at times victorious. On December 29, Helvetia, a strong British post on the Machadodorp-Lydenburg Railway in the Transvaal, surrendered to the Boers with a loss of fifty killed and wounded and two hundred captured, but was subsequently reoccupied by the British. The British forces under General French met with better success, inflicting considerable loss on 2,500 Boers northwest of Krugersdorp. On December 23, in cooperation with Clements, General French expelled the Boer army from the Magaliesburg range, after fighting that lasted three days and resulted in the capture of the Boer Commandant Kreuse. Later, he occupied Ventersdorp, a few miles to the south. Rumors that the Boers are weakening and ready to surrender are going the rounds of the press, but do not find much credence.

"The plain fact is that, after all their extraordinary effort and their terrible losses, the British campaign is still unsuccessful," observes the Burlington *Hawk-Eye*. "If ten or twenty thousand of the Cape Afrikanders join the hostile forces still in the field," adds the Philadelphia *Bulletin*, "the war will virtually have to be begun over again." On the other hand, the Louisville *Courier-Journal* thinks that Boer vitality is being exaggerated and that recent developments give no cause for alarm. It contends that occasional victories by ambush and strategy are only to be expected, and that trifling advantages of this nature "amount to little in comparison with the immense British resources." Says the Philadelphia *Public Ledger*:

"The situation is somewhat analogous to that of British troops in this country during the dark days of the American Revolution. There is a sufficient British force in South Africa to annihilate the armed Boers if the latter could be made to stand and fight,

but they are as elusive as the American troops were during the Revolution until they had tired out the invaders. There is, however, no prospect of Boer military successes of sufficient magnitude to terminate the war in their favor. Their only hope is to prolong the agitation or the war until Great Britain shall become involved in some other more important military enterprise and shall be obliged to agree upon terms of peace in order to release her large army from South Africa."

A RECENT PHOTOGRAPH OF MR. KRUGER.

This picture of "Oom Paul" was taken for the Chicago *Tribune* when he was in Paris. It shows his face to be in a marked degree unlike the portraits that have obtained currency in this country. The baby is his great-grandchild, Annie Eloff, and the boy is Gerald Eloff.

The Chicago *Journal* makes a plea for the exercise of clemency on the part of the British even at this late hour. It asks:

"Why do they not recognize the fact that such a war as they are now waging can have no good result, even tho they conquer in the end, as, of course, they are bound to do? Why do they not proclaim a general amnesty which will assure the combatant Boers of their rights as human beings; which will give the Boers, not independence, for that has been rendered impossible, but the certainty that they may resume their occupation without interference or control by the conquerors? That would be not merely the graceful, it would be also the politic thing to do in the present crisis. If such a proclamation were issued, the war would end at once, and all further loss of life and destruction of property would be avoided. The Boers know now, since Kruger has deserted them, that their dream of independence is only a dream. They would undoubtedly be very willing to stop fighting if they could feel that they would be permitted to till their farms and raise their cattle in peace."

December, 1899. December, 1900.

ILLUSTRATING ONE YEAR'S PROGRESS OF THE BOER WAR.

—*The St. Louis Republic.*

That President Kruger's visit to Europe will result in any change in the South African situation is not believed by American papers to be probable, tho the Detroit *News* expresses the belief that it was upon the present disaffection in Cape Colony that Mr. Kruger based his hopes of prolonging the war. In a recent interview with William T. Stead at The Hague, Mr. Kruger declared his hope that even yet he might be successful in winning European intervention. He did not wish, he said, to involve other nations in war. What he asks is that the governments which at The Hague declared their determination to use their efforts to secure amicable settlement of disputes by means of mediation and arbitration should make a united effort to bring the verdict of the civilized world to bear on Great Britain.

---

**The Sultan and His Cruiser.**—All the naval expenditures of Europe combined do not seem to be attracting as much attention in diplomatic circles just now as the Sultan's decision to have a second-class cruiser built in Philadelphia. This diplomatic perturbation does not seem to be due so much to any fear of the cruiser itself as to a fear that Uncle Sam will succeed in separating the Sultan from some of his money (the long-overdue indemnity of $90,000), a feat that the European powers have been attempting for years in vain. According to the newspaper reports, the Sultan hesitates to pay the indemnity direct, as the other powers would instantly swoop down upon him with demands that their claims be paid too, so he will slip an extra $90,000 in with the payment of the cruiser, with a hint that it be turned over to the Government. The contract with the Cramp Company was signed just before Christmas in Constantinople, and a special cablegram sent on Christmas Day from that city to the Philadelphia *Press*, with the O. K. of the Turkish censor, said that the signing of the contract was due to the fact that the Sultan was "deeply impressed with the greatness of the American republic," and was "impressed with the tremendous superiority of the American cruiser, as compared with vessels of the same class built in other countries." Not a word about indemnity. Germany, for one, however, did not propose to let the Sublime Porte send something like $3,000,000 in good money to the United States for the cruiser and the indemnity without a murmur, and, according to report, the German representative at Constantinople asked the Turk if he intended to pay the Cramps before paying a long-due bill of Herr Krupp. Perhaps as a re-

sult of this pointed query, the following rather disquieting dispatch, which may signify any one of several different things, emanated from Constantinople on the next morning after Christmas: "It is the general belief that the Cramps' contract for the construction of a cruiser for Turkey was signed without the first payment being made. This view is supported by the fact that the Porte has formally promised to pay nothing to Americans before paying the Krupps, and the Germans have not yet received anything."

## CHINA'S AGREEMENT TO THE DEMANDS OF THE POWERS.

ALTHO it is reported that China has agreed to the joint note of the powers, the newspapers, in America at least, remain recalcitrant; and it is clearly fortunate for the diplomats that they are dealing with the Chinese court instead of with the American press. The demands in the note may be briefly stated as follows: Apologies, indemnities, monuments, and punishments to atone for last summer's outrages; "open communication between the capital and the sea" by "the destruction of the forts" and by "the military occupation of certain points" by foreign garrisons; strict measures by the Chinese Government to suppress and prevent anti-foreign uprisings; more liberal treaty and diplomatic relations with the powers; and "interdiction against the importation of arms." A few papers, it is true, commend the note heartily. The Buffalo *Express* observes that the note "commits all the powers irrevocably to the general policy of reestablishing the Manchu dynasty and accepting apologies, indemnities, and individual punishments in place of cessions of territory or more drastic reparation," and adds: "When one recalls the jealousies and suspicions which existed between the powers last summer, the undisguised ambitions for territorial aggrandisement of some of them, and the enormity of the offenses they had to avenge, it must be recognized that this Peking agreement represents a marvelous triumph of reason and good sense." The St. Paul *Dispatch*, too, says: "The conditions are not in any respect such as China can not comply with, and not such as she ought not to comply with. They mark the middle road between leniency and severity, which is more than has been expected during the progress of negotiations."

There are other papers, however, that do not share this rosy view. The Chicago *Chronicle*, for example, declares that these "are in effect demands that the Chinese Government abdicate its sovereignty and accept a position of subjection to the powers joining in the demands," and it continues:

"This may be justifiable, and it certainly is if the security of foreigners in their lives and property can not be assured by less drastic measures. But we need not attempt to disguise from ourselves the fact that if the demands are conceded, as it is commonly supposed they must be, the joint powers will have asserted and assumed complete mastery over China and will be in a position to carry into effect a scheme of partition whenever they can agree on one which will not involve them in war among themselves.

"This danger of quarreling over the spoils together with the recognized difficulty of governing such a vast number of people, and such a peculiar people as the Chinese, from without, and not any sincere regard for the independence and integrity of the ancient empire, is the only guaranty China has against partition. But perhaps it is a sufficient guaranty for a good many years yet."

The requirement that the Chinese Government stop the importation of arms "will prove fruitless," in the opinion of the New York *Sun*, which goes on to say:

"To prevent the smuggling of prohibited articles, especially if it were winked at by the Chinese authorities, would prove impracticable, and the manufacture of arms and ammunition under munificently remunerated experts might be carried on for years in Sze-Chuen, or some other remote province, without the fact becoming known to foreign governments in any form more tangible and trustworthy than mere rumor. We do not understand that any Foreign Office proposes to patrol the immense Chinese frontier with its own excise officers, or to station agents of its own in every Chinese province for the purpose of enforcing the prohibition against the manufacture of arms and ammunition. To insist on a condition, the fulfilment of which is plainly out of the question, must have the effect of encouraging the Chinese plenipotentiaries to believe that other concessions on their part would be also nominal."

The Chicago *Evening Post*, another severe critic of the joint note, observes:

"It is gratifying to know that our State Department has informed the powers that, whatever happens as the result of their procrastination and irreconcilable attitude, the United States will not send any troops to China for occupation or enforcement of the proposed peace terms. A legation guard will be maintained by us, but nothing more will be done. The 'concert' has agreed to this condition, and it really had no option. We have done our utmost, diplomatically speaking, to promote peace, the open door, and the restoration of good relations with China. If the powers will not listen to reason, the responsibility is at their door. What the outcome will be no finite mind knows."

THE POWERS: "Open your mouth and shut your eyes, and we'll give you something to make you wise." —*The Minneapolis Journal.*

More than one paper, in the mean time, is exasperated by the reported policy of von Waldersee and the troops under him. "While the foreign ministers in Peking are working for peace and orderly government in China," says the Philadelphia *North American*, "Count von Waldersee is undoing the good they accomplish by continuing his military operations." It continues:

"It is not possible that the anti-foreign sentiment of the natives will be allayed so long as they are made witnesses of the barbarous practises of the foreign soldiery. No assurances that peace is to be reestablished and China left to its own imperial government will have weight with the masses. They will believe what they see with their own eyes and not what they are told about the purposes of the powers in holding interminable conferences in Peking. . . . . .

"As long as Waldersee adheres to this plan of campaign the foreign forces must remain in China. Neither the imperial authorities nor the viceroys will feel safe in attempting to preserve order if they are to be punished and their troops exterminated by the foreigners, with whom they are actually cooperating. There can be no betterment of conditions until the Chinese rulers are reintrenched firmly in power. Without their assistance the Chinese question will continue to disturb the world, and China must be filled with foreign garrisons. Nothing could be further

from the desire of the United States, as has been plainly made known ever since the first diplomatic notes were exchanged. The point has now been reached where it would be well to protest against Count von Waldersee's sinister activity, in the common interest of such of the powers as have no heart for a ruinous and prolonged war in the Orient, with all the incalculable possibilities of European complications to follow."

## THE NEWSPAPER OF THE TWENTIETH CENTURY.

MR. ALFRED HARMSWORTH'S idea that the new century will see a great newspaper trust controlling practically the entire newspaper output of the United States commands attention because of the phenomenal success Mr. Harmsworth himself has had in this field. "Alfred Harmsworth," says the Chicago *Tribune*, "is the owner of thirty English periodicals in addition to the London *Daily Mail*. Two months ago it was said he was negotiating for the London *Times*. He began as office-boy on *Tid-Bits* twenty years ago, with a salary of ten shillings per week. In two years he became the editor of a weekly run in conjunction with *The Illustrated London News*. In seven years he had saved $7,000, and with that sum started his first weekly, *Answers*. He was joined by his brothers; and one by one he has added to his publications until their combined circulation has reached the total of 15,000,000 copies a week. Among them is *Harmsworth Magazine*, which alone has a circulation of 1,000,000. His great success is due to the introduction of American methods into his publications. Mr. Harmsworth is the son of a lawyer. He is thirty-four years old, and in twenty years has made $20,000,000 out of his publications." Mr. Harmsworth's main objections to the daily of to-day are that it is "hopelessly clumsy in shape, verbose as to matter, and most imperfect as a record." He asserts (writing in the January *North American Review*) that "by the use of improved machinery it would be possible to issue the newspaper of the future in what is obviously its proper form—a small, portable, and neatly indexed publication of the size of a page of *The North American Review*, and of the bulk and appearance of the New York *Outlook*," which latter journal he pays a high compliment, calling it "the best of weekly reviews." "There are abundant signs," declares Mr. Harmsworth, "that we are witnessing the birth of developments in newspaper enterprise which will make the past look insignificant by contrast"; then noting Mr. Hearst's three papers in New York, Chicago, and San Francisco, Mr. Pulitzer's two in New York and St. Louis, Mr. Bennett's two in New York and Paris, the Galveston *News*, published simultaneously in Galveston and Dallas, and his own two "simultaneous" papers in London and Manchester, he says:

"My idea of the newspaper of the twentieth century may be thus expressed in brief. Let us suppose one of the great American newspapers—say *The Sun*, of New York, in my opinion perhaps the best arranged of all American newspapers—under the control of a man of the journalistic ability of Delane, the greatest of the former editors of the London *Times*, certainly the greatest political editor in the history of journalism, backed by an organization as perfect as that of the Standard Oil Company, and issued simultaneously each morning in (say) New York, Boston, Chicago, Pittsburg, St. Louis, Philadelphia, and other points in America; or at London, Liverpool, Manchester, Bristol, Edinburgh, Belfast, and Newcastle, in Great Britain. Is it not obvious that the power of such a paper might become such as we have not yet seen in the history of the press? And would not such a journal effectually revive the waning influence of the newspaper upon the life and thought of the nation?"

"The power to undersell," Mr. Harmsworth predicts, "would drive many newspapers into the combination, and little by little rival newspapers would be so weakened that, where they did not die a natural death, their purchase or absorption would be a comparatively easy and inexpensive step," until the managers of the combination "would hold the newspaper monopoly of the land." This done, the effect of such a tremendously influential journal on contemporary affairs would appear. Says Mr. Harmsworth:

"By the method of simultaneous publication the provincial purchaser will be placed on an equal footing with the dweller in the capital. As things are, he must either be content with an inferior local production, or wait till late in the day, when the great newspaper arrives by the mail or comes on the cars. Under the new régime he will find the national journal on his breakfast-table.

"In my opinion, the newspaper that I am describing will be able to maintain a higher tone and literary standard than is usually possible now. It will be able to ignore what may be called 'non-news.' I refer to the trivial and unimportant items and to the unedifying matter which every editor heartily longs to omit. Critics unacquainted with the press often ask why all this un-

"GIVE THE RANK AND FILE A CHANCE."
—*The Salt Lake Herald.*

IS THIS TO BE ANOTHER CASE OF KIDNAPING?
—*The Minneapolis Journal.*

## CARTOON VIEWS OF

necessary matter is not cast into the waste-paper basket. The answer lies in the existing rivalry and competition between newspapers. If an editor omits all mention of some sensational but unelevating police case, for example, he knows full well that his rival will insert it, and will subsequently boast about his superior news-service! No editor can afford to let even the most superficial critic imagine that he has been caught napping. On the other hand, a newspaper possessing a monopoly could absolutely boycott all such items. I lay strong emphasis upon this, as it affords a solution to a problem that has long troubled all journalists who seek the best interests of the public.

"Such a newspaper could maintain a high literary tone, and thus become an educative institution of the greatest value. This is true already of the best journals in most lands, but there is another side to the question. The existence of a gutter press can not altogether be ignored. Neither can we afford to neglect the fact that a considerable section of the public patronizes it. The new régime of journalism will promptly put an end to it, and will thus confer an additional benefit on the nation."

Some reader may be asking what side this great national newspaper would take in party politics. Mr. Harmsworth replies:

"I do not think it would be called upon to assume a mere party attitude at all. . . . I think that one of the good influences of a great newspaper monopoly would be seen in its tendency to minimize political differences and to bring about unity of thought and action. Much of the party feeling of the present day, on both sides of the Atlantic, is fed and fostered by certain inflammatory newspapers that depend upon political agitation for their circulation. This consideration would not affect the simultaneous journal, which would be free to advocate the best interests of the country, and could do so with an influence far wider in its scope than has hitherto been possible. . . . . .

"We thus arrive practically at government by newspapers, but so long as that is only another name for government by the people, no one need be alarmed at the outlook."

The New York *Times* thinks that one great objection to Mr. Harmsworth's plan would be the impossibility of finding an editor able to manage the tremendous newspaper that is proposed. Says *The Times:*

"No mere Delane would come up to the requirements of an editorship that was to make public opinion for 76,000,000 people. The hand of transcendent genius should grasp that pen. Such an editor would be cheap at $10,000 a week, say half a million dollars a year. The trust managers would be very mean if they did not pay him that salary. He would be chicken-hearted if he did not make them pay it. There are men in this town whose annual income is two or three times that modest honorarium who, mentally and morally, in respect to judgment and in respect to capacity, are simply unfit to be office-boys to an editor of such amplitude. But a want advertisement offering two million dollars a year for such an editor would fail to evoke him from his holy cell. There would be answers to the 'ad.,' shiploads of them, but subpenas would not reach nor search-warrants discover the man for that place."

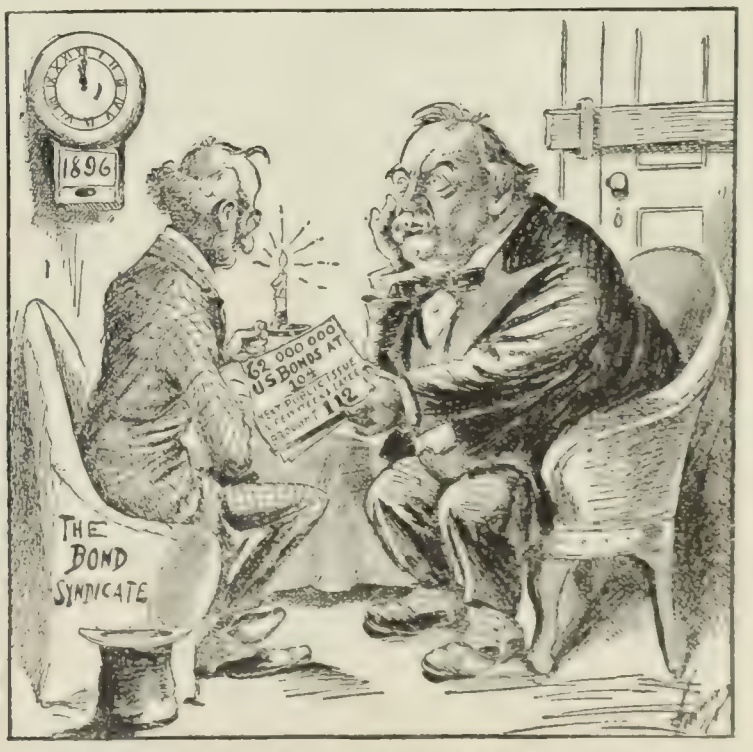
Up to the time of our going to press, however, the editor of the New York *Times* is the only editor who has confessed his inability to fill the position.

## A CENTURY'S GROWTH OF POPULATION AND COMMERCE.

A SURVEY of the world's advance in material prosperity during the hundred years just past only makes more clear what economists have long been noting in special articles from time to time—the tremendous strides of the United States toward world-supremacy in commerce and industry. In a valuable supplement to its issue of Friday of last week the New York *Journal of Commerce* makes an economic retrospect of the century which shows that while Europe has gained in population one hundred and sixty per cent. during the past hundred years, the United States has gained about one thousand four hundred and fifty per cent. Yet Europe's gain was unprecedented. During the sixteenth century Europe gained only twenty-seven per cent., during the seventeenth century only twenty-three per cent., and during the eighteenth a little over fifty per cent. Says the compiler of the supplement, who signs himself simply "W. D.":

"During the past century, the conditions favoring the growth of population in the European nations have been more propitious than in any previous period of history. The unparalleled progress in scientific discovery; the wide application of those discoveries to the productive industries; the substitution of steam-power for manual labor; the consequent reduction in the costs of industrial production and therefore in the prices of commodities; the shortening of the hours of labor concurrently with the rise in wages; and the progress in medical science and in the sanitary care of homes, villages, and cities—these great advances in the ramifications of the public life have led to a higher standard of living and of general health and constituted the average man more capable of production and reproduction and more competent to support and utilize the new increments of each successive generation. The result of these conditions is seen not only in an increased ratio of births, but also in an extension of the average

THE PASSING OF THE ECLIPSE.
—*The Minneapolis Tribune.*



"GIVING THE RANK AND FILE A CHANCE."
—*The Atlanta Constitution.*

MR. CLEVELAND'S ADVICE.

period of human life. Official returns show that 'the expectation of life' is now three years longer in the United Kingdom than it was for the period of seventeen years ending 1854; whilst compared with the beginning of the century, the gain must be considerably greater. In France, the span of life, in the eighteenth century, averaged twenty-six years and two months; whilst the statistician Lombard estimated the average term of life there at forty in the year 1868. A similar experience has occurred in other European countries."

These great gains during the past century, we are told, "express as no other data could the potency of the recreative processes that have been energizing the civilized populations of the last century. . . . History thus confutes the Malthusian doctrine that the realization of a happy society will always be hindered by the miseries consequent upon the tendency of population to increase faster than the means of subsistence—a dogma which still lingers among a limited class of pessimistic economists."

A migration unprecedented in history has also taken place in the last hundred years in the departure of 36,500,000 people (equal to the population of England, France, or Austria in 1880) from Europe for other shores. Half of them came to the United States. The United Kingdom contributed 10,760,000 to the outflow; Germany, 7,531,000; Italy, 4,715,000; France, 1,668,000, and the Scandinavian countries 2,370,000. Our own population, of course, is made up entirely of emigrants from the Eastern hemisphere and their descendants. "This creation of a nation of 76,000,000 out of the redundant populations of Europe," says the writer, "is one of the most striking among the great developments of the century." Immigrants are now reaching our shores at the rate of more than 1,000 a day.

Turning now to the world's commerce, there appears a record even more striking. "The surest criterion of the status of a civilization," says "W. D.," "is afforded by the condition of its commerce; and, judging from that standpoint, the progress of mankind—especially of the white rates—during the past century is found to be without parallel in the world's history." No adequate records of internal trade are kept, and it is only within the last seventy years that governments have kept systematic records of imports and exports; but as the present great industrial period has had its rise and growth within this period, the figures from 1840 are sufficient to show the rate of progress. The foreign trade of the United Kingdom during that time has increased from $851,000,000 to $3,820,000,000, or an increase of 350 per cent., while the population was increasing 50 per cent.; the foreign trade of France has grown from $288,400,000 to $1,510,500 000, or 424 per cent., while the population was growing 15 per cent., a still more surprising record; while the commerce of Germany has grown from $263,000,000 to $2,078,500,000, or 690 per cent., with a concurrent growth of 64 per cent. in population. Russia's foreign trade has grown only from $124,400,000 to $643,000,000 despite an immense increase of population. "Measured by the mere standard of brute force," says the writer, "the Czar's empire may present to the popular eye a very imposing spectacle; estimated from an economic standpoint, it is found the most inert and least civilized of all the European states. Russia leaves a humiliating record in the nineteenth century, and enters the twentieth with an equipment very inadequate to her pretensions."

Crossing the Atlantic, one finds that the foreign trade of our own country has grown since 1840 from $221,200,000 to $2,243,900,000, or over 1,000 per cent.! The writer notes that our exports are second only to those of the United Kingdom; but figures issued a few days ago by the United States Treasury Bureau of Statistics show that our exports now lead the world, surpassing those of the United Kingdom in the first eleven months of 1900 by $5,500,000. Our exports in 1840 were less than one-fourth of those of the United Kingdom. In 1898 the United States took the lead, but dropped to second place again in 1899. In the iron trade the writer notes that "the United States have risen to the foremost rank, their production in 1899 having constituted 36 per cent. of the world's supply and being 4,689,000 tons, or 58 per cent., greater than that of the United Kingdom in 1898. Great Britain has failed to maintain her former ratio of increase, her gain between 1890 and 1898 having been only 727,000 tons. The increase of Germany, within the same period, amounts to 2,575,000 tons; and even Russia shows a gain of 1,296,000 tons. Half a century since, Great Britain produced the better half of the world's supply; now her contribution is only 22. 50 per cent." In the production of coal, too, the United States has passed the United Kingdom and now occupies the foremost place. In shipping the United States holds second place, with Great Britain far in the lead, and in railroads our country has more miles than all the nations of Europe combined. No other nation in the world has 30,000 miles, while the United States has over 186,000.

Yet these splendid evidences of material progress can not hide the fact that not all the spears and swords have yet been beaten into pruning-hooks and plowshares. Says the writer:

"The last hundred years of material progress has been unattended by any equal gain in moral progress. Rather, the marvelous increase of productiveness and wealth has served to cultivate the sentiments of selfishness, acquisitiveness, ambition, and jealousy which appear to lie at the root of the worst of human hatreds. It therefore follows that an era of great material advance, unless accompanied by an equal progress in moral and religious forces, is liable to develop moral degeneracy, with all its destructive tendencies. . . . The most impressive lesson bequeathed by the dead century is the comparative impotence of mere trade and wealth to develop international amities and to elevate the spiritual capacities of man. . . . . .

"During the last one hundred and seven years, the world has sacrificed, in round numbers, 5,000,000 of lives and $22,603,000,000 in money to the purposes of active war, with all the attendant sorrows and miseries of the frightful slaughter; to say nothing of the still larger loss of wealth and the diversion of able-bodied men from productive employments to the maintenance of fleets and standing armies. What a terrible discount upon the blessings and glory of the civilization on which Christendom is so wont to vaunt! How much do we need to unlearn in the new century before we can justly boast of the humane quality of our proudest institutions!"

---

## ARMY PAPERS ON HAZING AT WEST POINT.

WHILE waiting for the report of the War Department's committee that is now investigating the hazing of Cadet Booz at West Point in 1898, from which, it is charged, his recent death resulted, it is interesting to note the comments of the military press on hazing in the academy. *The Army and Navy Journal* (New York) says:

"It should always be remembered that we are training young men at the national academies for command, and the foundation of a character fitted to exercise authority is respect for authority and respect for the rights and the freedom of others. Hazing is an exercise of lynch law, which, however worthy its objects or beneficial its results, can not be admitted in any form or to any extent in a military institution controlled by law. Whatever the remedy for it may be, it must be applied without fear or favor. The national academies, and especially the Military Academy, are always rowing against so strong a tide of public sentiment that it is necessary to sacrifice remorselessly any of the crew who can not be depended upon to obey orders."

*The Army and Navy Register* (Washington) is even more outspoken. It declares:

"Cadets who would be guilty of imposing on a defenseless young man and perpetrating all sorts of heathenish and diabolical tricks, such as are described as having been visited upon Booz, are not fit for the United States army. It is a mistaken idea, which some officers may entertain and which evidently

many cadets honor in observance, that it is gentlemanly and brave to nab upon a cadet and put him through all sorts of curious maneuvers and finish off the carnival with something which shall cause personal discomfort, if not physical distress. In the case of Booz the attack is said to have been sufficiently severe to have caused a fatal malady. There is no written or unwritten law of cadetship which would make such an action creditable to the participants. If an investigation shall disclose that the cowardly practise of hazing is attaining any such dangerous proportions at West Point, we have a right to be ashamed of the young men who are engaged in such miserable outlawry. If there is no truth in the charges which have been brought by the Booz family, it is proper that the cadets and the institution at West Point be fully exonerated from the smirch of the outrage. It is conceivable that the young man has made charges which can not be proven and which had no justification in fact. It would have been wise, however, to have made a full inquiry into the matter without delay and without the demand from Congress."

## THE CENTURY'S PROGRESS OF THE AMERICAN WOMAN.

THAT the American woman has invaded new fields of activity during the century just closed is a matter of fact; whether or not this invasion has been a good thing for the woman and for the fields of activity which she has invaded is a matter of opinion. Mrs. Flora McDonald Thompson, who has herself been for years a regular contributor to some of the leading newspapers in America, and who is at present conducting the "News of the World" department in *Harper's Bazar*, thinks that woman's true place is in the home, and she deplores the American woman's departures from domesticity as a gloomy sign for the future of the country. It is not alone the large number of divorces in the United States (328,716 in twenty years) that arouses her foreboding. Writing in *The North American Review* she says:

Photograph by Rockwood, N. Y., Copyright, 1899.

MRS. ELIZABETH CADY STANTON.

"That the economically ideal organization of the American family has been overthrown by the aggressive spirit of the 'new' woman appears with amazing clearness. . . . Over seventeen per cent. of the whole number of persons employed in all occupations are women. Furthermore, the United States commissioner of labor has found the number of women so employed to be constantly increasing, and that at the expense of men; the percentage of increase of women, in every given instance, showing a corresponding decrease of men. In this connection, still another suggestive fact appears in the statistics of the United States Department of Labor. In proportion as women advance in men's industries, and thus cause the retirement of men, the latter engage in domestic labor and personal service. The American woman competes with man, not alone to his disadvantage, but to his degradation.

"Involved with this chaos in the industrial order, revolution with reference to sex constantly advances in the domain of American politics. We have woman-suffrage to some extent existing in a number of States and in several Territories of the United States, and absolutely unrestricted woman-suffrage in four States—making a total of almost three fifths of the whole number of States in the Union which have in some way yielded political power to woman. Also we have the American woman clamoring for every office in the gift of the people, from President to police-court justice."

Mrs. Thompson's article was published in November, and another issue of the magazine was not allowed to pass without a reply. Mrs. Elizabeth Cady Stanton, who called the first Woman's Rights Convention (held in Seneca Falls, N. Y., in 1848) and whose eightieth birthday was celebrated in 1895 in the Metropolitan Opera House in New York City by 3,000 delegates from women's societies throughout the country, takes up her pen in answer, and in the December issue she champions the cause of the independent woman. "Mrs. Thompson," she says, "attributes the increasing number of divorces to the moral degeneracy of woman; whereas it is the result of higher moral perceptions as to the mother's responsibilities to the race. . . . With higher intelligence woman has learned the causes that produce idiots, lunatics, criminals, degenerates of all kinds and degrees, and she is no longer a willing partner to the perpetuation of disgrace and misery." Turning from this phase of the question she continues:

"Virtue and subjection, with this writer, seem to be synonymous terms. Did our grandmother at the spinning-wheel occupy a higher position in the scale of being than Maria Mitchell, professor of astronomy at Vassar College? Did the farmer's wife at the washtub do a greater work for our country than the Widow Green, who invented the cotton-gin? Could Margaret Fuller, Harriet Beecher Stowe, Frances E. Willard, Mary Lyon, Clara Barton have done a better work churning butter or weeding their onion-beds on their respective farms than the grand work they did in literature, education, and reform? Could Fannie Kemble, Ellen Tree, Charlotte Cushman, or Ellen Terry (if we may mention English as well as American women) have contributed more to the pleasure of their day and generation had they spent their lives at the spinning-wheel? No! Progress is the law, and the higher development of woman is one of the important steps that have been achieved."

## LETTERS AND ART.

### THE REVIVAL OF MACAULAY.

FROM time to time we have called attention to signs which point to a return of Lord Macaulay to some of his old-time favor both with the public and the critics. Apparently no author in modern literature has been without his period of obscuration, following a period of literary effulgence; and Macaulay has been

ROTHLEY TEMPLE, MACAULAY'S BIRTHPLACE.

no exception to this rule. In spite of his almost unrivaled brilliancy, his limpid clarity of style, and the vast mass of picturesque and highly valuable information crowded into the pages of his "Essays" and "History of England," it has been the fashion for some decades now to sneer at him as not much better than a shallow rhetorician. This fashion perhaps came in with Matthew Arnold's criticism of Macaulay's essay on Milton, and has been constantly reechoed since by lesser writers.

November 25, which was the five hundredth anniversary of Chaucer's death, was the one hundredth anniversary of Macaulay's birth.

One of the most appreciative of the recent articles relating to him appears in the New York *Times* in connection with the publication of an attractive new American edition of his works. Macaulay, remarks the writer, well merits a rehabilitation:

"A deal of nonsense has been written about him of late by men who could spend their time much better in studying the secrets of his eloquence. Macaulay was essentially a literary writer. There is no smell of the hack in the polite perfume of his style. It is the essence of lettered refinement, and those who sneer at it on account of its oratorical sonority or its careful balance of phrase and period might go further and fare worse in their search after a model. It is a rare thing indeed to find in the pages of this master of words a sentence whose meaning is not absolutely clear and manifest to the reader. As Dr. McCosh said of De Tocqueville, 'His thoughts lie in his style like pebbles in a clear brook.' Writing whose meaning may be understood is common, but writing whose meaning can not be misunderstood is not so plentiful that dilettanti can afford to sniff at the elegance and grace with which Macaulay contrives to surround his direct and unmistakable statements.

"But this is not the sum and substance of the matter. Making of words a medium clear as glass, he gave to his sentences also the brilliancy of crystal. Writing so that he who runs may read, he also wrote so that no reader would run, but would rather pause in admiration before the perfection of the diction, the balance of the phrases, the reposeful finish of the periods. Yet there is no atmosphere of idle evening in these sentences. They have the glow of a summer noon and the sonorous swing of the eternal surf. They sing themselves into the ear in prose poetry of amazing strength and solidity. They are English prose raised to its highest level of eloquence, and they make reading which stirs the blood. Pick where you will, and you find the vital, fluent, oratorical sentences rolling their resistless tide, the surface as smooth and polished as that of an inland river, the body as rich and piquant as the sea itself. . . . Free from turgidity, free from that pitiable grasping after weird words and contorted phrasing which mars the decadent styles of Macaulay's chief critics, free from dubiousness and from foreign influences, that pure and eloquent English style swims the sea of five deep volumes. And this is but a random choice. For it would have been easy to recall to the reader that magnificent burst of historical imagination which recreated the scene of the trial of Warren Hastings or that equally noble flight of fancy which glorified the art of history itself. The vein of oratorical eloquence which sends its rich flood through all Macaulay's works was born in him, and his biographer Trevelyan records that when through the corridors of the House ran the whisper 'Macaulay is up,' they speedily emptied themselves and every member sought his seat. Transferred from the written page to the speaking voice the Macaulayan style becomes Ciceronian in its splendors and its dignity. It glows constantly, and ever and anon flashes into lightning points, as in the query, 'Every Stoic was a Stoic; but in Christendom where is the Christian?'

"The potency of this elegant force, the polished ease of the literary master, is felt in all Macaulay's writings. The history is a series of brilliant word-pictures, painted with such skill that one feels in them the throbbing of England's mighty pulse. The essays gleam and dazzle with pearls of literary thought and diamonds of literary expression. And in the 'Lays of Ancient Rome' one finds a poesy which reaches its purpose by the same means; for the clank of the Roman knight's golden spurs rings in the rhythmic stride of his verse, and the war lyrics glitter with helm and cuirass and all the splendid panoply of the legionaries that swept the valleys of Cis-Alpine Gaul, leveled Carthage with the sands of Africa, and throned the Roman eagles on the hills of Thrace."

### A BRITISH VIEW OF AMERICAN POETRY.

THE publication of Mr. Stedman's "American Anthology" is taken by the London *Academy* (December 1) as the text for an interesting discourse on American poetry. *The Academy's* reviewer speaks in a complimentary way of Mr. Stedman's work in compiling and editing this volume, and expresses the opinion that the work "could not have been done more carefully and conscientiously"; but the reviewer is not enthusiastic over the output of our bards as indicated in the anthology. He says:

"It is clear that America has no distinctive national note in poetry: the time is gone by when people vaguely looked for something strikingly novel, gigantic, commanding, unprecedented, from the 'young nation' of the vast territory. We know now that she is not young, but old—a transplanted England, born to age. And her verse is English verse, with all the matured and over-matured characteristics of later English verse, when her verse is at its best. The effect produced by this volume, it must frankly be said, is not satisfying, nor impressive. It does not seem that in poetry America can, or will, find her own, and take rank by her motherland, even by the later England of Tennyson and his successors. An anthology of the English poets since Tennyson would, we think, make a better show, on the whole, than this complete anthology of American poets. That is not a hopeful thing to say; an ungracious saying, perhaps, but necessary. The especially depressing conviction which the book forces on us is that the advance of American poetry has not been sustained. There seemed more than hope for a nation which had produced such a group as that of Poe, Emerson, Lowell, and Longfellow. If another Emerson were unlikely, or even another Poe, it seemed no unattainable ambition to advance beyond Longfellow. But America has not even maintained the level of Longfellow. Among the later poets none stands prominently forth but Lanier and, in a minor degree, the minute grace of Father Tabb. The overwhelmingly materialistic genius of America is, we fear, chilling, if not killing, to poetry. It looks strongly as tho the poetic gift were flickering down, rather than spreading and broadening. Sad and strange that the wind of those free prairies and vastly splendid mountains can not fan to greatness the flame which feeds on the souls of all

great nations, from Palestine to England, from Italy to Persia and the Himalayas!

"There seems no lack of singers, if there be a lack of great singers. From a survey of these voluminous pages one gets an impression that almost every cultivated man or woman in America must be writing poetry—and publishing it. But all these swallows will not make a summer. It is a democracy of song indeed, where no man is better—or much worse—than his neighbors. There is a fatal air of level accomplishment over these pages; mere accomplishment, uninspired and undistinguished. The bede-roll of names somehow has a depressing effect—Tudor Jenks, and Titus Munson Coane [Coan], and Edith Matilda Thomas, and so forth, and so forth. Mr. Stedman's necessity of being historically comprehensive has forced on him the inclusion of a host of names for which there is no other real justification; but the result is a frowning wilderness of mediocrity, which nowise improves as we near the present day; and the heart of the reviewer sinks in this waterless land. As to the influences governing American poetry, they are mostly those of the period from Wordsworth to Tennyson. There is no hint of influence from the Rossetti and Swinburne movement, so powerful in England; while Lanier is the only one who has gone back to the Elizabethans and the seventeenth century. The poets of the early American days are decidedly old-fashioned, tho mild, very mild. Tho Mr. Stedman zealously champions him, we are not among those who are exhilarated by the chaste muse of William Cullen Bryant, the first considerable poet of America. Then you have specimens of James Gates Percival, who was called the American Somebody-or-other—they were all American Burnses or Shelleys or Miltons, etc., in those days—and was laughed at by Lowell. You have Nathaniel Parker Willis, whose stilted fame is now decently interred, and many another. But you come at last to the opulent season of Emerson, Longfellow, Whittier, Poe, and Holmes, and forget your journeying in the desert."

---

## THE ECLIPSE OF GEORGE ELIOT.

THE name of George Eliot, only a few years ago on every lip and the theme of innumerable articles—even of sermons—is now, it has been lately noted, scarcely the subject of a literary allusion. Tho nearly every writer has a period of partial obscuration after the period when the particular message he has for the world has been appropriated, yet no such almost total eclipse can be observed in connection with any of the great writers with whom George Eliot has been unhesitatingly associated in rank—Scott, or Thackeray, or Dickens, or Charlotte Brontë.

Mr. William Crary Brownell, the essayist and critic, who writes in *Scribner's Magazine* (December), of which he was formerly editor, attributes this surprising change of popular sentiment, which he calls "one of the most curious of current literary phenomena," largely to the predominance of intellect over emotion and all other phases of human character in her works. Altho the psychological, analytical type of fiction was a powerful attraction to the public while it had the force of novelty in the hands of this first and greatest of psychological novelists, yet characters delineated from this point of view are, the writer says, less permanently interesting to the mass of readers.

But George Eliot is, the writer thinks, likely to remain a unique and permanent figure at the head of psychological novelists. Mr. Hardy and Mr. James have in some subtleties and *nuances* of *genre* equaled her, but she still remains the master-spirit, he says. It is even possible to believe that with the great increase of interest in psychological and metaphysical problems now evident throughout the world, she may again attain to something like her former place, altho it was the rationalizing intellect, and not the spirit, that was uppermost in her treatment of life, and it is the latter of these that is the lode-star of the new mysticism. Mr. Brownell says:

"The drama itself of George Eliot's world is largely an intellectual affair. The soul, the temperament, the heart—in the scriptural sense—the whole nature plays a subordinate part. The plot turns on what the characters think. The characters are individualized by their mental complexions; their evolution is a mental one; they change, develop, deteriorate in consequence of seeing things differently. Their troubles are largely mental perplexities; in her agony of soul Romola goes to Savonarola and Gwendolen to Deronda for light, not heat. The prescriptions they receive are also terribly explicit—addressed quite exclusively to the reason and wholly unlike that obtained by Nicodemus 'by night.' The courtship of Esther and Felix Holt is mainly an interchange of 'views.' There are exceptions—notably Maggie Tulliver and Dorothea, the two characters which have been called, with ample reason, one may guess, autobiographic. But the exceptions accentuate the rule. As a rule the atmosphere of each novel is saturated with thought. Certainly nowhere else in fiction is there any such apotheosis of intellect both express and implied.

"It was doubtless in thinking mainly of George Eliot, whose aptest pupil he was, that more than a score of years ago Mr. Hardy spoke of fiction as having 'taken a turn for better or worse, for analyzing rather than depicting character and emotion.' It was certainly George Eliot who more than any other practitioner gave fiction this turn—a turn still followed, with whatever modifications, and illustrated in all serious examples of the art, so much so that a novel without the psychological element is almost as much of a solecism as a picture with a conventional *chiaroscuro*."

Allied with George Eliot's chief artistic limitation—her exclusive devotion to the intellectual aspect of life and character—is a moral limitation, Mr. Brownell points out, namely, her failure to recognize sufficiently "that subtle dynamic impulse of the will which the psychologists leave the theologians to describe as 'the new birth,' and which as a matter of fact plays a tremendous rôle in the drama of cause and effect . . . a common enough and prominent enough factor in the universal moral problem to reward if not exact the attention of the artist who is also a moralist":

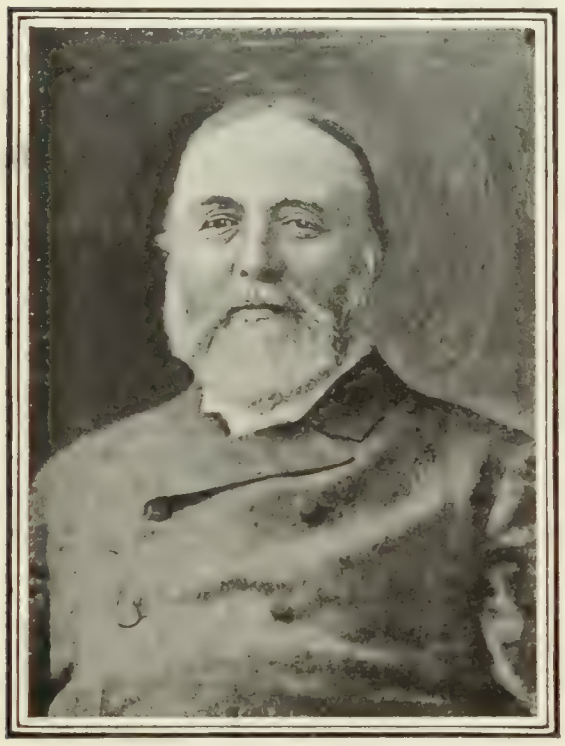
"Its exclusion from the consideration of so eminent a moralist as George Eliot is undoubtedly due to the lack of imagination and the predominance of intellect already noted in her genius and her practise. It is itself closely allied with mysticism, no doubt; it belongs, perhaps, in the domain of mysticism. And to deal with the mystic, or even to entertain an inclination to deal with it, necessitates the possession of the imaginative faculty and its cordial, unembarrassed, spontaneous activity, undeterred by fear of error and unrestrained by backward or side glances at the quite otherwise seductive data of ascertained truth. There is no shade of mysticism in George Eliot's moral philosophy, whose tenets and whose logic proceed from the processes of the mind and have little relation with 'the vision' without which, says the wise man, 'the people perish.' Everything is taken on the side of it that appeals to the intelligence. Gwendolen comes to grief because she does not realize that domination is impracticable—because, in a word, of intellectual blindness. Grandcourt's baseness is an intellectual perversion, not a sensuous one. The story of Tito's mere repugnance to what is unpleasant becoming at last readiness for any crime is the story of a moral decline exhibited in a succession of mental phases. Even error is a kind of alienation and sin essentially a mistake. The notion of 'dying to' it nowhere appears—I do not mean *pro forma*, in which shape perhaps it belongs less to literature than to dogma, but by implication. We are still in the penumbra, one would say, of the Old Testament. The *natural* results of error, the natural and integral sanctions of morality are convincingly, refreshingly, and stimulatingly considered to the exclusion of the preternatural; but the natural content of religion is quite neglected. Here, as elsewhere, she takes the scientific, the intellectual view of the phenomena which compose her material, and with her the mind in this field excludes the soul as in the field of art it does the imagination.

"But with whatever limitations, her position as a classic is doubtless assured. There are types of human character on which she has fixed the image in striking individual incarnation for all time; and her philosophy is of an ethical cogency and

stimulant veracity that make her fiction one of the notablest contributions ever made to the criticism of life. It is none the less true, to be sure, that her survival will mean the surmounting of such obstacles to enduring fame as a limited imaginative faculty, a defective sense of art, and an inordinate aggrandizement of the purely intellectual element in human character, which implies an imperfect sense of the completeness of human nature and the comprehensiveness of human life. But no other novelist gives one such a poignant, sometimes such an insupportable, sense that life is immensely serious, and no other, in consequence, is surer of being read, and read indefinitely, by serious readers."

## A MODERN WANDERING SCHOLAR.

THE death of Mr. Thomas Davidson last September has called attention to the unique personality of an American scholar not widely known, yet lately pronounced by one of the leading British reviews to have been "one of the dozen most learned men on this planet." He was born in Scotland in 1840, and after being graduated from the University of Aberdeen as first scholar and as Greek prizeman, he came to this country in 1866 and settled first in Cambridge, and later in Northern New York. The London *Spectator* gives the following account of him:



THE LATE THOMAS DAVIDSON.

"Living a quiet, retired life on a mountain farm in the Adirondacks, the most unworldly of men, caring absolutely nothing for money or fame, the late Thomas Davidson, whose very name is probably unknown to most of our readers, was one of the most gifted and remarkable men of the latter half of this century. To enumerate his writings, learned and important tho they are, is to convey no idea of a spiritual personality to whom some (and among them the present writer) owe not a little. It was not the opinions of this 'scholar-gipsy' which influenced his friends, for he was the most inconsistent of men, passing through phase after phase of philosophic thought, and contesting in the afternoon the very doctrines he had urged in the morning. Whimsical, vehement, impatient, his satire and argument flowing like a torrent, and his dogmatic spirit sometimes carrying him to lengths he had never intended, yet to know Thomas Davidson was to love him.

"Thomas Davidson would have delighted Goethe; the 'Wanderjahre' of Wilhelm Meister was Davidson's own life. He, too, held that 'to give room for wandering the world was made so wide.' As thorough an American as tho he had been born within the shadow of Bunker Hill, he nevertheless was so classic in feeling that he yearned for the 'palms and temples of the South,' and he had his wish gratified. Attached, largely through Longfellow's generous influence, to the examination department of Harvard University, he soon had the opportunity of repairing to Athens, where he studied Greek archeology. And here it may be said that perhaps Davidson was one of the greatest linguists of his age. Well grounded in Greek and Latin (able, after the good old medieval plan, to speak as well as to read Latin), he obtained complete mastery of modern Greek within a few months of reaching Athens. He could make a speech in that language as easily as did Mr. Gladstone in the Ionian Islands. He spoke and read French, German, Italian, Spanish, Norse, with absolute ease. He did his philosophic thinking in German rather than in his own tongue. He acquired later a complete proficiency in Hebrew and Arabic, and was fairly well versed in Czech, Russian, and Magyar. He never forgot a single word he had ever learned. His admiring friends tested him on one occasion in Greek. He never missed once, giving not only the ordinary but exceptional meanings, and stating in what authors they were to be found. He could repeat most of Aristotle's Ethics from end to end in the original. He knew word for word that difficult second part of 'Faust' which at times baffles even German professors; but his supreme love was Dante.

"It is rather dangerous to be a great linguist, for the chances are that you will be nothing else—like Cardinal Mezzofanti. But Thomas Davidson was a contradiction to all rules. Tho he missed being a great thinker, he had a powerful philosophic mind. Medieval in his conception of (and we might say in his impersonation of) the wandering scholar, Davidson became medieval in his philosophy; he took up the study of Thomas Aquinas. Outside the ranks of the profound Catholic scholars, there are few who can say they have mastered the 'Summa'; one of those few was Mr. Davidson. One must not hold him finally to anything, but at the time he wrote his learned work on Rosmini, the modern Catholic antagonist of the Jesuits, he certainly believed that Aquinas, based on the philosophy of Aristotle, had come nearer to solving the great riddle of being than any other thinker. In addition to the work on Rosmini, which is scarcely appreciated in England, Mr. Davidson must have some credit for stimulating the Pope in the preparation of his celebrated encyclical on Aquinas. There are not, it is safe to say, many laymen who have had three hours' confidential talk on philosophy with Leo XIII., but Thomas Davidson was one. He was also intimate with some of the religious orders, and knew not a little of the inner life of the Catholic Church, with whose art and devotion he sympathized as much as he detested its politics. He loved Italy as a man loves his bride, and in Rome he foregathered with the veteran Mamiani and others who had helped in the 'risorgimento.'

"Thomas Davidson was not quite a saint, but he loved much and he shall be forgiven much. He could have kept Socrates company over the amphora while the rest were under the table, and could have gone forth to teach with as clear a head. A unique character, built on a solid Scotch foundation, with the bright and eager tone of the American, he was the best example in our time of the medieval wandering scholar."

## A GREAT "HISTORICAL ROMANCE."

MR. HOWELLS has lately told us what *he* thinks of the historical romance. Not a few persons, however, disagree with him. Among these may be reckoned the publisher in the following tale, told by the Chicago *Times-Herald:*

"The young novelist laid his card on the great publisher's desk and then began unwrapping a large bundle that was fastened with heavy ropes.

"'I have here,' he said, 'a novel which——'

"'Pardon me for interrupting you,' the publisher said, 'but there's no use undoing it. We have more books on hand now than we shall be able to publish in the next five years. It will only be a waste of time for us to discuss your work. Take it somewhere else.'

"A look of sadness

DESCRIPTION OF THE HEROINE OF A ROMANTIC PLAY:

"She has a beautiful eye with a low brow; her ear is as the rose; her mouth is cherry-like, and her neck is that of a swan, while her hair falls in wondrous coils."

—*The New York Dramatic Mirror.*

took the place of the hopeful expression that had illuminated the young novelist's countenance, and, turning toward the door, he said: 'I don't mind telling you that George Washington is the hero of this tale.'

"'Ah, very good,' the publisher answered; 'George, if worked up properly, ought to make a first-class hero.'

"'And,' the novelist continued, as he took a step or two toward the hall, 'Benedict Arnold is the villain of the story. Benjamin Franklin is the funny man—the fellow that says the droll things, you know. Dolly Madison figures in it as the beautiful, gentle maiden who doesn't know her own heart until every male character in the book has taken a twang at the strings, and Thomas Jefferson is the wise chap who can't see a joke and is always trying to get off logic. But I'm taking up your time. Excuse me. Printem & Co., across the street, seem to be bringing out a good many successful books lately, I guess I'll go over there. By the way, I've worked up the duel scene between Aaron Burr and Alexander Hamilton in great shape. I have them fight first with knives, then they try it with swords; upon a third occasion they use pitchforks; at another time they come together with clubbed guns, and finally with pistols, according to the historical fact. Israel Putnam's leap over the precipice with his horse, and Patrick Henry's defiance of King George, in the Virginia legislature, form thrilling chapters of my story. Perhaps at some future time——'

"'Ho! Help! Help!' shouted the publisher; 'stop this man! Don't let him get away! He has a historical novel! Come back! Come back! Please come back and name your terms. 'William,' the head of the great firm said, turning to his secretary, 'write a half-page advertisement at once, mentioning the fact that 1,260,000 copies of Mr.—Mr.—ah, what is your name? Mr. Carvel-Johnstone's novel have already been sold, and that the publishers confidently expect a sale of 7,000,000 more before the proofs are read.'"

## MÂGHA—ONE OF INDIA'S GREAT POETS.

AMONG the most interesting personages in the little-known history of Hindu literature is the poet Mâgha, author of the "Sisupâlvadha," ranked among the greatest works of India. An interesting account of Mâgha, who flourished about the end of the tenth century of our era, is given by Kali Shanka Sharma in *The Universal Brotherhood Path* (November). The writer says of him:

"His father, Dattak, had immense wealth. It is said that at the birth of Mâgha he invited many celebrated astrologers from all parts of India to examine the stars of the child. They say to him that his son, after enjoying the wealth that he would leave to him, and acquiring good reputation, was destined to suffer at the close of his life from some disease in his feet and then die in extreme poverty and gloom. His father, thinking that a man could not live more than one hundred years, 36,000 days, put as many necklaces of invaluable pearls in separate boxes in preparation for the days of misfortune prophesied by the astrologers, and, having educated his son in the best possible way, he breathed his last, leaving a property a hundred times more valuable than that stored apart against poverty.

"It was after the death of his father that Mâgha began to write his great work, 'Sisupâlvadha,' the composition of which won for him immortal fame. He was not one of those unfortunate poets whose works are bitterly criticized in their own day and are admired only after their death. After the completion of his work he was at once regarded as the greatest poet of his age, and was visited by many men of letters. But Mâgha's reputation was not only due to his unparalleled genius, but also to his exceedingly compassionate nature and unbounded benevolence. He considered it his first duty to assist the poor and the suffering. He never forgot throughout his life the great truth that it is only in rendering service to suffering humanity, in working for the welfare of others, that life is worthily spent, and that thus only can the soul obtain complete and final victory over the lower animal nature in man, the cause of all sin."

Later, Mâgha lost all of his great fortune, so that all he possessed was a copy of his own book, and he was compelled to set out from his former home on foot with his wife, to seek assistance of his friend, the Rajah Bhaja, of Mâlwâ. "The pair that had never known sorrow," says the writer, with Oriental imagery, "the same pair, followed by pale-faced men, feeble women, and withered children, was now going on foot without even a day's food. . . . Great was the law of Karma! Nevertheless their faces shone with a heavenly light, they felt inwardly satisfied. . . . An unknown something helped them. Perhaps in contrast with the ghost-like crowd at their back there stood before them, what the material eye can only vaguely see, the smiling glorious souls inhabiting heaven, telling them what they could not distinctly hear: 'Your life is transient; your sorrows, ike your former joys, are fleeting. Come with us and enjoy eternal happiness.'" The rest of the characteristically Oriental story is told in the following translation from the Hindu book "Bhoja Prananda":

"Reaching Mâlwâ, Mâgha sat near the city gate. He sent his wife to the court of the king with a slip of paper on which was written a sloka (four lines) from his own poem. When the wife reached the court, the warden thus informed the king, 'Mâgha, the best of Pandits, sits near the city gate. He has sent his wife here, who stands at the door.' 'Let her enter,' said the king. Entering the court, the wife of Mâgha handed the letter to the king, who read:

"' The white water-lily has lost its beauty. The lotus flowers are beginning to appear pleasant. The owl has become silent. The ruddy goose is happy. The moon sets. The sun rises. Ah! Karma, under the hands of heavy fate, bears fruit in different ways.' ('Sisupâlvadha,' Canto 11, Sloka 64.)

"Reading this beautiful description of dawn and the moral deduced therefrom, Bhoja gave her 300,000 rupees and said, 'Mother, I give this little sum only for the preparation of food. Next morning I shall come to fall at the feet of your husband.'

"Hearing the poor praise her husband, she gave all that sum to them while she was on her way to the gate of the city. Reaching that place, she informed her husband of all that had happened. 'You are my fame incarnate,' said Mâgha, 'but what shall we do now, as other beggars are coming?' Seeing Mâgha in that plight, a learned Brahman among the famine-stricken people said to him: 'Having poured water on the mountains scorched by the rays of the summer sun, having freshened the woods stripped of their green by direful fire, having filled with water hundreds of tanks and rivers, O Cloud, thy emptiness now has become thy most valuable ornament!'

"Upon this, Mâgha said to his wife, 'O unhappy time, I have not a penny left now. Forlorn hope yet follows me. My mind, distracted tho it be, is still desirous of feeding the poor. Begging is loss of good name, committing suicide is a sin. O my soul, leave this wretched body of mine! Why dost thou delay? The waters of tranquillity have quenched the fire of poverty. But what thing in the world has power enough to extinguish the internal flame, which, being originated by the disappointed expectations of the hungry people, is bitterly feeding upon my heart. In this time of famine no one lends money. Alas! the king of the planets is setting now, and yet I have not given a bit of food to the poor. Life has now become burdensome to me.'

"Seeing Mâgha thus lamenting, the hungry crowd began to depart in tears. At this time Mâgha felt unbearable pain. 'Away, away, my soul,' he cried, 'for the hungry in complete disappointment are leaving me. Thou shalt certainly depart one day, why not then on this occasion, when I sigh to follow the poor and when death is more welcome to me than ever?'

"These were the last words of this great poet-philosopher."

---

AMONG the new books about Tolstoy is one by Dr. Alice B. Stockham, giving her impressions of the Russian prophet as seen by her in the course of recent journey to Russia. He had been especially interested in her books "Tokology" and "Karezza," and it was largely to present her ideas for the amelioration of women that she undertook the trip. The book contains much that is new and interesting about Tolstoy, especially in regard to his attitude toward the new metaphysics. A friend's doctor suggested that she could not be healed by the power of mind. "Why not?" Tolstoy replied; "All life is from the spirit: mind and body are inseparable. Nothing exists except by the power of spirit; man can not breathe or walk, he can not move a finger, his tongue would be dumb, his eyes sightless, were it not for the impelling life of spirit."

## SCIENCE AND INVENTION.

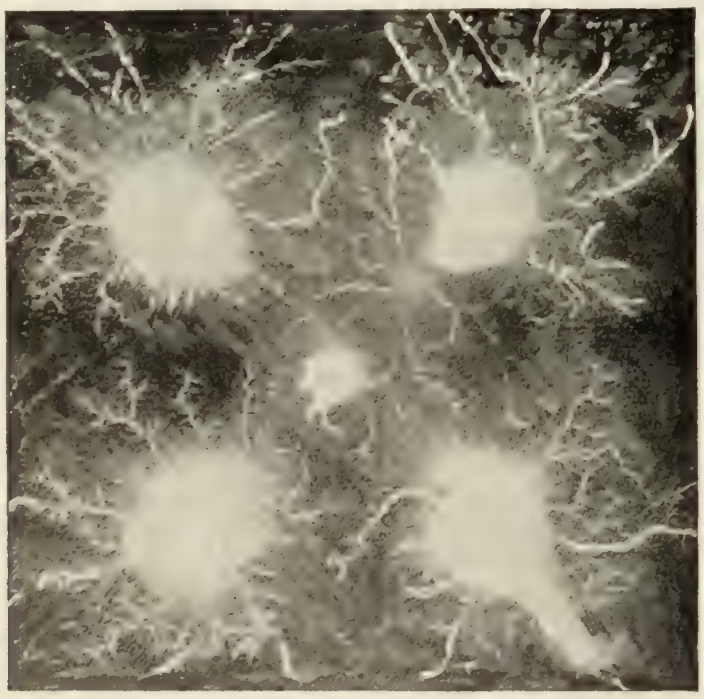
### PHOTOGRAPHIC STUDY OF THE ELECTRIC SPARK.

PHOTOGRAPHY is now so well recognized as a method of scientific investigation that no phenomenon can be said to have been exhaustively studied unless it has been photographed if it will lend itself in any way to such treatment. Some beautiful photographs of electrical discharges, taken in the course of recent investigations, are reproduced and described in *Der Stein der Weisen* (Vienna). Says the writer:

"Lightning as a striking and powerful natural phenomenon has always had quite a unique effect on the beholder, even if we

PHOTOGRAPH OF ELECTRICAL DISCHARGE FROM AN INSULATED METALLIC SURFACE.

do not take into account the half-instinctive fear of it shown by children. The lightning discharge as a high-tension electric phenomenon of the atmosphere was long ago carefully observed



DISCHARGE FROM AN INSULATED METAL CROSS.

in regard to form, power, and intensity, and there is a whole literature describing the occurrence and effects of noteworthy discharges.

"Moussette . . . assumed that lightning was an entirely material phenomenon, an outburst of flame that proceeded from cloud to earth and destroyed objects that lay in its path if its temperature were high enough to do so. According to him the 'streak of lightning' was due to the passage of so-called ball-lightning. . . . According to our better knowledge of electricity, whereby we recognize lightning as only the visible effects of a

DISCHARGE FROM A RING TOWARD A CENTRAL ELECTRODE.

union of positive and negative atmospheric electricity, we are rapidly gaining clearer ideas of the phenomenon, and at the same time the high-tension electric currents now available are enabling us to reproduce it with greater duration than when it occurs in nature. The formation of lightning by the passage of a spark from a positive to a negative pole, and its appearance to our eyes as an almost unbroken line, are evidently matters of special interest.

"The most common form of lightning is that which appears as a crooked line of light, while the so-called 'ball-lightning' is more seldom seen, altho it is more interesting."

The study of both these forms of lightning by allowing a high-tension discharge to take place upon a photographic plate has been undertaken during several years past, the writer informs us, by numerous investigators in various countries. And some extremely interesting results have been obtained, throwing light on the structure and course of the electric discharge under various conditions. We reproduce a number of these, which are as interesting to the lover of beautiful form as are snow crystals or frost-formations, which they somewhat resemble.—*Translation made for* THE LITERARY DIGEST.

### A RACE OF IMMUNES.

THE Arabs are practically immune to typhoid fever, and to all diseases of the serous membranes, so we are informed in a paper read by Messrs. Tostivint and Reutlinger before the Paris Society of Biology. There are always compensations in nature, and hence we need not be surprised to learn that the race is also prone to pneumonia and diseases of the lungs. We quote an abstract of the paper given in the New York *Medical Journal:*

"It seems that army medical statistics show that diseases of the digestive canal are twice as frequent among European troops in Algeria and Tunis as among the native soldiers. This is true of diseases of all parts of the intestinal canal. Affections of the liver also are much less common among the Arabs than among Europeans. On the other hand, all pulmonary affections are more prevalent among the natives. These peculiarities, the authors think, are due, the one to immunization in childhood by drinking unwholesome water, and the other to the fact that the

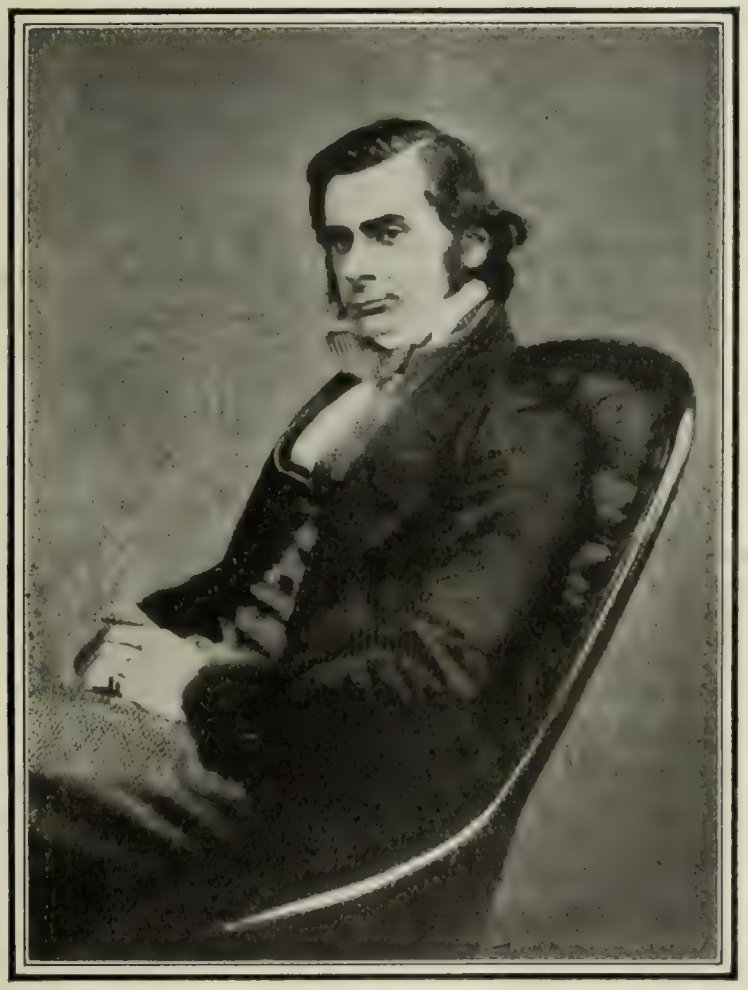
Arab's lungs, accustomed to the pure air of vast solitudes, are little fitted to struggle against the germs encountered in the air breathed by multitudes.

"As to the resistance of the Arab's serous membranes to infection, the authors say it is observed in the case of all those membranes, but particularly of the peritoneum and the pleura. . . . In consequence of this resisting power abdominal surgery among the Arabs is attended with the most favorable results. Rheumatism is exceptional, and metastasis [shifting] of infectious diseases to the synovial membranes of the joints and to the other serous membranes is very rare. The only serous affections that are met with as frequently among the Arabs as among Europeans are those occasioned by Koch's bacillus or the pneumococcus; the Arabs' very decided susceptibility to these two microorganisms contrasts sharply with the general resisting power of their serous membranes. This resisting power . . . seems to be a peculiarity of the primitive races. The peritoneum of the lower animals, it appears to be added in support of this theory, grows less and less resistant to infection the higher the creature is in the scale of living beings.

"Race peculiarities in regard to morbid susceptibilities are always interesting subjects of study, and much may be learned from their investigation. It is to be hoped, however, that the theory of intestinal immunization by the habitual drinking of foul water in childhood will lead to no attempt to introduce the practise into preventive medicine, for, to our mind, it could result only in the survival of the toughest, like the 'hardening' process."

## THE LETTERS OF A GREAT SCIENTIST.

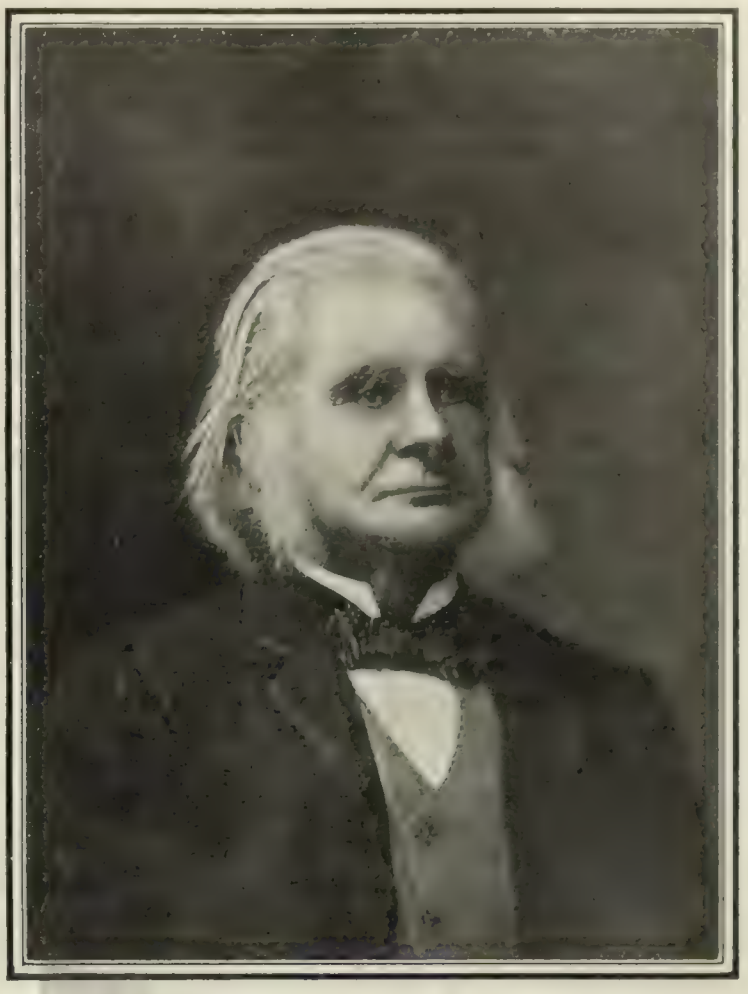
ONE of the most noteworthy books of the season is Huxley's "Life and Letters," edited by his son Leonard. The literary journals that review this collection take the opportunity to say a good deal about the life and character of the distinguished English biologist. *Literature* (November 17) speaks as follows:



From "The Life and Letters of Huxley." Copyright, 1900, by D. Appleton & Co.

THOMAS HENRY HUXLEY, 1857.

"Two views of Huxley were entertained by his friends. According to one he was meant to be a great investigator, who, fortunately for science, in his early years yielded to his bent, but who was later in life allured into controversies and discussions in which, being untrained, he could do no more than every man of capacity can perform, no matter how alien the field which he enters. According to another view he was born to be a controversialist and a combatant; a sort of Luther for modern science, he found his true vocation only when, in *The Nineteenth Century* and elsewhere, he fought fiercely for intellectual freedom. The impression left by these volumes is that neither judgment expressed the whole truth; that his nature was larger than some of his friends conceived; and that the man was never completely revealed until he had fought all his many fights, and wandered into many regions."



From "The Life and Letters of Huxley." Copyright, 1900, by D. Appleton & Co.

THOMAS HENRY HUXLEY, 1893.

In one respect the book will be a surprise; it reveals Huxley as a champion of the Bible and of religious teaching. Says the same paper:

"It will be a revelation to many persons who cite his name in support of extreme views to find that he was opposed to extremes of all sorts; that, for example, he deprecated divorcing intellectual from moral training, which would make the gutter child 'the subtlest of all the beasts of the field,' and that, while inexorable as to the expulsion of all theological teaching, he deprecated the abolition of religious teaching, which would be like 'burning your ship to get rid of the cockroaches,' or to 'throw away the child with the bath.' He voted for the retention of the Bible in the board schools because he believed that 'the mass of people should not be deprived of the one great literature which is open to them—not shut out from the perception of their relations with the whole past history of civilized mankind.' In fact, a clear line of cleavage was drawn between Huxley and the seven extreme secularists on the board—the Seven Champions of Unchristendom as they were styled. He voted for the famous compromise of 1871 proposed by the late Mr. W. H. Smith, providing for the reading of the Bible in board schools, not as a 'hush-up,' but, as he expressed it, as 'an armistice in respect of certain matters as to which the parties were absolutely irreconcilable.' One of the most striking of the many letters is that addressed to a secretary of a free-thought association rebuking the vendors of heterodox ribaldry, which disgusted him even more than orthodox fanaticism. It was characteristic of him that he did not draw, 'personally, socially, or politically,' to Bradlaugh; and equally characteristic that he took up the cudgels for the cause of toleration when it was proposed to exclude Miss Bradlaugh from the classes at University College."

Huxley will doubtless be best remembered as a controversial

defender of science against religion, in matters where he conceived that they were at variance. Of his attitude here, a writer in the London *Academy* says:

"Huxley was no kid-glove fighter. He did not spare himself; he did not spare his enemies; and he gloried in the fight, as all strong natures, with strong views, must. He was not of those who turn the other cheek: when he was hit he hit back, and casuistry, emotional rhetoric, and shuffling he smote hip and thigh. When he felt scorn, he showed his scorn. He was very human; when he thought he was right, he had small sympathy for the views of the other side; he lacked Darwin's gentle courtesy, but his militancy was always in defense of straightforward and honest-thinking. The wildcat element was strong in him, and tho on occasion he pared the creature's nails, they always grew again. He was not a Francis of Assisi, but a man whose aim in life was to understand life, its woof and warp and intention, to think and see clearly, and to whip hypocrisy. 'Everything which entered his brain by eye or ear,' said Professor Romanes, 'came out clarified, sifted, arranged, and verified by its passage through the logical machine of his strong individuality.'

"He held strong views, he spoke them; and the hearer he liked was the gritty, hard-headed workingman, with no illusions, but with plenty of fundamental brain power. 'I am sick of the *dilettante* middle class, and mean to try what I can do with hard-handed fellows who live among facts. . . . I believe in the fustian, and can talk better to it than to any amount of gauze and Saxony.'"

Tho Huxley began his career at a time when scientific pursuits were rather unprofitable in England, or, as he himself put it, when a man of science would "get invitations to all sorts of dinners and conversaziones, but not enough income to pay his cab-fare," yet he never appears to have quailed, and some of the most characteristic letters in the biography, both of his early and his later life, are illustrative of his determined spirit. The first extract which follows is from a letter to his sister under date of 1850—the outset of his life-work in London:

"I tell you all these things [his circumstances and difficulties] to show you clearly how I stand. I am under no man's *patronage*, nor do I even mean to be. I have never asked, and I never will ask, any man for his help from mere motives of friendship. If any man thinks that I am capable of forwarding the great cause in ever so small a way, let him just give me a helping hand and I will thank him; but if not, he is doing both himself and me harm in offering it, and if it should be necessary for me to find public expression to my thoughts on any matter, I have clearly made up my mind to do so, without allowing myself to be influenced by hope of gain or weight of authority.

"There are many nice people in this world for whose praise or blame I care not a whistle. I don't know and I don't care whether I shall ever be what is called a great man. I shall leave my mark somewhere, and it shall be clear and distinct and free from the abominable blur of cant, humbug, and self-seeking which surrounds everything in this present world."

T. H. H., his mark

Over forty years afterward (in a preface of 1894), Huxley again writes of himself, and, speaking of a much-opposed book he had published in earlier life, shows that he considered that his own fearlessness and determination were principles not merely to be practised, but to be preached:

"*Magna est veritas et prævalebit!* The truth is great, certainly, but, considering her greatness, it is curious what a long time she is apt to take about prevailing. When, toward the end of 1862, I had finished writing 'Man's Place in Nature,' I could say with a good conscience that my conclusions 'had not been formed hastily or enunciated crudely.' I thought I had earned the right to publish them, and even fancied I might be thanked rather than reproved for doing so. However, in my anxiety to publish nothing erroneous, I asked a highly competent anatomist and very good friend of mine to look through my proofs, and, if he could, point out any errors of fact. I was well pleased when he returned them without criticism on that score; but my satisfaction was speedily dashed by the very earnest warning as to the consequences of publication, which my friend's interest in my welfare led him to give. But, as I have confessed elsewhere, when I was a young man, there was just a little—a mere *soupçon*—in my composition of that tenacity of purpose which has another name; and I felt sure that all the evil things prophesied would not be so painful to me as the giving up that which I had resolved to do, upon grounds which I conceived to be right. So the book came out; and I must do my friend the justice to say that his forecast was completely justified. The Boreas of criticism blew his hardest blasts of misrepresentation and ridicule for some years, and I was even as one of the wicked. Indeed, it surprises me at times to think how any one who had sunk so low could since have emerged into, at any rate, relative respectability. . . . . .

"I doubt not that there are truths as plainly obvious and as generally denied as those contained in 'Man's Place in Nature,' now awaiting enunciation. If there is a young man of the present generation who has taken as much trouble as I did to assure himself that they are truths, let him come out with them, without troubling his head about the barking of the dogs of St. Ernulphus. *Veritas prævalebit*—some day; and even if she does not prevail in his time, he himself will be all the better and wiser for having tried to help her. And let him recollect that such great reward is full payment for all his labor and pains."

When one of his controversial articles was returned to him as "rather too pungent," with a request to tone it down, he commented as follows:

"I spent three mortal hours this morning taming my wildcat. He is now castrated; his teeth are filed; his claws are cut; he is taught to swear like a 'mieu'; and to spit like a cough; and when he is turned out of the bag you won't know him from a tame rabbit."

Quite another side of Huxley, and a new one even to those familiar with his works, is the lighter and social vein of the man. "His conversation," a friend is quoted as saying, "was singularly finished, and (if I may so express it) clean-cut; never long-winded or prosy; enlivened by vivid illustrations." The "Life and Letters" is full of his humor and repartee, of which a few anecdotes follow:

"Once in a country house he was sitting at dinner next to his hostess, a lady who, as will sometimes happen, liked to play the part of Lady Arbitress of the whole neighborhood. She told him how much she disapproved of the Athanasian Creed, and described how she had risen and left the village church when the parson began to read it; and, thinking to gain my father's assent, she turned to him and said graciously, 'Now, Mr. Huxley, don't you think I was quite right to mark my disapproval?'

"'My dear lady,' he replied, 'I should as soon think of rising and leaving your table because I disapproved of one of the entrées.'"

Toward Huxley's later life, it appears, a certain drawback to conversation came upon him:

"It is a great misfortune (he remarked to Professor Osborn) to be deaf in only one ear. Every time I dine out the lady sitting by my good ear thinks I am charming, but I make a mortal enemy of the lady on my deaf side."

The larger part of the story in Leonard Huxley's book is told by his father's own letters. These cover a wide range of subjects, from purely scientific ones to mere social pen-chat, and are addressed to a remarkable number of different correspondents. One thus gives his description of his aim in life:

"To smite all humbugs however big; to give a nobler tone to science; to get an example of abstinence from petty personal controversies, and of toleration for everything but lying; to be indifferent as to whether the work is recognized as mine or not, so long as it is done."

In the following paragraph he gives his opinion of science:

"Science seems to me to teach in the highest and strongest

manner the great truth which is embodied in the Christian conception of entire surrender to the will of God. Sit down before facts as a little child, be prepared to give up every preconceived notion, follow humbly wherever and to whatever abysses nature leads, or you shall learn nothing. I have only begun to learn content and peace of mind since I have resolved at all risks to do this."

A number of Huxley's letters are to his children, some filled with wise advice, some playful. Of the latter sort is one in answer to his grandson, a little fellow five years old, who, having read Kingsley's "Water Babies," and deeming his grandfather an authority on any matter of natural history, wrote thus to inquire:

"DEAR GRANDPATER: Have you seen a water-baby? Did you put it in a bottle? Did it wonder if it could get out? Can I see it some day? Your loving "JULIAN."

The following was Huxley's reply, which the biography gives in facsimile, neatly printed out so the child might read it:

"MY DEAR JULIAN: I never could make sure about that water-baby. I have seen babies in water and babies in bottles, but the baby in the water was not in a bottle, and the baby in the bottle was not in water. My friend who wrote the story of the water-baby was a very kind man and very clever. Perhaps he thought I could see as much in the water as he did. There are some people who see a great deal and some who see very little in the same things. When you grow up, I dare say you will be one of the great-deal seers, and see things more wonderful than water-babies where other folks can see nothing. Ever your loving "GRANDPATER."

## TOBACCO AS A NECESSITY.

THE suggestion was made by newspaper correspondents during our war with Spain that tobacco had ceased to be a luxury and had become a necessity, for soldiers at least, and that it accordingly should be issued as part of their regular rations. The authors were well laughed at; but now we find that the experiences of the South African war have suggested the same things to our English cousins. Says *The Lancet* (London, November 10):

"The war in South Africa has taught many things of greater and of less importance. Perhaps nothing that it has demonstrated has been more marked than the important part which tobacco plays in the soldier's existence. Whether this is to be reckoned as a great fact or a small one there can be no doubt about the truth of it. Yet the Duke of Wellington's armies had no tobacco worth speaking of. If they did not forbid its use, at any rate the Iron Duke's officers were directed to advise their men strongly against it. What a curious contrast with the campaigning in South Africa, where marches and privations as long and as stern as any suffered by our great-grandfathers were borne by the volunteers and soldiers of to-day with a grumble only when their 'smokes' failed them. We have it from many who took part in the forced marches leading to Paardeberg, to Bloemfontein, to Pretoria, and beyond, that when rations were but two or three biscuits a day the only real physical content of each twenty-four hours came with the pipe smoked by the smouldering embers of a camp-fire. This pipe eased the way to sleep that might otherwise have lingered, delayed by the sheer bodily fatigue and mental restlessness caused by prolonged and monotonous exertion. It is difficult, then, to believe that tobacco is anything but a real help to men who are suffering long labors and receiving little food, and probably the way in which it helps is by quieting cerebration—for no one doubts its sedative qualities—and thus allowing more easily sleep which is so all-important when semi-starvation has to be endured.

"The cases of acute mental derangement in the course of campaigns such as the present are many. There have indeed been many in South Africa. It would be most profitable and interesting could medical officers have taken special note of the capacity for sleep previously evidenced by those who broke down and also of their indulgence or non-indulgence in tobacco. We are inclined to believe that, used with due moderation, tobacco is of value second only to food itself when long privations and exertions are to be endured. Two features are to be noted with regard to the smoking practised on active service. It is almost entirely in the open air and it is largely on an empty stomach. The former is always an advantage; the latter we generally reckon a most unfavorable condition. Shall we see in the near future patients with tobacco amblyopia or smoker's heart acquired while the trusting friend of tobacco thought that he was enjoying unharmed the well-earned solace of a hard day's march? We believe not, and that the open air will have saved what might have been the untoward results of smoking when unfed."

**Hygienic Value of the Beard.**—Hair on the face is not worth very much from a hygienic standpoint, according to Gabriel Prevost. In an article translated somewhat awkwardly in *The Medical Times*, he says:

"Scarcely under the form of heavy moustaches shading the lips can it invoke service by hindering the introduction into the lungs of too cold air; and yet it should not pride itself too much on this. In return for less than the greatest neatness, it is filthy, and physiologically it is a net of microbes. It is evident that the inspiration of the air tends to accumulate dust there, as it does in a broom. The least trace of foods, liquid or solid, soils it and makes it an object of disgust; odors, good or bad, choose a dwelling-place there, and, finally, laziness about shaving is the only argument to put forth by those who praise it. From a bacteriological point of view it is almost unluckily the receptacle of dangerous microbes to which it serves at the same time for an habitation and a vehicle. Let us have the courage then to declare that we can not understand how any one can persist in this, least of all the physician or the soldier, two existences everywhere comparable by their forced contact with promiscuous people. The absurd prejudice still remains that the development of the hairy system coincides with that of strength. In this case we refer the fanatics of the beard to Antomarche, who made the autopsy of Napoleon. The conqueror of Wagram had not a hair on his breast. He did not have, besides, one on his hand."

## SCIENCE BREVITIES.

THE great smoke-cloud of the North of England is stated to have a notable influence on plants. Albert Wilson, in a paper on the subject, read before the British Association, spoke of the extent of the great smoke-producing district of the North of England and the miserable condition of the vegetation in some parts of the area. Among the various points dealt with in the paper, says *Nature*, were "the long distance reached by the smoke of large towns; the discoloration of rain-water ('black rain'); the effect of smoke on mosses and hepatics as compared with that on higher plants, the influence of smoke on sunshine and air-temperature in calm summer weather and in anticyclonic weather during autumn or winter.

"THE comparative, one might almost say absolute, security of ocean travel could not be better illustrated than in the latest trips of the Atlantic liners," says *The Marine Review*. "A storm raged, the fierceness of which passes all memory, and yet every ship came in. They were late, of course, all of them, but they came in. Every one of them had been battered with countless tons of water, hurled with immeasurable force, and time and again the mighty liners were tossed like corks upon the waves. But they conquered triumphantly. Fastenings were torn from the decks and even propeller-blades were lost, but they plowed steadily forward. There was a diminution of speed, but they went on. That wonderful machine, the essence of power, known as the Atlantic liner, is superior to the tempest. The mind of man subdues, if not directs, the elements."

THE TRAINING OF SIGHT.—"Lord Wolseley having lately remarked upon the good sight of the Boers as one cause at least of their good shooting, and having ascribed this good sight to its constant exercise in the open air, Mr. Brudenell Carter has pointed out," says *The Hospital*, "that it is not merely a question of open air but of the training of sight upon things that are far off and difficult to see. The defective vision possessed by so many children who have been brought up in towns is not caused by errors of refraction alone, common as these are, but by an actual deficiency in acuteness of vision, a lack of development in the nervous structures involved in the act of seeing. 'Vision,' he says, 'like every other nerve-function, must be cultivated for the attainment of a high degree of excellence. The visual power of London children is now cultivated by their environment. They see the other side of the street in which they live, and the carts and omnibuses of the thoroughfares. They scarcely ever have the visual attention directed strongly to any object which is difficult to see, or which subtends a visual angle approaching the limits of visibility; and hence the seeing function is never exerted, or at least is not habitually exerted to anything like what should be the extent of its powers. With a country child the case is widely different.'"

# THE RELIGIOUS WORLD.

## DISCOVERY OF "THE WISDOM OF THE CHALDEANS."

THE rediscovery of the oldest Hebrew book of magic in existence, the manuscript of which was lost over a thousand years ago, is an event of interest to Jewish and Christian scholars. An account of the manuscript and its history was lately given at a meeting of the London Society of Biblical Archeology. Dr. Gaster, a well-known Jewish scholar, stated that he had come into possession of the manuscript from Nisibis in Mesopotamia. It consists of sixty-two leaves, written by at least two or three hands, some of it in Arabic with Hebrew characters, and proves to be a collection of magical formulas and recipes belonging to many ages. Among the wonder-workers whose formulas are mentioned are Moses, Elijah, Elisha, Ezra the priest, Rabbi Aharon—the famous magician of the ninth century—and many other medieval rabbis belonging both to the Northern Ashkenazim and to the Southern Sephardim. We quote the following account of the manuscript from a summary of Dr. Gaster's address in the London *Jewish Chronicle* (November 9):

"The most important portion of the manuscript proved to be a compendium of the astrological value and utilization of the powers that rule in the course of the week. Each regent is described, its image is given, the mode of drawing it is indicated, and instructions are set forth how to make use in a magical manner of the image thus drawn, and of the formulas which are to accompany any of these magic operations. We are told to what profit this knowledge can be turned, the good and evil that can be performed by means of these divine images, and many curious instructions, as well as the Sigils or seals of these regents. The revelation of these mysteries is ascribed, in the first place, to Raziel, and, secondly, to the primitive Enoch. The Book of Enoch is often quoted in the Zohar, and brought into connection with this self-same Raziel. To him, and through him, etc., the astronomical mysteries of the world are said to have been communicated to Adam, Noah, Abraham. The same tradition is found in this manuscript, except that this knowledge is not communicated to Abraham but to the Chaldeans. Curiously enough, the name of God is never mentioned in this particular treatise, and there is not a single citation of a Biblical text or verse. On the other hand, it is saturated with the principles that rule in the Oriental magic, inasmuch as the ruling powers of the day are strictly separated from the planets, which are simply mentioned to indicate the propitious hour for writing the amulets. Evidently the regents of the different days are regarded as angels and supreme spirits that move these planets without being identified with them. Throughout, the names of these angels are Hebrew, there being scarcely one which is not capable of being explained by the Hebrew language. One point in the text under consideration is extremely interesting as showing its archaic character and the clew it gives to a metaphorical expression often used in Cabalistic writings, but seldom clearly expressed. It is often stated that God, or the name of God, or one of the Chief Powers, is included in and identified with that of his serving or ministering angels. The same expression occurs in the text. To each one of the chief angels of the day a number of angels are added as servitors. Examining their names, it is found that the first letters of the serving angels are the very letters of the name of their Chief Ruler. They form an anagram of his name, so that it is truly said that his name is included in theirs and theirs in his. In one case the angel is described in the form of a woman. The influence of the notion that the regent of the sixth day is Venus has been so strong as to cause the author to accept female angels in the heavenly hierarchy—a strong proof of the non-Jewish origin of the text, because the conception of female angels is contrary to Jewish notions.

"The title of this treatise is 'The Wisdom of the Chaldeans.' Reference to Chaldean astronomy is very rare in Hebrew writings; but it is referred to in the oldest astronomical book—the 'Beraytha de Rabbi Samuel.' Chapter IX. is devoted exclusively to the interpretation of the astrological importance of each of the seven planets. Each is minutely described as ruling over some occurrence or other. Sabatai (Saturn) rules over poverty, misery, illness, and sickness, destruction, internal ailments, and sin. Sabatai is first in order, and is said in the Book of Creation to have been created on the first day of the week. The author of that work must therefore have commenced his week on Saturday. The other six planets are the Sun, Venus, Mars, Mercury, the Moon, and Jupiter. Over the seven planets are appointed seven rulers, or angels, viz., Raphael, the angel of the Sun, Anael, the angel of Venus, Michael, the angel of Mercury, Gabriel, the angel of the Moon, Qaphsel, the angel of Saturn, Sadkiel, that of Jupiter, and Samael, that of Mars. While these names are to be found in other mystical works, nowhere do we find a parallel to the entire text, or to the images under which these angels are to be represented."

## STANLEY AS A MISSIONARY.

WHEN in 1875 Henry M. Stanley was circumnavigating the Victoria Nyanza in Central Africa, over a thousand miles from either seaboard, he discovered a man who since has played a part of some importance in English colonial history—Mtesa, king of Uganda. In *The Youth's Companion* (December 20) Sir Henry—who is now a knight and member of Parliament—tells of his first meeting with this interesting African monarch and of some religious discussions which they had together, showing Stanley in a decidedly new light. He writes:

MTESA, KING OF UGANDA.
—*Youth's Companion.*

"One day in full court the subject of the white man's faith was broached. As I expounded, I observed fixed attention on the part of the king and courtiers such as I had not noticed before. The rule had been understood by all that talk should be brief and various, but now it became animated and continuous. Gestures, exclamations, and answers followed one another rapidly, and every face was lighted up by intense interest. When we finally adjourned, the subject was not exhausted; greater cordiality was in the hand-shakes at parting, and Mtesa urged that we should continue the discussion on the next day. And so we did for several days. It seemed that the comparisons of Mohammed with Jesus Christ were infinitely more fascinating than the most lively sketches of Europe, with its wonders and customs; and truly the description of the accusation of Christ, his judgment by Pilate, and the last scene on Calvary was the means of rousing such emotion that I saw my powers of discerning character were extremely immature and defective. . . . . .

"We were deep in the decalog when an unexpected white visitor made his appearance in Uganda as suddenly almost as I had made mine. This was no other than Colonel Linant de Bellefonds, one of Gordon's staff, who had come on a political mission. Soon after the novelty of his arrival had somewhat worn away and the resumption of the decalog was mooted, it struck Mtesa that it would be a prudent thing to question this other white man from the north regarding the things I had said about Jesus and Mohammed and the respective faiths. Some of the native chiefs had gone among the Arab traders and had been made uneasy in their minds by the arguments in behalf of Mohammedanism. It was proposed in open court to question Colonel Linant, and the chiefs assented. Fortunately for the confirmation of my statements, the colonel, altho a Frenchman, happened to be a stanch Calvinist, and gave answers which corroborated me beyond a doubt. We then resumed the writing of the decalog, and in a short time it was finished.

"Mtesa was dismayed that the period of my departure had arrived. I had already passed a longer time in his company than was prudent, seeing that I had such a large number of men depending upon me at the other end of the Nyanza. He began to

devise various expedients for my delay, and had it not been for the presence of Colonel Linant, it might not have been an easy matter to leave him. He at last, after a firm refusal from me to remain longer, cried out, in a voice that had a tone of despair in it:

"'What is the use, then, of your coming to Uganda to disturb our minds if, as soon as we are convinced that what you have said has right and reason in it, you go away before we are fully instructed?' 'Mtesa is under a misunderstanding,' I answered. 'I am not an instructor in religion. I am simply a *kirangozi* [a pioneer] of civilization. When Mtesa goes to Usoga or to Ankori to make war, he first sends out guides and pioneers to point and clear the way for his army. That is what I do. When I go back to Europe, I must tell the white people the way that they should take to Uganda. Then those who may think they would like to do business with your people, or those who would wish to teach them the Christian faith, will come here by the way I have shown. If Mtesa really wishes that lawful instructors should come to Uganda, he has but to say so, and I shall write to the people of England to that effect, and I am sure they will send the proper men for that purpose.' 'Then write, Stamlee' (the native pronunciation of my name), 'and say to the white people that I am like a child sitting in darkness, and can not see until I am taught the right way.'

"I gladly consented, and on April 14, 1875, I made two copies of an appeal for missionaries to be sent to Uganda, one of which I enclosed under cover to General Gordon, and delivered to Colonel Linant. The other I intended to send by my own couriers overland to Zanzibar. Three days later I resumed my voyage. Four months passed, and I was again in Uganda, to continue, as circumstances permitted, the interesting task I had left unfinished. During the three months I remained with Mtesa, the translations which we made from the gospels were very copious, and the principal events from the creation to the crucifixion were also fairly written out, forming a bulky library of boards. When the work was finished, it was solemnly announced in full court that for the future Uganda would be Christian and not Mohammedan."

In consequence of the appeal made by Stanley in London and New York, a missionary fund of $150,000 was raised, and a band of five missionaries were sent to Uganda. Now a cathedral, 372 churches, and 97,575 converts are the result of the initial impulse which Stanley gave to missionary work in this field.

---

## MINISTER WU ON THE RELATIVE MERITS OF CHRISTIANITY AND CONFUCIANISM.

FOR the first time since its triumph over the older religions of paganism in the days of Constantine, Christianity is coming of late years into direct contact in its own domain with intelligent adherents of other great faiths. Particularly since the World's Parliament of Religions has Christianity had to endure the ordeal of unawed criticism. In return for the Christian missionaries sent to the "heathen" countries, the Orient—represented in the Vedic, Buddhist, and Mohammedan faiths—is sending its missionaries to Europe and America. These men see the vulnerable points of Western civilization, just as the Christian missionaries see the social sores of the Orient; and therefore mutual recriminations are beginning to be common. Adherents of each world-religion are apt to claim credit for whatever is good and deny responsibility for all that is bad in the social organism in which it is a part, and, *vice versa*, the assailants of each world-religion are apt to charge upon it all the bad and deny credit for all the good. Still others deny that any religion is more than one of many important factors in racial evolution, and assert that Buddhism or Judaism or Christianity owes fully as much to civilization as civilization owes to it.

Of the several discussions of this nature which have lately taken place, that aroused by the speech of Mr. Wu Ting-Fang, the Chinese minister in Washington, before the Ethical Society in New York, has attracted most attention. He said in part (New York *Times*, December 10):

"What is Confucianism? It will be well to mention in a few words what it is not before stating what it is. It is not a religion in the practised sense of the word. What I understand by religion is a system and doctrine of worship. As such it recognizes the existence of a divine supreme being and of spirits having control of human destinies, who want to bring man back from the errors of his ways by holding up the fear of everlasting punishment to him, and by promising him everlasting happiness for goodness. One of its cardinal doctrines is that there is such a thing as life after death. I must confess that the thought of the immortality of the soul is pleasant. I wish it were true; I hope it is true; but all the reasoning of Plato can not make it anything more than a strong probability. I am not aware that in the advance of modern science we have advanced one step more from uncertainty than did Plato. It must not be said that Confucius denies the existence of these things, but regards all speculation upon them as useless and impracticable. He would be called an agnostic in these days. 'What is death?' asked a disciple of him, and he replied: 'You don't know life yet; how can you know about death?' Such are the guarded words of Confucius on this subject. Life itself is full of mysteries too deep for human thought to fathom. There is no use in trying to tear apart the veil of death to take a peep at the place beyond. No one has ever been able to add one tittle of evidence concerning the future of man after death and of the world of spirits. Confucius was therefore right in dismissing these subjects without giving a direct answer. Horace Greeley once said: 'Those who discharge promptly and faithfully all their duties to those who still live in the flesh can have but little time for peering into the life beyond the grave. It is better to attend to each in its proper order.' This is not an unfair statement of the aim of Confucius. Confucianism undertakes to guide man only through this world. His system is accordingly intensely human and practical. He does not speculate upon what will be after death.

"Let us proceed to examine Confucianism. Man is regarded as an animal endowed with social instincts. He does not live with himself, but seeks the fellowship of man. Out of this fellowship Confucius deduces these relations: Sovereign and subject; parent and child; older and younger brothers; husband and wife; friend and friend. . . . . .

"The five relations I have referred to comprise all the relations in which a man may find himself in society. To each position are attached proper duties, and the fulfilment of those duties makes one a desirable member of society. Of the five relations, Confucius places special stress upon that of the parent and child. Filial piety may be said to be the pivotal point of his system. A good son must make a loyal subject, a faithful husband, and a trusted friend. The aim of Confucius is to make man a desirable member of society. They have to do good, and to perform the duties of their position. To be good they must practise the five virtues of benevolence, righteousness, propriety, understanding, and truthfulness.

"The virtues of Confucius may be best understood by making comparison with the founder of the Christian religion. Christ said, 'And unto him that smiteth thee on one cheek, also offer the other; and him that taketh away thy cloak, forbid not to take thy coat also.' This seems to me to be meekness with a vengeance. I am inclined to think that no sensible man has ever acted up to the letter of these injunctions. They are not applicable to human society. Whoever smites one is a dangerous person and does not need an invitation for him to proceed to smite the other cheek. A man who would take away your coat is a thief, and if he had the chance would take away your cloak also without saying as much as 'By your leave.' I perceive that there is not a disposition on the part of men and women in this country to take these words of Christ in their literal sense. It is better for the world that these words should be more honored in the breach than in the observance. I think the teaching of Confûcius is in more accord with reason. Confucius says: 'Do not quarrel with those who offend you.' This is all that good sense requires. Christ says: 'Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you and persecute you.' These, I must confess, are noble and grand statements, but such a standard of moral excellence is too high for frail humanity.

There is no likelihood that men of this world will ever attain to it. Christian nations fall far short of it. Love your enemies, Christ commands; but at this very moment some missionaries are crying out for vengeance and blood, and Christian armies are burning houses and villages, sparing neither age nor sex in their indiscriminate slaughter, and are carrying away everything they can lay their hands upon. What a vast gulf there is between profession and practise! But in any case what is required by Christ's commands is difficult of performance. I ask you if you could love anybody who killed your father or mother? I have never yet met one who acted up to that injunction. Confucius does not demand so much. The question was asked him if he would requite injury with kindness, and he said: 'Requite kindness kindly, and injury with justice.' By saying that injury should be requited with justice he meant that the requital should be just, fair and right; but he does not sanction retaliation, much less vengeance, in a vindictive spirit, as is sometimes done by people professing to follow the tenets of Christianity.

"A most striking instance in which the minds of Christ and Confucius are as one is to be found in the enunciation of the golden rule. Christ said: 'Do unto others as ye would they should do unto you.' Confucius says: 'Don't do to others what you don't want done to yourself.' This was enunciated five hundred years before Christ, and tho it is in the negative form, when you come to examine it there is not much difference. Some hairsplitters have tried to make out that these two forms do not express the same idea; but I consider that the difference in wording is merely nominal. At any rate, the spirit is the same, and any one who acts up to it, whether a professed Christian or a Confucian, is a truly good man. So far as this world is concerned, Confucius and Christ tread in the same direction, and principally in the same path. A good Christian is a good Confucian and a good Confucian is a good Christian. Men following Confucius are certainly entitled to happiness in the great hereafter. I don't believe that heaven is an exclusive place, and tho Christians, Taoists, Buddhists, and others try to appropriate it and to make a private park of it for their respective adherents, my opinion is that it is a place with many ladders leading to it, and that any one who has done good in life will be able to go up one of those ladders and enjoy the happiness that should come to him. It is a place for all good men, irrespective of doctrines and creeds A Confucian who leads an upright and useful and good life will go there as quickly as those of any other religion . . . . The crowning glory of Confucianism is that it teaches man to do good for the sake of good. It promises no reward and threatens no punishment. Confucius simply says, do good because it is good. Naturally, happiness comes to a man for being good, as a matter of course; but Christianity makes it a motive for being good. That is the difference between Confucianism and all other systems, for other systems hold up constantly glorious rewards for being good and severe punishment for being bad. Confucius alone teaches that goodness is a sufficient reward in itself. I admit that the teaching of Confucius is not so catching and fascinating as the other teachings, because it does not hold out a reward to those who practise its doctrine. But let me ask you, if you give a beggar some money do you expect a return or reward from him? If you give money to charity, do you expect something to return to you from the charity you gave it to? I tell you Confucianism is the highest form of civilization and morality, altho, as I have said, it is not so taking and fascinating as other religions.

"The world is gradually coming round to the teachings of Confucius. One of the signs of this is the growing agnosticism of the age, and the progress of science has compelled the abandonment of any religious theories. There has come a modification of the fire-and-brimstone ideas of bygone ages. I do not know if people become more callous as they become more civilized, but it is a fact that they no longer tremble with fear at the fire and all the terrors under the world as pictured to them by the pulpit. That is agnosticism, fostered by science, and the world's thought at the present day is drifting, tho unconsciously, toward Confucianism.

"Confucianism has taken root in Japan and in Korea also. Its spread is not the result of armed conquest or excessive propaganda. Neither the sword nor the missionary is ever employed to gain for it a single adherent. No trail of blood marks its progress. Missionaries have not been sent to other nations urging people to embrace Confucianism or to make war in order to compel people to embrace that religion. Confucianism appeals to human sympathy, human interests, and human aspirations. It is a power for mankind not through force and terror, but through voluntary submission of the heart."

Upon this address the Chicago *Times-Herald* (December 11) remarks:

"The address on religion which the Chinese minister delivered in New York will serve to illustrate the very great difficulty of proselyting in the Flowery Kingdom. In the first place it is to be noted that its tone is as superior as the one which we and all civilized people adopt toward the Orientals. Mr. Wu is not cast into the slough of national humiliation by the wonders of Washington. He is still the calm, imperturbable, thoroughly self-satisfied Chinese, and his new experience confirms him in his old beliefs. . . . . .

"It does not follow, of course, from the sting of such criticism that the Chinese are what they believe themselves to be. The most intelligent of them are, in fact, the slaves of the grossest superstition, and many of their practises are repellent to humanity and to common sense. But they are not savages, and in spite of the dark spots in their minds they have an intellectual keenness and stubbornness combined with that national self-righteousness which makes the problem of converting the 400,000,000 a tremendous one indeed."

The Philadelphia *Bulletin* (December 10) says:

"The sense of slight shock which Christians in the United States may receive from Wu's criticisms, carefully and philosophically expressed tho they are, may at least cause them to appreciate the feelings of the Chinese multitude—to whom their religion is as sacred as ours is to us—when the Chinese find it systematically comdemned by European and American religious propagandas which are often neither careful nor philosophic in their zeal. And the situation might be still more appreciated if instead of our polite and smiling Wu there were hundreds or thousands of Chinamen among us sent thither expressly to uphold the Confucian system and to disparage Christianity in the highways and byways."

The Philadelphia *Presbyterian* (December 19), in speaking of Confucianism and other non-Christian religions, says:

"Over against their terrible emptiness and failures stands Christianity with its God of heaven and of earth, with its redeeming Christ, with its sanctifying Spirit, with its Bible as an infallible rule of faith and practise, with its sacraments and church-ministries, with its tenders of grace for life and death, and with its celestial rewards. It is designed for all human creatures and relations, and wherever it is allowed free and full scope, it proves uplifting, beneficent, and saving in all phases of existence here and hereafter. Our Chinese critic evinces the darkened and perplexed mind of heathendom when he comes to deal with the soul's immortality. He speaks of it as a 'pleasant thing to contemplate,' and 'wishes it were true,' but it remains an enigma to him. His religion throws no certain light upon it. He assures us that 'Confucius would be called now an agnostic,' as the best this sage could say was that 'there were four things to be avoided: extraordinary things, feats of strength, disorder, and spiritual things.' But just here Christianity joins issue with him. It 'brings life and immortality to light.' It deals with marvels. It establishes itself by supernatural revelations and attestations. It produces miracles of faith and delights in extraordinary accomplishments. It insures resurrection to the body and glorification to the soul. It turns disorders into harmonies. It develops, ennobles, purifies, and perfects the spiritual."

The New York *Truth-Seeker* (Free-Thought) says:

"Like most religionists, Wu is a sectarian. He will find, probably, that Confucianism will be left in the heap with other religions, for the sentiments he ascribes to it are but the human expression common to all races and not peculiar to Confucius or the Chinese. At the same time a religion which should confine itself to these humane sentiments would have an infinite superi-

ority over Christianity, whose seer came to bring war and not to do good."

Mr. Wu has since denied that he intended any attack upon Christianity, and claims that the total purport of his address is not made clear by the press reports. He says, as quoted in the telegraphic reports:

"My theme was Confucius. The doctrines of Confucius are imperfectly understood in this country by people, and my task was to make clear, in as succinct a manner as possible, without taking too much time, the cardinal points of Confucianism. In order to make it clear to an American audience I chose the best form of religion, and that is Christianity, which was well known in this country, and which is considered the highest form of religion ever known, to be the standard by which comparison can be made, and I tried to compare the doctrine of Confucianism with the superior form of religion. It was not my intention to make an attack on Christianity. Taking that as the standard instead of being considered an attack should be considered a compliment."

## IS THE LAND OF LUTHER BECOMING ROMAN CATHOLIC?

SINCE Bismarck "went to Canossa" and the Pope triumphed over the most astute diplomatist of the century, the Center or Roman Catholic Party in Germany has occupied a position of very great political influence, and on the whole Roman Catholicism has made some notable gains in the empire. A writer in the New York *Observer* (Presb.) thinks, however, that Protestantism, in spite of some occasional setbacks, is more than holding its own. But he says:

"There is perhaps one dark spot in the outlook—in Saxony. Here in the country where Luther was born, and where his wonderful Reformation work was begun, there is a singular tendency among the members of the oldest aristocratic families to join the church of Rome. Whole families have gone over to Rome, families bearing names illustrious in the history of the Reformation. The reason is probably not far to seek. The royal house is zealously Catholic, and the King, now an aged man and no longer in the prime of mental vigor, shows a distinct inclination to fill all offices around his person and wherever his influence extends with members of the Roman community. A near relative of the king's, Prince Max of Saxony, was recently consecrated a priest of the Catholic Church. This young man's influence among the Saxon nobles, especially among the ladies, is enormous, and it is probably these royal and court intrigues which are responsible for many of the recent conversions. German Protestant associations are much concerned at the feebleness of the Saxon nobles, and on more than one occasion recently earnest appeals have been addressed to them conjuring them not to forget the faith of their forefathers, and to remain true to the principles of the evangelical faith."

On the other hand, the Rev. Walter Elliott, one of the best known of the Paulist Fathers, in a sermon which lately attracted considerable notice, takes the view that there is a well-defined movement toward the Roman Catholic Church in all the Germanic races, including the inhabitants of Scandinavia and the Low Countries. Of the movement in Norway and Sweden, where several prominent authors and scholars have lately become Roman Catholics, we have recently spoken. Concerning the Netherlands and the German empire, Father Elliott thus speaks (we quote from the New York *Catholic News*, December 15):

"The only really live religion in Germany and Holland is the Catholic. In both countries the non-Catholic mind is wavering in doctrine; the situation is worse than that among the higher intellectual circles. But the Catholic clergy and people are absolutely enthusiastic in their faith. They are in a position to win many converts.

"No foreign brethren of ours are more interesting than the German Catholics, for a large part of our American Catholics are of German blood, among the firmest and most zealous in the world. In 1871 the German empire challenged the Catholic religion to battle. Bismarck and William I., after conquering Austria and France at Sadowa and Sedan, undertook to conquer Rome. Catholic colleges and seminaries were closed, the religious orders were suppressed, eight bishops and 1,800 priests were imprisoned or exiled, and Protestantism universally applauded this latter-day oppression of conscience. The outcome of this battle of brute force against mind, of soldiers against worshipers, of prisons against churches, has been that the German Church has advanced to the front rank. In the fight for liberty of conscience, liberty of education and political liberty, the German Catholics have whipped the biggest military machine in the world. The gentle Teutonic soul, longing for God conquered the ugly helmeted Teutonic barbarian and drove him to Canossa.

"Politically the German Catholics are the Centrum. They are the center of the nation. About them circle all affairs of national interest. They indeed love their new nation, which they feel to be a nation of the future—a mighty race for war, for commerce, and colonization, princeps in learning, speaking a language of giants. The Centrum in saving the Catholic German faith has become the rock of the German empire. It will become the fulcrum for missionary effort, the like of which has not been seen since Boniface planted the cross at Fulda. Already this providential result of the Bismarckian persecution is becoming evident, and the interior inspirations toward winning back to Christ and His Church the noble races of the Rhine and the Elbe are beginning to be felt. There is valid hope that 'God and Fatherland' shall soon become a resistless missionary war-cry."

## THE "LETTER OF LENTULUS" AND THE PERSONAL APPEARANCE OF CHRIST.

AN inquiring reader of a metropolitan daily lately asked whether any authentic description of the physical characteristics of Christ has come down to us. In answer the New York *Times* printed without comment the following well-known letter said to have been written to the Roman senat by Publius Lentulus, "President of the People of Judea in the reign of Tiberius Cæsar":

"There lives at this time in Judea a man of singular virtue, whose name is Jesus Christ, whom the barbarians esteem as a prophet, but his followers love and adore him as the offspring of the immortal God. He calls back the dead from their graves, and heals all sorts of diseases with a word or a touch. He is a tall man and well-shaped, of an amiable and reverend aspect; his hair of a color that can hardly be matched, falling into graceful curls, waving about, and very agreeably couching upon his shoulders, parted on the crown of the head, running as a stream to the front, after the fashion of the Nazarites. His forehead, high, large, and imposing; his cheeks without spot or wrinkle, beautiful with a lovely red. His nose and mouth forming with exquisite symmetry. His beard thick, and of a color suitable to his hair, reaching below his chin, and parting in the middle like a fork. His eyes bright, blue, clear, and serene; look innocent, dignified, manly, and mature. In proportion of body, most perfect and captivating. His hands and arms most delectable to behold. He rebukes with majesty, counsels with mildness; his whole address, whether in word or deed, being eloquent and grave. No man has seen him laugh, yet his manners are exceedingly pleasant; but he has wept frequently in the presence of men. He is temperate, modest, and wise—a man, for his extraordinary beauty and divine perfections, surpassing the children of men in every sense."

Some discussion has been elicited by this letter. Mr. Moncure D. Conway, one of the leading radical American students of religion, writes as follows in the paper already quoted (December 15):

"The Lentulus letter is one of the most successful 'fakes' in the history of religious fraud, because of its beauty. Rossetti's 'Head of Christ,' which has long been my cherished possession, was, I believe, painted under the inspiration of this pretty invention, and if the appearance of Jesus had not been too rigidly conventionalized when it was devised (fifteenth century), no

doubt the pretended letter would have marked its reappearances during its five centuries in other beautiful works. Had it only been as artful as it is artistic it would be the masterpiece of fabrications, and Christian historians might to-day be defending instead of repudiating its pretensions. The old inventor imprudently put Lentulus in a city where no such person ever was, gave him an office that never existed, and made him write about Christus Jesus, an appellation unknown during the lifetime of Jesus and evidently taken from the New Testament. The adventures of the hoax have been tracked by Gabler, Herzog, Dr. Robinson, Schaff, and others, and there is a good summary in McClintock & Strong's 'Cyclopedia.' The original is given in this cyclopedia, and those familiar with Latin will find it amusing and instructive to compare the old letter with what it has become at the close of the nineteenth century, as quoted in your issue of December 8. The 'Son of God' (*vocant filium Dei*) in the first sentence has become 'offspring of the immortal God' (more Romanlike), the 'red beard' has been suppressed, the 'changing and brilliant eyes' are now blue, and a considerable number of adjectives have been added. . . . . .

"Nothing is more certain to scholars occupied with Christian history, whatever their creeds, than the fact that not one scrap or sentence written during the lifetime of Jesus, by Jew or Gentile, contains any allusion to Him whatever, or even to His existence; also, that of all the writings about Him after His death not one has been traced to a contemporary."

Another writer in *The Times* gives the following information about other alleged descriptions of Christ:

"Another description is found in the works of John of Damascus, in the eighth century, and a third in the church history of Nicephorus, fourteenth century. Besides these traditions may be mentioned the two so-called pictures of Christ—that sent by Him to King Abgarus and that imprinted on the handkerchief of Veronica. According to the legend, St. Veronica was a pious woman of Jerusalem, who when Christ passed by her on His way to Golgotha, took off her head covering and handed it to Him in order that He might wipe the blood and sweat from His face, and when He returned the cloth His features had become impressed upon it. Isn't this the first account of instantaneous photography on record?"

Still another writer remarks that "up to this time there has been made no discovery of any drawing, painted portrait, bas-relief, statue, bust, stamp on coin, or written description of Christ of which there is any truth whatever of its having been done during His life or after His death by any one who saw Him while He was alive."

## IS HELL BETTER THAN ANNIHILATION?

THE ancient doctrine of everlasting punishment in hell, which historic Christianity, almost alone among the great religions of the world, has officially held from the days of Athanasius to the present time, has by a certain school been rejected in late years. Dean Farrar and other "Universalists," in or out of the Universalist Church, frankly assert that they believe in "eternal hope"; while the poet Bailey, author of the once world-famous "Festus," taught that even Satan and the aboriginal inhabitants of Sheol would be saved, despite their present recalcitrant state. Another school, far less widely known, and for the most part made up of conservative theologians, adopt the theory of "limited" or "conditional" immortality, to which we have already referred in these columns. Just now there is a discussion in the London *Spectator* as to the relative attractiveness of hell and of annihilation for those who may have no hopes of dwelling in the Elysian abodes—a discussion first started by the recent publication of "The Life and Letters of T. H. Huxley." On Huxley's tomb are engraved the following lines, said to have been written by his wife:

> And if there be no meeting past the grave,
> If all is darkness, silence, yet 'tis rest.
> Be not afraid, ye waiting hearts that weep,
> For God still "giveth His beloved sleep."
> And if an endless sleep He wills—so best.

Huxley himself, as *The Spectator* points out, preferred "hell (in moderation)" to utter extinction. In commenting on this preference, Mr. F. C. S. Schiller, of the University of Oxford, lately of Cornell, a psychologist of some repute, calls attention to the fact that Huxley's case very forcibly brings out how much we still have to learn concerning men's real feelings toward the prospect of a future life. He writes (in *The Spectator*, November 24):

"Psychologically, of course, such a sentiment appears at first sight a complete paradox. Yet I have no doubt that in Huxley's case it was entirely genuine, and that an appreciable number of persons actually entertain it. On the other hand, I should think, judging by what one hears, that a very considerable number of persons do not want to go on living, and even have a strong emotional horror of the prospect of a future life. They would, consequently, welcome any assurance that exempted them from this doom. This variety of sentiment appears to be very common among the old and weary and unenergetic. It exists quite apart from religious beliefs and scientific convictions, and often indeed runs counter to them. Similarly, a large proportion of sincere Christians regard the prospect of 'heaven' without the slightest enthusiasm, and even with secret aversion. I suspect that what the generality of men would really like would be a (somewhat improved) continuation of their earthly existence. It would be very interesting, therefore, to determine in what proportions these various sentiments actually occur in cultivated persons of the day, and such an inquiry could not fail to throw much light on the emotional foundations of belief and on the strange inefficaciousness all the world over of the traditional doctrines concerning 'the things beyond death.' For whatever these doctrines are, the actual conduct of men is pretty much the same everywhere, and pays but little heed to any eschatology. Can the reason be that all the religions have failed to reach a complete understanding of human feeling on the subject, and so to get a real grip on human motives? The point seems deserving of exact investigation. When, recently, a statistical inquiry into men's actual sentiments with regard to a future life was suggested as an appropriate matter for the Society of Psychical Research to undertake, the late Professor Sidgwick held, I believe, that such inquiry would be useless, on the ground that every rational being *must prefer* heaven to annihilation, and annihilation to hell. Huxley's avowal is sufficient to dispose of this contention, and shows that either men are not rational, or that the subtleties and profundities of human psychology can not be adequately explored by the narrow categories of an abstract logic."

Still another writer in *The Spectator* calls attention to the following curious lines in Thomas Cooper's poem, the "Purgatory of Suicides," written in 1843, in Stafford jail:

> Oh! I could brook
> The dungeon, tho eterne!—the Priests' own hell,
> Ay, or a thousand hells, in thought, unshook,
> Rather than Nothingness! and yet the knell,
> I fear, is near that sounds—*To consciousness farewell!*
> (Book III., stanza 24.)

## RELIGIOUS NOTES.

BISHOP SBARETTI, apparently, is not to leave his see of Havana, even tho Gomez and his party would prefer a Cuban. The New York *Catholic News* says: "As bishop of Havana he has proven himself to be a man of rare ability, and the fact is that the Cuban people have the greatest respect for him. The Catholics of his diocese have no thought of asking for his removal. They know that nationality makes no difference in the universal church. It is only a handful of Cuban politician without any religious belief at all who are the agitators against Bishop Sbaretti. These men give an exhibition of impertinence by their attempt to interfere in Catholic Church affairs."

IN reference to the article on "The Reformed Christian Science Church," reproduced in our columns December 15, Mr. Willard S. Mattox, of the Christian Science Publication Committee for the State of New York, writes us a letter declaring that the new organization referred to "is not a schism of the Church of Christ, Scientist, because it was never a part of the Christian Science Church, and few, if any, of those composing the new sect ever were Christian Scientists." The statement that the Christian Science churches do not give free lectures is also contradicted: "Only last Sunday, December 16, at Carnegie Hall, this [New York] city, Judge Joseph R Clarkson, of Omaha, spoke before 3,500 people who did not pay a penny to gain admission." Mr. Mattox denies the right of the new organization to the name it has chosen: "Any one who departs from the strict teachings and practises of Christian Science forfeits all right to call himself a Christian Scientist. If Christian Science be true, there can be no Reformed Christian Science, and if it be not true, then why the preservation and perpetuation of the name or any part of a system declared to be false?"

# FOREIGN TOPICS.

## CANADA AND THE NICARAGUA CANAL.

OUR Canadian neighbors emphatically reject the idea that the United States must control any waterway connecting the Atlantic and Pacific; and the practical refusal of the United States Senate to indorse the terms of the Hay-Pauncefote treaty has aroused a storm of protest across the border. Many papers, like the Toronto *Globe*, accuse the United States of base ingratitude, asserting as an historical fact that Great Britain saved the United States from European interference during the recent war with Spain. The Winnipeg *Tribune* declares that the world can not permit the Nicaragua Canal to become a commercial and political weapon in the hands of Uncle Sam, and the Toronto *Westminster* points to the Suez Canal as a precedent. Very few express themselves as moderately as the Winnipeg *Telegram*, which says:

"At this time, when mutual interests and a better understanding of each other have built up between the two nations a friendly feeling, it would be lamentable if this question should sow anew the seeds of discord. Each nation, it may be hoped, will do its utmost to meet the views of the other, and diplomacy may yet find some solution of the difficulty perfectly satisfactory to both parties."

*Saturday Night* (Toronto) says:

"The perfidious conduct of the United States Congress in its treatment of the Hay-Pauncefote and the Clayton-Bulwer treaties with regard to the Nicaragua Canal should enlighten Great Britain as to the utter absence of honor which characterizes the representatives of the United States in their dealings with foreign nations. Individually the people of the United States are liable to deal as fairly and honestly with one another and their customers abroad as the individuals of any other nation, but their Congress seems to have a code of honor fashioned upon the ethics of a gypsy horse-trade."

The Toronto *World* is shocked by our manners, our absence of regard for the rights of others, and our alleged contempt for international law, "which," it thinks, "is more binding upon nations to-day than ever." The Toronto *Telegram* says:

"Protests may come quick and fast from the South American republics, which view with alarm the disappearance of the treaty guaranteeing them against the effects of an aggressive policy by either Britain or the United States. When the Clayton-Bulwer treaty goes by the board the United States will be free to annex a few South American republics. Great Britain may oppose the annihilation of the Clayton-Bulwer treaty, and the Panama Canal scheme may yet be effectively revived. The United States scheme contemplates a canal one hundred and sixty-five miles in length against the sixty-five mile canal which De Lesseps proposed to build."

There are also hints that Uncle Sam must behave or take a whipping. *Events* (Ottawa) says:

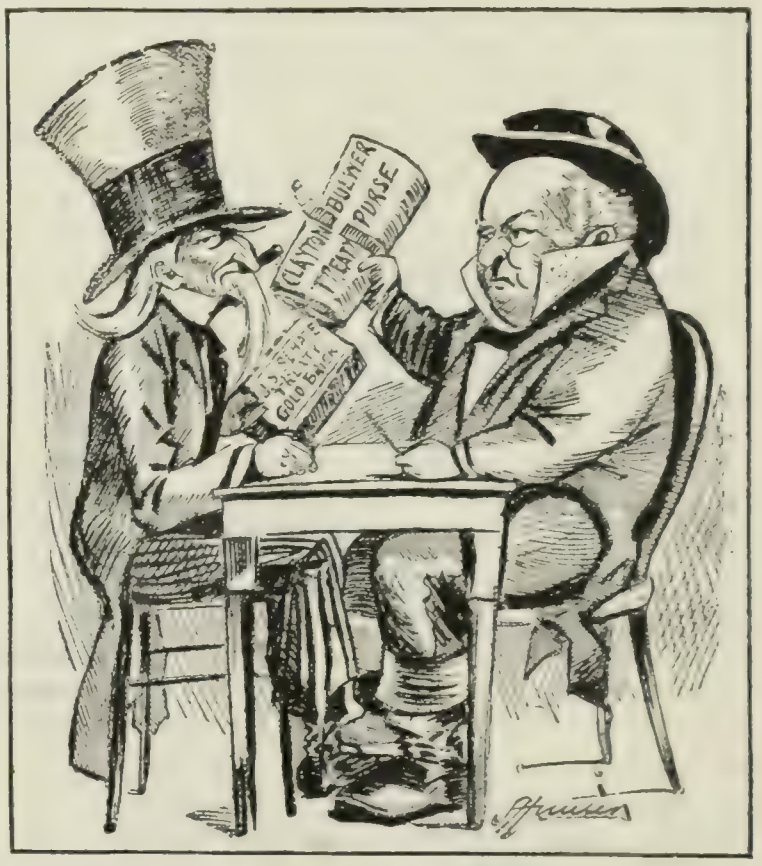
"Are the Americans prepared to fight? There are only two ways by which a treaty of this kind can be abrogated. One is by mutual consent, and the other is by war. As the Americans do not offer Britain anything for her consent to the abrogation of the Clayton-Bulwer treaty, and as she would be very foolish to give up so much for nothing, the only thing apparently for the Americans is to fight for it. The affair is very much tangled up, and the trouble is due entirely to American jingoism. As usual, the Yankee wants everything in sight, and he wants it for nothing. For Britain to give in to the extraordinary demands of the Americans would be a deplorable and a dangerous weakness. It would render all her treaties practically worthless if she allowed this one to be canceled without her consent, or even consented to its abrogation without getting a concession of full value in return. The feeling in Great Brit in so far as it has found expression is that the Americans must on this occasion be made to toe the mark."

The Montreal *Witness* is rather sorry for the United States for having such a "clownish" Senate. It nevertheless adds:

"In reprobating these unreasonablenesses, however, we have to keep in mind that the law of nations still is that he should take who has the power, and he should keep who can, and that the Senate, in throwing aside every question of right or honor in dealings, is merely asserting in a blunt way a fact which can not very easily be denied, that the United States is a giant and impregnable power that can demand pretty much what it likes, as no one proposes to quarrel with it."

Goldwin Smith, who writes in the Toronto *Weekly Sun*, is inclined to think that John Bull will deal rather gently by us. He says:

"Palmerston, of all ministers the most bellicose, assumed a very menacing attitude in the Trent affair. But then the Americans were at war among themselves, and the union of the British power with the South, the French Emperor being inclined the same way, would have been overpowering for the time. The British Foreign Office will preserve its dignity. Bluster when you do not mean to fight is worse than useless. Great Britain has always done for her own interests and the interests of those under her protection on this side of the water the best that diplomacy could do; she never will do more. The precedent of the Suez Canal, which is under international control, is hardly available in the case of the Nicaraguan Canal. Great Britain did not build that canal; on the contrary, Palmerston, from fear about the approach to India, did all he could to prevent it from being built."



HE PREFERS THE OLD PURSE.

MR. BULL: "Hexcuse me, Sammy, but your huncle John ain't a-purchasing gold bricks at present"

—*The Montreal Herald.*

**One Reason for China's Decline.**—One reason for the failure of the Chinese to become a really great and enduring people is the lack of soul. This is the opinion of Léon Charpentier, who contributes to a recent number of *La Nouvelle Revue* (Paris) a paper on the popular mythology of China. M. Charpentier says:

"Altho the Chinese profess utter indifference as to the dogmas of their three religions, Confucianism, Buddhism, and Taoism, and while they consider the beautiful ethics and philosophy of Confucius as mere good advice, nevertheless the imagination of the Chinese people, deeply influenced by the mysteries of nature and life, has created a swarm of marvelous and powerful

beings, to which are attributed, by the fears and hopes of the believers, a constant and important rôle in the government of the world."

A detailed consideration of the many gods and sacred animals that enter into the daily worship of the people brings M. Charpentier to the following conclusion:

"No people reject all dogma as vigorously as do the Chinese. They concern themselves not at all with the lofty morality of Confucius; yet, at the same time, no race exhibits such abject slavery to a fetishism at once tyrannical and degrading.

"This is why the Chinese, altho they have an immense domain, will never become a really great people. In this vast body there will never be a soul. The ancient Greeks, few in number as they were, must be accounted the noblest race of history. Perhaps Confucius will bear comparison with Plato; but when a society has no noble code of ethics, it will not grow; when it has lost such a code, its period of decadence has begun. The whole question for any nation is to know or not to know how to put into action 'the sublime harmony of beauty and life.'"
—*Translation made for* THE LITERARY DIGEST.

## BEHAVIOR OF THE ALLIES IN CHINA.

REPORTS of outrage, cruelty, and wholesale looting in China by the allied forces still come to hand, tho it is notable that such accounts receive currency chiefly in British and American papers. The correspondent of *The Straits Times* (a British colonial paper), who was in Peking during the entire siege by the European troops, declares that more than 50,000 Chinese men, women, and children, in the ordinary proportion in which they obtain in towns, were killed by the European and Japanese troops after the latter had entered the city. "Babies, children, men, and women," he says, "were indiscriminately bayoneted or shot." The correspondent of *The Daily Express* and *The Sphere* (London), Mr. George Lynch, declares that the savagery was "beyond conception." The Japanese and Americans were least culpable, but "a horrible lust of cruelty has developed throughout the private soldiery of all nationalities." To a representative of the Kobe *Chronicle*, (also under British auspices) Mr. Lynch said recently:

RUSSIA: "Open door?—Why certainly, there you are."
—*Fischietto, Turin,*

"In the course of the march to Peking, I found that the best-behaved body of troops among the whole lot were the Japanese. Particularly at Tungchau, where the Russians behaved abominably. I here myself saw Chinese women lying under the walls, from which they had jumped to escape being ravished by the Russian soldiers, with their hips broken. . . . The Russians were perpetually committing acts of cruelty. As an instance of what continually occurred I saw them kicking along a little boy of ten or eleven years old like a football. . . . It was impossible to be a member of the expedition without noting the inhumanity exhibited by the Russians as a matter of course. The Russian soldiers were perpetually prodding the Chinese with their bayonets, which they had fixed on their rifles the whole time. . . . It was a notorious fact that fifteen Russian soldiers raped a girl of eleven years old to death. The French soldiers, I am sorry to say, were also exceedingly cruel. Indeed, no nationality was altogether blameless in this matter. . . . Then you must recollect that it was a war without wounded. Practically no prisoners were taken."

One of the Japanese correspondents at the front (Mr. N. Taguehi, of the *Keizai Zasshi*) says: "Everywhere they [the French and Russian soldiers] went they scattered sorrow and anguish, their footsteps being those of plunderers and ravishers of women when no fighting was going on. Yet they showed themselves on the field of action the most cowardly of all." *The Japan Times* (Tokyo), commenting on the alleged outrages, says: "Such inhuman excesses will remain a lasting reproach to the civilization and honor of the countries to which the cruel brutes belong." "Enough has been done that the world knows of," says

IN STILL WATER THERE IS GOOD FISHING.
—*Kladderadatsch, Berlin.*

the Kobe *Herald*, "to stain the name of the Russian empire with a blot that will prove all but indelible."

The question of looting by the allied troops is still the subject of severe newspaper comment. Several of the powers—notably Great Britain and the United States—have officially condemned the practice by forbidding their troops to take without remuneration any article from a Chinaman or from a Chinese building. The French Government also has returned unopened a number of cases of plunder sent to President Loubet by General Frey (commander of the French marine forces in China); and Vice-Admiral Alexieff, Russian naval commander, is reported to have ordered his men to make out detailed lists of Chinese property in their possession, stating where such property now is. These orders are, however, it is averred, so easily evaded as to be practically of no effect. "The atmosphere of the city is loot," declares the correspondent of *The Westminster Gazette:*

"Moreover, people who a month ago were most emphatic in their condemnation of the practise are now among the most active in the wild scramble to obtain for nothing or next to nothing almost priceless treasures—the disease is as contagious as smallpox. It started with the soldiers, but it quickly spread until it embraces not only officers and civilians but missionaries and high officials within the Legations. Only a very few have withstood the temptation to loot, and these are inwardly rebellious because their consciences do not allow them to participate in the harvest."

In the interview with the Kobe *Chronicle* already quoted from, Mr. Lynch charges the missionaries with "disgraceful, promiscuous looting, or, at least, profiting from looting." We quote again from the interview:

"The private looting that took place was most successfully exploited by the missionaries. When an effort was made to stop promiscuous looting, every British officer was put on his honor to give an account of any loot that he had, and to return everything except one or two things of trifling value which he was allowed to keep as souvenirs. The looting stopped from that time among the soldiers—that is, private looting. But the missionaries were not bound by this at all. They took possession of big Chinese houses, where they carried on sales of everything they

could seize, engaging their converts to bring them in fresh articles from private houses as purchases depleted their stock. I bought a sable coat myself from a missionary for $125, after bargaining with him for some days. I sent home a photograph of one of these gentlemen taken in his 'shop' with piles of furs and Buddhas round him and his converts assisting in the selling. He stood amid the Buddhas like a poulterer selling his pheasants. He had a Chinese there valuing the things. The Chinese put on the full value, and the missionary sold them for one third less.

"'Did they say what the proceeds were for?'

"'Yes. For the good of the 'cause.' The money went straight into their desks.'"

Mr. Lynch promises to publish the portraits of these missionaries when he returns to England. There are several extensive "loot markets" in Northern China. A correspondent of *The Celestial Empire*, speaking of the allied camp near Tientsin, says:

"In every by-street and in the environs of the camps soldiers of all the powers gather in little groups bartering the spoils of war. It is all done very quietly, and apparently is winked at by those in authority. These little extemporized bazars are

A NEW EUROPEAN VOCAL CONCERT.

"We hold fast and true together."

—*Lustige Blätter, Berlin.*

extremely picturesque. Japanese, Americans, Frenchmen, Sikhs, Russians, soldiers of every flag, gather in eager groups, while civilian traders and curio-seekers haggle with them over prices in true Oriental fashion. By far the greater portion of the stuff is practically worthless except, as has been said, for its value as relics."

The American policy with regard to China, as outlined in the President's message, receives rather disparaging comment in the British press. President McKinley's suggestions are anything but definite declares, *The Times* (London). "He is also rather too optimistic as to the final result. Why doesn't he formulate a plan?" *The Standard* holds that "the United States Government has done little to strengthen the alliance. . . . In spite of Mr. McKinley's assurances, it rather acted as a drag upon European diplomacy." The message "contains not one positive suggestion," says *The Daily News*. *The St. James's Gazette* characterizes the President's opinions as "brave words, but entirely without importance." "Obscure and involved verbiage" is the comment of *The Saturday Review;* "the whole trend of the American policy is to leave other nations to do the work by which the United States will benefit." *The Scotsman* (Edinburgh), however, highly approves of the President's references to China, and concludes its comment by saying:

"On all questions of policy and principle to which the message, in its references to China and its future, gives expression, this country will find itself in hearty agreement with the United States."

In an article in the *Revue Diplomatique* (Paris, December 2) P. Coquelle, writing of the so-called Chinese crusade, undertakes to show that the sole motive of the powers in the war with China is to acquire a market for the surplus railroad material manufactured in the different countries as a result of the concessions granted by the Chinese Government before the outbreak of the trouble. This novel view is presented as follows:

"The question of the missionaries alone would never have led to a collective movement of the Powers. For more than twelve hundred years now the Chinese have massacred missionaries periodically, and the result has each time been excuses on the part of the guilty and the payment of large recompense to the families of the victims. Nor is the crusade for the sake of acquiring land upon which the Occidental nations may empty their surplus population. China is already too thickly populated, with the exception of certain inhospitable regions, for the reception of European colonies. . . . No, the true motive of the crusade is the question of railroads. During recent years the great iron-construction companies of England, Germany, Belgium, and to a certain extent also of France, have produced a considerable quantity of railroad material which has not been disposed of. . . . The Chinese have learned that railroads reduce distances; they use them and are satisfied. The result of this experience was a great quantity of demands for concessions on the part of English, German, French, American, and Belgian companies. All were granted, and the concessions up to the present time amount to some twenty thousand kilometers, which is but one quarter of the future system of China. One could regard the industry of the civilized world as rescued. The work commenced, notably on the great artery from Peking to Canton. But the mandarins and lettered classes did not regard so favorably as the common people the introduction of the locomotive. They saw that China would gradually become civilized through contact with European inventions, and that the ruling classes would lose their prestige with the loss of their power and riches. In concert with the Empress, whose secret desires corresponded exactly with theirs, they incited the Boxers. The imperial troops sent to suppress the Boxers were defeated according to order, rather than owing to the superiority of the rebels, the work on the railroad was destroyed, the Peking-Taku line torn up, and the Christians massacred or besieged."—*Translation made for* THE LITERARY DIGEST.

## THE NEW POLAND.

NATIONS are not born in a day, but neither do they die easily. This is aptly illustrated by the Polish problem, burdened with which Prussia enters the twentieth century, and which will tax all the wisdom of her rulers. Whether or not the Prussian Poles are more harshly oppressed than their brethren elsewhere, there is no doubt that their feeling on the subject is keener, and there has come among them a revival of national ambitions, nurtured by their clergy and strengthened by association. The brilliant qualities of the Poles enable them to obtain advantages in many parts of Germany, and altho the Government is well aware of their growing strength, there is no way to oppose men who do not openly rebel. The *Berliner Korrespondenz* says:

"At the end of 1898 there were 894 Polish associations. Their statutes give as their aims, religious edification, good-fellowship, moral improvement, education and enlightenment, and generally, also, the fight against Socialism. Rarely is the cultivation of the Polish language made the chief aim, and still less is the preservation of Polish characteristics mentioned. Only lately has it been possible to prove the political character of the Sokol (athletic) clubs; yet it can not be doubted that the majority of these associations form an enormous national organization for political purposes. Their aim is to gather all Polish elements together, to isolate them from their non-Polish fellow citizens, and to arouse their national Polish feeling. A highly developed press assists in the work."

The *National Zeitung* also declares that the Polish press and clubs are and always will be the enemies of the Germans. The peculiarity of the Polish movement lies, however, chiefly in the

fact that the Poles are not confined to parts of former Poland. They spread all over Germany, assimilate to a large extent with the Germans around them, and in their own provinces their places are filled by Poles from Russia and Austria. The *Deutsche Tages-Zeitung* (Berlin) describes the growth of the Polish nationality in the main as follows:

In nearly every province the Poles have increased. In Silesia they have increased from 994,000 to 1,023,000, in Westphalia from 27,000 to 150,000, since 1890. In 1890 Prussia had 3,000,000 Polish-speaking people out of a total of 30,000,000. But most of these then did not aspire to a separate nationality; they regarded themselves as Prussians. The increase of the Poles is not due solely to an excess of births, but to the strong immigration. There is no doubt that the Poles have been strengthened everywhere by the assimilation of purely German elements.

The movement is all the more interesting as it is not connected with territorial complaints. There is no political difference between the provinces largely inhabited by Poles and other parts of Prussia. The Prussian Government has endeavored to increase purely German influence in purely Polish districts by buying up the estates of degenerate Polish nobles, parceling them among German farmers. But the Polish peasant of to-day is as thrifty and careful as the German, and in many cases the holdings have passed into the hands of Polish cottagers, thus increasing the influence of the Polish element. The Poles have at present fourteen seats in the Reichstag.—*Translations made for* THE LITERARY DIGEST.

## HOPEFUL SIGNS IN SPAIN.

DESPITE the loss of her colonies and the unsettled condition of her internal administration, there are signs of national recuperation in Spain. The budget, which has just been presented by the Minister of Finance, shows a surplus, for 1900, of 7,930,230 pesetas ($1,400,000), and an increase of 48,000,000 pesetas ($9,360,000) in revenue is estimated for next year. The Spanish reviews and journals are also expressing great satisfaction over the results of the Spanish-American Congress (see LITERARY DIGEST, December 8). "It was one of the best things ever done to cement union and permanent concord between the mother country and the Latin peoples on the other side of the Atlantic," is the verdict of *La Ilustrácion Española y Americana* (Madrid).

Prof. Adolfo Posoda, of the University of Oviedo, declares in *La España Moderna* that the congress has been "the initial point for the establishment of better relations between Spain and America, and will certainly correct public opinion in Spain as to conditions in Latin America."

The international position of Spain to-day is not fixed; it is in process of change. But one thing is certain, declares Arthur E. Houghton (of the American legation in Madrid): Spaniards are, unofficially of course, glad to be rid of their colonies. We quote from Mr. Houghton's article in *The International Monthly:*

"When they [the Spanish] talk among themselves about the consequences of the colonial and American wars, they display their characteristic vigor and frankness in confessing that the loss of the colonies is a good riddance. They bitterly charge the colonies with having been a burden on their finances, a constant drain upon their best male population through army, navy, and emigration, a drag upon their resources of every kind, a source of weakness and a clog in Europe. . . . They are of the opinion that the material advantages derived from the colonies by Spanish capital, industries, agriculture, shipping interests, were but a poor set-off against the greater evils of their rule beyond the seas. Their idea is, therefore, after a more or less prolonged period to settle down within their peninsula, become engrossed in the reorganization and development of the abundant resources of their soil and of their mines, to feed their trade in new channels, husbanding and concentrating all their energies and their spirit of enterprise, both in the peninsula and in fields nearer at hand. . . . They illustrate their modern contention by pointing out, for instance, that their diplomacy will have henceforth not only a better vantage-ground from which to go on trying to induce the Spanish-American republics to consent to closer relations, commercial and political, with the old mother country, now that she has severed all connection with the new world, but also a better starting-point for negotiations such as the Madrid Foreign Office is prosecuting with Minister Storer, to put the commercial and all relations between Spain and the United States on a better footing on the principle of reciprocity of concessions."

In a recent address before the *Ateneo* of Madrid, Señor José Echegaray, who is a statesman and orator as well as the greatest of Spain's living dramatists, gives an analysis of the Spanish character such as has seldom been made by a Spaniard. This address, which he entitles "What Constitutes the Strength of Nations?" is thus summarized in the current number of *Poet Lore*. We quote from it:

"What, think you, has overcome us in the past insurrection and in the past war? Not men, for our men died bravely by sea and land; but science and wealth. . . . If Spain had been rich and able to construct armored cruisers, if great capital had enabled her to cover Cuba with railroads, the insurrection would not have prospered nor should we have opposed to our enemies at Santiago an army of specters. . . . Facts are facts: science superior to ours; industry the most remarkable in the world; wealth untold, immense capital,—these are the elements against which we have fought and before which we have fallen. Our defeat was a foregone conclusion. . . . . .

"And in this connection let me point out one signal defect of our race. We are guilty of an incurable social indiscipline, an exaggerated individualism which sterilizes the noblest efforts and the highest faculties. Not that we are more rebellious or ungovernable than other peoples of Europe: ours is a deeper indiscipline of the mind by which we tend fatally toward division, showing that the centrifugal forces within us are enormous. Nobody agrees with anybody else, and each often ends by inconsistency with himself. Wherever a number of our people gather together for social, scientific, artistic, industrial, economic, or political purposes, there arise as many opinions as there are individuals, not a bad thing in itself, but it stands to reason that each should leave the domain of theory and come down to the practical, each ceding something toward a coordinate result. . . . We have a lively imagination, a rapid comprehension; we see much and quickly from the realm of fancy. The variety of our conceptions exceeds perhaps those of any other people of Europe; but it is variety in disorder. Our heads are full of fancies, our horizons are expansive, we entertain a multitude of conflicting ideas; but we know not how to select the principal ones, those which should dominate, or how to subordinate the lesser ones. We are like a piano without pedals, all the strings vibrating at once, and confusion reigns instead of harmony."

## CORRESPONDENTS' CORNER.

### The Bible and the Trees.

*Editor of* THE LITERARY DIGEST: In THE LITERARY DIGEST of September 22 (page 344) you quote from Dr. Felix L. Oswald's article on the value of shade-trees, in which he says: "It is a strange fact that not one of the religions of the world gives a word of warning against the folly of forest destruction." He is not well informed in Jewish history, as your readers may learn from Deut. 20:19: "When thou shalt besiege a city a long time, thou shalt not destroy the trees thereof, by forcing an ax against them, and thou shalt not cut them down, for the tree of the field is man's life"

JOHN BRERETON.

LAMAR, MO.

### Lutherans and the Epistle of St. James.

*Editor of* THE LITERARY DIGEST.—One of your correspondents inquires if I can prove that Lutherans of to-day "reject the Epistle of St. James because it contradicts justification by faith alone," his question implying that I have asserted they do.

I answer: Of course not. Nor am I responsible for the statement as quoted. I would not presume to make so categorical an assertion, for it is my conviction that one can seldom tell at any moment just what any Protestant does or does not reject. My words were: "*If* Lutherans," etc.

Is it not rather amusing to find a *Lutheran* telling us "The Epistle of St. James does not contradict justification of faith alone?" *Lucus a non lucendo*, no doubt. It is a new proof for the thesis presented in the pages of *The American Ecclesiastical Review.*

As to "Norway, Sweden," etc., your correspondent will find my statement in quotation marks with a reference to the author, page, date, and place of publication of the volume quoted

The Royal Houses of Israel and Judah.—Rev. George O. Little. (Funk & Wagnalls Co., $3.00.)

## CURRENT POETRY.

### With a Copy of Keats.

By FREDERIC LAURENCE KNOWLES.

Like listless lullabies of twilight seas
Heard from still coves, and soft and sad as these;
Such is the echo of his perfect song—
It lives, it lingers long!

Beside his fame Hyperion's luster pales,
Sweeter his own song than his nightingale's;
No voice speaks, in the century that has fled,
So deathless from the dead!

How many stately epics have been tossed
Rudely against Time's shore and wreck'd and lost,
While Keats, the dreaming boy, floats down Time's sea
His lyric argosy!

—From "On Life's Stairway" (L. C. Page & Co.).

### Theocritus.

By OSCAR WILDE.

O Singer of Persephone,
In the dim meadows desolate
Dost thou remember Sicily?

Still through the ivy flits the bee
Where Amaryllis lies in state,
O Singer of Persephone.

Simœtha calls to Hecatë,
And hears the wild dogs at the gate;
Dost thou remember Sicily?

Still by the light and laughing sea
Poor Polypheme bemoans his fate,
O Singer of Persephone.

And still in joyous rivalry
Young Daphnis challenges his mate,
Dost thou remember Sicily?

Slim Lacon keeps a goat for thee,
For thee the jocund shepherds wait;
O Singer of Persephone
Dost thou remember Sicily?

### The Millionaire.

By ARTHUR STRINGER.

Wasted and all in rags his starved soul went,
And opulently paupered, he grew old,
And stood with loaded hands and heart forespent,
A beggar, with a million bits of gold.

—*Ainslee's Magazine.*

### The Vintage.

By ARTHUR STRINGER.

Love brewed me drink in the cup o' life
At the tavern of the years.
Love bade me drink to the dregs thereof
And, oh! I found that the brew of Love
Was but the wine of tears!

—*Ainslee's Magazine.*

**A Strengthening Tonic**

**Horsford's Acid Phosphate.**

Especially recommended for the relief of nervousness and exhaustion so common with the *grip* patient. Nourishes and strengthens the entire system by supplying the needed tonic and nerve food. Induces restful sleep.

DIGEST readers will be interested in the announcement regarding "An English Woman's Love Letters," which appears on the page facing second cover page of this issue. The book is aptly styled "a genuine literary sensation."

## Current Events.

### Foreign.

CHINA.

December 25.—The representatives of the powers at Peking, through the Spanish minister, deliver the joint note to Prince Ching, Li Hung Chang being too ill to attend; it is forwarded immediately to the Empress-Dowager and the Emperor.

December 26.—According to reports, a force of 2,500 Chinese is met by French troops, the Chinese suffering great loss.

December 27.—Emperor Kwang Su strenuously objects to the terms of the joint note calling for the reduction of the forts in China, and permanent legation guards.

December 30.—The Chinese plenipotentiaries in Peking are ordered by the Emperor to sign the preliminary joint note of the powers and to ask for a suspension of hostilities.

SOUTH AFRICA.

December 26.—Cape Town reports that a squadron of yeomanry has been entrapped by the Boers and captured.

December 27.—General DeWet seeks to make his way south, to lend strength to the Cape Colony invasion, but meets continued opposition.

December 29.—Lord Kitchener reports a skirmish at Graylingstad, on the Vaal River, with serious British losses.

Kimberley is reported again to be practically isolated.

Lord Roberts sails from Gibraltar for England.

December 30.—General Kitchener reports that the Boers have surprised the British garrison of Helvetia, on the Delagoa Bay railway.

Fresh Boer commandos invade Cape Colony.

OTHER FOREIGN NEWS.

December 24.—The Pope closes the Holy Door in the Basilica, at Rome, which he opened last year; the ceremony is witnessed by 80,000 persons.

General Kodama, governor of Formosa, is appointed Japanese minister of war, replacing General Kathura, who resigns.

Reports state that Celestino Peraza, formerly secretary-general of President Castro of Venezuela, has revolted against the Venezuelan Government, near Lezema, in the Guarico district.

December 25.—The Dowager Lady Churchill dies suddenly in England.

Edmund Barton, former leader of the Federal Convention, accepts the Earl of Hopetoun's offer to form the first cabinet of the Australian Federation.

December 26.—Gilbert Parker, the novelist, starts for Egypt, to study the administration there.

### Domestic.

CONGRESS.

December 24.—The War Department decides not to take any further action toward bringing volunteers home from the Philippines until Congress provides regulars to replace them.

December 25.—A race riot breaks out in Centerville, Ind., negroes getting drunk and threatening the white residents.

The Salvation Army gives Christmas dinners to 40,000 persons in New York City.

December 26.—Ex-President Cleveland issues a

THE BAKER & TAYLOR CO.,
Publishers, 5 and 7 East 16th Street, New York.

YOU can buy a chimney to fit your lamp that will last till some accident happens to it.

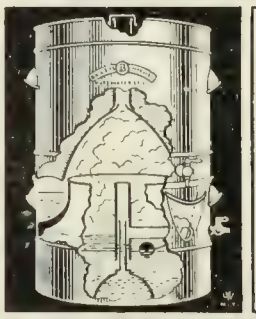
Macbeth's "pearl top" or "pearl glass" is that chimney.

You can have it—your dealer will get it—if you insist on it. He may tell you it costs him three times as much as some others. That is true. He may say they are just as good. Don't you believe it—they may be better for him; he may like the breaking.

Our "Index" describes *all* lamps and their *proper* chimneys. With it you can always order the right size and shape of chimney for any lamp. We mail it FREE to any one who writes for it.

Address MACBETH, Pittsburgh, Pa.

BAILEY'S NEW MODEL



Latest production of A. R Bailey, inventor of the Ralston Still and formerly Pres. and Mgr. of the A. R. Bailey Mfg. Co. Our 1901 Model is the only Still now recognized and endorsed by the Ralston Health Club of America. Has all the advantages and none of the defects of others.

PURE WATER STILL

SOME OF THE IMPROVEMENTS.

FORCED AERATION: Air is mechanically drawn into the Still, cleansed and sterilized by a spray of scalding hot water and steam, and is then forced into the condensing chamber where required for use. Aeration is the life of water.

ENCLOSED DISTILLATE RESERVOIR: This prevents pollution of the water with empyreumatic gases and avoids that "steamy taste" common to other Stills. Distillate reservoir holds nearly 2 quarts.

No. 90, 9 in. diam. 14½ in. high. Made of copper, plated inside and out with pure block tin, only $10.00.

Illustrated booklet I sent on postal request.

MADE ONLY BY
THE BAILEY & LUND MFG. CO.
75 CLYMER ST. BROOKLYN, N. Y.

Both problems solved by M. W. H., University of Virginia; the Rev. I. W. Bieber, Bethlehem, Pa.; H. W. Barry, Boston; C. R. Oldham, Moundsville, W. Va.; the Rev. F. H. Johnston, Tarboro, N. C.; M. Marble, Worcester, Mass.; W. R. Coumbe, Lakeland, Fla.; W. W., Cambridge, Mass.; J. E. Wharton, Sherman, Tex.; A Knight, Hillsboro, Tex.; G. Patterson, Winnipeg, Can.; F. E. Reid, New York City; D. Schaudi, Corning, Ark.; Dr. O. L. Telling, Independence, Col.; H. A. Seade, Mahomet, Ill.; R. J. Williams, Ashland, Pa.; F. F. Carroll, Aiken, S. C.; O. W. Ensworth, Warren, Pa.

524 (only): Dr. H. W. Fannin, Hackett, Ark.; the Rev. A. De R. Meares, Hyattsville, Md.; P. A. Towne, West Edmeston, N. Y.; W. J. Leake, Richmond, Va.; Prof. R. H. Dabney, University of Virginia; A. Porter, New Brighton, S. I.; H. Coss, Cattaraugus, N. Y.; S. Stoddard, Kansas City, Mo.; F. B. Osgood, North Conway, N. H.

525 (only): The Rev. G. Dobbs, New Orleans; Prof. W. W. Smith, Randolph-Macon College, Lynchburg, Va.; N. Weil, Calhoun, Ky.

Comments (524): "Trenchant and thorough in theme and treatment"—I. W. B.; "A superb combination. The key develops most surprising depth. B—Kt 3 and R—R 2 are fine 'tries'; the P on R 4, while misleading the expert, prevents a 'cook' by K—R 4"—H. W. B.; "Very fine"—C. R. O.; "The explanation of the key is to enable the R to give mate on Q sq in a certain contingency"—F. H. J.; "Well worth of 1st in any tourney"—M. M.; "Ingenious, and would be even nearer perfection were the key not so apparent from the position of the R"—W. R. C.; "Decidedly good"—W. W.; "A snare for P—R 5 comes within an ace of being the key"—J. E. W.; "A Gordian knot beautifully untied"—A K.; "Worthy of a prize"—H. W. F.; "Most excellent"—A. De R. M.; "Very good in number of different mates"—P. A. T.; "The variety of Black's moves is unusual"—W. J. L.; "The best one I ever solved"—H. C.

(525): "The passport to its beauty is within too easy reach"—I. W. B.; "Surprising number of surprisingly beautiful mates, and the forcing of certain difficult continuations is clever in the extreme"—H. W. B; "An elegant piece of work"—C. R. O.; "Superb, a well-earned prize"—F. H. J.; "This is Slater's favorite theme and a fine one, especially, when well-rendered as in this instance"—M. M.; "Another marvelous game of Polo. Such an exhaustive display of the power of the Knight might well take a first prize in any company"—W. R. C.; "Artistic and polished"—W. W.; "Delightful"—J. E. W.; "Superfine! the quadruple grouping of 3, 4, 5 and 6 pieces is beautiful"—A K.; "Well deserves the award"—G. D.; "The availability of the Knights is a constant surprise"—W. W. S.

It is a strange fact that several of our expert solvers were caught by 524, and others who got 524 failed on 525. For 524, almost every imaginable move was tried for the key: R R 3; R—R 2; P—R 5, and, as several wrote: "Any old move will do." The whole trouble is that you did not see that the Kt on Q B 3 can not move. A number send P x P, intending to mate by Q—K 4; but Q x Kt ch stops it, for, Q x Q is not mate; you took the P from K 4, and now the black K can go to Q 4.

BELL'S PROBLEM.

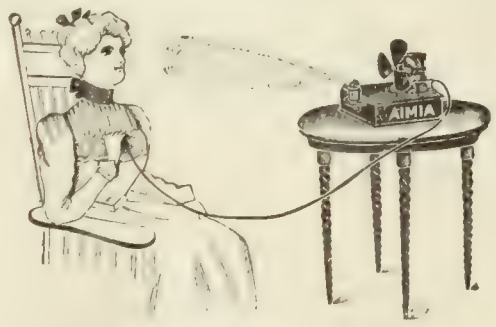
## Chess Nuts.

A new Chess-magazine, to be known as *The American Chess-World*, is to be published in New York City. The first number is promised on January 15.

The Masters Lasker, Maroczy, and Marco, during their recent trip through Hungary, stopped at Nagy Teteni, near Buda-Pesth, and were amazed to find a people all of whom played Chess, even the peasants.

In addition to my little book "Electric Light Home" fifth edition, 10 cents, and the wonderful $1 Electric Motor which I have advertised within these columns for over a year, I recommend for your home my

Vitalized Air Circulator.



James H. Mason, Inventor.

The "Aimia" Vitalized Air Circulator is an ideal one for the sick room, in winter or summer. *For sick people* the outfit can be placed on the table, *the invalid can start or stop the fan* by pressing the button. It is noiseless and its refreshing coolness is of the greatest value.

A BLESSING for the bedroom, serving room, office, store, telephone closet, dining table. It may be **used to deodorize** toilet rooms by placing any desired deodorizer in front of the fan. The *Dry Batteries* (contained in the hardwood box) *will run the fan many months* without renewal with the intermittent use it receives.

**Very refreshing in a second.** Place a bottle of perfume, smelling salts, sal volatile, menthol, lavender salts or a bouquet of flowers in front of the fan, press the push-button and in a moment the swiftly revolving fan will diffuse the odor throughout the room.

This arrangement will be found most delightful near the bedside, even in Winter, as outfit can be kept on a table with push button under pillow or in easy reach.

TRY IT ONCE and you will never be without it afterwards.

FOR DISINFECTING SICK ROOMS, etc., saturate a sponge with any good disinfectant and set same on a plate in front of revolving fan.

This apparatus is highly indorsed by the medical profession.

The battery can be renewed at a cost of only 50 cents.

**Price, including a Bottle of Smelling Salts, Complete, $3.50.**

Jas. H. Mason, Inventor,

Am. Tract Society's Building,

Established 1886. 150 NASSAU ST., N. Y. CITY.

# The Army of Health

## THE ARMY IN THE PHILIPPINES INSIGNIFICANT COMPARED WITH THIS ONE.

If all the people in the United States, Canada and Great Britain, who make daily use of Stuart's Dyspepsia Tablets, could be assembled together it would make an army that would outnumber our army of one hundred thousand by at least five to one.

Men and women, who are broken down in health, are only a part of the thousands who use this popular preparation, the greater number are people who are in fair health but who know that the way to keep well is to keep the digestion perfect and use Stuart's Tablets as regularly as meal time come to insure good digestion and proper assimilation of food.

Prevention is always better than cure and disease can find no foothold if the digestion is kept in good working order by the daily use of Stuart's Dyspepsia Tablets.

Mr. Thomas Seale, Mayfield, Calif., says: "Have used and recommended Stuart's Tablets because there is nothing like them to keep the stomach right."

Miss Lelia Dively, 4627 Plummer St., Pittsburg, Pa., writes: "I wish everyone to know how grateful I am for Stuart's Dyspepsia Tablets. I suffered for a long time and did not know what ailed me. I lost flesh right along until one day I noticed an advertisement of these tablets and immediately bought a 50 cent box at the drug store. I am only on the second box and am gaining in flesh and color. I have at last found something that has reached my ailment."

From Mrs. Del. Eldred, Sun Prairie, Wis.: "I was taken dizzy very suddenly during the hot weather of the past summer. After ten days of constant dizziness I went to our local physician, who said my liver was torpid and I had overheated my blood; he doctored me for two weeks without much improvement; I finally thought of Stuart's Dyspepsia Tablets (which I had used long before for various bad feelings) and the first three tablets helped me.

"They are easily the best all around family medicine I ever used."

The army of people who take Stuart's Tablets are mostly people in fairly good health, and who keep well by taking them regularly after meals. They contain no opiates, cocaine or any cathartic or injurious drugs, simply the natural peptones and digestives which every weak stomach lacks.

Stuart's Dyspepsia Tablets are sold by druggists everywhere in United States, Canada and Great Britain.

# The Literary Digest

VOL. XXII., No. 2 NEW YORK, JANUARY 12, 1901. WHOLE NUMBER, 560

Published Weekly by
FUNK & WAGNALLS COMPANY,
30 Lafayette Place, New York. 44 Fleet Street, London.
Entered at New York Post-Office as Second-Class Matter.

**TERMS OF SUBSCRIPTION.**

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

PUBLISHERS' NOTE: The Index of Volume XXI. of THE LITERARY DIGEST, including twenty-six numbers from July 7 to December 29, is now printed and will be mailed free to any subscriber upon request sent to the publishers by postal card or letter.

## TOPICS OF THE DAY.

### THE NEW SITUATION IN SOUTH AFRICA.

DURING last week, the apprehension in British circles caused by the activity of the invading Boer commandos in Cape Colony was increased rather than diminished, and the opinion is freely expressed in the newspapers that a new lease of life has been given to the South African war by the tactics of the Boers. Richmond, Middelburg, and Graaf Reinet, all of them in the very heart of Cape Colony, have been the scenes of successful looting forays; farther to the north, a British convoy of twenty-six wagons loaded with stores valued at $250,000 was captured, tho this exploit was in part offset by the British capture of five wagons of supplies and 6,000 rounds of ammunition from General De Wet. In the districts now under martial law in Cape Colony are towns within but a few miles of Cape Town itself. The Government has issued an urgent call for volunteers, and guns have been landed from the war-ship *Monarch* to protect Cape Town. "Not in the worst days of the early part of the war," remarks the New York *Tribune*, "when Ladysmith and Kimberley were besieged, did the Boers carry their standard so far into the British colonies." It continues:

"The Boer raiders are not seeking mere loot and destruction. Their hope is to raise the masses of the Dutch population in Cape Colony into open revolt against the Government. That was their aim at the outbreak of the war, and in it they nearly succeeded, being baffled only by the arrival of Lord Roberts at Cape Town. They are trying it again, and are coming nearer to success. There is little doubt that some thousands of the Cape Dutch have already joined them, so that the forces now menacing Graaf Reinet and Cape Town are composed not so largely of invading Boers as of insurgent Cape Colonists. It is in truth a genuine and serious rebellion of its own subjects that the British Government now has on hand. It will suppress it, beyond doubt. But the bitterness of feeling between the two races will be most deplorably intensified and prolonged."

"Little stock should be taken in the idea that these men are fighting from despair," says the Providence *Journal*; "it is cool brainwork, not passion, which is securing them their unexampled mobility and their wonderful escapes." "Of course, the capture of De Wet," declares the New York *Commercial Advertiser*, "would change the whole situation; but who can guess where De Wet is, or upon what garrison he will pounce next?" The Detroit *News* adds:

"If De Wet is chased up a gully which appears to be a *cul-de-sac*, he always finds an outlet. He has supplies scattered all over the country and friends to aid him. The British must carry their supplies as they pursue, and are always hampered with a baggage-train of some sort. General Sheridan blocked the game of the Confederates by burning and destroying everything in the Shenandoah valley and converting the most fertile district of the State into a barren desert. Kitchener, if he adopts similar tactics, has a hundred valleys to block and an area of half a million square miles to devastate before he can make the country uninhabitable for De Wet."

General Kitchener held a conference at Pretoria about two weeks ago with some of the most influential of the burghers who have surrendered to the British, and steps were taken to issue a peace proclamation emphasizing the hopelessness of further resistance and promising that the burghers who surrendered should be sent back to their own districts. There is not much confidence, however, that this action will have any appreciable effect. "The difficulty with the Boers," says the New York *Herald*, "is that they are perfectly willing to be killed in the cause they have espoused, and when a man is in that state of mind he never knows when he is whipped. For that matter, he never is whipped until he is dead."

Lord Roberts's return to England has been signalized by a great popular demonstration and by his elevation to the rank of an earl in the peerage of Great Britain; but a damper was put upon his greeting by the grave news from Cape Colony. Says the Philadelphia *Bulletin*:

"London may cheer itself hoarse in welcome to 'Bobs,' and royalty and parliament may confer on him the highest rewards; but under existing conditions the outside world will decline to be greatly impressed by the spectacle. It is likely to arouse cynical amusement in the minds of beholders, rather than respect for the might of the great empire whose soldiers have been outfought and out-maneuvered in dozens of minor engagements, and whose present power over the vast regions which it has recently annexed is more fiction than fact."

"It is now pretty certain that the earliest possible date for the real ending of the war in South Africa will be next May or June," observes the Cleveland *Leader*, and the Boston *Journal* voices an opinion found in many papers when it remarks that "England seems to be fulfilling Mr. Froude's prediction that she would create for herself a second Ireland in South Africa."

The Springfield *Republican* thinks that "the worst feature of the situation is only beginning to dawn upon the consciousness of the British"; and that feature is the unconquerable spirit of the "border nations, small but dauntless, which have exercised such an immense influence in all ages upon the course of the world." Such nations have been able to wage war for centuries, until the verge of extermination. "These border nations," it

says, "are the tough, hardy sprouts of the perennial springtime of human freedom. Comparatively few of them have ever been entirely conquered and wholly absorbed."

## WILL THE ISTHMIAN CANAL INJURE THE PACIFIC-COAST CITIES?

SOME anxiety is being felt by people on the Pacific slope from a fear that the isthmian canal, by creating a short cut from our Atlantic ports to China and the Philippines, will leave the California, Oregon, and Washington ports on a "side-track," two thousand miles north of the main route of trade to the far East. As the San Francisco *Argonaut* says:

"San Francisco is now the great distributing center for the through trade between Atlantic ports and the countries of the Pacific. Goods are brought here by rail to be shipped to Japan, China, Australia, Hawaii, and the Oriental countries; they are brought here by ship from these countries to be sent to the East by rail. As Pacific commerce develops, this trade would naturally increase. Would Eastern importers and exporters find it more economical to ship directly by way of the Nicaragua Canal? Or would the railroad companies find it to their advantage to reduce rates sufficiently to meet this competition? This is one of the elements of uncertainty that enter into the question. Should an extensive trade between Atlantic ports and the Orient by way of the canal develop, would the vessels engaged in this trade be likely to call at San Francisco or other Pacific coast ports? They might call for coal, but San Francisco would have to import the coal to supply them, and could not any other port from Townsend on the north to Brito on the south be able to import it as cheaply?"

The Seattle *Post-Intelligencer*, too, declares that among the reasons that are advanced for the construction of the canal, "the reader will seek in vain for any that can possibly apply to the North Pacific coast. We will not even be on a spur track of the great ocean highway that it establishes." It believes that "the canal would be a bad thing locally, bad for Seattle, for the State of Washington, and all its producers," and goes so far as to say that "in view of the limitations upon its use, its comparative worthlessness to sailing-vessels, the tolls that must still be imposed on commerce, and the enormous amount that must be raised by taxation to build it, we are frankly of the opinion that the Government ought not, at this time, to undertake the construction of an isthmian canal."

*The Argonaut*, however, says that it is not its purpose "to argue that the canal would not be a benefit to California and to the Pacific coast, or to urge that its construction would not be advisable," and a careful reading of the Pacific-coast papers shows that most of them believe that other results that the canal will bring (such as lower freight rates that will facilitate the exchange of products with the Eastern States) outweigh the reasons that can be urged against its construction.

## AFRO-AMERICAN PAPERS ON SOUTHERN REPRESENTATION.

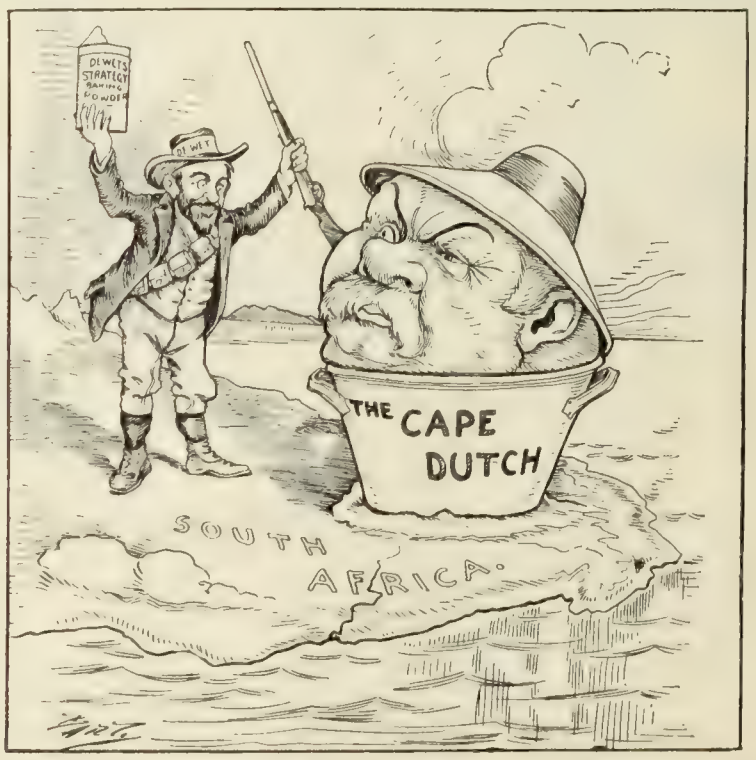
A RENEWED interest seems to be manifest in Congress in the proposal to cut down Southern representation to fit the reduced vote that has followed the disfranchisement of most of the negroes in several States; but most of the press believe that nothing will be done about it. The Chicago *Chronicle* (Dem.) says: "The reluctance of the Republican Party to take up this question is unaccountable. Few domestic problems are of greater importance. No one lies nearer the foundation of decent and orderly representative self-government." The New Orleans *Times-Democrat* (Dem.), however, remarks: "Congress can not cut down the representation of the Southern States under the fourteenth and fifteenth amendments until it has some data showing how many voters have actually been disfranchised 'because of race, color, or previous condition'; and it has, as every one knows, not the slightest information on this subject." Representative Olmsted, of Pennsylvania, offered a resolution in the House last week directing that the committee on census be asked to obtain this information, and more may be heard about this topic later.

In the mean time, it is interesting to see what the Afro-American press, the organs of the race most vitally interested, have to say. *The Colored American*, published in Washington, says:

"This is no party question; it oversteps the bounds of party or section and comes directly at the heart of the whole people. The negro has not been given his rights, as guaranteed to him by the Constitution. We ask nothing more; we ask no quarter, we want only our right. And we have the right to protest against being represented in Congress, when we have no voice in the selection of the representative. Let the South cut those obnoxious disfranchisement laws out, and the negro stands with it. Otherwise Congress will cut down the representation."

The New York *Age*, which is perhaps the leading Afro-American journal in the United States, has little hope that the Su-

J. BULL: "Holy smoke! That's the same present I got last year."
—*The Minneapolis Tribune.*



WILL IT RISE?
—*The Minneapolis Journal.*

SOME SOUTH AFRICAN RISINGS.

preme Court will adjudge the Southern disfranchisement laws unconstitutional; and it declares that "if the Supreme Court of the United States was out of the way or so created as to be amenable to the Constitution, dealing with questions affecting the Afro-American's rights, we should have no trouble in the matter; but the Supreme Court of the United States stands as a bulwark for all that is venomous in dealing with the rights of Afro-American people." The plan to reduce the Southern representation does not satisfy *The Age*, for after the reduction is accomplished the negro will still be without the ballot, in as bad case as before. It continues:

"The right of the Afro-American people to equality in the suffrage laws of every State is a principle so thoroughly embedded in the Constitution of the United States that no power in the federal compact can have power to deny it or abridge it. It should be our purpose to insistently fight for a recognition of this just principle of the Constitution in a way which would not jeopardize the main right in the meting out to those who violate the letter and the spirit of the fundamental law that retribution which goes along as penalty of wrong-doing."

---

## MORE COMMENT ON THE CONSTITUTION AND THE FLAG.

THE report that ex-President Harrison has been retained in one of the cases now before the Supreme Court to argue for his belief that the Constitution extends by its own power to cover Porto Rico, Hawaii, and the Philippines, is the most recent phase of this momentous and critical examination of our form of government. It appears that some of the party leaders have been criticizing the ex-President sharply for his public expressions of an opinion contrary to the Administration policy, and some have said that his public discussion of a question still before the Supreme Court was an act of doubtful propriety. The New York *Press* (Rep.) says: "To harangue the populace on a question before the court is a surprising proceeding on the part of an American lawyer. On the part of an American lawyer who has been an American chief magistrate it is incomprehensible." Mr. Harrison, in a speech in Indianapolis on New Year's eve, may have had these criticisms in mind when he said:

"The decapitation of the ex-President when the oath of office has been administered to his successor would greatly vivify a somewhat tiresome ceremonial. And we may some time solve the newspaper problem what to do with our ex-Presidents in that conclusive way. Until then I hope an ex-President may be permitted to live somewhere midway between the house of gossip and the crypt of the mummy.

"He will know perhaps in an especial way how to show the highest honor to the Presidential office, and the most courteous deference to the President. Upon great questions, however, especially upon questions of constitutional law, you must give an ex-President his freedom or the ax, and it is too late to give me the ax."

The newspaper editors, too, seem to feel free to give their views on this important topic, and some of the most interesting of their expressions of opinion will be found in the quotations that follow.

### New England.

The Boston *Advertiser* (Rep.) calls Mr. Harrison's warning against the dangers of imperialism "splendid and patriotic"; but the Boston *Herald* (Ind.) thinks that if his view prevails the seriousness of the problems of our new possessions "will be enormously enhanced," and it believes "that in this instance a majority of the justices will probably decide that Congress has the right to make separate and distinct laws for both Porto Rico and the Philippines." The Boston *Transcript* (Rep.) takes the opportunist view that "the Constitution is a chart, and every chart to be of value must be constantly amended, as new rocks, shoals, and currents are discovered or developed"; and the Boston *Journal* (Rep.) thinks that in the case of this particular rock "we do not want a decision that the Constitution is already operative from end to end of the Philippine archipelago." The Hartford *Times* (Ind. Dem.) rejoices that ex-President Harrison has "hit the imperialist crowd a blow under which they are visibly staggering," and the Springfield *Republican* (Ind.), which hopes that the court will confirm Mr. Harrison's opinion, predicts that such a decision "would take the breath out of imperialism and throw it into panic." The Hartford *Courant* (Rep.) hints that Mr. Harrison's opinion may be due to "the mental attitude of ex-Presidents toward their successors."

### New York and Philadelphia.

The New York *Sun* (Rep.) not only holds that the Constitution does not follow the flag, but declares that the intellectual reputation of Mr. Harrison has been damaged by his expression of the contrary opinion, and the New York *Times* (Ind. Dem.) thinks that the ex-President is suffering from a "curable nervous

A QUESTION THAT CAUSES A BAD CASE OF NIGHTHORSE.
—*The St. Paul Pioneer Press.*

excitement, which has been communicated to him from the excessively septic literature of anti-imperialism." The New York *Herald* (Ind.), however, declares that "if the court does not hold that 'the Constitution follows the flag' its decision will be a great surprise to the ablest constitutional lawyers of the country." The New York *Press* (Rep.) agrees with Attorney-General Griggs that if the Constitution hinders the nation from exercising the powers that other nations enjoy, then "it is a shackle about the neck of the country"; but the New York *Evening Post* (Ind.) thinks that "it is a strange plea for a lawyer to make, that the Constitution can not mean so and so because that would limit our powers. To limit and define the powers of government was one of the great aims of the Constitution." The New York *Journal* (Dem.) asks: "Is it possible that a man can reach the position of Attorney-General of the United States and not learn that our Government is one of enumerated powers, and that all powers not granted to it are denied? What a beautiful sensation the Griggs theory would have created if it had been put forward in the Federal convention of 1787!"

In Philadelphia, *The Times* (Dem.) believes that ex-Presidents Harrison and Cleveland "can justly claim to be in sympathy with the decided majority of the more intelligent convictions of the people"; and *The North American* (Rep.) agrees with Wayne MacVeagh, President Garfield's Attorney-General, who said a few days ago: "That in time of peace the Constitution does not follow but precedes the flag, is as certain as anything in this world can be, for in time of peace the flag has no right to be anywhere but where the Constitution authorizes it to

be; and it follows as the night the day that whatever is done under its folds must be done subject to the limitations the Constitution prescribes, for it is not the flag but the Constitution which secures 'the blessings of liberty to ourselves and our posterity.'" *The Bulletin* (Rep.) remarks that Mr. Harrison "has shown in the most positive way how it is possible for a citizen in his position to render valuable public service by just and timely criticism of dangerous governmental policies"; while *The Press* (Rep.), Postmaster-General Smith's paper, declares that a "narrow adjudication" of the case before the court "commits the United States to a barren policy and practise, in which its powers can never be used and its flag never be extended over either territory or people not ready for complete assimilation. The broad work of raising to civilization lands unequal to the step alone, of sharing in the task of the world's great powers, is barred to it."

### The Middle West and Northwest.

Turning from Philadelphia to Chicago, one finds two more Republican papers indorsing the anti-Administration view that the Constitution follows the flag. The Chicago *Times-Herald* (Rep.) declares that the ideas that our Government "may discriminate between sections, that it may be part representative and part non-representative, are notions so strange and astounding that it is difficult to conceive how they could ever have found expression in the United States"; and the Chicago *Evening Post* (Rep.) says that in the Constitution "despotic power over millions of annexed people is neither expressly granted nor implied. It is repugnant to all distinctive American principles." The Chicago *Record* (Ind.) says: "The United States must exercise imperial control, at variance with the most vital principles of the Constitution, or it must take the Philippines to its bosom as an integral part of the nation. The only escape from one or the other of these courses probably lies in relinquishing the islands." The Chicago *Tribune* (Rep.) would not be surprised to see the court disagree with General Harrison, and remarks that it would merely be "another illustration of the fact that the best of lawyers are not always infallible."

The Indianapolis *News* (Ind.) suggests that in case the Supreme Court's decision is not acceptable to the people, the Constitution can be amended, while the Indianapolis *Sentinel* (Dem.) urges granting independance to the Philippines. The Detroit *Free Press* (Ind. Dem.) remarks that "if Mr. Harrison is not guilty of treason, he is obviously guilty of *lèse majesté*, and with ten years more of benevolent assimilation he might expect to be punished for thus invoking the spirit of the fathers." The Columbus *Ohio State Journal* (Rep.) favors the view that Congress can legislate for our dependencies without limitation by the Constitution; but the Detroit *News* (Ind.) remarks: "It may be that we have the legal right to subjugate distant islands and hold their inhabitants as subjects, but this is no reason why we should do it. The fact that we may do this and incur the long train of evils that may result from such a departure may be just the reason why an imperialistic policy should be abandoned." The Milwaukee *Journal* (Rep.) argues that even if the court does decide that the Philippines are an integral part of the United States, the disastrous results that have been predicted will not necessarily follow; and the St. Paul *Pioneer Press* (Rep.) takes the equally optimistic view that an opposite decision of the court, giving Congress plenary power, "threatens no liberty" of our island peoples, and "relieves them of burdens they could not bear."

### The South.

Most of the Southern papers seem to agree with ex-President Harrison rather than with the Administration. The Richmond *Times* (Ind. Dem.) says that "public confidence that the Supreme Court of the United States will remove the foul blot of the Porto Rican and Philippine tariff infamy from the statute books will be increased by the blighting logic of Mr. Harrison's address"; and the Baltimore *Sun* (Ind.) declares that "if Congress can put upon Porto Rico, the Philippines, and Alaska any form of government it sees fit, then governments do not derive their just powers from the consent of the governed." The Louisville *Courier-Journal* (Dem.) says: "There is high authority for saying that the disciple is not above his master nor the servant above his lord, but that assertion is now called in question by the department of justice of the United States, acting for Congress as well as the whole administration. In other words, it is gravely asserted that a Congress created by the Constitution can act without the Constitution and contrary to it." The Houston *Post* (Dem.) quotes ex-President Harrison's sentiments with manifest approval, and the New Orleans *Picayune* declares that "his view is that of a great constitutional lawyer, filled with the spirit of American liberty, while the doctrine put forward by Attorney-General Griggs, representing President McKinley, is in conformity to a movement to set aside and subvert the Constitution and merge the republic into the empire." The Macon *Telegraph* (Dem.), on the other hand, seems to indorse the Administration view when it says: "It is idle to talk of liberty and George Washington and the consent of the governed when we come to deal with tribes such as the Sioux, Blackfeet, Apaches, and some of those to be found in the Philippines. None of our wild tribes here at home have ever 'consented' to be shut up within certain limits, except at the point of the bayonet. We had either to force them or our development of adjacent regions had to stop. So in the Philippines, we shall again have to be inconsistent with our theories of government, or give up our plans of exploration and development in that part of the world."

### West of the Mississippi.

The St. Louis *Globe-Democrat* (Rep.) notes that the Administration's contention "is in line with the position taken by such eminent authorities as Marshall, Webster, Benton, Jefferson, and many other distinguished men," while the Kansas City *Times* (Dem.) makes the conflicting assertion that "if the Supreme Court shall sustain the position which the President has taken through his legal representative, the whole previous theory of the government, as it has been interpreted by every responsible authority from the author of the Declaration of Independence to the present day, will be destroyed." The Topeka *Capital* (Rep.) quotes Webster and Benton to show that the Administration view is the correct one. The Des Moines *Leader* (Ind.), on the other hand, calls General Harrison's views "admirable," and the Omaha *Bee* (Rep.) concurs in saying that they "will have the effect to strengthen sentiment against the prevailing policy regarding the new possessions." The Omaha *World-Herald* (Dem.) observes sarcastically that "the Republican organs that are congratulating Mr. Harrison upon his able arguments are the same organs that ridiculed Mr. Bryan when he advanced identically the same arguments." The Denver *Republican* (Rep.) declares that "the Constitution goes just as far as the nation wishes it to go, and it has been extended to new territory only by a declaration to that effect expressed through an act of Congress."

"It seems impossible to understand," remarks the San Francisco *Chronicle*, "how a government created by a constitution can exercise authority outside the constitution which creates it"; and the San Francisco *Call* (Rep.) believes that if the court confirms such a view it will be necessary either to amend the Constitution or to treat the Philippines as we are treating Cuba. The Seattle *Post-Intelligencer* (Rep.) sums up the Republican view by saying that "while the Constitution of the United States probably does not extend of its own inherent force over the new possessions of the United States, the principles of constitutional liberty do so extend; and they will be respected, upheld, and declared wherever American courts are established."

---

**Pensions for Railroad Employees.**—While in Germany a pension for the aged laborer is provided by the Government, a similar pension system is being started in this country by the railroad corporations. The Pennsylvania Railroad has had such a plan in operation for some time, and now *The Railway World* (Philadelphia) reports that the Chicago and Northwestern road and the Chicago, Milwaukee, and St. Paul are also about to establish similar systems. "Adoption of a pension plan by the Santa Fé management," says the same journal, "is likely in the near future." It is estimated that this new departure will cost the Chicago and Northwestern $200,000 a year, and the Cincinnati *Times-Star* applauds the road's action as altruism. The Chicago *Public*, however, a single-tax weekly, says:

"Every employee who receives such pecuniary benefits either earns them or gets them as a charity dole. It is one thing or the

other. But if he does earn them, he ought to be able to get them as a right, and not as a privilege under an employer's patronage. If he does not earn them, then he is the petty beneficiary of a degrading charity system. In our view every man, woman, or child who works earns more than his wages plus all the altruistic benefits he receives. And tho we offer no condemnation of charitable intervention while workers are plundered to the extent of impoverishment, we do not hesitate to denounce devices which, in the guise of charity or the name of altruism, serve to deaden the public conscience while universal robbery through special privilege is perpetuated."

## WHAT IS THE CHIEF DANGER CONFRONTING THE NEW CENTURY?

A NUMBER of prominent men and women were recently asked to state what they believed to be the greatest menace to twentieth-century progress, and the answers given to the question are certainly interesting, tho their variety makes them rather bewildering. The persons addressed (by the New York *World*) guess the conundrum in a hundred different ways, guided to their conclusions by temperament or individual experience. It appears, however, that the consensus of opinion centers upon imperialism and war as being the greatest dangers confronting humanity at the present day, and Andrew Carnegie, millionaire, joins hands with Kier Hardie, Socialist, in arraigning the evils of militarism. "I believe," says Mr. Carnegie, "that ere the twentieth century closes the earth will be purged of its foulest shame, the killing of men by men in battle under the name of war." W. T. Stead writes in similar vein, declaring that the chief menace to man's progress is "war, which threatens Christendom as the result of ignoring Christian principles in its dealings with one fourth of the human race which is born inside a yellow skin." To Sir Walter Besant the danger appears especially one of increasing naval armaments, designed "apparently for self-protection," but in reality for aggression; while Lord Charles Beresford regards "the Chinese question" with most apprehension. Karl Blind, the German political economist, John Dillon, the Irish member of parliament,

"GOOD-BY. YOU CERTAINLY HAVE BEEN GOOD TO ME."
—*The New York World.*

and H. W. Massingham, the British journalist, agree that no more serious danger threatens than imperialism.

In many quarters, however, the greatest menace is believed to be of a social rather than international nature. The Earl of Wemyss states it as his opinion that Socialism is blocking the march of human progress, and Arthur W. Pinero, the dramatist, attacks trade-unionism. Joseph Arch, the English labor leader, retaliates by declaring that "a large accumulation of wealth on the one hand and a large increase of pauperism on the other" is the growing evil in society; and Samuel Gompers expresses fears for the lowering of the American standard of living by

DAWN OF THE TWENTIETH CENTURY AS IT STRIKES EUROPE.
—*The Detroit News-Tribune.*

Oriental competition. "The greatest political danger of the twentieth century," maintains William J. Bryan, "is that the increasing influence of wealth will lead to increasing disregard of the inalienable rights of man." President Schurman, of Cornell University, fears most the "exaltation, worship, and pursuit of money as the foremost good of life." "The salt that may save us from this blight," he adds, "is to be found in our schools and churches, in every union for a righteous cause, and most of all in the ideals and aspirations of the noble souls who will not suffer human society to degenerate into a mere brutish struggle for life and the survival of the fittest." President Hadley, of Yale University, finds the threat to the public welfare in "legislation based on the self-interest of individuals, or classes, instead of on public sentiment and public spirit."

Among the ecclesiastics, emphasis is laid on the moral virtues. When questioned regarding coming dangers, the Bishop of Hereford replied, in the words of Colossians iii. 5: "Evil desires and covetousness." The Bishop of Llandaff answered: "Infidelity, anarchy"; the Bishop of Gloucester: "Self-advertising vanity." Dean Farrar declares: "The chief social danger is the dominance of drink. The chief political danger is our apathetic laxity in facing serious problems." Cardinal Gibbons says that "the greatest dangers that now seem to confront us are political corruption and the lust for gain and the unholy purpose to which it is perverted."

Four authors, Stanley Weyman, Max Beerbohm, Conan Doyle, and Max O'Rell, fear most the growing power of what Dr. Doyle calls "an ill-balanced, excitable, and sensation-mongering press," and what Max Beerbohm describes as the "jumpy journals." Mme. Sarah Grand finds the greatest evil in the laxity of marriage relations; Ellen Terry, in growing artificiality in our social life; and George R. Sims, in the spread of insanity. Henry Arthur Jones, the English playwright, sums up his conclusion in the word "Dishonesty"; William Watson, in the word "Greed."

"Among all these discordant voices," facetiously observes the Philadelphia *Times*, "there was one note of wisdom. The Archbishop of Canterbury, asked what was the chief danger of the

coming century, replied: 'I have not the slightest idea.' If all our prophets were as judicious as Dr. Temple, they would command more respect."

## GENERAL ALGER'S DEFENSE OF ARMY BEEF.

THE fact that nearly nine tenths of the casualties in our army during the Spanish war were the result of disease; the further fact that the soldiers who died of disease in the United States numbered more than twice as many as all those who died of disease in Cuba, Porto Rico, the Philippines, Hawaii, and at sea; and the testimony of General Miles before the Dodge commission that in his judgment the food furnished to the army "was one of the serious causes of so much sickness and distress on the part of our troops," all help to explain why General Alger's remarks in the current *North American Review* on "The Food of the Army during the Spanish War" is, even at this late date, exciting comment all over the country. The following table may be made from figures contained in a letter written by Adjutant-General Corbin and published in *The Army and Navy Register* (Washington) in its issue for August 19, 1899:

CASUALTIES IN THE ARMY BETWEEN MAY, 1898, AND JUNE 30, 1899.

| | Killed. | Died of wounds. | Died of disease. | Total. |
|---|---|---|---|---|
| Cuba | 244 | 74 | 922 | 1,240 |
| Porto Rico | 4 | 8 | 255 | 267 |
| Philippines | 253 | 92 | 380 | 725 |
| Hawaii | ... | .... | 46 | 46 |
| At sea | .... | 7 | 213 | 220 |
| United States | 6 | 8 | 4,091 | 4,105 |
| Total | 507 | 189 | 5,907 | 6,603 |

General Alger's article takes the form of an attack upon General Miles, who said in his testimony before the Dodge commis-

THE VOICE FROM THE GRAVE: "Let's try this beef again!"
—*The St. Louis Republic.*

sion that "the pretense is" that the canned roast beef supplied to the army "was sent as an experiment," and who said of the refrigerated beef (which he called "embalmed beef"): "If I was furnished for any expedition in this country, or any other, with such stuff, I would prohibit the men from taking it. . . . I do not think that beef such as was sent to Cuba and Porto Rico would be good in any country in the stomach of any man." W. H. Daly, major and chief surgeon of volunteers, in a letter to the War Department, expressed the opinion that the fresh beef was "apparently preserved with secret chemicals," and said that the beef, "while it looked well, was of a sickening odor, like a human body dead of disease and injected with preservatives, and when cooked was quite unpalatable, consequently likely to prove an efficient cause of ill-health." General Alger charges that General Miles based his "startling and scandalous accusations" entirely upon the statements of Dr. Daly. Commissary-General Eagan, it will be remembered, used such strong language before the Dodge commission in replying to General Miles's charges that a court-martial recommended that he be dismissed from the service, a sentence that was commuted to suspension from rank and duty (but with full pay) for six years, until his retirement.

The allegation that the canned beef was supplied under pretense of experiment is bitterly resented by the former Secretary of War, who says that canned beef has been "a recognized part of the army ration for nearly a quarter of a century," and that France and England have in recent years bought more than 35,000,000 pounds of it in this country for their armies and navies. "The secret of the source of complaint" against it, he thinks, was the fact that it "should have been used only when cooked with vegetables and properly seasoned," which could not always be done. He adds: "The ration was not used to any great extent in the camps in the United States, but only on the transports to Cuba and Porto Rico, and for a short time in Cuba by part of Shafter's army in the trenches, where objection to its use could also be raised on account of the inability to cook and serve it suitably. A few issues were also made in Porto Rico." As regards the "embalmed" beef, General Alger quotes the verdict of the Dodge commission that it was not "subjected to or treated with any chemicals," and cites the verdict of the court of inquiry that it "was not 'doctored' or treated with any other agent than cold air," that the use of the refrigerated beef "was wise and desirable," and that "there was no better food available or practicable."

All these charges and counter-charges were matters of daily report in 1898 and 1899, so that the publication of them now is not strictly in the nature of news. What makes the article remarkable is that General Alger should attempt to revive the controversy now, and revive it in the form of a personal attack on General Miles. He calls General Miles's conduct "inexcusable" and "unsoldierly," and likens his charges against the commissary department to "a blow from an assassin's knife out of the dark." General Miles, he says in conclusion, was not only to blame for the sacrifice of "a brave, honest, and faithful officer" (General Eagan), but, "besides this, a false impression had been created throughout the country as to the food furnished the army, which may never be removed. The charges of General Miles, twice proven false in spirit and substance, are therefore the more heinous in their effect. Yet the present Congress promoted General Miles to be lieutenant-general, and has thus far failed to give to General Shafter the rank of major-general to retire upon in his old age, and this after his magnificent campaign at Santiago, as well as his former distinguished services."

Most of the newspapers side with General Miles. The New York *Journal of Commerce* says: "The whole indictment of General Eagan is, not that he bought canned beef, but that he bought bad canned beef and did not take the ordinary precautions of a dealer against being imposed on. As to the fresh beef, the effort to deliver it in a tropical latitude in July may have been impracticable; certainly it was unsuccessful. Whether the beef had been embalmed or not, much of it was not in good condition. The correspondence between General Eagan and some of the contractors is difficult to reconcile with any theory that General Eagan performed his full duty by the soldiers." The Detroit *Journal* (Rep.), on the other hand, declares: "The war, under all the circumstances, was one of the most brilliant in conception, execution, and triumph the history of the world records. The master-mind of it all was hounded

from his exalted position into private life, while the chief traducer of his matchless service to his country is rewarded with undeserved and unearned honors."

## GOVERNOR PINGREE'S PARDONS.

THE critics of Hazen S. Pingree, whose term as governor of Michigan expired with the old year, think that the quality of his mercy was not strained in the last few weeks of his term, when he pardoned so many convicts that it almost amounted, the Detroit papers say, to a prison delivery. The Philadelphia *Press* says that "such a record of wholesale pardoning has probably not been equaled in the same space of time by any governor of a State," and declares that "it is a reckless use of power for which no executive can be excused"; while the Chicago *Times-Herald* says that his "pardoning notorious crooks and swindlers" is "a matter that invites the gravest public concern." The Detroit papers have reported the rapid fire of pardons day by day, but a more comprehensive review of the month's work is given in a despatch from Jackson, Mich., where the state prison is located, to the New York *Journal*. It says:

"On December 1 there were in the Michigan state prison here 778 convicts. By the end of this month there will be less than 600. During the month of December alone Governor Pingree signed orders calling for the release of 119 prisoners. Pardons, paroles, and commutations of sentence have been numerous. Indeed the ex-governor signed pardons up to the last minute of his official career.

"Never before has the State of Michigan experienced such a general and indiscriminate prison delivery. The releases by order of Governor Pingree during December have numbered among them the most noted criminals in the State. They include twenty men serving time for offenses against women and nineteen serving life sentences for murder. One man, Archibald McCallum, who pleaded guilty of excessive brutality to his own mother, she being over eighty years of age, is now enjoying life, liberty, and the pursuit of happiness. Noted forgers and world-renowned confidence men, besides the ordinary run of crooks, have been released."

Most of the pardoned prisoners were men who had been convicted of serious crimes. The "small fry" were left in jail. To quote again:

"The feast of pardons really began December 1, with the release of the former quartermaster-general of the State, Gen. W. L. White, who had fled to South Africa, after embezzling $43,000 from the military fund after the Spanish war. White pleaded guilty and was sentenced to ten years. He was pardoned before he had served thirty-six hours of his sentence, the reason given being that others, accomplices, had not been prosecuted. Gen. Arthur F. Marsh, adjutant-general of the State, an accomplice, was also pardoned, tho his case was before the Supreme Court and he had not been sentenced.

"Ever since then the pardon mill has been humming merrily, until to-day, in some of the departments of the prison, there are not men enough to do the work of the institution, which has been heretofore assigned to convicts. Every clerk and bookkeeper has been pardoned or paroled; in the tailor shop there is left but one lone man to make and repair the clothing for the remaining convicts, and he goes out this month.

"It will take months, now that Governor Pingree is out of office and there is some prospect that the stream of pardons will cease, to get the prison on a normal footing. New men will have to be broken in to fill the places of those who have been released.

"To most of the pardons Governor Pingree attached his reasons for extending executive clemency. In many cases they were as weird and wonderful as those given for the pardon of the 'two generals,' Marsh and White. The Molitor murderers were set at liberty because, it was stated, 'they had taken the law into their own hands and freed Isle County of a tyrant'; McCallum because 'both he and his victim were drunk'; Defrance, who had worked banks all over the country to the tune of hundreds of thousands of dollars, because 'public opinion was against him,' and a fair trial was impossible.

"The ex-governor is unsparing in his denunciation of judges, prosecuting attorneys, and juries. He has in nearly every instance taken the testimony presented by the attorneys for the prisoners, allowed the lawyers to draft some good-enough reasons for the pardons, and signed them without further investigation."

Governor Pingree said in his farewell address to the legislature that the newspapers had "lost no opportunity" to make personal attacks on him, and to publish "malicious and wilful libels," so it may be that a later report may show that Governor Pingree's large-hearted month of forgiveness was less injudicious than the newspapers represent.

## NEW ZEALAND AS THE "EXPERIMENT STATION" FOR RADICAL LEGISLATION.

NEW ZEALAND democracy is to-day the talk of a good part of the world. Nowhere else has a government undertaken so many reform schemes, of which England and America have only begun to dream and talk; and not only have they been undertaken, but, according to Mr. Henry Demarest Lloyd, they are being conducted with success.

Last year Mr. Lloyd (who is the author of "Wealth Versus Commonwealth" and other notable books on industrial subjects), went to New Zealand to see for himself the most "advanced" democracy in the world. In his book, "Newest England," recently published, he writes of the people of New Zealand as a people who have almost completely substituted cooperation for competition in most of the departments of business. In their stores, factories, banks, and farms, the consumers and producers, the capitalists and laborers, are now one and the same class. He calls their democracy the "Farthest North" in the sphere of self-help.

New Zealand, or rather Australasia, is a sort of transported Europe, according to Mr. Lloyd, including transplanted men and ideas, animals and plants; and these men, left free in the South Seas to experiment to their hearts' content, have succeeded to a remarkable degree.

Yet these South Sea Englishmen still have some open seams in their ship of state. In municipal government they are even worse off than America and Europe. In New Zealand, "a country without strikes," trades-unionism is impotent to help out labor in the arbitration courts. That country has two great trusts, a sheep ring and a coal ring, and every one of the Government's reform schemes for dealing with land, labor, taxation, finance, and industry is lame somewhere; but, tho lame, "it still moves," and moves faster there than elsewhere. The New Zealanders, says Mr. Lloyd somewhat paradoxically, are not the most civilized, the most happy, the most prosperous people in the world; but they certainly are the least uncivilized, the least unhappy, the least disinherited.

The first scheme through which the people of New Zealand began to take business out of the hands of private individuals and conduct it collectively through their Government, was the public insurance act, passed by parliament in 1869 at the instance of Sir Julius Vogel. The people wanted insurance, but at that time the population of the country was so comparatively small and so far out of the world that the great life insurance companies elsewhere did not care to do business there. So from the start governmental insurance was popular. Now, the total amount of governmental insurance outstanding is $46,525,710 among a population of less than 900,000. Almost everybody in New Zealand over fifteen years of age is insured, the average for men being about $375, and for women about $35. The Government does more than one half of the insurance business, and it keeps the rates down to a minimum. Nothing illustrates better the general prosperity of the people than this enormous amount of capital invested in insurance. The Government con-

ducts the business on the same principles as a private company. The fact that the state is behind every one of its policies and has never failed to pay up promptly has added to the popularity of state insurance. The state has also freed its policies of all oppressive restrictions. The one restriction is that the heirs of the insured can not collect if he or she commits suicide within six months of the time of taking out the policy.

There are several departments of this state insurance, one of which is called the "Temperance Section," for total-abstainers, which was established in 1882. In a few years "interesting statistics" are promised from this section on the relative length of life of drinkers and non-drinkers. The millions of dollars received by the Government annually for insurance go back to the people in loans.

Another interesting aspect of the Government's activities is the public trusteeship. When a man dies with his estate so invested that suspension of business would probably mean its ruin, the state, through its commissioner, steps in and takes the man's place, carrying the business on till the heirs can decide upon its disposition. When the man's widow is left with property she does not know how to manage or invest profitably, the public trustee, at her invitation, gives her his advice and the benefit of his assistance by investing and conducting the business for her. To this official cities or individuals desiring to create a public trust may go. A person wishing to be absent from his business for an indefinite period may put his business in the hands of this trustee and go away feeling perfectly assured that it will be conducted as well as, if not better than, he could conduct it himself. He knows the trustee is backed by the people, who are responsible for the last dollar if any blunder or mistake is made. The property of a man who becomes insane goes to the trustee also, and in conserved and protected for him or his heirs.

Another part of the book that will interest American readers is that which describes the Government's management of railroads, its methods of giving land to the landless, and its great success in teaching men to work without contractors and bosses, and in inducing the tramp and vagabond to take up the ax, the pick, and the spade.

The government railroads in New Zealand—and nearly all the leading roads are now under government control, we are told—are run for service and not for profit. The minister of railways said to Mr. Lloyd: "After we have earned enough to pay the expenses of the operation, and the interest on the money borrowed to build the railroads, we reduce charges as rapidly as profits increase." Any profit over three per cent. is now returned to the people in the form of cheaper rates. It costs adults one half a cent and children one fourth of a cent per mile to ride, and naturally the railroads are more popular there than elsewhere. Mr. Lloyd saw frequently great excursions of school-children going from the cities to the country, and *vice versa*. Children of the primary grades were carried free. Working-people are given the same rates for holiday trips as the schools. The rates on the trains between the cities and their suburbs are so low that the working-people can afford to have their homes several miles away from the shops.

A seven-pound parcel can be sent anywhere in the colony for twenty-five cents. Newspapers and books are carried for less than one half the rates that prevail in the United States. A farmer can send fifty-six pounds of his garden truck to the city for twelve cents, and a large shipper can get no lower rates than a small shipper. Such a thing as one shipper's getting a rebate or advantage over another is unknown.

The railroad problems that confront public ownership are:

When shall the new lines be built?

How shall the new employees be selected?

How shall promotion and conditions of employment be determined?

How shall rates be fixed?

They are regarded elsewhere as hard questions, but New Zealand is working out the answers with satisfaction. When the people want a new line in any certain locality, they petition the ministry, who in turn bring the subject before parliament, where it is finally decided. The minister of railways fixes the rates. The employees are selected on the basis of a civil-service examination. Examinations are also required for promotions. The railroad system is by no means perfect, for the principal cities, Auckland, the capital, and Wellington, are not yet connected by rail on account of jealousies of their inhabitants; but the people control all the roads they have built, and they give good service.

Among the things that soon become familiar to the traveler in New Zealand are the abolition of the contractor and direct employment by the state, the cooperative system of public works, the relief of the unemployed, the settlement of the land, and treasury advances to farmers and workingmen.

All these reforms were introduced in 1890 by an overwhelming vote of the people. The contractor had made himself as obnoxious to the workingman and the people as the landowners had made themselves to the farmers. Previous to 1890 considerably more than half of the best land in New Zealand was in the hands of a few men, the most of whom lived abroad. The great masses of the people were landless and homeless. They were forbidden to set their feet upon many of these wide tracts, laid out for sheep-raising and so enclosed as to make the land of many small farmers valueless. The Government, under the leadership of Premier John Ballance and Labor Commissioner Richard J. Siddon, condemned the vast tracts, paying their owners for them. Then began the building of public roads, railroads, and other public works through these lands, giving all the idle men in the colony work, and encouraging them to build homes along the roads they worked upon. In this way the people have recovered their lands, settled upon them, and are rid of the hated contract system. The state in turn was rewarded with good roads, railroads, and other public works; and to-day, in New Zealand, a man is regarded as being worth more than a sheep—the sheep that kept him off the land so long.

IT is not certain whether Mr. Croker's silence on the way things are going in New York is due to satisfaction with the management or to the refusal of the cable companies to transmit the only language he deems appropriate to the situation.—*The Philadelphia Ledger.*

LAST winter two little children were standing in front of the main entrance to the Senate chamber, when Senator Chandler, who, as you know, is a great wag, and a friend came through the door. One of them, a little girl of eleven, burning with curiosity, stepped up to them and asked: "Mister, how much does it cost to go in there?" "You had better ask that gentleman coming up the corridor," said the Senator from New Hampshire, pointing to Senator Clark, of Montana, who was leisurely approaching the entrance.—*The Chicago Record.*

## LETTERS AND ART.

### IS CHINESE TO BE THE UNIVERSAL LANGUAGE?

CHILDREN—and some elders—who find the mysteries of English orthography hard to master, will hardly be elated to learn that a recent writer believes Chinese destined to be the universal language of commerce and the professions. Even tho living men may not adopt the tortuous signs of the yellow man, he remarks, our grandchildren may be obliged to learn them. The writer, Mr. Johannes Hrolf Wisby, says (in *Mind*, December, 1900) :

"The presence of the allied forces in China may ultimately prove to be the lever that will launch the Chinese language into our very schools as part of the curriculum. When nations wage war upon one another, they generally manage to learn from one another as well, and the scientists accompanying the allied forces in China are already recommending the idea, in despatches to their respective governments, that written Chinese be adopted, experimentally at least, as a professional and business language. Everywhere these men went in China they were astounded by the fact that the people of the various provinces, altho incapable of understanding one another verbally, were able to communicate with ease and accuracy in writing. As this condition is exactly opposite to those governing in Europe, where the people are bunched off, as it were, in dialect districts, and where no uniformly intelligible code exists, these men began to examine into the merits of the Chinese tongue. They seem convinced that it is the most practical language in the world, and better suited for universal adoption than any other. They are not anxious to have it replace existing languages, but they recommend it as an international vehicle of business correspondence. We are not to write poetry in Chinese, nor to have our daily or periodical press infested with the 'crow's feet' of the yellow man; but the typewriting-machines that our grandchildren may use are likely to have Chinese characters, and our business letters and advertising may, to a large extent, have to be written according to the method used by Confucius.

"The idea is as simple as it is natural. The only thing that must be overcome, before it will work its way through Western civilization, is prejudice. There is a widespread superstition that Chinese is an extremely hard language to learn, and the appalling obstacle is vociferously tooted in our ears that the alphabet consists of 'no less and perhaps more than 50,000 characters.' As a matter of fact, Chinese being a symbolic tongue has no alphabet; and as long as no attempt to pronounce it is made, the written language is by no means difficult to learn. The phonetic or spoken language is, however, so variable, and so cut up into dialectic phrases—each province in China, and there are eighteen, having its own vernacular—that very few people, even among the most learned mandarins, ever acquire a mastery over them. A Peking scholar has about as much, or as little, chance of understanding a farmer in the Yun-nan province as a London dandy has of understanding a Welsh miner; but, when it comes to writing, the startling fact develops that while the miner and the dandy would not be able to make themselves mutually understood, the Chinese farmer and the scholar comprehend each other perfectly.

"All other languages, if let alone, deteriorate or develop with comparative quickness and become a barrier, through branching out into dialects, rather than a medium of intercourse between the nations. Chinese is the only language, possibly with the exception of the almost prehistoric Egyptian, that may be regarded as fully developed, in that it never changes, but draws the people together around a common standard of symbolic meaning that carries the same significance to-day as it did over two thousand years before Christ. Take English—undoubtedly one of the most perfectly developed of the so-called civilized tongues: what a pitiably inconstant, changeable, and utterly unreliable medium of expression it is! Since Chaucer it has changed so that the ordinary reader of to-day finds it a task to pick his way to the meaning of phrases and combinations that were perfectly intelligible a couple of centuries ago. Linguistic research shows us that while modern languages, and they are all phonetic, undergo perceptible, and sometimes confusing changes every century, Chinese, which is the only truly symbolic language surviving, is also the only language incapable of being changed by time.

"Then what is the radical difference between the tongue of the Celestials and the speech of the rest of the world? A nutshell explanation will do. Language, all over the world, except in China, is phonetic, and relies for the creation of the words upon various combinations of a few elementary signs, arranged in the order of an alphabet. The chief disadvantage of this system is that since the writing follows the sound, and the sound of speech is constantly changing, the written language changes as well. The Chinese method is best illustrated by an example. If you take up a city directory in Germany, you will notice at intervals certain little cuts with numbers representing telephone-receivers. They arrest your attention, but you do not have to speculate long before you guess that the cuts signify which parties have telephones and the number you must ask for if you wish to call any one up. That's Chinese! Instead of explaining that this and that and the other man has telephone connection, a drawing, a cut, a *symbol* telling the same tale, is substituted. The index finger on sign-boards saying 'This way,' the maritime-flag signal code, the characters employed in mathematics, in natural philosophy, in astronomy, in geodesy, and in many other branches of science, are really Chinese forms of communicating ideas—so far as they are strictly symbolic, fixed signs with a fixed, unmistakable, unchangeable meaning. When you write that 2 and 2 make 4, this is phonetic writing; when you write $2+2=4$, this is symbolic writing. The brevity and clearness of this are evident. Mathematics is only a species of sign-writing; and in this fact we find the secret reason why Chinese scholars are so fond of algebra and geometry, and why they make such pronounced success of their studies in this field. There can be no doubt that much of the progress made in the mathematical sciences of late years has been rendered feasible by the adoption of carefully selected symbols; or, in other words, by the adoption of the same methods as China has been using for thousands of years. Complicated trains of reasoning and calculation, such as, for instance, in chemistry, are presented to the mind *en bloc* by a few arbitrary signs, and are comprehended at a glance—as the character of a landscape is gleaned in the twinkle of an eye. When we write c. o. d. on a package, or f. o. b. on a bill of lading; when we write '$' instead of 'dollar,' and a hundred other characters, we are virtually acknowledging the superiority of the Chinese method. And when the Londoners write 'Charing X' instead of Charing Cross, the Norwegians 'Xania' for Christiania, and Christmas is spelled by all Anglo-Saxon peoples 'Xmas' for brevity, it only demonstrates the world-wide want of a symbolic language."

There would be nothing, says the writer, to hinder New York, London, and Paris from at once introducing the use of Chinese characters in cable despatches and in the law, medical, and mechanical courses of the various colleges. Latin and the "hideous" Volapük failed, he says, because they had no national basis or because a phonetic tongue offers no guaranty of permanency or unity of meaning. "But a symbolic language never changes. It remains forever a unifying influence. As long as the idea to be expressed remains the same, it is expressed in the same way. The symbol expresses an idea quite apart from the spoken utterance of that idea. In other words, we may benefit by the advantages of written Chinese without ever bothering about pronouncing it."

---

**Joseph Conrad: a New English Writer of Sea Stories.**—Mr. Joseph Conrad, altho already well known in England by his "Nigger of the Narcissus" and other stories, is comparatively unknown in this country. Mr. William L. Alden, the London literary correspondent of the New York *Times*, makes some surprising statements about Mr. Conrad's latest book, "Lord Jim." He calls it a work of "superb genius," and says that "the book ought to place Mr. Conrad at the head of all English short-story writers with the solitary exception of Mr. Kipling." "It is a phenomenon," he adds, "almost as strange

as the author himself—the man who spent a lifetime at sea, dealing with the roughest phases of life, and living almost wholly without books, and then suddenly showing himself to be one of the most striking writers known to English literature." In similar vein Mr. Alden continues (in the New York *Times*, December 1):

"It is hardly a novel, for it lacks the essential form. In fact, it does not pretend to be anything of the sort. It is simply a story told by one man to a circle of friends—the story of a sailor who made a ruinous mistake.

"'Lord Jim' is a great book, a wonderful book, a magnificent book. I fear to praise it as it deserves, for, if I could do it, I should be thought by most people to have fallen into the deepest mire of 'gush.' But I venture to say that no book like it has ever before been published in the English language. That does not, of course, mean that greater books have not been published. But 'Lord Jim' stands alone. I can recall nothing that can properly be placed in comparison with it. It is the fruition of the blossom that we saw in 'The Nigger of the Narcissus' and 'The Outcast of the Islands'; but, admirable as those books were, Mr. Conrad has this time left them nearly out of sight."

## A PUBLISHER'S DEFENSE OF THE CONTEMPORARY NOVEL.

FOR some time an animated discussion has been going on in England over the merits and demerits of the novel of to-day, which, as we have already pointed out, is more and more crowding serious works to the wall. So largely does the novel dominate the book-market in England that Mr. George Allen, a publisher who has hitherto brought out other kinds of literature than fiction, announces that hereafter he will make a regular business of novel-publishing. Partly in defense of his course, he writes an article in the London *Outlook*. He does not agree with those who believe the novel to be deteriorating. He says:

"How is it, if the novel is deteriorating, that publishers of good standing, caring something, as the latest *Outlook* leader on the subject implies they do, for literature and reputation, ally themselves with the personal purveyors of rubbish for the lower multitudes? If I say, in answer to this question, that I think the novel has not deteriorated, I prepare the way for a justification of my individual action; but that is hardly of sufficient interest or importance to warrant this intrusion upon valuable space. I have the advantage over some others who are taking part in this discussion in being able to consult a retentive memory. If *The Outlook* cries 'Shame!' on the generation of Marie Corelli, may not I invoke the shade of Martin Tupper? True, the proverbial philosopher was not a novelist. But in both cases we have precisely the same phenomenon—the greedy exploitation of rubbish resulting in large financial success, followed by immense agitation amongst the reading public—agitation so universal that for a time criticism itself is confounded; for, as *The Outlook* is careful to point out, success carries all before it. But is that all? Consult experience. The noise is made, but it dies away again. The Martin Tupper to whose name I appealed is only a type. The generation for which he wrote was also the generation of many great poets and great novelists. They stand: the rest pass."

The publisher of to-day, says Mr. Allen, must offer his work to all classes, yet at the same time he should so far as possible adhere to the principle of encouraging the relatively good workman. Concerning some of the intimate and important relations which the publishing business bears to literary development, he says:

"A publisher of my acquaintance, loving the good, decided to issue some time since a minor classic—a work of fiction. He resolved to give it a worthy and an artistic form, and on the expenditure necessary to secure this he lavished a sum of twelve hundred pounds. Commercially, he made a mistake; artistically, he did a good work. He does not regret it. But he is resolved to be more careful in future. Such things, repeated, lead obviously enough to ruin. What is the alternative? Never to venture anything for that smaller public? By no means. He must appeal to all publics; and then, by the doctrine of compensation, he may be able again to indulge in costly and beautiful experiments. It is even so with the modern novel. By catering for all publics he may eventually be able to encourage the good writer in whom he believes: the writer who comes slowly to the front, the man who by dint of perseverance and hard work gradually, by his publisher's aid, gains the place to which he is entitled. If I appeal to the smaller class only, it is useless to think of helping that man. And yet *The Outlook's* plea for severer criticism, if effective, will make any task more difficult. Surely it would be a saner thing to admit the publisher's difficulty by judging the books issued according to the standard, low or high, for which, whatever the authors may think, the publisher knows they are adjusted; or must the publisher himself label his novels? . . . . . .

"No publisher will complain if any journal will take his books for what they are, even if it should become necessary to rule out some types of novel altogether from all consideration. The critic's task, in fact, is comparatively easy, and yet, as you admit, the power of the purse and the pressure of the market make him fail in performing it. The publisher is in a very different position, and a far harder one. He must, as I said, supply all classes. As long as the illiterate exist he must take heed of them; otherwise the very word *publisher* is a misnomer.

"The remedy? Crush the illiterate, and all those for whom that rough-and-ready term can be made to stand. But that is a matter for you educationalists to settle. When you have settled it, publishers like myself will have occasion to bless you."

## A NEGLECTED AMERICAN POET.

ALTHO most poets suffer a period of neglect in their earlier years, it is not often that a genuine poet remains almost wholly unrecognized by the public during his whole lifetime. Such appears to have been the fate of Ellery Channing, who is a nephew of the great Boston preacher of the same name, and who, tho still living, published his first volume of poems five years before Emerson's first volume appeared. As early as 1849 Thoreau, in alluding to Channing's home on the Concord, wrote of him:

"There
A poet wise has settled, whose fine ray
Doth often shine on Concord's twilight day;
Like those first stars, whose silver beams on high
Most travelers can not at first descry,
But eyes that wont to range the evening sky."

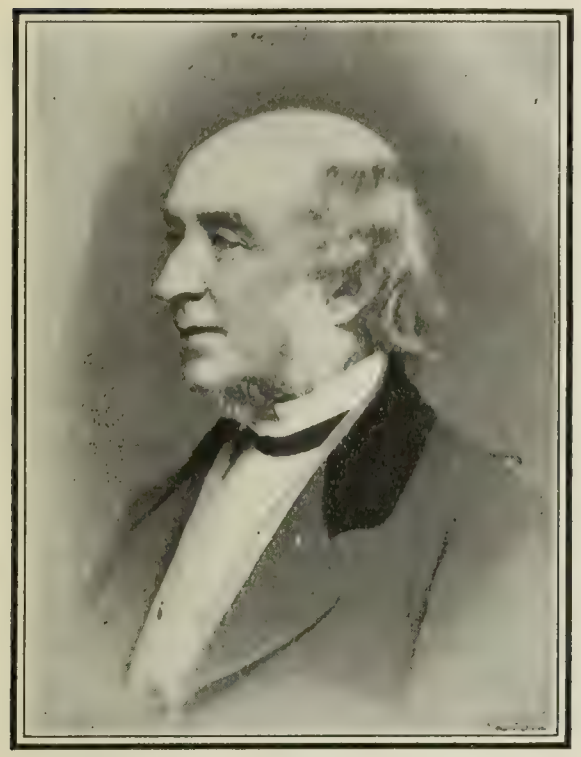
"It was a true verdict," writes Mr. F. B. Sanborn, in *The Atlantic Monthly* (December); "very few were the contemporaries who recognized the poetic radiance of Channing's genius, rare and fitful, but permanent, and winning greater attention now than when, more than half a century ago, his first book of poems was published, and commanded the praise of Emerson in *The Dial* and *The Democratic Review*." Mr. Sanborn, who was himself a friend of the chief writers of the Concord school, and has written biographies of his fellow townsmen Emerson, Thoreau, and Alcott, gives an interesting sketch of Channing's life and genius. He writes:

"Born in November, 1818, sixteen months later than Thoreau, and entering Harvard College a year after (in 1834), his first published poem ('The Spider') appeared in 1835, and he was as early a contributor to the famous *Dial* as Thoreau. His papers there were almost as many as Thoreau's, and he had printed three volumes of verse and one of prose ('Conversations in Rome,' 1847) when the first of Thoreau's two books, the 'Week,' came out in 1849. Be it remembered, for the encouragement of unread authors, that of the dozen or twenty volumes now maintaining the credit of Thoreau, the poet-naturalist himself published only two, of which the second alone, 'Walden,' paid for itself during his lifetime. Since 1850, Channing has published four more volumes of verse and one of prose: 'Near Home,' in 1858; 'The Wanderer,' in 1871; 'Life of Thoreau,' in 1873; and in 1885 and 1886, two single poems, 'Eliot' and 'John Brown.'

The last is a dramatic poem, quite different from the verses which the author contributed to Mr. Orcutt's 'History of Torrington,' the birthplace of Brown, and introduces the visit made by Mrs. Ellen Russell, a daughter of Father Taylor, to the hero of Harper's Ferry in his Virginia prison. . . . . .

After a journey to the Far West, Mr. Channing came eastward in 1840.

"In 1842 he returned to his native region, and not long after took up his residence in Concord, where he has now mainly lived for nearly sixty years. In the interval he visited the Mediterranean and Italy; traversed New England, Eastern New York, and Canada with Thoreau; helped Horace Greeley edit the New York *Tribune* in its earlier years; ten years later edited the New Bedford *Mercury*, and formed the acquaintance of Thoreau's friends there, the Ricketson family. In all these wanderings and residences his artist eye was constantly seeking out the finest landscapes, and his sauntering habit was to take his friends thither and introduce them to scenery they could hardly have found for themselves. He showed Hawthorne the loveliest recesses of the Concord woods, and of the two rivers that course slowly through them; he preceded Thoreau at Yarmouth and Truro and the Highland shore of Cape Cod; and he even taught Emerson the intimate charm of regions in Concord and Sudbury which he, the older resident and unwearied walker, had never beheld. 'In walking with Ellery,' he wrote in 1848, 'you shall always see what was never before shown to the eye of man.'"



WILLIAM ELLERY CHANNING.

In the following poem, entitled "The Lonely Road," Channing refers, says Mr. Sanborn, to the old road "winding among forests and orchards of that long-abandoned farm in Concord, near whose entrance stood Thoreau's cabin, after its removal miles away from the shores of Walden":

No track had worn the lone, deserted road,
Save where the Fox had leapt from wall to wall;
There were the swelling, glittering piles of snow;
We strayed along,—beneath our feet the lane
Creaked at each pace. . . . . .
Some scraggy orchards hem the landscape round,
A forest of sad apple-trees unpruned;
And then a newer orchard,—pet of him
Who in his dotage kept this lonely place:
In this wild scene, this shut-in orchard dell,
Men like ourselves once dwelt by roaring fires,—
Loved this still spot, nor had a further wish.

A little wall, half falling, bounds a square
Where choicer fruit-trees showed a garden's pride,—
Now crimsoned by the Sumach, whose red cones
Displace the colors of the cultured growth.
I people the void scene with Fancy's eye,
And think of childish voices,—or that kind
Caressing hands of tender parents gone
Have twined themselves in soft and golden hair,—
All fled,—and silent as an unlit cave.

A long farewell, thou dim and silent spot!
Where serious winter sleeps,—or the soft hour
Of some half-dreamy autumn afternoon:
And may no idle feet tread thy domain,
But only men to contemplation vowed,—
Still as ourselves,—creators of the Past!

The neglect which has attended his works Mr. Sanborn attributes—as did Emerson—to an apparently wilful unmelodiousness of verse. "With all this," says the writer, "conscious of his unmerited fortune among American authors, Ellery Channing has yet lived his fourscore years in the light of his own adjuration of the ideal poet:

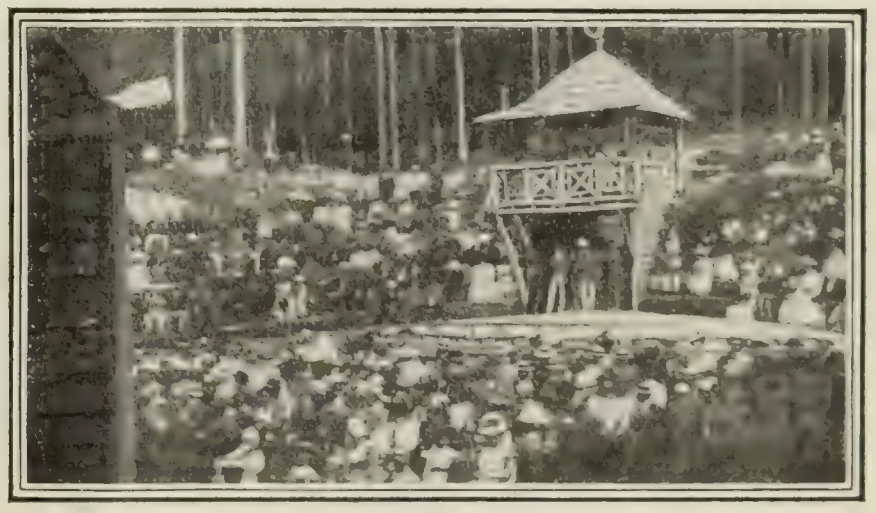
So let him stand, resigned to his estate!
Kings can not compass it, nor nobles have;
They are the children of some handsome fate,—
He of himself is beautiful and brave.

## OPEN-AIR THEATERS OF THE VOSGES.

FIVE years ago, a certain Maurice Pettecher, who is described as "a man of letters with the soul of an artist," became convinced that the miracle plays and satirical dramas (*soties*) of the Middle Ages had gained rather than lost in effectiveness by being performed by improvised actors. The continued success of the Ober-Ammergau Passion Play confirmed him in this view, and one fine day in Bussang, a little French town of 2,000 inhabitants, he got a few people together to play a drama which he had hastily written. His idea was to revive the traditional popular theater whose essential function, in his own words, is "to unite in a common sentiment, to animate with a common inspiration, without distinction of class, wealth, or environment, all the minds of a given region, large or small." The story of his effort and the result is told by Léon Abric in the *Revue Illustrée* (Paris, November 15), from which we quote:

"The company consisted of an old servant, some college boys, a manufacturer, and a lawyer. All accepted the invitation, but without enthusiasm. As soon as the rehearsals were under way, however, these good people began to take themselves very seriously and attended very carefully to their gestures and the modulation of their voices. At the first performance, on an improvised stage with green trees for side-scenes and the mountains for background, the verdict of the audience was that 'the thing isn't half bad,' and their laughter and their tears appeared in the right places.

"The theater developed rapidly. The company was increased by the addition of shopkeepers from the village and workmen from the Pettecher factory. Every year a new piece is presented. The rehearsals usually begin in June and take place every evening after working-hours. The writer was present at one of them



THE AUDITORIUM AT BUSSANG.

and was surprised by the sincerity and enthusiasm of the actors. . . . To be sure, the local accent resisted all the instructor's efforts; but it lends an additional charm, and enhances the local color, for the action of all the plays occurs in Lorraine. The costumes, which were amusingly picturesque, were made by local seamstresses after Madame Pettecher's designs, and the scenes were painted by local artists whose intentions, at least, were good.

"The troupe has been in existence five years and has had no

internal dissensions. The actors never complain that their names appear neither on programs nor placards.

"The playwright has sought to give each of his pieces a moral as well as local color. In some he satirizes and ridicules local superstitions; in one he combats alcoholism; the interest of others is purely literary. All are written with careful and artistic simplicity so that their lessons may be appreciated by the most uncultivated of the audience."

The scenery and the accessories, M. Abric goes on to say, are the "real thing" whenever possible. The side-scenes consist of living trees, the actors walk on real turf, and for country scenes the curtain is removed entirely and the bright meadows and dark pine forests of the Vosges become visible. While the play is thus conducted in the open air, there are three covered galleries with seats for 2,000 spectators, and abundant standing-room in front of these is protected by an awning from sun and rain.

Inspired by this success at Bussang, three residents of Gérardmer, near by, established a popular theater at that picturesque place. The auditorium consists of level meadow surrounded by terraces. Here also most of the plays are performed by a troupe made up of local talent. At still another place, Menil-eu-Xaintos, the contagion has spread, the originator here being the Abbé Meignien, and the play being always the same—"The Mystery of Joan of Arc"—full of pious candor and naive devotion. Here also the players are natives of the district, and all "give evidence of praiseworthy conviction." This is the best attended theater of the three, pilgrimages being made to it and special trains carrying constantly increasing crowds. Similar theaters are also to be found in Brittany and Provence.

Of the plays themselves, M. Abric writes:

"The spectator carries away from them a most delightful impression of novelty and simplicity. To enjoy them thoroughly, however, he must forget that he has ever attended a theater. He must leave his cheap sarcasm and skepticism at home and come with the soul of a child. The spirit of the boulevards is out of place among these picturesque mountains. Nature is in command and ridicule loses its power."—*Translation made for* THE LITERARY DIGEST.

## THE RETURN OF ROMANCE IN LITERATURE.

MR. MAURICE F. EGAN, professor of English literature in the Catholic University at Washington, views the contending claims of realism and of romance in fiction from a standpoint directly opposed to that of Mr. W. D. Howells, from whose article on "The New Historical Romances" we lately quoted. Dr. Egan is a romanticist, a believer in faith and intuition, not as opposed to reason and analysis, but as the masters and interpreters of them. The spirit of romance, which is the product of man's intuitional and spiritual nature moving over the waters of life and recreating them in the vision of faith, ebbs and flows, he says, as these higher elements in his soul assert themselves strongly at different periods, or in other periods lie quiescent while the lower rationalizing and materializing conceptions of life temporarily are in the ascendant. The latter half of the nineteenth century has been a period of spiritual obscuration, and material conceptions of all kinds momentarily triumphed. In the realm of philosophy we had materialism, and agnosticism, which is a belief that the spirit of man is not strong enough to see through the veils of matter and answer for itself the great questions of human destiny. In the realm of letters we had the naturalistic school, which, like physical science, merely sees what the eye can see or what can be analyzed in the retort. Now, however, in both realms, Dr. Egan sees an incoming wave of spiritual vibrations; and he dwells with pleasure on the fact that on its crest are many good things. Writing in *The Catholic University Bulletin*, he says of the realistic and of the new conception of art and life:

"Realism itself could not escape analysis; the newer man wanted to dry it as the chemist does alcohol. Every drop of water must disappear. And then the Darwinian movement was affecting life. Realism, after all, can not escape being synthetical, since even the most scientific of the new school were forced to call in the aid of imagination. Here was the difficulty. Besides, Balzac—even the all-seeing Balzac—hesitated to say some things; Flaubert had his reserves. The movement of realism was hampered by prudery, and it was not sufficiently 'scientific.' Zola, instead of being the founder of a school, is the beginning and the end of an illogical attempt in literature to dig around the roots of animal life in search of the monstrous grubs that infest them. The naturalistic-scientific movement somewhat affected Matilde Serao in Italy and the clever Spanish novelists, among whom are Galdós and Madame Pardo-Bazan. In England it touched George Moore. In Russia it influenced Tolstoy and Dostoyeffsky. It has had no permanent effect, except upon D'Annunzio, who may call himself a pathological criminologist of the scientific-naturalist school. Literature, one sees, has for some time been forging checks upon the Bank of Science just as that bank was engaged in playing the same game with the Bank of Theology.

"In English-speaking countries the scientific-realistic movement has spent its force. Reverence and mysticism are coming into vogue again, and with them the romance. A man who does not to-day assume that he would like to believe, if he could, is as much out of the fashion as the man who doubted Spencer or Huxley twenty-five years ago. And the more you believe, the more you are in the current of the stream. It is the old motion of the pendulum. Therefore the romance is king. Poetry is even coming into vogue; the poets are struggling out of their twilight, and it will soon be day for them. Everybody who is rich looks around for ideals, and everybody who is not rich hopes to acquire some as soon as he can afford to keep them."

## NOTES.

THE marriage of Miss Mary E. Wilkins to Dr. Charles Freeman, of Metuchen, N. J., has been postponed in order to allow her to finish her new story, "The Lion's Share."

THE misquotation of book titles by the public library reader is a perennial source of amusement to the bookman. Following are some of the latest calls for books at a Western library:

Account of Monte Cristo. Acrost the Kontinent by Boles. Bula. Count of Corpus Cristy. Dant's Infernal Comedy. Darwin's Descent on man. Feminine Cooper's works. Infeleese. Less Miserable. Some of Macbeth's writings. Something in the way of friction. Squeal to a book.

The following lines by Arthur Sherburne Hardy are quoted by *Unity* (Chicago), anent the recent debates as to what is the real teaching of the Rubáiyát:

ON A FLY-LEAF OF OMAR.

Deem not this book a creed; 'tis but the cry
Of one who fears not death, but would not die,
Who at the table feigns with sorry jest
To love the wine the Master's hand has pres't—
The while he loves the absent Master best—
The bitter cry of Love for Love's reply.

THE report of educational progress in Porto Rico is most encouraging. When the Hon. M. G. Brumbaugh, the commissioner of education for the island, took charge in San Juan on March 6, 1900, the only schools were those held in rented rooms, many of which had no floors, desks, or sanitary arrangement of any sort. The teachers were notoriously incompetent, and educational advantages were open to only a small number of children. Of the new conditions the New York *Mail and Express* says: "According to the commissioner's data, there were in Porto Rico on October 1, 800 schools with 38,000 pupils, an increase of 180 schools and 9,000 pupils within the ten weeks after his arrival. These results, however, he says, are but the beginning of the educational system which the people need and desire. There are 300,000 children of school age for whom no training can be provided under available appropriations. Every school in the island has its full quota of pupils; hundreds of applicants are turned away for lack of room and teachers."

THE death of Mrs. Abby Sage Richardson in Rome, at the age of sixty-three, calls attention to a remarkable woman, who in her heroic career brings to mind Mrs. Oliphant. Left at the age of hardly more than twenty—through a painful tragedy—with two children, she supported herself and them with her pen and by lectures, in the mean time pursuing studies in Elizabethan literature, Anglo-Saxon, and other literary subjects. From the time when she was left apparently helpless by the cruelty of one man and the death of another, she lived wholly by her own exertions, and later gave her sons the benefit of higher education and foreign travel. She will be best remembered through her "Old English Poetry," "Familiar Talks in English Literature," "Abelard and Heloise," and "Old Love-Letters." Her youngest son, Mr. William Sage, is author of "Robert Tourney," one of the successful novels of the past year. Mrs. Richardson also wrote, in collaboration with Miss Grace Furniss, "The Colonial Girl," and "The Pride of Jennico," besides other plays.

## SCIENCE AND INVENTION.

### PRESENT STATUS OF THE EVOLUTIONARY THEORY.

"THE crowning achievement of the nineteenth century"—this is what the Darwinian theory of natural selection is called by one who shared with Darwin the establishment of that theory and who has long been one of its chief expositors and popularizers. Alfred Russell Wallace, in the first of a series of articles on the history of the "passing century," now appearing in a syndicate of newspapers, makes this assertion at the conclusion of a review of the rise, progress, and present status of the doctrine of organic evolution. Dr. Wallace first tells us that most of the objections made to theories of evolution, and especially to those that deal with living organisms, rest upon misconception of what any such theory can possibly explain. He says:

"Evolution, as a general principle, implies that all things in the universe as we see them have arisen from other things which preceded them by a process of modification, under the action of those all-pervading but mysterious agencies known to us as 'natural forces,' or more generally the 'laws of nature.' More particularly the term evolution implies that the process is an 'unrolling' or 'unfolding,' derived probably from the way in which leaves and flowers are usually rolled up or crumpled up in the bud and grow into their perfect form by unrolling or unfolding. Insects in the pupa and vertebrates in the embryo exhibit a somewhat similar condition of folding, and the word is therefore very applicable to an extensive range of phenomena; but it must not be taken as universally applicable, since in the material world there are other modes of orderly change under natural laws to which the terms development or evolution are equally applicable. The 'continuity' of physical phenomena as illustrated by the late Sir William Grove in 1866 has the same general meaning; but evolution implies more than mere continuity or succession—something like growth or definite change from form to form under the action of unchangeable laws.

"The point especially to be noted here is, that evolution, even if it is essentially a true and complete theory of the universe, can explain only the existing conditions of nature by showing that it has been derived from some preexisting condition through the action of known forces and laws. It may also show the high probability of a similar derivation from a still earlier condition; but the farther back we go the more uncertain must be our conclusions, while we can never make any real approach to the absolute beginnings of things. Herbert Spencer, and many other thinkers before him, have shown that if we try to realize the absolute nature of the simplest phenomena, we are inevitably landed either in a contradiction or in some unthinkable proposition. Thus, suppose we ask—Is matter infinitely divisible or is it not? If we say it is, we can not think it out, since all infinity, however it may be stated in words, is really unthinkable.

"If we say there is a limit—the ultimate atom—then, as all size is comparative, we can imagine a being to whom this atom seems as large as an apple or even a house does to us; and we then find it quite unthinkable that this mass of matter should be in its nature absolutely indivisible even by an infinite force. It follows that all explanations of phenomena can only be partial explanations. They can inform us of the last change or the last series of changes which brought about the actual conditions now existing, and they can often enable us to predict future changes to a limited extent; but both the infinite past and the remote future are alike beyond our powers. Yet the explanations that the theory of evolution gives us are none the less real and none the less important, especially when we compare its teachings with the wild guesses or the total ignorance of the thinkers of earlier ages."

A large part of Dr. Wallace's review is taken up with a recital of earlier attempts at evolutionary theory, such as those of the ancients, and, in modern times, those of Buffon, Goethe, and Lamarck. Darwin's announcement of the principle of natural selection by survival of the fittest he regards as the crown of all these. He sums the matter up thus:

"Altho the philosophical writers of classical times obtained a few glimpses of the action of law in nature regulating its successive changes, nothing satisfactory could be effected till the actual facts had been better ascertained by the whole body of workers who, during the last five centuries, have penetrated ever more and more deeply into nature's mysteries and laws. By their labors we became possessed of such a body of carefully observed facts that, toward the end of the last century, such thinkers as Laplace and Hutton were enabled to give us the first rudiments of theories of evolution as applied to the solar system and the earth's crust, both of which have been greatly developed and rendered more secure during the century now passing away.

"In like manner Buffon and Goethe may be said to have started the idea of organic evolution, more systematically treated a little later by Lamarck, but still without any discovery of laws adequate to produce the results we see everywhere in nature. The subject then languished till, after twenty years of observation and research, Charles Darwin produced a work which at once satisfied many thinkers that the long-desired clew had been discovered. Its acceptance by almost the whole scientific world soon followed; it threw new light on almost every branch of research, and it will probably take its place, in the opinion of future generations, as the crowning achievement of the nineteenth century."

Objections and difficulties brought up by critics of the theory have, Dr. Wallace thinks, been fully answered, and it remains the last word of science on the vexed problem of the world's origin. To quote the author's final summary:

"This theory of natural selection—meaning the elimination of the least fit and therefore the ultimate 'survival of the fittest'—has furnished a rational and precise explanation of the means of adaptation of all existing organisms to their conditions, and therefore of their transformation from the series of distinct but allied species which occupied the earth at some preceding epoch. In this sense it has actually demonstrated the 'origin of species,' and, by carrying back this process step by step into earlier and earlier geological times, we are able mentally to follow out the evolution of all forms of life from one or a few primordial forms. Natural selection has thus supplied that motive power of change and adaptation that was wanting in all earlier attempts at explanation, and this has led to its very general acceptance both by naturalists and by the great majority of thinkers and men of science."

### SALT AS A HEART STIMULANT.

THE discovery of the "elixir of life" by two professors in the University of Chicago is announced in large headlines by the sensational section of the daily press. Not only so, but we are told that the said elixir is so familiar a substance as common salt, which most of us have used more or less regularly without a thought that we were absorbing so potent a stimulant. This version of their investigation the Chicago scientists—Professors Loeb and Lingle—repudiate with some indignation, and apparently with reason, for the pamphlet in which they explain their results treats simply of some experiments confirmatory of the theory already advanced by several physiologists, that the origin of the heart's rhythmic beat must be sought among the inorganic constituents of the blood. Says Professor Lingle in the pamphlet already referred to:

"The latest theory to explain this action has been advanced by Howell, who holds that to produce rhythmic contractions in heart tissue the interaction of three salts is necessary—sodium chlorid to maintain pressure, calcium salts to produce tone and act as the real excitant, and potassium salts to cause relaxation and neutralize the excessive stimulating action of the calcium salts.

"The idea of the rhythmic activity of the heart being a function of the inorganic salts of the blood is indirectly supported by some work by Professor Loeb. He has shown that rhythmic contraction can be produced at will in the striped muscle of the frog by the action of a single salt solution, thus contradicting Biedermann's theory that a mixture of salts is necessary."

Professor Loeb's theories have also been tested by his col-

league in experiments on turtles, in which he gave especial attention to the following three points:

"First—Will ventricular tissue beat rhythmically in solutions of non-conductors; or, in other words, is rhythmic activity an ion effect in heart muscle [an ion is a chemical element as it exists in a solution decomposable by an electric current]?

"Second—If the stimulus of this rhythmical activity is an ion, is it the calcium or sodium ion?

"Third—What is the rôle of other ions with respect to ventricular rhythmic activity?"

Says the correspondent of the New York *Sun* in describing these experiments further:

"Professor Lingle found that hearts would not begin to beat or maintain rhythmic beats in solutions of non-conductors. To test this a series of experiments was made with solutions of cane-sugar, dextrose, and glycerin. The fact that no rhythm was developed in these solutions, Professor Lingle says, proves Professor Loeb's conclusions that rhythmic activity occurs only in solutions of electrolytes and is, therefore, an ion effect.

"Professor Loeb maintains that the stimulus is most closely associated with the sodium compounds, or, rather, with the sodium ion. The calcium and potassium salts simply prolong the rhythm and improve it by their ability to neutralize the injurious effects of too much or too extended action of sodium. Professor Loeb has studied separately and together the action on heart tissue of the three ions, sodium, calcium, and potassium, and finds that while the other ions may start heart action, the sodium ion is the only one which will maintain it."

## THE SUN AS A FAMINE PROPHET.

NUMEROUS attempts have been made to connect sun-spots with terrestrial events. Not to mention all sorts of astrological theories, with which we need not concern ourselves, most of these attempts relate to supposed influence of the spots on the weather, and are related to the now well-known eleven-year "sun-spot period," which was long ago shown to correspond with a similar cycle in the earth's magnetic condition. Added to this correspondence, the observation that the appearance of a large sun-spot is often accompanied by a violent magnetic disturbance left little doubt that these phenomena are related, at any rate, to the earth's magnetic condition, whether the connection goes any farther or not. More than twenty years ago Sir Norman Lockyer and the late Sir William Hunter undertook an investigation of the records of sun-spots, magnetic storms, cyclones, and rainfall, especially with regard to India, from which they drew the following conclusion:

"That the eleven years' cycle in terrestrial magnetism has a direct and important influence upon telegraphic enterprise; that the cycle of wind disturbances produces direct results upon the percentages of casualties among the shipping of the world, and that the cycle of tropical rainfall has a portentous coincidence with a cycle of famine in India."

All these cycles were found to be coincident with that of the sun-spots. These conclusions were not accepted by the whole scientific world. Nevertheless, Sir Norman, who is the only surviving member of the scientific partnership just mentioned, read before the Royal Society in November last a paper that carries his conclusions much farther, at least so far as India is concerned. Says the Manchester *Guardian* (November 26) in an editorial account of the paper:

"Spectroscopic study of the spots has shown certain abnormalities in the light which they send us—for they are but relatively dark—to be accompanied by irregularities in the Indian rainfall. A study of climatic variations during the past century has shown that India has 'two pulses of rainfall, one near the maximum and the other near the minimum of the sun-spot period.' All the famines of the past fifty years have occurred in the intervals between these two 'pulses.' Why it should be so is easy to perceive; the 'pulses' are limited in extent, and during the intervals between them the quantity of rain falling in India ceases to be sufficient for agriculture, which in that teeming land is pushed up to the limit possible in good years. The inference is that the likelihood of famine in India recurs in cycles of eleven years, and our records actually show that this has been the case. Thus 1880 and 1891, 1885–86 and 1896–97 have been notable years of famine, or at least—for the theory is not mathematically rigid—have been closely followed by famines for which they prepared by drought. It is clear that if we can thus be aware in advance of the probable failure of the Indian crops it will help us to provide against the ensuing famine. In that way Sir Norman Lockyer's research may be of incalculable value if further experience confirms its results, tho we must still bear in mind Mr. Abercromby's warning that, tho there are strong grounds for the belief in a connection between sun-spots and weather, yet 'from the nature of atmospheric circulation we are unable to utilize this fact in forecasting weather, either for any season or for any day.' Before we are able to carry the business so far years of investigation will have to pass. In the mean time we are reasonably sure of the interesting fact that the same power which tears the sun's photosphere into flaming craters alters the price of bread in our markets and fills our skies with the brandished streamers of the aurora."

Sir Norman is reported by *The Westminster Gazette* as fairly confident of being able in four or five years to localize the exact province or district in which severe drought will take place. It says:

"Nor will India alone gain by this notable discovery. Famine years in India are generally years of low flood in Egypt, and having obtained the law followed by the former the scientists have been able to arrive at that governing the Nile valley. In a word, a limitless vista of possibilities is opened up. And the initial results have been achieved mainly by taking photographs of the sun daily!

"'Faraday toyed with a needle,' remarked Sir Norman, with a twinkle in his eye, 'and they laughed at him; yet he gave us the electric telegraph. The history of science has established the fact that the "*useless*" turns out to be the most *useful* in the end. The man in the street becomes very skeptical when you begin to talk of sun-spots and "prominences" and the effect of both on meteorology; but there will remain perhaps,' added Sir Norman, 'some compensation to science if it can save millions of lives and millions of pounds in India.' . . . . . .

"South Kensington, Sir Norman informed our representative, in conclusion, will be the center for future observations and further developments, and photographs will come there daily from India, Mauritius, and Greenwich. The Royal Society is taking a deep interest in the subject, while the Prime Minister, who has been Secretary for India at one time, and is a personal friend of Sir Norman Lockyer's, is understood to be directly alive to its great possibilities."

It need not be expected, however, that the world of science will be any more nearly unanimous in this matter than it was a score of years ago. Even now protests are heard. One, from an anonymous correspondent of the paper from which we have just quoted, puts the case against Sir Norman's theory fairly well. Says this writer:

"No knowledge of sun-spots and protuberances, however exact, can get over the fact that there is no real correspondence between their changes and the variations of terrestrial weather. In these variations a cyclical order may be roughly discerned. As meteorological study goes on it may be made out more clearly. But in any case nothing can be gained by going from the obscure to the more obscure, and substituting study of a solar cycle not in correspondence for study of the terrestrial cycle which primarily concerns us. . . . . .

"There is no evidence for his assumption that the unknown lines sometimes seen in sun-spots spectra are due to known substances at enormously high temperatures. His own argument compels him to rely upon the fact that such lines are sometimes present and sometimes absent in the spectra of sun-spots otherwise indistinguishable. Sun-spots at the best cover so small an area of the sun's disk that he does not pretend to assign to them any power over terrestrial weather. He assumes that when they

are abnormally hot an immense unspotted area is abnormally hot also. But for this assumption there is not an atom of proof, either experimental or deductive. He told your interviewer that the sun is now 'unusually hot.' But it is as inconceivable that the sun should spontaneously increase his total energy as it is that your paper-weight should sometimes increase its weight from eight ounces to twelve. The proposition is absolutely and diametrically opposed to the fundamental conceptions of physics."

## TALKING-MACHINES, ANCIENT AND MODERN.

THE old-fashioned talking-machine, which was an attempt rather than a finished product, was an endeavor to imitate the human voice; the modern talking-machine, the phonograph, reproduces an actual voice. They differ very much as an original painting and a photograph; only, to carry the simile further, the painting in this case was a scarcely recognizable daub, while the photograph is reasonably clear and faithful. Yet for some scientific purposes the original or synthetic method of reproducing and studying the voice is still employed. Of some recent developments of it, M. A. da Cunha writes as follows in *La Nature* (Paris, December 1):

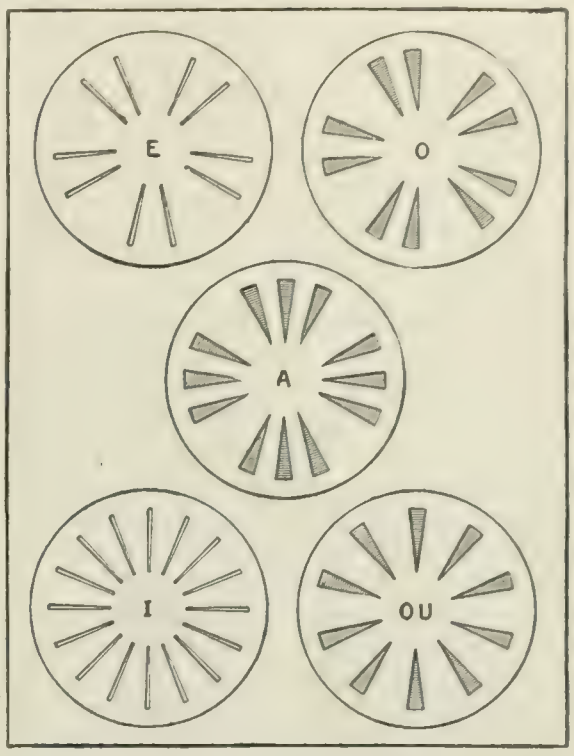
FIGS. 1, 2, 3, 4, 5, 6.—Analytic Flames of Vowel-Formation, I, U, OU, E, D, A (French).

"When the phonograph made its appearance about fifteen years since, it put a stop almost brutally to the labors of a host of inventors who had at once to give up seeking a purely mechanical method of imitating the human voice. This was wrong; for nothing that is connected with the study of our organism should be neglected. Altho some scientists like Helmholtz, Koenig, and Herrmann have continued their studies, the results in general are not known outside their laboratories. It thus seemed to us that it would be interesting to say a few words about the ideas of Dr. Marage, which have led him to the construction of an apparatus that is well thought out and that may be the starting-point for very important applications. This device, which is limited to the production of the vowels, works admirably, and it has the peculiarity that it has been constructed by exactly reversing the whole series of experiments made for the analysis of sounds. It is, then, if not an absolutely perfect apparatus, at least one made on correct mathematical principles. . . . . .

"The apparatus necessary for the analysis of sounds, no matter what method may be employed, consist of a stretched membrane placed at the end of a mouthpiece. On one of the faces of this membrane the air is caused to vibrate by means of sounds, and to the other some system of registration is applied. In general this consists of a very long needle connected to the membrane, and vibrating with it, which traces a curve on a moving sheet of paper.

FIG. 7.—"Acouometer," giving standard sound.

M. Marage has constructed a very simple device; its simplicity, in fact, is a great part of his invention. He had showed that the experiments of his predecessors often differed among themselves, and were sometimes confused. The reason of this was that the forms of apparatus employed were defective owing to their different elements. By suppressing these elements, the causes of error were done away with.



FIGS. 8, 9, 10, 11, 12.—Movable Plates for giving different vowels in the "siren."

"In the new machine all annexes not absolutely indispensable are done away with; mouthpieces and conducting-tubes were suppressed; it followed that the vibrations took place in direct contact with the membrane. This was made of stretched india-rubber, a material which is known not to modify the voice in any way. Finally, as a last and important modification, the author changed the registering system completely; in place of using a needle, he caused acetylene gas at constant pressure to be delivered on the inverse side of the membrane. This gas escaped by a tube and was lighted at its extremity. When the membrane vibrated, the pressure of the gas varied and the flame changed in intensity. By receiving the successive images on a moving band of sensitized paper we have a graphic record that gives valuable information about the formation of different sounds.

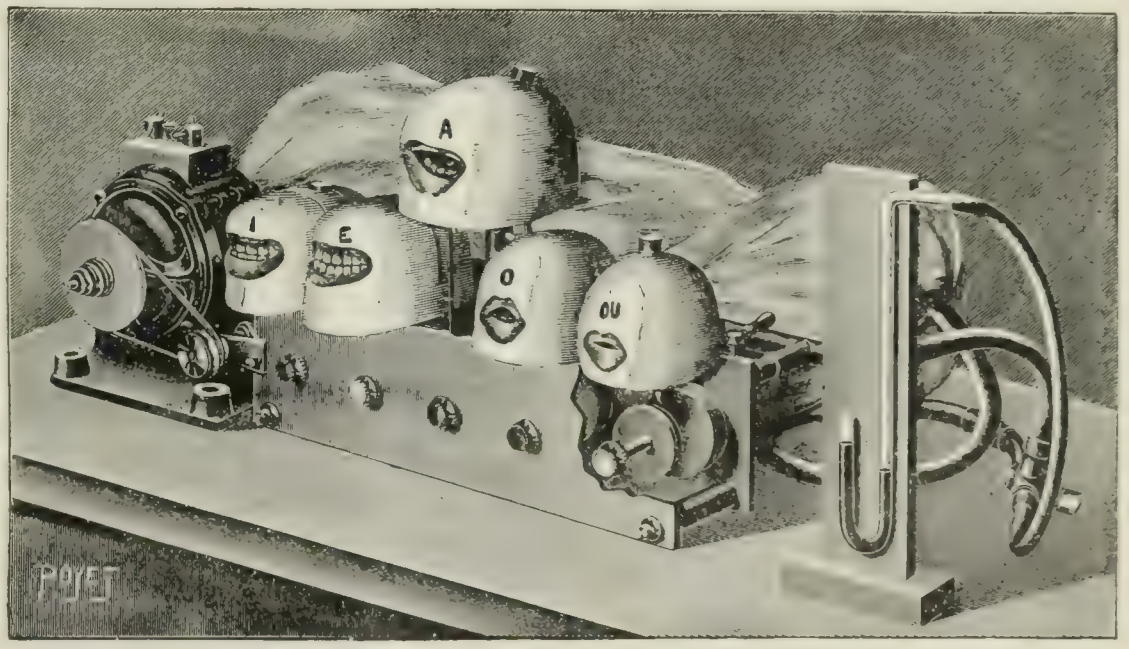


FIG. 13.—Synthetic Apparatus for forming vowel-sounds.

In applying this method to the emission of vowels he proved the following:

"Certain vowels, I, U, OU [in French] are formed by a series of vibrations of different intensity and separation, but regularly spaced; in other words, there exists for these sounds a series of continued and similar vibrations (see Figs. 1, 2, 3). For É and O these vibrations are also regular, but each is formed of two oscillations (Figs. 4 and 5) arranged in a special manner for each. We thus have groups of double vibrations. Finally, in the case of A, these groups have three component vibrations (Fig. 6).

"These observations are not new, for previous experiment by the method of rigid connections had given similar indications. The present investigations, however, not only confirmed these, but had the important advantage of rendering the graphic records clearer, so that they became easier to follow. . . . . .

"M. Marage is not satisfied with the 'siren' for the production

of the vowels. Not only the larynx, but also the cheeks play an important part in the production of sounds, adding the harmonies that give the voice its character. Other elements also contribute to this special characteristic of the voice whereby that of a particular person is at once recognized; but we can not touch upon them here.

"To give to his apparatus the feature that he considered necessary, M. Marage has been able with Dr. Roussel's aid to reproduce the interior of a person's mouth while he is pronouncing the different vowels, using for this purpose the plastic substance employed by dentists. He fits these reproductions, made in plaster-of-Paris, to sirens giving the appropriate combinations of sounds, and then sets his machine going. . . . As we have seen, this synthetic process is interesting, and altho it has no future before it, so far as reproduction of the human voice is concerned, at least it may have a few useful applications.

"The author proposes to modify the steam sirens used on shipboard so that they will emit the vowel sounds; thus different phonetic signals may be obtained, which may be used to form an international alphabet. Another important application of this synthetic process can be made in the construction of ear-trumpets that will not fatigue the deaf, because they will not modify the grouping of the oscillations adapted to the ear.

"Finally, there has been constructed an 'acouometer,' giving a typical sound (the vowel A, for example), which may be used as a standard to which certain other sounds may be referred (Fig. 7). There will also be a great number of interesting applications in medicine; but we have no space to describe them here."—*Translation made for* THE LITERARY DIGEST.

**The Peanut as a Civilizer in Africa.**—The peanut may yet prove the salvation of the African negro. At least so it is asserted by Herr Bernega, of Hanover, who delivered, before the section of pharmacy at the recent Congress of Naturalists at Aix-la-Chapelle (Aachen), a lecture on the products of the German colonies, viewed in their relations to the chemical industries of the mother country. "Among other subjects," says *The National Druggist*, "he touched on the cultivation of *Arachys hypogæa*, or the peanut, in the Kameruns and elsewhere in tropical Africa. While in Dakar (Senegambia) the speaker found that enormous quantities of the nuts were shipped thence, by the Kusfisque and St. Louis railway, to Marseilles, and that the quantity was ever on the increase. The price of the nuts there, in Dakar, was about a shilling a bushel, the latter weighing from 20 to 23 pounds, while in Marseilles they commanded £9 to £10 sterling [$45 to $50] per ton. In 1898 there were shipped, from Bathurst alone, 29,000 tons. The peanut, says the author, is proving an excellent educator of the negro in the paths of agriculture. The 'factories' or trading-posts in the colony give each negro a bushel of nuts, free, as seed, on the condition that he returns four bushels from his crop from the seed. The yield he states, is usually twenty-fold, in good years. The seed is planted at the close of the rainy season (in April-May) and the nuts are dug in November. Enormous crops are made by the natives in the English and Portuguese possessions, and the author urges the German Government to press it in its colonies. The nut yields a delightful oil, which is used, we may remark, in sophistication and imitation of olive oil, and the nut is now one of the cheapest-known sources of albumen. It contains a very large percentage of nitrogenous matter, and constitutes an important ingredient of the concentrated rations issued to the German soldiers on the march."

---

**News by Telephone.**—For several years past there has existed at Budapest, Hungary, a so-called telephone-journal, or system of news-distribution by telephone. This received a good deal of notice from the press at the time when it was established in 1893, and it has several times been mentioned in these columns. The German paper *Die Reform*, as quoted in the *Revue Scientifique* (December 8), tells us that the system is still successfully operated. Says this paper: "It is well known that this journal keeps its subscribers in touch with the news by telephone, items of interest being telephoned from the central office to each subscriber from 8 A.M. till 11 P.M. Each communication comes on the hour, except the news of the money market and parliament, which are sent every half-hour. The subscription price is 3.75 francs [75 cents] a month, and the subscriber is not bound for more than four months: he pays nothing extra for receivers or lines. The receiving-apparatus is so arranged that two persons can listen at once, and communications are announced by a prearranged bell-signal. At the end of 1898, the circuit, which is limited to the city of Budapest, had reached 914 kilometers [567 miles] of lines; the present number of subscribers is about 7,000, or eight times those of the first year. Trials have been made, with good results, looking to the extension of the system to the neighboring towns of Szegedin and Arad. *Die Reform* also gives technical details, with figures, of the mode of installation of the system and of the arrangements used for the telephonic transmission of the news."—*Translation made for* THE LITERARY DIGEST.

---

**Inoculation for Malaria.**—In a recent number of a German medical weekly, as quoted in the New York *Staats-Zeitung*, Dr. Sander, of Germany, has described a discovery of the highest importance for the stamping out of malaria and the acclimation of the white race in the tropics. The article is based on letters received from Dr. Kuehn, an army surgeon in German Southwest Africa, who has been studying the so-called "Sterbe," a plague which has decimated the horses of that country. It was found that serum from horses afflicted with this disease is a cure and a preventive of malaria in men, white or black. Inoculations with such serum produce neither general nor local inflammation, and have been employed with success in very severe cases. The experiments were begun early in 1899. Fifty persons inoculated in that year passed the rainy season, from November to May, without showing the slightest symptom of malaria. On the other hand, many who had not been inoculated were attacked by the disease, but were easily cured by inoculation. All these persons were natives; but it is a remarkable fact that the natives of this region show less natural immunity to malaria than Europeans.

---

## SCIENCE BREVITIES.

"MOLTEN WOOD."—It is reported through consular channels that Mr. De Gall, inspector of forests at Lemur, France, has invented a substance which he calls "molten wood," and which among other things is a good electrical insulator. By dry distillation of the wood under high pressure the escape of developing gases is prevented, thereby reducting the substance to a molten condition. After cooling off, the report states, the mass assumes the character of coal, yet without showing a trace of the organic structure of that material. This new body is hard, but can be shaped and polished at will. It is also represented as impervious to water and acid and is a perfect electric non-conductor.

SEA-WEED.—It has been discovered by Messrs. Letts and Hawthorne that sea-weed is a valuable test for ascertaining the presence of sewage in sea-water. "The authors' attention was directed to this subject," says *Merck's Report*, "by the large quantities of sea-weed outside Dublin and Belfast that were putrefying. The two chemists thereupon determined to discover the reason of this extensive putrefaction of the weed, and protracted investigations proved that the successful growth of the weed depends almost entirely upon the presence of sewage in the water. The greater the pollution, the more prolific was the growth of the weed, while on the other hand, if no pollution of the water existed, the weed simply died."

"IT is stated that a movement is on foot to do away with automobile shows," says *The Scientific American*. "The reason for the step is to be found in the experience of bicycle manufacturers. As long as a few of the leading makers engaged spaces at the show, all of the others felt obliged to be represented. This results in a heavy expense. A plan has been formulated for starting a train of automobiles around the country, beginning next March. The train will visit all cities of consequence and remain from one to four days in each, in order that the residents may inspect the automobiles and have their merits explained to them. It is thought that this will benefit the industry to a greater degree than can be accomplished by holding shows, and the expense would not be greater than in going from one show to another."

A MOVING platform is to be constructed in Paris on the right bank of the Seine. It will be underground, and its length will be about ten kilometers [6 miles]. "The route proposed," says *Electricity*, "passes under the Avenue de l'Opéra, the great boulevards, the Boulevard Sébastopol, the Rue Turbigo, and the Rue de Rivoli. In place of the three platforms now existing at the Exposition the new scheme embraces four. The first, as at the Exposition, will be stationary, the second will have a velocity of 1.50 meters 5 feet], the third 3 meters [10 feet], and the fourth 5 meters [16½ feet]. Thus a very rapid means of transit afoot will exist in that portion of Paris now the most encumbered by vehicular traffic, for as all locomotion will be in one direction a person walking fast on the fourth platform, having no adverse stream of pedestrians to avoid, will easily be able to do more than ten miles an hour.

## THE RELIGIOUS WORLD.

### THE TEMPORAL POWER OF THE POPE AS CLAIMED BY ROMAN CATHOLICS.

THE Roman question is evidently not a dead issue, and the Rev. Dr. Humphrey Moynihan, in an article said to be inspired by Cardinal Rampolla (the Papal Secretary of State) and prepared under his direction, declares that it will not be a dead issue until the temporal power is restored to the papacy. Writing in *The Catholic World* (December), Dr. Moynihan gives the following reasons why the Pope will never acquiesce in the present status in Italy:

"The church is essentially a sovereign and complete society, possessing its own organization and laws, and having to do with the moral and spiritual interests of mankind. At its head is one who is the Universal Teacher of Christendom. The spiritual ruler of many nations can not be the vassal or dependent of a government; the man who guides the destinies of a mighty spiritual empire, standing for justice and righteousness amongst the nations and rulers of nations, must be independent of political control. Independence is the very breath of life of a moral power. 'Let the very enemies of the temporal power of the Apostolic See,' wrote Pius IX., 'say with what confidence and respect they would receive the exhortations, advice, orders, and decrees of the sovereign pontiff if they beheld him subject to the will of a prince or government.' The Pope must be above suspicion. His authority must not be neutralized by mistrust as to his motives or uncertainty as to his freedom of action. If Leo XIII. were but the first subject of the new King of Italy, he would ere long be regarded as the instrument of a government, and his decrees would be scanned for evidences of Quirinal diplomacy. Other nations would not turn to him with that unquestioning confidence which is due to the Father of the Faithful. Sooner or later the Roman pontiff would be no better than the Archbishop of Canterbury, who exercises spiritual jurisdiction only under the shadow of a scepter, and the Church Catholic would shrink to the limits and the servitude of a national institution. The popes have always understood that they were not as other kings. When, for example, seven hundred years ago Nicholas III. published a constitution in which a foreign prince or potentate was forbidden to rule in Rome, it was on the ground that the pontiff should be free in his administration of the church. When in more recent times, by the orders of Napoleon I., the papal colors were hauled down in Rome, Pius VII. at once launched against the French Emperor a decree of excommunication, while other princes were silently acquiescing in the sentence by which the master of the world deprived them of their inheritance.

"In the Roman pontiff sovereignty and independence are inseparable. This is freely acknowledged even by eminent Protestant historians, who admit that, on the one hand, secular governments have an inborn tendency to control the church, and that, on the other hand, the saddest pages of the annals of the church were written when the papacy was under the influence of a dynasty. Gregorovius, rising from his study of the mind of the church, testifies: 'The Metropolis of Christendom, representing a universal principle, should have liberty, and the supreme pontiff who has his seat there should not be the subject of any king.' Ranke, with the history of the church before him, re-echoes words spoken at the Council of Basle: 'I was once of opinion that it would be good to separate the spiritual wholly from the temporal power; but I have learned that the Pope without the patrimony of Peter would be nothing more than the slave of kings or princes.'"

As to the Pope's "title deeds" to Rome, Dr. Moynihan says:

"Few dynasties there are that have not begun in violence or perfidy; the papacy, the most majestic as well as the most ancient of all dynasties, is founded not on fraud or force, but on the homage of a grateful people. 'The temporal dominion of the popes,' writes Gibbons, 'is now confirmed by the reverence of one thousand years, and their noblest title is the choice of a people whom they had redeemed from slavery.' None, save perhaps those who are profoundly ignorant of history or careless of the arguments that would buttress usurpation, now deny that for eleven hundred years and more the popes ruled Rome through the choice of the people they had saved. The days when the papacy acquired its title-deeds to Rome were the stormiest that Italy and the world have ever seen. Europe rocked beneath the tramp of hordes of barbarians; the fairest provinces of civilization were given over to havoc and pillage; those who cowered in walled cities looked out on flaming homes and vineyards, and listened to the cries of their countrymen as they were put to the sword or swept away as slaves. It was a time when, as Dean Church says, it seemed as if the whole world and human society were hopelessly wrecked without prospect or hope of escape. It was then, when animalism and brute force were let loose upon the Garden of Europe, that Italy, left to the mercy of every invader, looked to the popes of Rome for safety, and the popes saved Italy, and with it the cause of civilization. Then, and in days to come, the papacy was the one stable institution which by virtue of the dominating power of religion could exercise a controlling influence over the warring elements of the age, and establish a new order of things upon the ruins of the old. . . . Were it not for the Roman pontiffs, Rome would have shared the fate of Memphis and Babylon: it would be a nameless and shapeless heap of ruins in a wilderness swept by pestilence. 'It is not necessary,' writes Leo XIII., 'to recall the immense benefit and the glory with which the popes have covered the city of their choice—a glory and benefaction which are written in indestructible letters upon the monuments and the history of all the ages. Rome belongs to the popes by titles such and so many that no prince, whoever he be, can show the like for any city in his kingdom.'"

On the other hand, says the writer, the present occupants hold Rome only by "an act of treachery that is a blot on the history of Italy and a scandal to the world":

"The deed of the 20th of September, 1870, was a violation not only of the rights of nations, but also of a convention to the observance of which the honor of Italy had been pledged. That deed, unjust and dishonorable in its inception, has never been legitimized. True, in the reign of terror which followed the storming of Rome, almost before the roar of the cannon had died away, a plebiscitum of the people of Rome was held in order to justify usurpation; but the fact that only forty votes were cast for the Pope, while forty thousand were cast for the invaders, is sufficient proof, if any proof were needed, that the popular vote of the Romans was a shameless farce. Only a few months afterward an address of loyalty presented to Pius IX. by a society of the city bore the signatures of over twenty-seven thousand Roman citizens. On the first anniversary of the so-called plebiscitum an address was again presented to the Holy Father by the young men of Rome, who declared: 'Our hearts burned with indignation when we witnessed the impudence of your enemies, who dared to lie on parchment and marble, representing as a vote of the Roman people that ridiculous *plébiscite* which was nothing but the vote of a horde of immigrants, strangers, public criminals, and the few cowards who allowed themselves to be drawn by threats and promises.'"

The Roman question, Dr. Moynihan asserts, is more acute today than it has been at any time during the past thirty years, and Leo believes with confidence that Rome will be restored:

"The spoliation of the Holy See is only an incident in the history of the papacy. Nine times have men taken Rome from the popes, and nine times have they given it back. Once more will the patrimony of Peter be given back—not, perhaps, so extensive as it was in days gone by, for it is only independence that is sought, not territorial aggrandizement—but certain it is that immemorial right and the eternal patience of Rome will triumph over the iniquities of 'accomplished acts,' and Leo's dream will be fulfilled: 'Rome will again become what Providence and the course of ages made it, not dwarfed to the condition of a capital of one kingdom, nor divided between two different and sovereign powers in a dualism contrary to its whole history, but the worthy capital of the Catholic world, great with all the majesty of religion and of the supreme priesthood, a teacher and an example to the nations of morality and civilization.'"

Archbishop Ireland, of St. Paul, who has lately returned from a visit to Rome, pointed out in a recent sermon in Washington

some of the reasons why Roman Catholics believe that the Pope should be an independent sovereign, and prophesied that at no remote day the "Italian people and Christendom at large would give back to the papacy its wonted dignity and liberty." He said in part (we quote from the New York *Tribune*, December 10):

"The Catholic Church is a divinely created organism, receiving directly from Christ its mission and all the rights which are needed that it may live and work; its life and mission are expressed in its supreme chief, the successor of Peter, and to him belong in a preeminent manner all the rights inherent in the church and whose possession is needed for fulfilment of its mission and work willed by Christ. Hence the pontiff's right to independence and as a consequence to temporal sovereignty.

"If the Pope is a civil subject of an authority outside of himself, he has not the necessary freedom; the ruler or government would interfere, make laws impairing his freedom of action, or strive to impose methods more serviceable to the state than the church. The pontiff's words must bear no possible suspicion that they were imposed by men who have no authority in things moral and spiritual. If the sovereign pontiff be the subject of the King of Italy, what guaranty is there for other peoples and other rulers that, whether through fear or favor, Italian influences have not penetrated into the Vatican, and that Italian interests are not to be served? The peril of national jealousies would be the greater were the foreign countries at the time warring with the King of Italy.

"We in America are willing indeed to hearken to the words of Peter, but it must be plain that they are not the words of a foreign ruler whose sole purpose is the interest of a foreign nationality, not of the church. The sole effective guaranty of independence for the pontiff is temporal sovereignty, which marks out for him sufficient space on earth upon which he may work in fulfilment of his mission, with all the independence he needs. The dependence of a bishop upon the civil ruler severs him from union with Christians in other countries, reduces his church to the condition of a national church, and disrupts the oneness of the universal church. Other churches than the Catholic do not demand civil independence and temporal power for their chieftains, because no other church than the Catholic is a world church, nor aims at being at the same time universal and one; nor fulfils the injunction of the Savior, 'Teach all nations.'"

## MAX MÜLLER'S INFLUENCE ON RELIGIOUS THOUGHT AND SCHOLARSHIP.

AMONG the most appreciative of recent estimates of the late Professor Max Müller is one contributed by Mr. Moncure D. Conway, who, tho an American, lived for over thirty years in England and knew the great Oriental scholar during that time. Mr. Conway speaks of Müller's deep and far-reaching influence over religious thinkers and scholars not only in England and America but in India. Of this influence on scholars in three continents he says, writing in *The North American Review* (December, 1900):

"I was much impressed by some characteristics of the memorial meeting held at Columbia University. The large assembly of cultured people was addressed by eminent educators in different institutions, men occupied with various branches of learning, and the most striking feature of every tribute was its pervading sentiment of personal gratitude to the teacher whose labors had ended. Apparently none of the speakers had known Max Müller personally, and only one—Prof. Richard Gottheil—mentioned having seen him; not one appeared to have adopted his peculiar theories; but each had his grateful debt to pay. He had opened for one his field of research; he had stimulated others to their tasks; he had enriched all by his literary and linguistic masterpieces. What are incidental *errata* of a pioneer in unexplored regions compared with this creation of a scholarly race able to correct the mistake? The master sat at his mighty task, assiduous, unwearied: now his hands are folded on his breast; his case goes to the jury of scholars, and their verdict will everywhere confirm that of the professor of philosophy of Columbia University: 'In a generation rich in scholars no one could be called greater than Max Müller.'

"Especially impressive were the simple words of the Hindu speaker at the meeting, the Swami Abhedananda, who spoke always of the deceased scholar as 'our friend.' Max Müller was indeed the greatest friend India ever had. He not only exhumed for the young Hindus whom England was educating the literature of their race, but gave them the means of understanding it. Wherever I went in India I usually met the students and the pundits, and a number of the titled men and all of these, of whatever caste or sect, regarded Max Müller as the greatest of mankind, and I was charged with messages entreating him to visit India. This enthusiasm of the cultured influenced even the illiterate, insomuch that when his illness was announced in India special sacrifices were offered in the temples for their 'friend.' For the many Hindu students in England Max Müller's house was a sort of shrine. His hospitality to them was pathetically noble. Most of them spoke good English, but he could converse with them in their mother-tongue, and it was beautiful to listen—occasionally I enjoyed that happiness—to his sympathetic talk with them on their studies and their religious ideas. These pilgrims sometimes carried to him even their personal sorrows. Once there presented himself before him a fine-looking Hindu in threadbare dress, who began addressing him excitedly in Sanskrit. Few Hindus can speak Sanskrit, and Max Müller at once recognized an extraordinary man beneath the poor garb. When he answered in Sanskrit and asked the youth to take a seat, and cordially grasped his hand, the Hindu wept. He had a sad story to tell. A Brahman of high caste, Nilakantha Goreh by name, learned in Oriental literature, he had for years studied the various religions, and reached faith in that taught by Jesus. It involved martyrdom. At the nearest mission he announced his conversion. He was deprived of his caste and cast out by his relatives. The stupid missionaries called him 'Nehemiah,' sent him to their book establishment in London, and there he was set to the lowest drudgery. 'A negro slave could hardly be worse treated,' said Max Müller. For a long time that was endured by this most learned convert to Christianity ever known in India. At last he fled, and, knowing by repute just one man in England, found his way to Oxford and to that man. The penniless Hindu scholar was at once installed as a guest in Max Müller's home, and there wrote a useful little work on the Vedantic philosophy.

"Max Müller appeared to have a mission to individual minds. To every thinker his heart and home were always open, and intolerance was absolutely unknown to him. 'You know I do not mind difference of opinion,' he wrote me in relation to criticisms on his Hibbert lectures ('Origin and Growth of Religion,' etc.); and concerning some comments I forwarded he wrote: 'I liked Bradlaugh's articles—they show one of the many possibilities of misunderstanding.' He never showed the slightest heat when discussing a religious question, however fundamental, but he once wrote a rather stern note about the dismay into which some of us were thrown by certain fanatical proceedings of the leader of the Brahmo-Somaj in India, Keshub Chunder Sen. When this leader visited England (1870), his first discourse was given in Martineau's chapel, his second in mine, and all rationalists, including some of the clergy (Dean Stanley, of course), united to give him a grand welcome. This was reported in India and gave his theistic movement a great sanction. But some years later not only Keshub Chunder Sen, but some of his nearest followers, gave themselves up to such superstitious extravagances that their London supporters were compromised. This was especially the case with Max Müller, for just at that time *The Indian Mirror* (Brahmo-Somaj organ at Calcutta) printed extracts from his private letters, praises of the Brahmo movement, that seemed to carry his support to the new fanaticism. A printed lecture of my own being liable to the same misinterpretation, I asked Max Müller whether some mild protest was not needed. He was at first inclined to think there must be misunderstanding or exaggeration in the stories coming from Calcutta, which he, too, had heard: 'Nothing is so easily misrepresented as Oriental phraseology. You remember a beautiful prayer that Colenso quoted, and people laughed at it because it began, "Oh, Ram! oh, Ram!" (*i.e.*, Rama). I enclose you some letters from Keshub Chunder Sen and Mozoomdár. They will show you whether these men are fools or knaves.' It was not, however, a question of what was said, but of wild performances—a combination of

dervish dances and Roman Catholic rites—and in 1881 the scandal in Calcutta and in London became so acute that silence became impossible. Being in America that year, I did not see what Max Müller wrote, but it was characteristic that his deprecation of the performances should take the form of a quasi-defense of severely censured Sen. He wrote me, December 21, 1881:

"'Altho I am busy with other matters, I could not resist saying a few words for K. Chunder Sen—not that I am not afraid that he has overstrained his brain and may break down altogether, but because I hate ingratitude. That excellent man (and I feel confident of his honesty and freedom of vanity in the beginning) has spent himself—some wheels in the machine with which he worked are out of order—surely he should be treated with kindness—if anything can restore him, it is kindness and sympathy and gratitude. It is the old story of the squeezed-out orange—we do not want that any more, let us throw it out of the window.'

"Max Müller never, I think, met the Brahmo leader. Had he known him or listened to his sermons he must have realized that, however good-hearted, Sen had not the culture or the wisdom to establish any really important movement. He had not the wit to recognize that the grand welcome he received in England and the crowds attending his sermons—wearisome rhapsodies—were all due to the interest in India awakened by the long labors of Max Müller. But, for that matter, how many philologists, orientalists, anthropologists are aware that before Max Müller's time such investigators as themselves were voices in the wilderness? Dean Stanley remarked (I quote from memory): 'In my early life few knew even the name of Buddha; now he is second to but one other.' It was this Oxford scholar who created audiences for such studies, enthusiasts for 'The Light of Asia,' and devout readers for the forty-nine Sacred Books of the East which he has placed in our hands—the most important ethical service ever done by any man for mankind."

---

## THE CREED OF CHRISTIAN SCIENCE.

INCREASED public interest in Christian Science has been stimulated by the recent discussion of this creed in the Protestant Episcopal Church Congress (see THE LITERARY DIGEST, December 1, 1900). In various church assemblies this theme is continually presenting itself as a matter of growing importance to all the churches, and Christian Scientists believe they see a larger measure of comprehension of their tenets. The Ministerial Association of Pembroke, N. H., lately embodied its discussions of Christian Science in a report, which meets with some criticism in an article published in *The Christian Science Sentinel*, the official organ of Mrs. Mary Baker G. Eddy. The writer expresses himself as follows in regard to the much-debated belief of Christian Science as to God, sin, and the existence of matter:

"It is quite true, as stated in the report, that Christian Science gives a more spiritual meaning to certain words. For instance, it gives a clear and explicit definition of God, and consequently a better conception of Him as divine Love—the author and foundation of all that is real. Similarly, Jesus revealed to the world the nature and essence of God in a brighter light than God's chosen people had before conceived of. Mortals need to be stirred and reformed by vigorous and righteous utterances. Our fellow beings are yearning to know God as their ever-present, all-powerful Friend, whom the poet has aptly styled 'The Great Physician.' Few, if any, will say that God is understood and depended upon as fully as He ought to be in the dear relationship of 'Our Father,' who is now and always has been with us, the omnipresent One 'in whom we live, and move, and have our being.'

"Those who believe in one God should rely upon Him as the only cause and motive power of all that really exists. Can it, for a moment, be assumed that God is the cause of sin? Would it not be quite as unreasonable to maintain that sin has any substance or reality? From what first cause has sin derived its substance and reality? The omnipotence and omnipresence and infinity of God has been literally accepted by orthodoxy. Then, to remain orthodox, one must abide by the principle of this fundamental statement. The principle would be departed from and it would be heterodox to say that God's perfect man—reflecting the divine image and likeness—brought a substance called 'sin' into the world, or to say that an unknown would-be creator has done so. It is absurd to believe there is another power called the devil and sin, if God is the only power—Omnipotence—All-in-all. The question is: 'Was it God's man, created in the divine likeness, who sinned, or was it a man of dust, a mortal?' Jesus said, 'A good tree bringeth not forth corrupt fruit.' The water which turns the large wheel is a sufficient motive power for the smaller wheel connected therewith. God controls His universe now even as He did 'when the morning stars sang together.' It is evident that God's standard of perfection would be trailed in the dust by the claim that His creation, originally perfect and pronounced by Him 'very good,' could afterward become very bad. If such were true, there could be no such thing as unchangeable perfection in God's universe. Yet Jesus said: 'Ye therefore shall be perfect, as your heavenly Father is perfect' (Matt. v. 48, Revised Version). In other words, through obeying the sacred injunctions laid down by the Master, it will at length become clear to our apprehension that the eternal perfection of God and man exists here and now—'the kingdom of heaven within you.'

"Referring to 'Science and Health with Key to the Scriptures,' by Mary Baker G. Eddy, and the quotation therefrom in the ministerial report, that 'man is incapable of sin,' it is necessary to read the context, from which it is seen that God's man is referred to, not mortal men. This is clearly what John the beloved meant when he said: 'Whosoever is born of God doth not commit sin; . . . he can not sin because he is born of God.' Christian Science takes the Scriptural ground that because sin and matter are not of God—Spirit—they have no right to exist, and can not exist as part of God's kingdom; hence they belong only to mortal consciousness, and will eventually be cast out and destroyed. Sin is a murderer, whose action will cease only when mortals learn to cease sinning. 'And ye know that no murderer hath eternal life.' Eventually it will be found that divine Love actually reigns supreme over all. Is 'such teaching fraught with moral and spiritual danger'? Christianity demands reasonable and scientific conclusions only. It is a grave injustice to say this 'leads to looseness in morals,' even if all do not, as they should, live up to the teachings of Christian Science. A Methodist would persistently deny the statement that any inconsistency in church-members is due to a lack in John Wesley's highest ideals of the Christian life. The teachings of Christian Science strictly inculcate the highest degree of morality.

"The report states that 'Christian Science denies the efficacy of the atonement for the forgiveness of sin.' This statement is the opposite of the tenets prepared by Rev. Mary Baker Eddy for the use of the Christian Science churches. These tenets distinctly acknowledge 'God's forgiveness of sin in the destruction of sin,' and 'the atonement as the efficacy and evidence of divine Love, of man's unity with God, and the great merits of Jesus, the Wayshower.'

"The term 'personality' as applied to God seems to be thought appropriate by some. Christian Scientists have no objection to that conception, provided 'personality' be understood to mean Infinite, Omnipresent Being—Divine Love. The question is asked, 'To whom do Christian Scientists pray?' I reply, They pray to 'Our Father which art in heaven,' as the great Teacher taught how to pray. Our Lord's prayer, spiritually interpreted, heals the sick.

"The report points out that the success of Christian Science is due to two causes: (1) 'Mental weakness,' (2) 'its cures.' As to the first, Festus said, 'Paul, thou art beside thyself'; others said, 'These men are full of new wine.' As to its cures, the report says: 'It is true that Christian Science has produced a large number of cures, especially of nervous disorders.' From my extensive reading, and from personal information, I feel safe in saying there are very many more patients healed by Christian Science from dyspepsia, rheumatism, fevers, tumors, and cancers than there are from hysteria or other nervous symptoms. It is quite true, as the brethren have stated, that 'this is not a sufficient reason for a Christian becoming a skeptic.' The fact is, however, that no one ever becomes a skeptic through reading 'Science and Health with Key to the Scriptures.' On the contrary, many infidels have been reclaimed by it, and many who formerly seldom read their Bible now love it and use it as their daily companion. The first tenet of Christian Scientists is: 'As

adherents of Truth, we take the Scriptures for our guide to eternal Life.' That leaves no room for skepticism."

Christian Science, says the writer, does not assert that the flesh is an illusion and pain an imagination, as these words are commonly understood. He quotes from "Science and Health" (p. 457) the statement: "Sickness is neither imaginary nor unreal—that is, to the false sense of the patient. It is more than fancy, for it is solid conviction. It is therefore to be dealt with through right apprehension of the Truth of Being." Christian Science, he adds, has no quarrel with medical men, who, he freely acknowledges, "are striving to reach a higher ideal in the art of healing diseases and alleviating suffering." Neither has it any quarrel with ministers of the Gospel, "who would, if they understood Christian Science, rejoice to imitate Christ by cleansing lepers, restoring sight to the blind, causing the lame to walk, and raising the dead. . . . When the student of Christ's religion learns, through glad experience in living more fully up to the teachings of our Lord, that Christianity has a right to a science to declare and prove the Truth, then he will know that he has indeed found Christian Science, and that this name is by no means 'a misleading term,' but that it is, as the words imply, the truth of Christ made practical in the salvation of mankind from sin, sickness, and death."

## IS JAPAN, WITHOUT CHRISTIANITY, A "YELLOW PERIL"?

AT the recent Church Congress in Newcastle, England, Mrs. Isabella Bishop, the famous Oriental traveler, and the first lady member of the Royal Geographical Society, well known also as the author of "Unbeaten Paths in Japan," "Korea and Her Neighbors," and other works, made some remarks upon the religious condition of Japan which attracted considerable attention. In referring to the recent well-known failure of Christianity to make any satisfactory headway in that country, "where agnosticism has carried all before it," she declared that "the growing manhood of the country, freed from the teaching of Confucius, and not having the teaching of Christ, was, indeed, a yellow peril, not only to Japan itself, but to the Far East. Dazzling as the progress of Japan has been, she has as much need of the Gospel and Christian teaching as Central Africa has, and possibly more."

This statement has aroused considerable criticism from the Japanese press, which do not relish having their race called a "yellow peril." Among other journals the Kobe *Chronicle* (November 15) thus comments on Mrs. Bishop's words:

"It puzzles us how a lady of Mrs. Bishop's observation can, after visiting not only the beaten but unbeaten tracts of Japan, believe that her own particular country exhibits under Christianity such immense moral superiority that any nation failing to profess the same religion is going straight to perdition, and is a 'peril,' yellow or white. For the inference of course is, that Christian England or Christian Europe being morally superior to non-Christian Japan, let us therefore redouble our mission work. If those who assemble in the Church Congress care to send missionaries to this country to propagate the faith in which they believe, there is no reason why they should not do so. Such emissaries will receive better treatment on the whole in Japan than a Buddhist missionary would receive in England. But to declare Japan to be on the level of the savages of Central Africa, because she is not Christian—and it is difficult to see what else Mrs. Bishop could have meant—is a flight of imagination that may cause an inquiry from an agnostic Japanese as to whether veracity is included among the Christian virtues. Such a remark inevitably suggests comparisons. There are Japanese who have visited Europe and America without being much impressed by the overwhelming moral superiority that ought to be evident in the West before the West undertakes to convert the East. We venture to say that there is no country in the world where life and property are more safe than in Japan; there are few civilized countries where there is less of that hopeless wretchedness which is the result among industrial nations of the wide gulf established between the rich and poor; nor, as older residents will admit, are there many countries where there is more mutual help between individuals, especially among the poorer classes. There are vices that are peculiar to other countries, and we are by no means among those who reckon the Japanese as a little less than angels, any more than we would place Englishmen or Americans or Germans in that interesting category.

"Our opinion is that if the virtues and vices of civilized countries could by any process be summed up, the balance as between nations would be found fairly even. At the same time it may be pointed out that Mrs. Bishop has chosen a rather unfortunate time for her Central African comparison. Recently there came back to Japan a Japanese Christian preacher who had been sent to work among the army in China by Japanese Christian congregations. On the same steamer was the correspondent of an Osaka journal. In the course of conversation the former remarked how good it was to see Japan joining the Christian nations in spreading the glorious gospel of civilization among the Chinese. To which the Japanese journalist replied by asking the Christian commissioner whether he had noticed the curious fact that the peacefully disposed Chinese found their lives, property, and women far safer among the heathen Japanese troops than among the Christian Occidentals. Moreover, we have been assured on the authority of a late resident that the quarter of Peking which is under the control of the Japanese is the only part of the Chinese capital where the people have recovered sufficient confidence to pursue their ordinary avocations. This may be because the Japanese understand the Chinese better; it may be that the Chinese would rather be subject to a 'yellow' people than a white; it may be that the Japanese have a more efficient military police; whatever the reason, the fact remains that confidence appears to have been more quickly established in that part of Peking under Japanese control than in the others. Nor is the case singular. Those who follow the events of the campaign in North China in 1894–95 will remember the remarkable fashion in which the country settled down as soon as the Japanese occupied it. Nothing surprised those who watched the incidents of that war so much as the remarkable talent for the administration of conquered territory shown by the Japanese, and the placidity with which the Chinese accepted Japanese rule. Of looting there was little or none; offenses against property and person were punished with the utmost rigor; there was the least possible interference with existing laws or customs; Chinese headmen of villages were even invited to sit with Japanese administrators in hearing a charge against any inhabitant; and the result was that, instead of fleeing, the Chinese remained to pursue their ordinary avocations and even to assist the invaders by their services in transport—services, by the way, which were paid for, not 'commandeered.' These are facts which Mrs. Bishop could have discovered for herself before drawing her Central African parallel; but they are now further enforced by what is almost universally acknowledged to be the admirable behavior of the Japanese troops during the recent troubles in China. We do not know that it is possible to better demonstrate the utter hollowness of the assertion that Christianizing a nation necessarily means the humanizing thereof, than to compare the conduct of the Japanese with the other troops engaged in the recent operations."

## RELIGIOUS NOTES.

A NUMBER of usages hitherto looked upon as Roman Catholic are being adopted from time to time by Protestant churches. "Retreats" and "missions" have long been common in the Episcopal church, as are many other Catholic customs. It is more surprising to hear of the former usage adopted by a Presbyterian church in New York. The "Old First" Presbyterian Church in this city has also lately thrown open its doors for meditation and prayer during each week-day. *The Catholic News* tells of a Methodist church in Arcola, Ill., where an "angelus" bell is rung every morning at eleven o'clock "as a signal for each member to cease his or her worldly labors and engage in prayer."

PEROSI turns out oratorio after oratorio with a facility that suggests to some of his irreverent critics the comparison of an Italian barrel-organ. His latest work is called "Mosé." *The Westminster Gazette* says of it: "In the first part Moses goes into the country of the Midianites, where he meets with Zipporah, the wise and gentle. The dominant idea here is idyllic. This part ends with the command given to Moses by Jehovah from the burning bush. In the second part Moses and Aaron menace Pharaoh, and the plagues of Egypt are represented by choruses and orchestral interludes in Perosi's well-known style. The third part represents Moses praying by the side of the Red Sea, the murmurs of the Hebrews, the triumph of the pursuing Egyptians, the parting of the waters, and the hymn of the conquering Hebrews."

# FOREIGN TOPICS.

## LATER PHASES OF THE WAR IN SOUTH AFRICA.

THE end of the year is marked by a revival of interest in the struggle between Great Britain and the Boers. There is no longer talk of intervention on the part of the powers. "Whoever understands the feeling of England, whoever realizes what she has already expended in this war, will also understand that Great Britain would rather risk war with the whole world than brook interference," says the *National Zeitung* (Berlin). The *Indépendance Belge* (Brussels) nevertheless hopes that the British Government may sooner or later welcome arbitration. "There is no need for armed interference," says the paper; "and no one can wish to see the struggle extended into a bloody European war; but why should Great Britain refuse the good offices of friendly negotiators?" It is being realized throughout the British empire that the resistance of the Boers is not broken, tho that resistance is attributed chiefly to Boer ignorance. The London (Ontario) *Advertiser* fears that the withdrawal of troops from South Africa was premature. It says:

NO FLEECE.

KRUGER-CALCHAS: "Flowers, flowers, beautiful lady—and nothing but flowers."

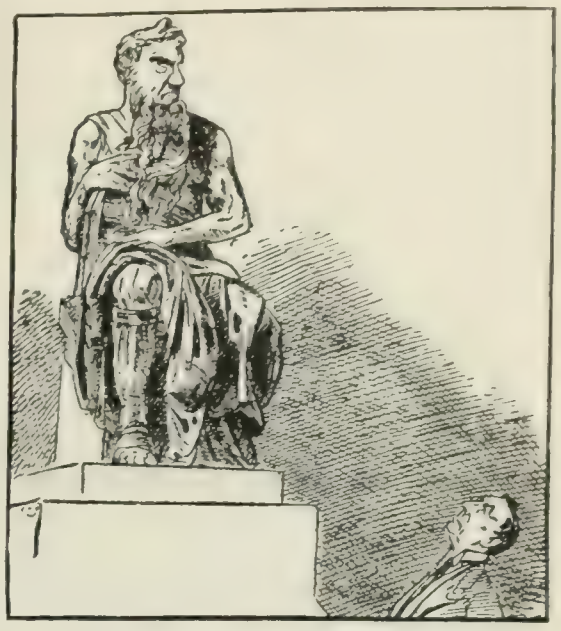
—*Humoristische Blätter, Berlin.*

"Better far would it have been to have kept a very large force in the field for the last two months, and thereby have thoroughly controlled the veldt, than to have led the Boers, very ill-informed as many of them are, to believe the stories told by their leaders that the British were withdrawing because they were afraid. A thoroughgoing surrender of every Boer commander in the field, and a complete covering of the territory with well-drilled mounted police, will alone show the Boers how hopeless is their struggle against destiny."

A correspondent of the London *Times* reiterates the opinion that the Boers, if they could be reached by proclamations, would give up the struggle, especially if they were asked to consider the feelings of the prisoners who have been transported from Africa, and if the power of Great Britain were duly explained to them. Here and there, however, it is suggested that the British Government should offer terms. *The Statist* (London) expresses itself to the following effect:

Men like Botha and De Wet should be approached with a view to ascertaining what terms they would accept. The Boers may be offered full citizens' rights, and their leaders could be given positions in the executive council of the new colonies. Brave enemies, such as the Boers have shown themselves to be, are not likely to surrender unconditionally, and the way the war is being carried on is not likely to end their resistance. If the Boers will not come to terms with Sir Alfred Milner, the chief justice of the Cape Colony, Mr. Hofmeyer, may find them more willing to listen. The British Government must show that England is not vengeful.

*The Westminster Gazette* also suggests the granting of terms. But it is doubtful that the Boers will accept anything short of complete independence. President Kruger says they will not. The Boer envoys in Europe all agree that their people's chances are improving. On the other hand, the British army is reported on the Continent to be very tired of the struggle. The London correspondent of the *Schlesische Zeitung* describes the views of British military men on the whole as follows:



MR. CHAMBERLAIN AND MOSES.

"Good heavens! Can that be Kruger?"

(Mr. Chamberlain, with his wife and son, yesterday morning visited the churches of St. John Lateran, Santa Maria Maggiore, and San Pietro in Vincoli, where he stayed for some time admiring the celebrated statue of Moses by Michael Angelo.—*The London Times*, November 20, 1900.)

—*Westminster Gazette.*

This is what military men thought in Pretoria about November 10, when these gentlemen were returning: If anything, the military situation has improved from the Boers' point of view. Only their best men are in the field now and under the best leaders. On our side (the British) the situation is getting worse. Our losses are enormous, and the volunteers return home as fast as they can get away, as there is so little return for the enthusiasm with which they went out. The generals can not do much, for the troops obey very unwillingly. Moreover, there are not enough reinforcements, for the number of those who are willing to take the place of the returning ones is decreasing continually. For some weeks we have been waiting in vain for the organization of that police force which was to be ten thousand strong. People will not volunteer for it. The officers are

HE HAS PUT HIS MONEY IN THE SLOT, BUT THE FIGURES WON'T WORK.

—*South African Review, Cape Town.*

as dissatisfied as the men, and the commanding officers are quarreling. "I am tired of it!" is what you hear on all sides, and this naturally affects the discipline. The wealthy officers, who manage to get home, are much envied by their poorer comrades. A few brilliant engagements would improve the spirit of the army; but the Boers are not to be caught: their object is to tire us out, and they know that time is in their favor. There is no rest. The Boers are swarming everywhere and we hear of "victories" continually; but they are barren victories. There is a rumor that Austenburg had to be evacuated because it was impossible to provision the place. Here in Pretoria we have not too many provisions, the sick list is swelling, and everybody wonders how we will get along when the rainy season begins. The Outlander refugees are getting to be very restless, and even Rhodes seems to be at loggerheads with the imperialists now.

The *Handelsblad* (Amsterdam) quotes from the Dutch South African papers at length to show that the sufferings of the Boer women and children who are treated on the *reconcentrado* plan are very considerable. The Boer women of the Cape Colony have been aroused thereby, and there is again talk of a general revolt of the Afrikanders. The following, from a letter by Miss Cronje, daughter of the Free State commandant, Andries Cronje, is typical of the narratives which fill pages of the Dutch papers:

. . . "Later, General Macdonald returned. They took everything—the car, the dried fruit, the blankets, even the servants' clothes. 'I had better take all these good things, else you will give them to the Boers,' he said. Then he asked me what reason I could give why the house should not be burned? 'What is to become of my poor old mother,' I asked. 'Oh, never mind about your mother,' he said. 'Why don't you tell your father to come back and plow his land?' He told mother to go and pull father home by his whiskers. September 16 a skirmish took place not far from our home. On the 18th they came and burned the house. I asked them to let me keep at least one cow, but they said: 'Not one, not one! Tell your men to give in.' We told them that our men would never give in, and that the only people they, the English, could war against were women, because women could not shoot back."

Some British Liberal and Radical papers regard the methods employed in South Africa as not creditable; but *The Standard* points out that advances were made to the Boer commanders at a comparatively early time. It says:

"It has been suggested, not without plausibility, that the exclusion of the Boer commanding officers from the offer made by Lord Roberts to those who voluntarily surrendered has tended to keep the hostile bands in the field. As a matter of fact, the officers, tho not included in the terms of the proclamation, were not shut out. . . . Through Mrs. Botha and Mrs. Joubert, as intermediaries, communications were sent to General Botha and his colleagues. We may be sure that no argument was omitted to persuade them of the certainty of receiving honorable treatment. Yet they took no notice, and went on fighting. The blame rests not with the British authorities, but with those who, outside the wasted territories, have encouraged the belief that, by maintaining their tactics of sporadic vexation, the Boers may in the end weary us into restoring their independence. That can never be."

According to statements published at the time in the *Staats-Courant* by General Botha, he was offered $50,000 a year if he would accept the British terms, and similar offers were made to other leaders.—*Translations made for* THE LITERARY DIGEST.

---

**Alcoholic Drinks in the Boer Army.**—The fighting Boer has always discouraged whisky-drinking, and the present war is no exception to the rule, as the following by Fritz v. d. Straaten in the *Süd-Afrikanische Korrespondenz* shows:

"In the Boer army liquor-drinking has been prohibited from the beginning, and smuggling prevented as much as possible. The rule worked well. Our men have been in the saddle hundreds of miles at a stretch and in all sorts of weather, yet none 'caved in.' We had no hygienic uniforms, many had not even warm overcoats; yet the cold nights and hot days did not hurt the men. I have asked many medical men about the matter, and nearly all attributed the remarkable physical endurance of the Boers to their abstemiousness. It has been said that liquor will assist one in bearing fatigue. Not a word of it is true. Once during the campaign on the Tugela, I, with a few comrades, reached an abandoned farm. The sun was sinking. We had been in the saddle since daybreak, without food or drink. Nothing eatable was in the house, but one of the men found a bottle of Cape brandy. Every one shared the find except an old cattle Boer. And the result? All who took a drink were in a raging fever half an hour after. Despite all the hunger and thirst I had experienced I never felt so bad during the whole campaign. Had we met any Britishers when we continued our ride the old Boer who refused to drink would have been the only one able to fight. It is absolutely false that liquor raises the courage. The only result it has is to make the men more careless. This may have been of some value in the old days of hand-to-hand fighting; but what is wanted to-day is iron nerve, a clear eye, quick decision. I will only add that the Europeans, on the Boers' side, felt no bad effects from being deprived of liquor."—*Translation made for* THE LITERARY DIGEST.

---

## EUROPEAN COMMENT ON THE AMENDED CANAL TREATY.

THE European comment on this subject is chiefly British comment; and such interest as is shown by the press of other countries lies not in the relation of the canal to their own nations, but in the possible rupture which it may cause between America and Great Britain.

In some of the British comment, a number of points are brought out that have not been dwelt upon in the general discussion that has taken place on this side regarding the importance of the canal. *The Times* (London), after quoting figures from the report of the isthmian canal commission to prove that the "tonnage likely to go through the canal would, after all, be inconsiderable," declares that "there are some doubts as to whether the thing is commercially worth doing." Referring to the comparison with the Suez Canal, *The Times* says:

"As a matter of fact the analogy is very imperfect. The Suez Canal lies in one of the greatest trade routes of the world. The Nicaragua Canal has no such advantage. The Suez Canal joins great trading communities; the Nicaragua Canal would join only two great oceans which themselves produce no trade. The Suez Canal has no railway rivals; the Nicaragua Canal would have a dozen transcontinental lines to compete with; and, as the backbone of the American continent lies very near the Pacific, the trend of trade is eastward, always eastward at every parallel one chooses to take. The Panama Railway carries goods at a cost, including transshipment at both ends, which is considerably less than could be charged on the Nicaragua Canal. Yet if that canal were to secure the whole transcontinental trade of Panama, it would not levy dues on more than 600,000 tons of shipping. It is sometimes assumed that British trade with the East would follow the projected route. But to Calcutta the voyage would be 9,000 miles longer by Nicaragua than by Suez; to Hongkong it would be 4,000 miles longer; to Yokohama 800 miles longer; and to Melbourne 1,600 miles longer. Add to this that the Suez dues are far lower than the Nicaragua Canal could by any possibility afford to charge, and that the Suez route is infinitely better provided with coaling-stations."

Summarizing, from a British standpoint, *The Times* concludes:

"The great currents of British trade are little likely to pass through the Nicaragua Canal. There is a very considerable trade with Chile and other states on the Pacific slope, but it is carried on in sailing-vessels, which can not use the Nicaragua Canal because both ends are in the belt of calms called the doldrums; and there are reasons which shippers understand well enough why transfer to steam-vessels is unlikely."

The same journal, referring to the adoption of the Davis amendment, regrets that "such an unnecessary piece of jingoism" should have been perpetrated by the Senate. The

amended treaty it characterizes as "subversive of the avowed and apparent objects of the original agreement." It concludes as follows: "If the concessions to which we have consented are refused, we can only express our regret. Our existing treaty rights remain untouched, and, as we have said, they are guaranteed by the Constitution of the United States so long as they are neither broken by force nor amended by amicable negotiation."

*The Standard* (London) declares that "the Senate by its amendment has nullified the efforts of its own State Department as well as of the British Foreign Office, and has run counter to the views of both governments." It concludes: "That the Hay-Pauncefote treaty should be accepted by us, as now amended, is of course out of the question." *The Globe* (London) declares that "the Hay-Pauncefote compromise goes to the farthest extreme in conciliation and represents England's last word on the canal question." Henry Labouchere thinks that Great Britain would be wise in accepting the amended treaty, and that the United States has a right to be paramount in the Nicaragua Canal, just as England has a right to control the Suez Canal. *The Chronicle* (London) says that, "as the first outcome of President McKinley's reelection, this is discouraging. . . . It means, in a word, that the jingoes and anti-English members of the Senate have triumphed, and we are back again to-day where we were at the time of the Venezuela quarrel and President Cleveland's insolent and provocative speech." *The Chronicle* bluntly demands "unconditional refusal of the new amendment," but asks, in conclusion, "What force has Lord Salisbury to back up a refusal? Our army is shut up in South Africa and China, and our navy is needed to protect communications with both. Seldom in its stormy career has the Conservative Government been placed in a more dangerous dilemma."

"It is incredible that the English Government could allow itself even to consider the possibility of permitting its rights to be ignored in so cool and insolent a manner," remarks *The Saturday Review*. It continues:

"The policy of perpetual concession to the United States, and overstrained eulogium of her statesmen, meets with no response from the other party save fresh demands and increasing insolence. The conviction that we shall on no possible grounds quarrel with them has become so ingrained in American politicians, and has been so carefully fostered by our fatuous courting of their good will, that it is almost impossible now to convince them that they are wrong."

*The Westminster Gazette* thinks that the British should get some concessions on the Alaska boundary dispute in return for acceptance of the canal amendments. *The Speaker*, another Liberal paper, says: "We imagined that we could foster in others a spirit of disregard for international usage and that this crime would not recoil upon our own heads. Almost its first effect has been the launching against the country of a direct menace to which we shall probably bow with all the loss of dignity and national position which it involves."

Turning to the continental nations, the *Nieuws van den Dag* (Amsterdam) does not think that England will seriously oppose as strong a power as the United States. That is also the opinion of the *Kölnische Zeitung* (Cologne). Other German papers regard the amendments as likely to provoke serious "misunderstandings" between this country and Great Britain.

The *Journal des Débats* (Paris) says:

"The Senate has created rather a delicate situation, from the point of view of the Anglo-American relations. In the face of this diplomatic embroglio, outsiders should remain cool and view it without being influenced by the sentiment of the masses. At first sight, the vote of the Senate looks like an affront both to England and the United States; it even offers the perspective of complications between these powers; and the general public, ill-disposed toward the English as it is, may not be displeased to find that new embarrassments are in preparation for them. But we think it would be imprudent to give way to this sentiment, however natural it may seem to be. For the Nicaragua question interests all nations, and the attitude of the Senate may create difficulties for the Washington Government with the whole world. Without a doubt, the United States, while showing contempt for Great Britain, offers violence to the rights of the human race. Hence the other powers, especially those which still have territory and interests in America, can not remain indifferent, for they must say to themselves: *hodie tibi, cras mihi.* [To-day, for you; to-morrow, for me]."—*Translations made for* THE LITERARY DIGEST.

---

## BRUNETIÈRE ON THE "AMERICAN SPIRIT."

THE European contention that the people of the United States are too heterogeneous in origin and as yet too diverse in temperament to admit of the existence of a real "American type," is presented exhaustively and at considerable length by Ferdinand Brunetière, of the French Academy, in a recent magazine article. M. Brunetière's text is a book entitled "The American Spirit," by Edmond de Nevers, a French Canadian, brought out a month or so ago in Paris. M. Nevers is disturbed over the great migration of Canadians, especially French Canadians, to the United States. Do these become real Americans, he asks, or do they retain their old-world French traditions and customs? He asks further: "Is it to our political interest to contribute to the unification of the entire North American continent; and will it be possible for us, under the Stars and Stripes, to grow and develop, without losing anything, without sacrificing anything we hold dear, but remaining faithful to our French Catholic traditions?"

In answer, M. Nevers concludes that the contributions of Europe to the population of the United States are so diverse that, adding the negro and the Indian, we can not possibly as yet have a pure national type here.

The Americans, declares M. Brunetière, in his review of the book (in *Le Revue des Deux Mondes*), call themselves Anglo-Saxons, and "such they are to a certain extent"; but the original strain has been greatly modified by alien populations, particularly by Germans and Irish. The Anglo-Saxon is naturally an aristocrat. His most marked characteristics are "a love of gain, a spirit of practical enterprise, a cold, proud exclusiveness, and distrust of strangers." "The progress of the democratic idea in America," M. Brunetière continues, "is the very contradiction of the Anglo-Saxon ideal, and, if proof is desired, it may be found in the resistance, pushed to the point of cruel persecution, with which the Americans, when they were really Anglo-Saxons, opposed the immigration of foreigners." The Americans, M. Brunetière thinks, are being gradually but surely democratized by the preponderating influence of the Irish immigrant, "who is essentially and always a democrat." As soon as the first Irish immigrant came to America, he "instinctively, perhaps unconsciously, set about destroying what traces of inequality he found in the structure of American society." It is due to his influence, M. Brunetière holds, that American cities are all alike, and "present such a dreary monotony of appearance." It is the democracy of art and of architecture. This "deadly abrogation of inequality" may also be seen in the dress on our streets. "No one in America, man or woman, appears in the costume of his or her condition. In the streets of American cities one never sees the blouse of the workman, or the little cap of the working-girl; every man dresses like a gentleman, every woman like a lady." Our citizens of Irish origin, moreover, are not to be found in any large numbers in our aristocratic cities, such as Boston, Baltimore, and New Orleans. They flock to our democratic strongholds: New York, Chicago, San Francisco. The influence of the Germans, Dutch, and other foreign nation-

alities M. Brunetière admits to be strong, but less evident than that exercised by the Irish.

The solution of the race problem in America, which must precede the appearance of a real national spirit, he thinks, is as yet in the distant future, but it will come. We quote again:

"The democratic movement, represented, if you will, by the Irish element, is presenting in 'course of separation and contact' from all the races of ancient Europe, the essential characteristics of an American spirit, as yet undetermined and variable. When these characteristics have, as it were, become fixed, the old strains of blood will become dormant, and then, just as formerly, the Romanizing of the world did not prevent the Gaul from becoming France and the Iberian from becoming Spain, so the Anglicizing of the North American continent will not prevent the American spirit from stamping its individuality upon the heterogeneous elements of which it is formed and which it will be able to assimilate to itself. . . . If one asks why the Irish element has become so powerful in the United States, and, as the real source of the American spirit, why it may be said to rule the nation, it is precisely because this element has not attempted to maintain its autonomy in the Union."—*Translation made for* THE LITERARY DIGEST.

## WAS THE PARIS EXPOSITION A NATIONAL LOSS TO FRANCE?

THE general verdict of European opinion on the results of the Paris Exposition seems to be that from a financial standpoint the great fair has been a failure, but from an artistic point of view it merits very high commendation. We gave a number of newspaper comments recently (December 8); the Reviews are now beginning to discuss the matter. Speaking of the splendid art collections in the Palais des Beaux Arts and the different industrial and mechanical exhibits to be seen along the Rue des Nations, the *Vox Urbis* (a semi-monthly published in Rome in the Latin language) declares that "even the shortest visit to the Paris Exposition was, to an observant person, in itself a liberal education." *Figaro Illustré* (Paris) quotes statistics to prove that the Exposition was the greatest of the century (and, consequently, of all time), and that "it was an unqualified success in the best sense of the word." *La Ilustracion Española y Americana* (Madrid) thinks that the results were "in the highest degree good and useful, and made for civilization." It especially commends the "alimentation and machinery exhibits of America."

All the comments, however, are not so complimentary. In a caustic review, entitled "The End of the Dream," in a recent number of *Le Correspondant*, Louis Joubert calls the Exposition "a gigantic exploitation of the national resources for the benefit of a coterie and a political party," and quotes François Coppée's characterization of a former exhibition as having for "its real *raison d'être* to satisfy the thirst for medals and decorations." M. Joubert says further: "Prematurely opened and badly begun from its very foundations upward, the Exposition terminated in ruin and bankruptcy, having passed through a series of accidents and misfortunes the like of which preceding expositions never knew." Apropos of this premature opening and bad beginning, it is now being declared in the Paris journals that M. Picard, who "made" the Exposition, practically drew up the scheme "while you wait." France believed that Germany was planning an international exposition for 1900, and the French Government determined to appropriate the date. At ten o'clock one morning M. Picard was asked if he could have ready by two in the afternoon a rough scheme for the consideration of the cabinet. At the hour appointed he laid his plan before the President (Carnot) and his ministers. It was at once incorporated in a decree.

The chief "grievance of patriots," declares M. Joubert, "against the originators of this useless exposition" has been the fact that they have "subordinated to personal and party advantage the very honor and standing of France before the world":

"During the three years of its active preparation, all our political interests, domestic as well as foreign, have been made to give way before that one narrow idea—the success of the fair. We have been compelled to submit to the insolence of England in Egypt, to bow our head in humiliation at Fashoda. . . . We have been forced to repress our enthusiasm for the gallant little people struggling for its liberty in South Africa—our generous nation whose heart and hand have always gone out in sympathy and battle for the liberty of America, of Ireland, of Belgium, of Poland, of Greece, of every weak and oppressed people. We have let slip all our opportunities to regain our lost influence and mount once more to our rightful place in the world's counsels, all because the dominant consideration, the welfare of the Exposition, imposed upon us the duty of self-effacement and humiliation. Before all, the 'palace of the cane and the bandbox'; before all, the bazar and the mountebank's platform. We have had to submit to every insult, to choke down every mortification, to let pass every opportunity, lest we jeopardize the success of the Universal Exposition."

The second grave charge made against the management of the Exposition is that, instead of using it as a "peaceful conference for the repudiation of ancient hatreds and time-worn persecutions," the managers of the congresses permitted "all sorts of social discontent and revolutionary incendiarism" to be launched from the tribunes.

Those who received concessions to sell goods or carry on other business enterprises on the fair grounds, the same writer asserts, were "sheared unmercifully." They were subjected to "every imaginable extortion," and most of them realized much less than they paid for their concessions. Twelve restaurant-keepers demanded the return of a total of nearly four millions of francs, declaring they had lost this sum. The writer finds fault with the entire financial management, and speaks of the "incoherence, confusion, and unheard-of disorders" of the exhibition. He quotes M. Henri Houssaye, the Academician, as saying on this last count:

"After twenty or thirty visits one learned (he could not learn it in any other way) that to see Japan he must go successively to the Champ de Mars, to the Esplanade des Invalides, and to the Trocadero; that perfumery was limited to the department of threads and textiles, hygiene to the space devoted to war, and optics to that of pianos; that the exhibits of Greece were separated by those of Turkey, of Sweden, of Spain, of England, of Germany, and of the United States; that the 'exhibition of the ancient charitable associations' was to be found in the 'gallery of alimentation'; that one must look for the specimens of Sévres pottery in the sections devoted to foreign exhibitors; that combs, feathers, and brushes were classed as 'decorative arts'; that the bath-tub of Marat was found in the department of public assistance, and the saber carried by the great Napoleon at Marengo must be sought on the third floor of the pavilion of waters and forests."

Yet, despite all the obstacles, all the mismanagement, M. Joubert concludes that "the fair must be regarded as a triumph of the genius and marvelous vitality of La Belle France."—*Translations made for* THE LITERARY DIGEST.

---

THE following story of Sir Wilfrid Laurier, the Premier of Canada, is related by Mr. R. Holmes, a member of the Canadian parliament from West Huron, Ontario: "Some one asked Sir Wilfrid Laurier how it came that he, being a Roman Catholic, was so broad in his views and tendencies toward others. His answer, in effect, was as follows: 'Up to the age of eighteen I could speak nothing but French, and I hired out with a Scotch farmer in order to learn English. Every morning this good man held family worship, and the different members of the household read in turn a verse of the Bible. In the course of time I was invited to remain with the family while morning service was held, and I had every opportunity of judging of the sterling and consistent character of that good farmer and his family, and I must admit that the impressions I there received have remained with me through life, and have undoubtedly influenced me more than I know.'"

# Reduced Prices
... on ...
# Suits and Cloaks

UNLESS you act quickly, you will be unable to take advantage of our Reduced Price Sale. We wish to make room for new Spring stock, and the twelve hundred pieces of suitings and cloakings included when we began this Sale are being sold rapidly. The assortment will hardly last longer than the end of this month.

**Suits, Cloaks and Skirts made to order at one-third less than regular prices** — perfect in fashion, shape and workmanship. Nearly all of our styles and materials share in the reduction. These offerings and others:

**Tailor-Made Suits, lined throughout; former price, $10; reduced to $6.67. $15 Suits reduced to $10; $20 Suits reduced to $13.34.**

**Separate All-Wool Skirts, former price $6.50; reduced to $4.34. $7.50 Skirts reduced to $5.**

**Winter Jackets, lined throughout; former price $7; reduced to $4.67. $9 Jackets reduced to $6. $13 Jackets reduced to $8.**

**Rainy-Day Skirts, former price $7; reduced to to $4.67. $8 Rainy-Day Skirts reduced to $5.34. $10 Rainy-Day Skirts reduced to $6.67.**

**Reduced Prices on Rainy-Day Suits, Golf Capes, Long Jackets, Etc.**

Catalogue, Samples and Reduced Price List sent *free* at once upon request. If any garment ordered therefrom should not please you, send it back. *We will refund your money.* Be sure to say that you wish the Winter Catalogue and Reduced Price Samples.

**Our New Spring Catalogue** will be ready February 7th. Write now and we will mail you a copy, with a full line of new Spring samples, as soon as it is issued. Be sure to say that you wish the new Spring Catalogue and Samples.

**THE NATIONAL CLOAK CO.,**
**119 and 121 West 23d St., New York.**

# Vapo-Cresolene

**"We Were Not Disturbed All Night."**

Parents tell us this who have vaporized Cresolene for their children with Whooping Cough or Croup. The record of twenty years shows the great curative and preventative power of Cresolene for Bronchitis, Influenza, Measles, Catarrh, Coughs, Scarlet Fever, and other contagious diseases. Recent tests made at the Yale Pathological Laboratory proves that vaporized Cresolene kills the germs of diphtheria. Send for descriptive booklet with testimonials. Sold by all druggists.

**Vapo-Cresolene Co., 180 Fulton St., New York.**

**Combine Durability of Metal with Beauty of Bisque and do not break.** Illd Catalogue mailed free by
A. VISCHER & CO., Dep't L
**11 Warren St., New York. Ask your dealer.**

## BOOKS RECEIVED.

THE LITERARY DIGEST is in receipt of the following books:

Yawps and Other Things.—William J. Lampton. (Henry Altemus Co., $1.00.)

The Joys of Sport.—W. Y. Stevenson. (Henry Altemus Co., $1.00.)

Le Duc de Reichstadt.—Madame H. Castegnier and Prof. G. Castegnier. (William R. Jenkins, $0.50.)

Vaccination. A Curse and a Menace.—J. M. Peebles, A.M., M.D., Ph.D. (Temple of Health Publishing Co.)

The Story of Cyrus. Clarence W. Gleason. (American Book Co., $0.75.)

Helps for the Quiet Hour.—[Preface by Rev. Jesse Bowman Young, D.D.] (Eaton & Mains, $1 00)

Man and the Spiritual World.—Rev. Arthur Chambers. (George W. Jacobs & Co., $1.25.)

Instruction for Chinese Women and Girls.—Lady Tsao.—Translated by Mrs. S. L. Baldwin. (Eaton & Mains, $0.75.)

The Lapidaries, and Aunt Deborah hears "The Messiah."—Mrs. Elizabeth Cheney. (Eaton & Mains, $0.30.)

The Bandit Mouse, Etc.—W. A. Frisbie.—(Rand, McNally & Co.)

## CURRENT POETRY.

### A Seasonable Fellow.

By FRANK L. STANTON.

I'm mighty fond o' winter, when the frost is lyin' gray
On the gardens where we frolicked with the flowers o' the May;
When they have the candy-pullin's, an' the cider's sharp an' sweet,
An' the music o' the fiddle makes a fidget in yer feet!
Then you'll find me *shore*
On the creakin' cabin floor,
A-dancin' ev'ry quadrille an' a-coaxin' 'em fer more!

I've got a friendly feelin' fer the spring, so rosy-dressed,
With the wind in all her ringlets an' the blossoms on her breast;
When the mockin' birds air singin', an' you hear the honey-bees,
An' the robins an' the rabbits air as happy as you please!
Then you'll find me *shore*
Just a-th'owin' wide the door
To the sunshine an' the singin', an' a-whistlin' out fer more!

An' then I like the season when the summer comes along,
An' the drowsy, dreamful weather's like a sigh that's in a song;
When the cattle-bells air clankin' on the dusty hill an' plain,
An' the lilies air a-holdin' of their silver-cups fer rain.
Then I takes my ease
In the shadders o' the trees,
While the partridge in the medder whistles lively fer a breeze!

An' I like the fall time, bretherin'—when the leaves air gold an' gray;
When all's so still 'pears like the wind has sighed itself away
From the scented shadders o' the night, an' from the sleepy day—
When, if you'd only listen, you'd hear *all* the angels —Say!
Then you'll find me *shore*
Jest a-th'owin' wide the door
An' lettin' heaven come down to me, an' askin' 'em fer more!

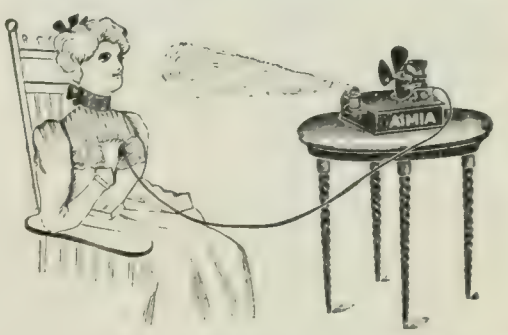
# Vitalized Air Circulator



The "Aimia" Vitalized Air Circulator is an ideal one in Winter or Summer. It is noiseless, and its refreshing coolness is of the greatest value.

A BLESSING for the bedroom, serving room, office, store, telephone closet, dining table, etc. It may be **used to deodorize** toilet rooms by placing any desired deodorizer in front of the fan.

**Very refreshing in a second.** Place a bottle of perfume, smelling salts, sal volatile, menthol, lavender salts or a bouquet of flowers in front of the fan, press the push button, and in a moment the swiftly revolving fan will diffuse the odor throughout the room.

This arrangement will be found most delightful near the bedside, even in Winter, as outfit can be kept on a table with push button under pillow or in easy reach.

TRY IT ONCE and you will never be without it afterward.

FOR DISINFECTING SICK ROOMS, etc., saturate a sponge with any good disinfectant and set same on a plate in front of revolving fan.

This apparatus is highly endorsed by the medical profession.

The *Dry Batteries* (contained in the hard wood box) *will run the fan many months* without renewal with the intermittent use it receives.

The dry battery can be renewed at a cost of only 50 cents.

**Price, including a Bottle of Smelling Salts, Complete, $3.50.**

Express not paid

## MORE OR LESS PUNGENT.

**But in Another Sense.—**

Altho from very earliest dawn
Till set of evening sun,
Back and cross my would-be lawn
My troublesome neighbors run;

And tho they jeer with voice malign,
As back and forth they pass,
They yet, in truth, obey the sign,
For they "keep off the grass."

—*Harlem Life.*

**Stealing a March** —The famous composer sat in the orchestra-chair and listened to the comic opera of his rival. As the chorus roared out a swinging, familiar air, the tears started to the great musician's eyes. "Ah," he said sadly, "I would not have believed it, but he has stolen a march on me."

To those familiar with his works, the truth of this remark would have been apparent.—*Princeton Tiger.*

**He was all Fixed.**—One of the churches in a little Western town is so fortunate as to have a young woman as its pastor. She was called to the door of the parsonage one day, and saw there a much-embarrassed young farmer of the German type. "Dey said der minister lifed in dis house," he said. "Yes," replied the fair pastor. "Vell—m—I—I vant to kit merrit!" "To get married? Very well, I can marry you," said the ministeress, encouragingly. "Oh, but I got a girl alreaty," was the disconcerting reply.—*Brooklyn Life.*

**With the Critics.**—"It seems a pity," droned critic No. 1 (a heavy man), "that in Mr. Stephen Phillips' play of 'Herod' we should twice be confronted with the sight of dead persons on a bier—namely, Aristobulus in Act I., and Mariamne in Act III. And the trick is all the more deplorable by reason of the circumstance that Mr. Phillips has previously had recourse to it in his 'Paolo and Francesca.'" "Um," grunted critic No. 2, who is something of a wag. "But surely you don't wish to deprive a poor poet of his bier."—*St. James's Gazette.*

**The Disease and the Cure.**—The candidate, in the course of a speech just previous to election, had occasion to refer to the flogging of children. "Some folks," he said, "object to beating youngsters, but I agree with the truth conveyed in that saying of the wise man, 'Spare the rod and spoil the child.' I suppose I was no worse than other boys," he went on to say, "but I know I had some flogging myself, and I believe it did me good. On one occasion I was flogged for telling the truth." "It cured you, sir!" cried a voice from the back.—*London Answers.*

**"Out of the Mouth of Babes."**—Mr. William Canton, in his book "Children's Sayings," reveals many bright phases of child life. A writer in *The Westminster Gazette*, in reviewing the book, says:

"A few of the stories, picked out at random, may be given. The loving-kindness of children is one of the most charming characteristics. Two little lads were discussing how much they loved their father and mother. The elder said: 'Oh, I couldn't live without "muvver"; if she ever dies, I shall go and dig her up.' His brother replied: 'Yours is a very stupid plan: when "farver" dies I'm going to have him stuffed.' As examples of the combination of 'wild imagination and sound common sense' in children, Mr. Canton gives the following:

"A lady meeting a small boy whom she knew, asked him where he was going. He answered: 'I am going into the town to spend a penny, but I haven't got one.'

"A gentleman found his little daughter crying

**JOSEPH DIXON CRUCIBLE CO., Jersey City, N. J.**

bitterly because she had had a tumble. 'Never mind, Wynnie,' he said, 'won't a chocolate make it better?' 'No,' said the child between her sobs, 'but two would do it.'

"A London child, in a copse carpeted with wild hyacinths, gathered bunches of the blue flowers, and shaking them on either side of her head, cried, 'They ring the sweetest music I have ever heard.'

"A little boy and girl, whose mother was ill and inaccessible, were overheard by their aunt holding the following pathetic consultation on the subject of their nurse's unkindness to them:

"'What shall we do?' said the girl hopelessly. 'I'm going to ask father to send nurse away,' replied her brother sturdily. 'What shall you do if he won't?' 'Then I'll ask God to help us.' 'But perhaps God won't send her away.' 'Well, then,' said the little chap in desperate earnest, 'I'll see what the devil can do for us.'

"After proper investigation it is pleasant to know that the nurse was dismissed."

---

**Mr. Dooley on "L'Aiglon."**—The new volume by Mr. Dunne entitled "Mr. Dooley's Philosophy," while perhaps not quite up to the level of his two preceding books, is generally accepted as an excellent piece of humor. Among the best touches in the volume is the following graphic description of a well-known scene in "L'Aiglon," as conceived by the Chicago philosopher:

"Wan day a tailor shows up to measure him (the Duc de Reichstadt) f'r some clothes. Th' tailor, d'ye mind, is a rivolutionist in disguise, an' has come down fr'm Paris f'r to injooce th' young man to take th' vacancy. 'Fourteen, six, thirty-three. How'll ye have th' pants made, Impror?' says th' tailor. 'Wan or two hip pockets?' says he.

"'Two hips,' says young Napolyon. 'What do ye mean be that?' he says.

"'Thirty-eight, siventeen, two sides, wan watch, buckle behind. All Paris awaits ye, sire.'"

"'Make th' sleeves a little longer thin this,' says th' boy. 'An' fill out th' shouldhers. What proof have I?'"

"'Wan or two inside pockets?' says th' tailor. 'Two insides. Hankerchief pocket? Wan hankerchief. Th' pants is warn much fuller this year. Make that twinty-eight instid iv twinty-siven,' he says. 'Paris shrieks f'r ye,' he says.

"'Proof,' says th' la-ad.

"'They've named a perfume afther ye, a shirt waist, a paper collar, a five-cint see-gar, a lot iv childher. Nay more, a breakfast dish christened f'r ye is on ivry lip. Will I forward th' soot collect?' he says."

## Current Events.

### Foreign.

CHINA.

December 31.—Emperor Kwang Su, reports say, has written a letter congratulating the Czar on his recovery.

January 1.—Li Hung Chang expresses the belief that the Chinese Emperor will accede to the requests of the powers.

The murderer of Baron von Ketteler is beheaded.

January 5.—Count von Waldersee gives notice to his staff to cease hostilities.

Li Hung Chang suffers a relapse, and his illness delays peace negotiations.

January 6.—The Empress-Dowager of China orders one of the Chinese generals to move to the Yang-tse valley and thence northward with an army of 15,000 men.

Count von Waldersee agrees not to operate in certain districts of Pe-chi-li province.

SOUTH AFRICA.

December 31.—The loyalists of Cape Colony, it is said, have been asked to organize a paid defense corps to help repel the Boer invaders, who have penetrated farther south than ever.

LARGE EXPENSE
on horses
STOPPED AT ONCE

And slipping completely and surely prevented,—giving your horse a free, confident, firm footing on any kind of icy or slippery road by the Goodyear-Akron Perfect

RUBBER SHOE

$1.50 a pair complete ready for use

$1.50 a pair complete ready for use

HALVES SHOEING BILLS

DOUBLES horse's work value. They stop the pounding concussion that soon makes him bow-kneed or disables him. They improve his action and looks. They increase a horse's selling price. They make life and work more pleasant for him. They are "wings" for a horse's feet.

Whether you own one or a hundred horses you should have at once the facts about the Goodyear-Akron Shoes. Every day you delay costs you shoeing bills and horse value. A Goodyear-Akron Shoe is a combination of iron with a peculiar sort of rubber pad that wears better than steel. It is a new production of rubber which no other manufacturer in the world can produce. It is a miracle for Horse Shoes.

Send your name and address for our book "Horse Sense on Horses' Feet." Sent free, no charge.

An Offer

Send your name and address for our book "Horse Sense on Horses' Feet." Sent free, no charge.

Set your horse's hoof on a piece of paper, draw outline of hoof with pencil, mail to us and we will send you prepaid, a pair for front or hind feet, complete ready for use, on receipt of $1.50. Put them on and try them, and if afterwards they are not considered simply a boon to both horse and driver, and almost a half saving in shoeing bills, and a thing you wish never to be without, we will refund your $1.50 in full. Certainly this is a proposal which speaks for itself, and it is made by

PEN-CARBON-MANIFOLD CO., 145-7-9 Centre St., N. Y.

January 1.—General Knox, who has been following De Wet, reports the capture of some of De Wet's supplies.

General French reports the capture of a Boer despatch rider.

January 2.—Martial law is proclaimed in five divisions of Cape Colony, due to the rising of the Dutch.

De Wet is headed off by Pilcher, and the British occupy Graaf Reinet, in the heart of the disaffected district of Cape Colony.

January 5.—General Kitchener reports the reappearance of the Boers on the railway north of Bloemfontein.

OTHER FOREIGN NEWS.

January 1.—The Earl of Hopetoun is sworn in as the first governor-general of the Federation of Australian colonies.

January 2.—Lord Roberts is greeted personally by the Queen at Osborne Castle, Isle of Wight, and she confers an earldom on him and makes him a Knight of the Garter.

More revolutionary risings are reported in the provinces of Venezuela.

January 3.—Earl Roberts proceeds from Southampton to London, where he is received with royal honors.

January 4.—Earl Roberts assumes charge of the army headquarters in London.

Reports of an outbreak of plague at Vladivostok and a renewal of plague cases at Smyrna are confirmed.

## Domestic.

CONGRESS.

January 3.—Business is resumed after the holiday recess.

*House:* Much excitement is caused by a resolution offered by Mr. Olmsted, of Pennsylvania, looking to the reduction of representation from Southern States in which the franchise is abridged; the Democrats filibustered against consideration, and adjournment is forced by a vote of 77 to 75.

January 4.—*House:* The Olmsted resolution proposing an investigation of disfranchisement methods in the South is referred to the committee on census.

DOMESTIC NEWS.

January 1.—Benjamin B. Odell, Jr., is inaugurated as governor of New York State.

January 2.—The New York State legislature meets and organizes, Senator Ellsworth being reelected president *pro tem* of the Senate.

January 5.—The Census Bureau issues a bulletin stating that the center of population is in latitude 39.9.36; longitude 85.48.54.

January 6.—Philip D. Armour, the head of the packing house of Armour & Co., dies in Chicago.

AMERICAN DEPENDENCIES.

January 4.—*Philippines:* Generals Wheaton and Bates report small captures, the destruction of insurgents' camps, and the seizure of supplies in Luzon.

January 5.—*Philippines:* The Philippine Commission passes a bill appointing trustees to institute legal proceedings to determine whether the ownership and control of the San Jose medical college of Manila are vested in the church or in the United States Government.

WHAT'S THE DIFFERENCE Between our genuine Cabinet and other makes? These cuts speak plainer than words.

Above is our new 1903 style genuine "Quaker" Bath Cabinet. Write for Booklet Free.

OUR NEW 1903 Style QUAKER Folding Turkish BATH CABINET

is not a cheap, shoddy, flimsy affair, but is **GUARANTEED TO BE THE BEST CABINET ON EARTH, OR YOUR MONEY CHEERFULLY REFUNDED.** Has latest improvements—a real door, on metal hinges, not a bag to pull on over head, or a hole to crawl through. **It has a strong, rigid, galv. steel frame.** Covering best, antiseptic, hygienic cloth, **rubber lined.** Our Cabinet does not rest on the shoulders, nor pull on over head. No woodwork to rot, warp, crack or pull apart. A wooden frame for a Cabinet would be about as valuable as a wooden stove. **Our Cabinet will last 20 years, is large and roomy,** knees, arms and legs do not touch the sides. Plenty of room for hot foot bath and to sponge, towel and cool the body while inside. **Our New Heater, Rack and Vapor Cup** are the best. **TO OPERATE** simply open door, step in, sit down. (All done in one minute). Bathe, open top curtains, cool off perfectly, step out. Only perfect Cabinet made. Folds flat in 1 inch space. Weighs but 10 lbs. Easily carried. **RECOMMENDED BY OVER 1,000,000 HAPPY USERS**—such eminent people as Alice B. Stockham, M. D.; Chicago, Editor of "Tokology;" Hon. Chauncey M. Depew, U. S. Senator; Congressman John J. Lentz; Louis Morrison; Rt. Rev. Bishop J. L. Spalding; Rev. C. M. Keith, Editor "Holiness Advocate;" Senator S. McCarrell, and thousands of others.

**WE ALSO FURNISH and Beauty."** **$2.00 Book FREE to Patrons**—100 pages, by Prof. Gering, "The Guide Book to Health Gives nature's treatment for every disease as followed at Health Resorts in Europe and America. Tells how to live, etc. It's a mine of knowledge.

**HOT QUAKER BATHS BENEFIT every MAN, WOMAN AND CHILD.**

Open the 5,000,000 pores of the skin, sweat out all the poisons in the blood, which if retained, overwork the heart, lungs, liver and kidneys. **Make clear skin, bright eyes.** Keeps you strong, vigorous and healthy. **Prevents** Colds, Lagrippe, Fevers, Consumption, and all Disease.

**WE POSITIVELY GUARANTEE RESULTS.**

Our medicated bath treatment will cure Nervous Troubles, Debility, Weakness, Sleeplessness, Neuralgia, Aches, Pains, Colds, Lagrippe, Obesity. **Cures Rheumatism** (we offer $50 reward for a case that cannot be relieved). **Cures** Headache, Gout, Sciatica, Piles, Dropsy, Diabetes, Indigestion, **all blood, skin, liver, stomach** and **kidney troubles.** Not only cures, but prevents all ailments peculiar to ladies.

**Not Ours.** All cheap affairs, pull on over head like this are **Dangerous.**

**Not Ours.** Cheap, flimsy affair, top separate, pulls on over head said to be Dangerous. Raise up or move Cabinet falls to pieces.

**DON'T BE DECEIVED.**

**Not Ours.** Why pay $7.50 or $12.00 for wooden frame affairs, which rot, warp, split and are unsatisfactory, when a genuine "Quaker" with steel frame, costs only $5.00? Lasts for 20 years, and is guaranteed superior, or money refunded.

With the Cabinet, if desired, is a **Head** and **Complexion Steaming Attachment. Beautifies complexion.** Cures and prevents skin eruptions and diseases, Eczema, Pimples, Blotches, Blackheads, Asthma, Catarrh, Bronchitis, all Throat Trouble. **IF OURS IS NOT THE BEST CABINET MADE WE DON'T WANT YOU TO KEEP IT,** but so confident are we that it will please you, that

**WE SEND IT ON 30 DAYS TRIAL,**

**to be returned at our expense and your money refunded if not just as represented.** What could be more fair? We have been making genuine Bath Cabinets for years, are the largest m'f'rs in the world. Sold 300,000 last year. We're responsible, capital $100,000.00.

**OUR PRICE IS WONDERFULLY LOW.**

Sent to any address upon receipt of **$5.00** complete with best heater, vapor cup, directions, formulas for medicated baths, and "Prof. Gering's $2.00 book." Face Steamer, $1.00 extra. Twenty-three States represented by the solvers of 520 and 527.

ERRATA.—Problem 520 in DIGEST December 29th should be 521, and that of January 4th should be 529 instead of 527.

---

WE receive very many *original* problems, which we can't use, because of evident defects. We are always glad to publish problems composed by our solvers; but these problems must have something special to recommend them. The Chess-Department of THE LITERARY DIGEST is not for the exploitation of *original* compositions, but first and most specially for the presentation of the works of distinguished problematists. When we publish a problem composed by one of our friends, we must, in a large sense, stand sponsor for it; but when we publish prize-problems or those that represent famous composers, we are not responsible for the defects. While we try to select the very best problems that we can find—and it is generally conceded that THE LITERARY DIGEST Problems are of great excellence—yet we must, occasionally, publish problems that do not come up to our standard. We hope that our Chess-friends will not feel aggrieved on account of the non-appearance of their problems; the fact is that if we published all the problems sent to us, we would not have room for any others.

---

WE have been requested to explain what is known as the Forsyth Notation. It is hardly possible to do this without a diagram; but if you will take Problem 522, we will try to make it plain. Begin at Black's Q R sq, use a figure to indicate the number of *vacant* squares, and capital letters for White's pieces, small letters for Black's. Then 522 will read:

2 p 5. r 2 P Q 3. 1 P 1 R 1 p 2. b p k Kt 1 p 2. 4 kt R 2. 1 P 6. 5 kt K 1.

You see that on the first row there are no pieces, hence 8; in the second row a black P on the first square, hence p 7, etc.

## "The Hall of Fame."

What do you think of the idea of selecting fifty of the problems published in THE LITERARY DIGEST for the "Hall of Fame?" If this idea strikes you favorably, select the twenty 2-ers, and the thirty 3-ers that you consider entitled to this distinction. We will keep the "polls" open until March 1st. We are quite sure that this will prove extremely interesting as revealing the various tastes of our solvers and, also, the faculty to discern the intrinsic merits of a problem. In making your list, give the number of each problem.

## A Brazilian Diamond.

This very remarkable game was played a short time ago in Rio de Janeiro:

Evans Gambit.

| DR. VIANNA. *White.* | A. SILVESTRE. *Black.* | DR. VIANNA. *White.* | A. SILVESTRE. *Black.* |
|---|---|---|---|
| 1 P—K 4 | P—K 4 | 18 Q R K sq | Q—Q B 4 |
| 2 Kt—K B 3 | Kt—Q B 3 | 19 B—B 7 ch | K—B sq |
| 3 B—B 4 | B—B 4 | 20 B-Kt 6 ch | B—B 4 (a) |
| 4 P—Q Kt 4 | B x P | 21 B x B | Kt x B |
| 5 P—B 3 | B—R 4 | 22 Kt—K 4 | Q—Kt 3 |
| 6 P—Q 4 | P x P | 23 R x Kt ch | K—Kt sq |
| 7 Castles | P—Q 3 | 24 Kt-Q 6 (b) | P x P ch |
| 8 Q—Kt 3 | Q—B 3 | 25 K—R sq | P—K R 3 (c) |
| 9 P—K 5 | P x P | 26 Q—Q 5 ch | K—R 2 |
| 10 R—K sq | B—Q 2 | 27 Q—K 4 | K—Kt sq |
| 11 B-K Kt 5 | Q—B 4 | 28 Q—K 6 ch | K—R 2 |

| 17 Kt—Q 2 | Kt—K 2 | | |

*Notes from The Times, London.*

(a) It is necessary to interpose thus, for if K—Kt sq; 21 Q—Kt 3 ch, Kt—Q 4; 22 B—B 7 ch. etc.

(b) This is remarkably fine. The Queen is *en prise* of three pieces, but any capture appears fatal. If, for example, Q x Kt, there is an easy win by Q—Kt 3 ch.

(c) If 25.... Q x Q; 26 Kt x Q, P—B 3; 27 Kt x P, R—Q 3; 28 K R—K B sq, P—B 3 = Q; 29 R mates.

(d) If P x R, 30 Q—B 7, mate.

(e) The finish is most brilliant, and the play all through quite out of the common.

# PHYSICIANS AGREE

that **Robinson's Bath Cabinet** cures the very worst cases of RHEUMATISM, NEURALGIA, COLDS, CATARRH, ASTHMA, TYPHOID and OTHER FEVERS, CONGESTIONS, KIDNEY, LIVER, SKIN and BLOOD DISEASES, OBESITY and STOMACH TROUBLES, SOOTHES THE NERVES, and PREVENTS SICKNESS. GIVES A BEAUTIFUL COMPLEXION. **A TURKISH BATH AT HOME FOR 2 CENTS.** It opens the pores, and sweats the POISONS (which cause disease) out of the blood. The best Physicians in America and Europe endorse and use the Robinson Bath Cabinet.

**Dr. Anderson, of Yale University, says:** "I am using your cabinet in the College gymnasium, and at my home. I find it very valuable in treating **Rheumatism** and many other **diseases.**"

**Dr. Brereton says:** "It has become a question with me not that the Vapor Bath **will cure,** but what it **will not cure.** Pains and aches vanish as if by magic."

Our cabinet possesses four **Essential Features,** covered by patents, necessary for the successful use of the Cabinet Bath.

**$2.00 Book Free to Patrons.** It contains full instructions for curing disease, written by prominent Physicians.

**Please send for our handsomely illustrated catalogue, and our "Special Offer"** to customers

**AGENTS WANTED**

**$75 to $200** monthly made by our representatives. We want enterprising Men and Women to represent us. Exclusive rights. Write at once for Special Agent's 1901 Proposition. Do not delay, as territory is being taken rapidly.

**$500.00 in Gold** will be given to the Agents doing the largest business this year.

**ROBINSON THERMAL BATH CO.,**
764 Jefferson St., Toledo, O.

# WE TEACH YOU FREE. $1200 A YEAR SURE.

**GOLD, SILVER, NICKEL AND METAL PLATING. NEW, QUICK PROCESS.**

VOL. XXII., No. 3 NEW YORK, JANUARY 19, 1901. WHOLE NUMBER, 561

Published Weekly by
FUNK & WAGNALLS COMPANY,
30 Lafayette Place, New York. 44 Fleet Street, London.
Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

## TOPICS OF THE DAY.

### NEW STEPS IN RAILROAD CONSOLIDATION.

IT is nothing new for the radical journals to inform the American people that they are about to bow the neck to the yoke of a few "railroad kings" or "coal barons"; but it is not customary to read such remarks in so conservative paper as *The Railway World*, of Philadelphia, which asserts that "to-day A. J. Cassatt, Mr. Vanderbilt, J. Pierpont Morgan, E. H. Harriman, and James J. Hill are regarded as practically ruling all the great railroads of this country"; or in the New York *Journal of Commerce*, which says that "it requires no violent draft upon the imagination to anticipate in the near future the complete control of anthracite production and distribution by a single group of individuals"; and that "no one will find it difficult to conceive of the entire anthracite trade as completely controlled by a single mind as a department-store or a rolling-mill is." Even the Interstate Commerce Commission, in its annual report last week, called the consolidation of railroad lines "at once the most conspicuous and the most significant result of current railroad financiering," and predicted that soon "it will lie within the power of two or three men, or at most a small group of men, to say what tax shall be imposed upon the vast traffic moving between the East and West." The commission adds significantly that "it is both human nature and the lesson of history that unlimited power induces misuse of that power. Railways are not combining for the purpose of 'extortion and abuse,' but none the less should the people provide some protection against that possible result of the combination."

These impressive comments from conservative sources have an obvious bearing on last week's startling railroad news. That news was, in effect, that corporations controlling steamship and railroad lines have been brought under such harmonious control as to bring about the following conditions:

1. A steamship line across the Atlantic, railroad lines reaching across the United States, and a steamship line across the Pacific are now under one control, so that a passenger can travel more than half-way around the world on lines owned by one group of Americal capitalists.

2. The same group of capitalists control all the railroad systems running into Boston, New York, Philadelphia, Baltimore, and the other North Atlantic coast ports, so that a "railroad trust," as far as these important cities and their tributary territory is concerned, is already a reality.

3. The hard-coal situation is practically controlled by these roads. About ninety-six per cent. of the Pennsylvania hard-coal output goes to market over the Pennsylvania Railroad and the Morgan and Vanderbilt roads. There is a rumor that the road carrying the other four per cent., the Ontario and Western, will soon enter the combination.

According to Mr. Leo Canman of the Chicago *Tribune*, whom the New York *World* calls "the best railroad news authority in the country," the following roads, aggregating 76,224 miles, are in the new combination;

| | Mileage. |
|---|---|
| New York Central | 2,340 |
| West Shore | 495 |
| Chicago and Northwestern | 5,630 |
| Michigan Central | 1,663 |
| Lake Shore and Michigan Southern | 2,200 |
| New York, Chicago and St. Louis (Nickel Plate) | 523 |
| Erie | 2,187 |
| Lehigh Valley | 1,235 |
| Reading | 1,265 |
| Central Railroad of New Jersey | 675 |
| Delaware, Lackawanna and Western | 932 |
| New York, New Haven and Hartford | 1,464 |
| Southern Railroad | 5,823 |
| Central of Georgia | 1,609 |
| Northern Pacific | 4,846 |
| Chicago, Milwaukee and St. Paul | 6,451 |
| Cleveland, Cincinnati, Chicago and St. Louis (Big Four) | 2,495 |
| Chesapeake and Ohio | 1,544 |
| Boston and Albany | 388 |
| Fitchburg | 458 |
| Wisconsin Central | 857 |
| Union Pacific | 3,021 |
| Baltimore and Ohio | 2,365 |
| Baltimore and Ohio Southwestern | 933 |
| Chicago and Alton | 943 |
| Missouri, Kansas and Texas (Shreveport) | 560 |
| Missouri, Kansas and Texas | 3,100 |
| Missouri Pacific | 5,375 |
| Southern Pacific | 7,571 |
| Kansas City Southern | 825 |
| Total | 76,224 |

Financial journals also include in the combination the Great Northern and the Pennsylvania railroads, and the American line and J. J. Hill's Pacific line of steamers.

The New York *World* exclaims: "Think of the vast quantities of commodities transported and marketed by this Oriental-Occidental system! Think of the effect of the rates fixed by these eight men [not named] upon the prosperity of whole States, of a multitude of cities and towns, of the toilers on a thousand farms!" And the Philadelphia *Times* says that "it is the most stupendous combination that has ever been made in industrial and financial circles, and it should be of positive advantage to all classes and conditions of our people. It will be so unless the extraordinary power possessed shall be perverted to extortion to gratify greed. It is dangerous to trust such unlimited power to individuals, however wise and honest in purpose, and these vast combinations impressibly teach the imperious necessity of just and positive restraint upon all possible abuses of such boundless authority." The Chicago *Tribune*, too, believes that "it can not be assumed that the altruism of railway managers will be sufficiently developed to make them refrain from the exercise of the practically unchecked power they will enjoy."

Socialistic comment is not wanting. "This is only another step," the Philadelphia *North American* believes, "toward a still vaster combination of railroad and other interests, which will place the whole transportation system of the country under the control of a consolidated corporation or trust, whose power will be incalculable and whose operations will force the question of government ownership of the national highways to final issue." The Salt Lake *Tribune* says:

"This will go on until the great combines, believing themselves to be impregnable, will become arrogant and mercenary. And the people will stand that for a less or greater time, as may be, and then the revolution will come. Then the ballot will be called in, the needed laws passed, the roads will be confiscated and paid for in government bonds, and the Government will own and run the roads. This will make such a centralization of power in government hands and supply it with such tremendous revenues that it, in turn, will become oppressive and a menace to the very liberties of the people. All this opens up a prospect which is not altogether encouraging, and foreshadows the fact that possibly this century will have even more complicated and dangerous questions to meet than did the last."

GETTING READY FOR UNCLE.

UNCLE SAM: "That's right, boys. When you get everything into the bag, you can just hand it over to me."

—*The New York Journal.*

---

**Resuscitation of Galveston.**—At the time of the appalling catastrophe that befell Galveston last September, when 6,000 lives were lost and millions of dollars' worth of property was destroyed by hurricane and tidal wave, the view was widely taken that the city would never be rebuilt and that the site would have to be abandoned. How far wide of the mark such predictions were is strikingly demonstrated by facts recently printed in the Galveston *News*. *The News* estimates the total property loss at $17,058,275. In all, the number of homes destroyed was 4,131, of which more than one thousand have already been rebuilt. The total relief received by the city in money and supplies is said to have been $1,594,000, while $2,258,600 has been expended in repairs and reconstruction of buildings. A large sum has also been spent in the restoration of railroads, telegraphs, machinery, etc. The demand for goods of various kinds has been so great that the retail dealers are doing better than ever before. The wholesale houses are ready for the new year's business on an advancing scale of operations. Exports of cotton and other goods during the three months following the disaster actually exceeded those for the corresponding months of the preceding year. "This is an extraordinary showing in view of the terrible destruction wrought by the storm," declares the Philadelphia *Inquirer*. The Detroit *Tribune* adds: "It will take years to make Galveston what it once was; but that so much has been accomplished in so short a time is proof that its rise from the ruins will be rapid and complete, as befits an American community which, as Kipling says, 'turns a keen, untroubled face home to the instant need of things.' Galveston is proving that she richly deserved all the sympathy of sentiment and dollars that the world laid at her feet."

---

## "HELPS" THAT HINDER THE INDIAN.

A RECENT number of *Punch* contains the story of a lady who remarked consolingly, when her mare kicked another member of the hunting-party: "Oh, I'm so sorry! I do hope it didn't hurt you! She's such a gentle thing, and could only have done it in the merest play, you know." What Congress has done for the Indian, similarly, seems to have been "well meant," but equally unfortunate in its results. Major R. H. Pratt, superintendent of the United States Indian Industrial School in Carlisle, Pa., says in a letter in *The American Volunteer*, a Carlisle newspaper, "I am sorry to say that I do not feel especially confident of the Indian's future," and gives his reason for this feeling as follows: "The pernicious system of giving him rations for a long series of years and issuing clothing, distributing money, land to lease, etc., has borne the natural fruit of idleness; hence worthlessness, disease, and death. These, altho intended benevolence, have been the worst crime committed against the Indian. The present Commissioner of Indian Affairs declared recently in a public address that the Indian and our country would now be better off had the Indian tribes never been recognized, had there been no treaties made with them, and had there never been an Indian Bureau." Major Pratt says that for many years his formula for solving the Indian problem has been: "To civilize the Indian, get him into civilization, to keep him so, let him stay."

Even the Indian schools, by perpetuating and encouraging race isolation, are, in the opinion of Major Pratt, "pernicious." *The Red Man and Helper*, published at the Carlisle school, says on this point:

"On many Indian reservations, expensive and abundant school accommodations for all the children have been provided. No louder invitation to remain Indians and tribes could be given. No greater hindrance could be placed in the way of the individual who aspires to higher, broader, nobler living. The system says to the Sioux Indians, We don't want you to become useful, independent American citizens; we want you to remain independent, tribal Sioux. In twenty-three years thirty-five millions of dollars of public money have been expended on twenty-two thousand Sioux, all to hold them together educationally and in every other way as Sioux. That the method has been a complete success is established fully by every present condition. Twenty-three years hence, and another thirty-five million dollars of public money poured over them will find the maw of this cormorant system still crying Give! Give! and the Sioux Indians no less compact as Sioux and tribe than they are now; and the same is true of all the tribes.

"Seventy-five years of tribal schools among the Indians in the great State of New York have served only to compact them as tribes. The same fruit results from tribal schools for eighty years among the so-called civilized tribes of the Indian Territory, nor is the result mitigated by mixing the blood until there is an average of two parts Anglo-Saxon blood to one part Indian throughout those tribes. In fact the commingled white blood is one great influence which engineers the opposition to the assimilation of these tribes into the body politic. The reason is

found in the fact that the government policy makes it pay, in dollars, to remain Indian and tribe."

## GUAM AS OUR ST. HELENA.

THE announcement that General MacArthur has been authorized by the War Department to deport to Guam a number of Filipino political and military leaders, whose presence in Manila is considered more helpful to the insurgent cause than to our own, calls out various comments, some serious and some otherwise. The Boston *Herald* (Ind.) recalls that Spain used Guam for a similar purpose, and fears that our entire "policy of subjugation" is coming to resemble Spain's rather too closely. The Chicago *Record* sees an undesirable similarity to Russian administrative methods. The Brooklyn *Times* (Rep.), on the other hand, thinks "there is nothing to get excited about," as this "is no new departure, but only a wise adherence to the policy which the military authorities of the United States have constantly pursued," in proof of which it cites the detention of Geronimo, Rain-in-the-Face, and Jefferson Davis.

To quote some of the less serious comment, one finds in the New York *Times* (Ind.) the opinion that since a more solemn officer has succeeded Captain Leary as governor of Guam, the Filipino exiles "might be bored," so that—

"obviously, the thing to do with these Filipinos is to bring them to these United States. A tour across the continent would open their eyes about the comparative resources of this continent and their own island, and about the hopelessness of resisting the power of the United States. If any of them has a gift in the way of after-dinner oratory, here and not there is his field. We could sandwich him in between Chauncey M. Depew and Wu Ting Fang and give him a chance to plead his own cause. He could not be more rancorous than Atkinson or less scrupulous than Pettigrew. We might even turn him loose in Boston without fear. Such a journey for the Hispanized Malays who are our prisoners would be so enlightening that we might, after they had undergone a 'campaign of education' for six months, safely return them to Luzon as American missionaries."

The Detroit *Tribune* (Ind.) has another suggestion. It says:

"The addition of a St. Helena to our national plant as a world power suggests the inquiry why domestic as well as colonial agitators against the existing order of things may not be similarly disposed of with equal advantages to the powers-that-be, and no particular discomfort to themselves. When Mr. Debs or Mary Ellen Lease prove especially pestiferous from the G. O. P. point of view in campaign time, why could not they be sent at government expense into healthful retirement on Guam for a few months? General Hizon is one of the Filipino officers just ordered there by General MacArthur. The very name suggests that hizzonner and hizzexcellency, the erstwhile mayor of Detroit and governor of Michigan, might with profit, to the Administration, be despatched to keep the Filipinos company. Why not provide on Guam a permanent office for Editor Bryan and *The Commoner*, in the event that the peerless one should still continue in communication with the domestic forces of disorder and show symptoms of being about to give Hannaism further trouble by heading for the third time the ticket of dishonor at home and cowardly shrinking abroad?"

## END OF THE ARMY "CANTEEN."

TO judge the friends and foes of the army "canteen" by the assertions of their critics, one might gather the idea that the former think more of the brewers' campaign contributions than they do of the welfare of our soldiers, while the latter—to quote from the testimony of Secretary Root before a Senate committee—are "misguided people," who "are doing Satan's work in endeavoring to take these young fellows out from under the restraint and under the influences that surround them when they are in camp, and drive them out into the horrible and demoralizing and damning surroundings that cluster around the outside of the camps." Assuming that both sides have the real welfare of the soldier at heart, the difference of opinion which exists will lead to close observation of the effects of the measure now ordered by Congress, to abolish all sale of liquor in army camps. The Baltimore *Sun* (Ind.) says: "A practical test alone will decide which is the better system for the soldier, and which offers the greater temptation to him. Without regard to the principle involved, it may be said that the matter is principally one of fact and must be decided in the light of experience."

The provision inserted by the House of Representatives in the army bill and now accepted by the Senate declares that "the sale of or dealing in beer, wine, or any intoxicating liquors by any person in any post-exchange or canteen or army transport, or upon any premises used for military purposes by the United States, is hereby prohibited. The Secretary of War is hereby directed to carry the provisions of this section into full force and effect." The matter came before the Senate in the form of an amendment, made to the House bill by the Senate committee,

and permitting the sale of beer in the army post-exchange. The Senate showed its disapproval of this by laying the amendment on the table by a vote of 34 to 15, and leaving intact the prohibitory measure quoted above. Thirty-seven Senators were absent, or paired with absent Senators, and did not vote.

The Prohibition papers and most of the religious press are opposed to the canteen, while most of the daily press favor it. *The United Presbyterian* (Pittsburg) says: "The anti-canteen amendment is not the demand of simply the few who are denominated 'fanatical Prohibitionists'; a vast multitude who did not vote for the Prohibition candidates are strongly in favor of it. In fact, as we believe, the great body of the better people are opposed to the canteen." The Catholic Total Abstinence Union of Buffalo is reported as giving out a statement in which it remarks that "we do not think that many of our soldier boys are so depraved as to require saloons in camp, or that they will desert if they can not get their beer. If there are any such, they should be sent to the hospital for treatment instead of to the beer saloon." *The New Voice* (Chicago) points out that the post-exchange can be made just as attractive as a club-room and social center now as before, and the New York *Evening Post* (Ind.), recalling Attorney-General Griggs's interpretation of the other anti-canteen law, thinks that "it is a satisfaction that Congress has now made its wishes known in such clear language that even a Griggs can not find a way to again override its manifest desies." The Boston *Advertiser* (Rep.), too, believes that the Senators "realized that in some large sense they . . . were debating the question whether a law of Congress approved by the President should be, or should not be, annulled by a quibbling interpretation put upon it by a member of the Cabinet."

On the other side the Washington *Times* (Dem.) speaks of the measure as "designed to promote drunkenness and disorder in the service," and adds: "The assumption that, because a young man leaves civil life to enlist in our army and fight our battles, his morals and his meats and drinks are to be prescribed and controlled by the organized female hysteria of America is not only outrageous, but action upon it is absolutely certain to lead to deplorable demoralization, as soon as the new restrictions become operative." The Boston *Transcript* (Ind. Rep.) observes critically: "We have no desire to accuse all members of Congress who have voted to cut off the soldiers' beer of playing politics, but had Congress voted to abolish the canteens in the Capitol it certainly would have been consistent throughout in its prohibitory policy." The Brooklyn *Times* (Rep.) expresses an idea current in many papers when it remarks:

"That a majority of the members of both branches of Congress were coerced into voting against their own convictions on this subject through the dread that the Women's Christian Temperance Union would start a prayer chain or some equally potent weapon against them can scarcely be doubted. They remembered the determined set that was made against the reelection of President McKinley for his acquiescence in the decision of Attorney-General Griggs, permitting the sale of beer and light wines in the army post-exchanges, and they hesitated to invoke against themselves the anger of the organization which had conducted that campaign."

The Baltimore *Sun*, quoted above, finds food for thought in the remarks of Senators Lodge and Teller on the evil effects of the saloons in Manila, and the remark of Mr. Teller that "it is in the power of the President to close every one of them as quick as a telegram can reach Manila." Says *The Sun*:

"It is significant that some of the most ardent supporters of our colonial system now recognize and deplore the demoralizing conditions which have resulted from the military occupation of the Philippines. Senator Lodge, of Massachusetts, in the debate on the canteen amendment, said he was 'convinced that the saloon had done incalculable harm' to the Filipinos. Recently the civilized nations of the world entered upon an agreement prohibiting the sale of liquor to the savage peoples of Africa. Mr. Lodge is evidently of the opinion that the prohibition should be extended to the Philippines, and has introduced an amendment to the army bill forbidding the importation of distilled liquors into the archipelago except for medicinal purposes. It is a well-known fact that before American troops were sent to the Philippines the natives were exceptionally temperate. According to Senator Teller, 'the United States has cursed the people of the islands with a curse as vicious and vile as any the Spanish ever placed upon them.' It is gratifying to observe that Congress is at last waking up to a realization of the nation's duty to the people of 'our dependencies.' If any moral obligation rests upon this country to protect African savages from the vices of modern civilization, surely this Government is under equally great obligations to those new wards of the nation over whom it has recently asserted its sovereignty."

*Mida's Criterion*, a liquor organ published in Chicago, pronounces the new anti-canteen measure "loosely drawn," and referring to the nullification of the present law by Mr. Griggs it says:

"An equally ingenious lawyer could probably get around the new provision quite as easily, and it will be interesting to observe the application of legal ingenuity to the new section.

"It will be observed that no penalty is provided for violation of this law, and that it is not self-operative, but calls for action by the Secretary of War before it becomes effective. Neither does it cover giving away liquor or bartering it, as ordinary liquor laws do. It is curious that this much-discussed regulation should be so loosely drawn, especially in view of past experience with the existing law. Maybe it was passed but not intended to be enforced."

---

**National Marriage and Divorce Laws.**—The bill introduced into Congress by Representative R. W. Taylor, of Ohio, proposing to give Congress the power to enact national marriage and divorce laws, has stirred up some remark. Chairman Ray, of the House committee on the judiciary, supports Mr. Taylor's measure, and, indeed, favors an amendment to the Constitution, if that be found necessary, to give Congress full control of marriages and divorces. At present each State enacts its own laws for marriage and divorce, and "the gross injustice of the present system," as the Philadelphia *Bulletin* says, "by which marriage and divorces which are perfectly valid in one State are treated as illegal and null in another, is too manifest to be denied, and in spite of the agitation for a closer approach to uniformity in the action of the various legislatures on the subject little progress in this direction has so far been made." The New York *Mail and Express* thinks that "such a condition is the gravest of scandals, and while it is allowed to continue it offers just ground for the reproach that our American system has neglected to place the necessary safeguards about family life." The New York *Herald* says:

"The subject is an old one, but of vital concern to the people. It reveals in the United States an anomaly not seen in any other civilized community on the globe—a great nation in the forefront of progress, with 76,000,000 souls constituting one people, living under a common government, speaking the same language, and professing the same Christian religion, yet subject to forty-five separate codes of law governing the relation that is the foundation to the family, home, and society, and having within its borders polygamy beyond the reach of all these laws and even the general Government. It is not surprising that out of this heterogeneous state legislation has grown a conflict and looseness of law prolific of matrimonial anomalies and abuses, causing no end of domestic misery and scandal. A marriage valid in one part of the country may be held invalid in another. Divorce granted in one State may not be recognized in another. A lawful husband or wife in one may be a bigamist in another. Children legitimate in one may be illegitimate in another. In some States the tie of wedlock can be severed but for one cause, and with exacting formalities; in others divorce can be had for the asking on any one of a dozen grounds."

## PRESIDENTIAL VOTE OF THE MINOR PARTIES.

THE corrected vote for the Presidential candidates of the minor parties, as indorsed by the radical papers, is given in the accompanying table. The aggregate vote for such parties in the recent election was about 82,000 greater than in 1896, but more than a million less than in 1892, when the People's Party was at the zenith of its power. On November 6 last the vote of the People's Party fell far below that even of the Social-Democratic Party, which entered national politics for the first time and drew heavily on the Socialist Labor following.

The Prohibition Party total, tho 77,000 greater than four years ago, is not as high as in 1888 or in 1892. *The New Voice* (Chicago) expresses disappointment that the figures are not as large as was at first anticipated, and attributes the falling-off to two causes: "1. An unexpected and unforeseeable slump in the vote of two or three important States, which failed inexplicably to measure up to what was reasonably expected of them. 2. A systematic counting out of Prohibition votes." "The size of the vote," adds *The New Voice*, "is in its importance very secondary to the fact that our vote really was largely increased, and that the old indomitable spirit of 'fighting it out on this line' is fully alive in our ranks." It declares:

"The men who voted for Woolley and Metcalf voted for them because they believe that the prohibition of the liquor traffic is the supreme issue in American politics. We heard much during the campaign—so much that we were led to believe that there was something in it—about the vote that we were going to get from the anti-imperialists, from the patriotic orders, and from this or that other source. That vote did not materialize. Analyzed as carefully as possible the returns show nothing of it. The men who voted with us voted for Prohibition; and nine hundred and ninety-nine out of every thousand of them can be counted on to repeat that vote as often as necessary, until Prohibition is an established policy in government."

"The only party which made decided gains," declares the New York *Outlook*, "was the Socialist. The aggregate vote of the Socialists this year was approximately one hundred and forty thousand, or just four times their vote in 1896." The Cleveland *Citizen* (Soc. Dem.) thinks that the vote "was a splendid one indeed, when it is considered that this was a Presidential year and that lines were more tightly drawn than usual, that the Social-Democratic Party was a new party in the field and compelled to live down the ignominy that was cast upon Socialism by both capitalists outside and poltroons inside of the labor movement." *The Coming Nation*, an independent Socialist paper published at the Ruskin Colony in Georgia, while declining to accept the vote as the "full Socialist strength" and maintaining that many Socialists voted for Bryan, nevertheless pays tribute to Social-Democratic progress. "The meaning of the vote," it says, "is as plain as the sound of bands and the glint of banners and helmets filing into column up the highway—an army marching straight on to industrial organization and the final freedom of which the earth has dreamed these centuries." It is contended by *The Social Democratic Herald* (Chicago) that a large number of Socialist votes were destroyed or tampered with. "This was especially true," it claims, "in Indiana and Texas."

The Socialist Labor Party finds but little consolation in the returns, which register two thousand votes less than its Presidential candidate (Charles H. Matchett) received in 1896. In the opinion of the party organ, the New York *Daily People*, this falling-off is due to the existence of a "counterfeit" Socialist Party. It says:

"The political lie about Populism being Socialism could fetch only the least guarded; this year's political lie, however, about the Social Democracy being Socialism was infinitely more insidious. it proceeded from sources whose previous connection with the Socialist Labor Party gave it a color of truth; when thereto was added the preposterous lie of the 'Socialists being united' under the Debs hat, and the never paralleled support given to the lie by the Republican press, a conception may be formed of the vehemence of the gale encountered in 1900. . . . In the midst of the hurly-burly in the nation's political formations, the Socialist Labor Party moves onward on its track ever sounder, ever stronger, ever fitter to achieve the man's work of its mission."

The decline of Populist strength is regarded by many papers as being the most significant feature in the third-party vote, and the opinion is generally expressed that "Populism is dead," and

that its adherents have returned to the old parties. Among the Populists themselves, no attempt is made to disguise the fact that the vote was disappointing, and much vigorous discussion is now going on as to questions of future policy. *The Missouri World*, a Populist paper published in Chillicothe, Mo., thinks that it has been the "fusion policy that has crippled the People's Party, and advocates uncompromising independence in the political field. With this view *The Populist Journal* concurs, tho it expresses willingness to cooperate with the radical reform forces outside the two old parties. *The Representative* (Minneapolis), edited until his death a few days ago by Ignatius Donnelly, also advocates a union of reform forces on the basis of a radical money plank, public ownership of monopolies, and direct legislation. It is to be noted, however, that at the recent Populist conference in St. Louis the present "Midroad" policy was approved and Socialist overtures were rejected.

Altho each of the smaller parties confidently predicts its triumph in national politics, and altho the Socialists are able to point to European countries in which their doctrines have enlisted

the support of millions, such predictions find but little credence in the daily press. Says the Philadelphia *Times*:

"While it would be rash to predict that no one of these minor parties will ever supersede one of the great parties, their present rate of growth does not indicate this as even a remote possibility. The two principal organized parties have the field, and it is easier for the leaders of either to trim sails to catch a popular breeze than it is to organize a new party from the bottom to represent even a strong popular sentiment. The late election figures furnish very little encouragement for new parties."

## TWO HUNDRED WARS IN ONE HUNDRED YEARS.

IT is now more than fifty years since the Scotch poet, Charles Mackay, wrote his tremendously popular song, "A Good Time Coming," in which he predicted that

"In the good time coming
Nations shall not quarrel then,
To prove which is the stronger
Nor slaughter men for glory's sake;
Wait a little longer."

We are still waiting. Mr. W. Fletcher Johnson, who has been ransacking the annals of the century just past, records in the New York *Tribune* a list of more than two hundred wars, large and small, that have shaken the nations in the hundred years. In this retrospect, too, the further striking fact is brought out that there has not been a single year of the century that has not seen the bloodshed and tumult of battle on some part of the globe. The roar of war has been continuous from Aboukir in 1801 to the present conflicts in China, South Africa, and the Philippines. Mr. Johnson remarks mildly that it is "impossible to declare the century a peaceful one." He says:

REGIONS DEVASTATED BY WAR, 1864-1900.

(Map sent to the Paris Exposition by the International Association of the Red Cross.)
—*From The Review of Reviews.*

"The unexampled progress of the world in civilization has resulted in greater complexity of the political relationships of the nations, and in bringing each nation into more direct contact with others and with a far greater number of others, and these conditions, amid the persistence of elemental passions, evil as well as benign, have inevitably widened the opportunity for war.

"Nor shall we err if we judge that more wars of the nineteenth century were of high import to the world than of any other century. Sir Edward Creasy has set down only fifteen 'decisive battles' in more than twenty-three centuries—battles, that is, which materially affected the course of human progress—and only one of these is in the nineteenth century, while the eighteenth century had no fewer than four. But Sir Edward stopped with Waterloo. Had he extended the scope of his observations to the end of the century he might well have found several other conflicts at least as important as the futile cannonade of Valmy. At least six or seven of the nineteenth-century wars may well be ranked as of first-class importance to the world, and several must rank in point of physical magnitude among the greatest of all time."

Then follows a catalog of wars of the century, filling nearly three newspaper columns. It is a bloody record, says Mr. Johnson:

"Yet may it largely be said that 'these dead have not died in vain.' The vested iniquities of many centuries have been swept away by the hot breath of war, millions of slaves have been set free, nations have been redeemed from alien despotism, the great principles of peaceful mediation and arbitration have been securely established, and, on the whole, civilization has gone forward, both upon the wings of peace and upon the thunderous powder-cart of war.

"If the century has not been more free from bloodshed than its predecessors, it has at least been more free from blood shed in vain, and has brought the world perceptibly nearer to the hoped-for century end when the Christmas bells shall indeed

"'Ring out the thousand wars of old—
Ring in the thousand years of peace.'"

## A STRENUOUS TEMPERANCE REFORMER.

MRS. CARRIE NATION, of Medicine Lodge, Kansas, who took the law into her own hands the other day in Wichita, Kansas, by wrecking a saloon, because the authorities had neglected to enforce the prohibition laws of the State, has leaped into national prominence as the result of her exploit, and is the subject of much comment, serious as well as facetious, in the newspapers. "Mrs. Nation is a woman with a strong arm and a good eye," humorously observes the Topeka *Capital*, "and her first attack on the Carey Hotel saloon showed evidence of long target practise. Glasses, bottles, plate-glass mirrors, and 'Cleopatra at the Bath,' a favorite Wichita masterpiece, went down before her well-directed fire of brickbats, rocks, scraps of old iron, and billiard balls." Continuing in more serious vein, *The Capital* comments:

"The strongest and most effective missiles women can aim at the saloon business are not brickbats, but moral suasion. Somebody should point out to Mrs. Nation that temperance can not be advanced by intemperate methods such as those adopted by this crusader from Barber county; but if Mrs. Nation is able to persuade the great majority of the women of Wichita to rise in their might and demand that saloon rule shall cease, she will accomplish the object she seeks in short order."

The Detroit *Journal* does not attempt to disguise a certain admiration for Mrs. Nation's feat. It says:

"There is of course no doubt that neither Mrs. Nation nor any other fanatic or person of any sort has the legal right to destroy a picture of 'Cleopatra Entering her Bath,' or a counter, or a mirror, or bottles, or even to assault a bartender. But when these things with others are collected for the sake of together composing what the law of Kansas says shall not exist—a saloon where intoxicating liquor is sold—we must confess to some sympathy with the crusade Mrs. Nation has started in her vigorous way, because it is practical enforcement of law made nugatory by criminally neglectful officials. Any private citizen would be justified in taking from one having criminal intent a dangerous weapon, and in destroying it. The saloon in Kansas is outlawed; any one is justified in shooting it on sight, and if Cleopatra at her bath is in the line of the projectiles she must go with the rest. This is apparently the line of Mrs. Nation's reasoning, and it is not so bad a case. We are wicked enough, at all events, to wish that she could put in a few licks in the prohibition State of Maine. That State is full of drinking sinners who need to be called to repentance before it is everlastingly too late."

Mrs. Nation was arrested, of course, but the authorities found that, in the words of the Salt Lake *Herald*, they had "captured

an exceedingly awkward elephant," for the friends of temperance came to the rescue from far and near and "stirred up such a storm that its echoes are reverberating all over the country." Even imprisonment could not dampen her ardor, and, tho unable to carry on the campaign she had inaugurated, she "bombarded the saloons," says the New York *World*, "from her cell in the county jail with a remarkable vocabulary of strong English words." In an impassioned appeal to her sex, reported in the last-named paper, she says: "Take your consecrated rocks, hatchets, brickbats, and anything that comes handy, and you can clean this thing up. Don't wait for the ballot! Don't stop for Chester I. Long or old Bill McKinley, even if you do find them in a gilded hell. A good square blow might bring them to their senses. God will back you and bless you. You will elevate your own sex and our men, too."

## MEANING OF THE NEW REAPPORTIONMENT.

THE passage of the Burleigh reapportionment bill by the House of Representatives by the decisive vote of 165 to 102 (in which about half the Representatives of each party voted for and half against the measure), and its speedy adoption by the Senate, bring the topic into definite form for newspaper discussion. The main feature of the measure is its addition of 29 members to the House (and therefore to the Electoral College); and the feature most noticeable by its absence is the omission to reduce Southern representation on account of the new franchise laws affecting the negro vote. The Brooklyn *Standard-Union* (Rep.) charges that the Republicans who voted for the bill "are afraid to face the issue presented by the vote-suppressing Southern States that are notoriously violating the fourteenth amendment to the Constitution," and the Chicago *Evening Post* (Rep.) remarks that "the South has nothing to fear. The fourteenth amendment is treated by Congress as a dead letter, it does *not* follow the flag into Southern States."

More comment, however, is aroused by the enlargement of the size of the House from its present membership of 357 to 386, each Congressman to represent a population of 194,182. The following changes in representation result: States gaining one Congressman, Massachusetts, Connecticut, Arkansas, Colorado, California, Florida, Louisiana, Mississippi, Missouri, North Carolina, North Dakota, Washington, West Virginia, and Wisconsin; gaining two Congressmen, Minnesota, New Jersey, Pensylvania; gaining three, Illinois, New York, and Texas. All the other States retain their present representation. Newspapers of both the great parties seem satisfied with this arrangement. The Boston *Journal* (Rep.) calls it "an equitable division on either a sectional basis or a party basis," and the Philadelphia *Times* (Dem.) thinks that "the change has no immediate party significance, tho it may lead to some important results hereafter." "As for the party gains," observes the New York *Tribune* (Rep.), "it is of interest to note that while both parties gain in probable strength in Congress and in the Electoral College, the party which is now in the majority, and which is more progressive in spirit and influence, is the one which gains by far the more. Taking last year's election as an indication of the party standing of the States, it is seen that of the twenty-nine new members of the Electoral College the Democrats are likely to have ten and the Republicans nineteen, a net Republican gain of ten. The net Republican gain in the House of Representatives may not be quite as large, owing to the difference in electoral methods between the strong Republican States of the North and West and the strong Democratic States of the South. It is conceivable, for example, that some of the new members from New York, Illinois, and Massachusetts may be Democrats, but under present methods there is little if any hope of a corresponding Republican gain in Texas, Arkansas, or Louisiana."

Some papers fear that the enlargement of the House will hamper the transaction of public business. It seems to the Brooklyn *Times* (Rep.), for example, that the House "is already so large as to be unwieldy, and an addition of twenty-nine to its membership will tend only to aggravate the evils already existing"—an opinion in which the Washington *Times* (Dem.) and many other journals heartily concur. *The Times* recalls the belief of Alexander Hamilton, expressed in *The Federalist*, that "in all legislative assemblies, the greater the number composing them may be, the fewer will be the men who will in fact direct their proceedings"; and quotes further:

"The people can never err more than in supposing that by multiplying their Representatives beyond a certain limit they strengthen the barrier against the government of a few. Experience will forever admonish them that, on the contrary, after securing a sufficient number for the purposes of safety, of local information, and of diffusive sympathy with the whole society, they will counteract their own views by every addition to their Representatives. The countenance of the Government may become more democratic, but the soul that animates it will be more oligarchic. The machine will be enlarged, but the fewer and often the more secret will be the springs by which its motions are directed."

The San Francisco *Chronicle* (Ind.), however, observes even now that practically all the work of the House is transacted in committee, and not on the floor of the House, so that an increase in the number of Representatives will lighten the work of the individual Congressman, and thus make the House really more efficient. "A larger House is needed," it says, "not that this or that State may have more Representatives, but that the work of the people may be properly done."

COMPANIES capitalized at $2,415,423,500 were formed in the United States last year. A portion of this amount is said to represent actual value.—*The Detroit News.*

AS editor of *The Commoner*, Mr. Bryan will be right in line for the Lincoln post-office in case a Democratic President is elected in 1904.—*The Detroit Free Press.*

PROBABLY General Roberts will continue to be a hero for some time to come. There is no office he can run for, and nobody has proposed to give him a house and lot.—*The Pittsburg News.*

GOVERNOR ODELL has dispensed with his legal adviser employed by the State at a salary of $10,000 a year. Mr. Platt will no doubt undertake with great pleasure to give all the advice that may be needed.—*The Washington Star.*

THE politician's wife was startled by a sound below stairs. "John," she cried, "there's a robber in the house." "The House?" replied John. "What's the matter with the Senate? That's worse."—*The Philadelphia Press.*

THE St. Louis *Globe-Democrat* thinks that if Cubans are wise they will not "follow the lead of windy orators." If Cubans are as wise as that, we might take a few lessons from them ourselves.—*The Louisville Courier-Journal.*

CONSIDERATE.—Germany has protested against Turkey's paying the United States claim before Herr Krupp's bill is paid. Rather than cause any hard feeling, the Sultan probably won't pay either of them.—*The Detroit Free Press.*

THEY were once more talking about trusts. "I heard another definition of a trust the other day," said Mr. Northside to Mr. Shadyside. "What was it?" "A trust is a body of men entirely surrounded by water."—*The Pittsburg Chronicle-Telegraph.*

# LETTERS AND ART.

## IS LITERATURE BECOMING DEGENERATE?

THE professional critic of literature has plenty of chances to have his say in the literary journals concerning current books and literary tendencies, but the great army of people who buy and read books rarely have an opportunity to express themselves publicly. The New York *Times*, however, perceiving this desideratum, with commendable enterprise devotes several columns weekly to letters showing how the literature of the day is viewed by the unprofessional reader. One such reader, who appropriately signs himself "Cynique," writes as follows of the present state of literature:

"We speak of 'literature of to-day,' 'littérateurs,' 'masterpieces of word-painting,' 'great novels.' So? The literature of to-day is a vapid collocation of drivel for the most part. To be an author, observe the following rules: Learn to know the language moderately well, steal the ghost of an idea from some real author, long since dead, dilute it with reams of inky swash, a few lurid pictures, a weird, crazy cover design—and the book will sell!

"To-day our literature is nothing but dilution *pur et simple*. A drop of Plato, Æschylus, Ruskin, or some other is stewed and hypothecated till the original idea is lost in a fog of bad odors of words, and resembles thirty cents, Mexican money, with a hole in it! Of the alleged novelists now alive, there is not one deserving serious consideration, while their books are poor trash. 'Richard Carvel,' 'To Have and To Hold,' 'Janice Meredith,' and 'David Harum' are fit samples; the slaverings of distorted and unhealthy imaginations. Dooley is bad enough to have been perpetrated by M. Quad. There are, of course, some books written now that are known as 'good'; but what sort are they? Weak in conception, aimless in plot, silly in deduction, and either over or under drawn, they are pitiably misguided efforts.

"The poets are more numerous than the prose writers, or at least the scribblers who try verse are so, and if anything worse. A clergyman recently summed up the situation in a few words which seemed to me well chosen. The gentleman to whom I refer is a celebrated man of international reputation. He said: 'Kipling is a genius—and a beast; Swinburne is a genius—and an esthete, tho sometimes a bore; the American poets are so small as to merit little praise. Stedman, Riley, Harte, Carman, Scollard—even old Richard Stoddard—they are all faulty to a fault. They are not young men full of fire. They are old or middle-aged; their powers should be near their prime, either approaching or slowly descending from the summit of Parnassus. Instead, their writings are feeble, puerile, weak, more like the crude work of a promising novice than the finished creation of the successful man.'"

In somewhat similar vein is a recent editorial article in the Providence *Journal*, relating chiefly to the new American school of fiction. The renaissance of romance, the writer points out, is one of the noteworthy facts of the past few years. After a long period in which realism and psychological analysis divided the field of fiction between them, the mass of readers have turned with a sigh to what promised to be "good stories." But there are signs that the quick-change artists of the new and gory school denominated "historical romance" have overdone their stunt. The writer above-mentioned remarks:

"But now the romancers are becoming in turn fully as wearisome as the realists. It is a kind of glorified dime novel, as has been said, that they are putting forth, and it may fairly be asked how long the public will stand this sort of thing. There is an innate love of mere fable in almost every mind, and a narrative that moves swiftly, and excites either curiosity or suspense, is pretty sure of an audience. But is it necessary even in romance to discard altogether the finer touches of character, the delicate shades of thought and feeling? If that be so, then romance hardly belongs to literature at all, and the admirers of Miss Johnston, for example, might as well devote their attention to 'Old Sleuth.' The Boston *Transcript* quotes a magazine editor in praise of a story soon to appear in his publication. 'The chief merit of it,' he says, 'is that it contains no philosophy, not a word of description, not a single reflection. It is simply a collection of thrilling incidents crowded one on the top of the other in breathless succession. Evidently the author intends to turn it into a play as soon as it shall have made its mark with the public!'

"Is the taste of magazine readers, however, as childish as these remarks imply? Are romancers released from the duty of giving their books some ethical as well as esthetic purpose? Is there no philosophy or description or reflection in 'Henry Esmond' or 'Rob Roy,' or even in 'Richelieu' or 'The Tower of London' after their kind? It is absurd to call the crowding together of incidents a work of art. Skill it may demand, but not insight. If the extreme realists have sometimes placed too little reliance on incident, surely the extreme romancers have erred just as visibly in the opposite direction! Such praise as this editor bestows indicates a shockingly low standard of literary taste."

## MUSIC, ART, AND DRAMA IN JAPAN.

THE Japanese are credited with a monkey-like desire to copy everything Occidental. This, says Mr. Poultney Bigelow, is at the present time true only to a very small extent. In the course of an article narrating his late experiences in Japan, he says (in *Harper's Monthly*, January):

"The more we see and study the Japanese, the more we see that he takes the good where he finds it, and does not admire a thing merely because it is from abroad. European drama, music, and painting leave the Japanese cold—the very things we might fairly assume to be worth their admiration.

"One day Kotaka [Mr. Bigelow's host], who does not care for music, allowed me to escort his wife to a grand concert of the Symphony Society, given in the hall of the Academy of Music in Uyeno Park, at half-past one. The orchestra was all Japanese, clothed in European evening-dress, twelve pieces in all. The program was printed in English, and the tickets cost one dollar apiece, which is a monstrous price for Japan. It was a European building, and the interior, for ugliness, was like the ordinary American country meeting-house. Everything that was cultivated, rich, and swell in Tokyo society turned up here, whether foreign or domestic. There was something to suit every taste. The orchestra would play a Mascagni intermezzo, and while it rested there would be a flute and samsin performance by popular artists in native gowns. The symphony dozen sat on chairs; the flute and samsin squatted down at the front of the stage. There would be solos and duos of Beethoven and Diabelli performed by German amateurs, and then a native song by Matsunaga and others in native dress, who formed a violent contrast, yet reaped applause beyond anything given to the white man's melody, even when performed by twelve musicians of Japan.

"Mrs. Kotaka listened attentively to the white man's music, and I followed with equal attention that of the yellow composers. I asked her what she thought of Beethoven and Mascagni. She thought they were interesting, but not so satisfactory from the standpoint of music as the composers of her own country. She appreciated the efforts of Schumann and Arthur Sullivan much as we might sit through a concert of bagpipes, or the work of some amateurs whose feelings we did not wish to hurt. And Mrs. Kotaka is a lady thoroughly trained in musical matters, a famous performer both instrumentally and vocally. That we do not imitate Japanese music while we are copying so much from that artistic nation is to my mind but a proof that their work in that field is too subtle for us, lies too far below the surface. To do the white man justice, however, let me add that the orchestration of the twelve musicians, while very accurate in time, and perfect in harmony and accord of instruments, was sadly lacking in the vital quality of interpretation."

As for Japanese art, Mr. Bigelow says:

"There was a vast salon open while I was there, an international show of pictures. Of course, I was anxious to see them, but Kotaka did not care much about them. He went, however, to indulge me, but took me first for a lunch at the swell restaurant of the capital. . . . After lunch we strolled over to the

paintings, and there were acres of canvas. Every European school was represented—the theatrical rococo of a certain Viennese period; the limp and sexless sort in the Burne-Jones vein; the military in imitation of De Neuville; and a lot of other stuff suggesting Fortuny, Knaus, Bouguereau, and other popular names at very long range. The most popular manner seemed to be that of the very thin *plein air* effect, as tho done with a very dry brush. It was the result of hard work, but the result did not justify the pains involved. 'Would to God it had been impossible!' was the cry I was inclined to make, and I turned gratefully to some sketches of native themes by native masters. Japanese oil-painting, like Japanese rendering of German symphonies, wins applause—the same applause that we accord to a dog who stands on his front paws, or to a man who does some horrible but difficult contortion. It is not the art that we admire—we merely acknowledge the difficulty of his task. Kotaka thought Japanese art had nothing to fear from abroad; that the Japanese who went abroad to study excited no particular enthusiasm when they returned home, and displaced none of the local favorites. Of course native art will be modified in time to the extent of making anatomical correctness and mathematical perspective relatively more important; but even as matters are today the body of Japanese connoisseurs feel that Europe has more to learn from Japan than Japan from Europe—at least in the art world. The masterpieces of native art are jealously treasured in museums and the homes of wealthy men of taste. The price of good native work has not fallen; it is in steady demand, not merely in Japan, but abroad. The foreigner can not pick up art treasures on the streets of Tokyo any more than he can pick up Raphaels and Turners in the department-stores of London or New York. Your Japanese art-dealer is a mighty swell, to whom you must be properly introduced. He, too, loves the things he deals in, and he does not care to part with them unless he knows that they are to fall into the hands of those who are capable of appreciating them. There is little of the mercantile spirit in the typical Japanese—he is a poor merchant. When he sells it is because he has to, and the money he gets is but poor compensation to him for the loss he feels when a work of art leaves his collection."

Concerning the stage in Japan, the writer says:

"Before leaving the subject of art in Japan, just one word about the stage. My friend Professor Mitsukuri and his wife asked me to their box at a play in which appeared the famous Danjuro, who is in Japan what Edwin Booth was in America—what Sir Henry Irving is to the English stage. It was extremely difficult to secure a place anywhere when he was acting, particularly in this play, which was on the favorite Japanese theme—loyalty to one's chief, and love between parent and child, the situations being drawn from Japanese history. In this play Danjuro as a vassal deliberately slays his own child, a gallant lad, who cheerfully consents to the act, because thereby the interests of their feudal lord may be advanced. The main interest centers in the natural struggle of a loving father to overcome the feelings battling for mastery within him. The same situation has been presented in Sir Henry Irving's rendering of 'Peter the Great,' but Danjuro's conception was more affecting. There were twenty-five hundred people in the audience, and much wiping of eyes. The play lasted three hours, and between the two acts there was a pause of perhaps twenty minutes, during which we adjourned to a charming tea-house connected with the theater, where light refreshments were served. All left their walking-boots in the cloak-room, and paddled about the vast building in little straw sandals—the audience never disturbed by noise of boots.

"Professor Mitsukuri and Kotaka preferred Japanese acting to that of the European, tho they were familiar with both from extended travel and residence in both Europe and America. There is much in Danjuro that to us is grotesquely conventional, but in the sublimer passages he was most impressive; never ranted, and scarcely made a gesture. His eyes and the muscles about his mouth told the tale of his heart beyond misunderstanding, and the people whom he moved were neither illiterate nor ignorant of our methods. European dramatic companies have visited Japan, and have left the Japanese cold. Should Coquelin come to Tokyo the Japanese aristocracy would entertain him, attend his performances, be amused by the novelty of the thing, but on his departure they could return to Danjuro with renewed devotion.

"When we therefore deplore the fading away of old Japan, it may be consolation to reflect that in the fields of painting, music, and the drama at least, the Jap is prepared to grow by evolution and not by revolution."

---

## THE READING OF THE WORKING CLASSES AND ITS RELATION TO CRIME.

MUCH has been written of the reading of the "working classes." It is said that they read nothing but worthless fiction and the yellow journals, and it has even been claimed in England—incredible as it may seem—that they are "too much educated," and that Hooliganism, that strange phenomenon of modern London streets, is largely a resultant of this. As so many who do not belong to these classes have written of their literary tastes, it is interesting to learn the views of the son of a working coal-miner, Mr. Tom Cliffe Phillips, of Cardiff. Mr. Phillips, who writes in the London *Literature*, adopts several views opposed to those of other writers on this subject. He says:

"The average boy and girl leave school with just the ability to read the evening paper, some periodical of *Tit-Bits* type, or interesting story; and story-reading not demanding any serious strain upon the mental faculties, and providing a stimulative salt in items of adventure or love-making, is naturally taken to on the line of least resistance. Then in view of their squalid daily environment, the revelations of a different world as depicted by the novelist, the fair scenes of mountain, valley, and river, uncontaminated by the ugly factories and workshops of industrial progress, the vivid descriptions of works of art and beauty, the account of rich dresses and splendid mansions, the clash of swords and noise of battle, or the armored panoply of chivalric times, have an amount of attraction that can not be very well understood by those whose lives have been cast in more favorable circumstances.

"I can not see or feel that this is in any way to be deplored. Before you can raise the class level of intelligence you must first show the individual members something better, and the way to attain thereto, so that they may make their endeavor accordingly. If reading is to be cultivated at all, it must be from the point of interest; and I maintain that the novelist, and he alone up to the present, has had any portion in providing the material wherewith to establish the love of reading in the masses on a firm and fruitful basis. From story-reading, readers will gradually advance to works of literature other than fiction; essays and poetry will attract attention in growing ratio, and the love of good work will gradually and surely be raised. Then working-class novel-readers, pure and simple, fall into different ranks of mental grasp and foresight, and I am of firm opinion that the general standard is on the upward grade."

*Literature*, in commenting on these statements, quotes from a recent letter in the London *Daily News* by the president of the London Metropolitan Board Teachers' Association, in answer to a statement by a member of the London School Board that Hooliganism is bred in the evening-schools. The former gentleman asserts that Hooliganism arises not from education, but from the want of it, in fact from truancy. "There are 700,000 children of school age in the London School Board area," he says; "of these, 100,000 are always absent." From this semi-illiterate portion, aided by parental neglect, emerges Hooliganism. But even of these truants, most learn to read, he says, and this, far from being an evil, is the only hope for them. *Literature* continues:

"The outcry against education which was heard in the seventies is dying, but it is dying hard. The key of knowledge is still but grudgingly offered to those who really need it. No serious person can believe—tho the protest would seem to be needed—that education, whose one function, as every age and country has believed, is to civilize, to soften the manners, and to 'let the ape and tiger die,' really leads to crimes of violence. But there

are two sorts of education. The main object of secondary education—of the public schools [*i.e.*, not of the 'Board Schools,' but Harrow, Rugby, etc.]—is to educate character. The main object of the primary schools is to impart knowledge and let character go. There undoubtedly lies one solution of the Hooligan problem. Those who assert that education is useless if it only creates a debauched literary taste can make a more plausible case. But there is much exaggeration both in their facts and their arguments. One critic sees in the fact that the porters at railway stations collect all the newspapers, all 'the ephemeral rubbish which has been idly scanned and thrown away,' a direct and melancholy result of mechanics' institutes. We need not enter now on the large question of the influence of inferior journalism; but in the matter of 'good' and 'bad' literature we can not forget that these are relative terms. What is bad in the view of the cultured gentleman may be good for the uncultured working man. The former may question some of Mr. Phillips' literary judgments; but our contributor is right in saying that 'the reading of fiction,' even poor fiction, if it is wholesome, 'is simply a symptom of an interest in things that are brighter and more alluring than that every-day dull grayness which surrounds the life of so many people.' It only wants to be guided aright—here the managers of public libraries have a great responsibility—and, at any rate, the first step will have been taken toward that appreciation of great thoughts and beautiful pictures in which lies the sovereign remedy for savagery and crime."

## MOST POPULAR BOOKS OF THE MONTH.

ACCORDING to the latest returns of *The Bookman* (January) the six most widely read books in the United States are the following:

1. "Alice of Old Vincennes." By Maurice Thompson.
2. "Eben Holden." By Irving Bachellor.
3. "In the Palace of the King." By Marion Crawford.
4. "Eleanor." By Mrs. Humphry Ward.
5. "Tommy and Grizel." By J. M. Barrie.
6. "The Master Christian." By Marie Corelli.

Other widely read books are, in fiction: "The Redemption of David Corson" (Goss); "The Voice of the People" (Glasgow); "The Cardinal's Snuff-Box" (Harland); "The Reign of Law" (Allen); "The Isle of Unrest" (Merriman); "Unleavened Bread" (Grant); "The Sky Pilot" (Connor); "Richard Yea-and-Nay" (Hewlett); "Elizabeth and Her German Garden"; "Monsieur Beaucaire" and "The Gentleman from Indiana" (Tarkington); "Stringtown on the Pike" (Lloyd); "Philip Winwood" (Stephens); "To Have and to Hold" (Johnston); "Bob, Son of Battle" (Ollivant); "Boy" (Corelli); "Wanted, A Matchmaker" (Ford); "Quisanté" (Hope); "Red Pottage" (Cholmondeley). In works other than fiction, the following are most read: "The Life of Francis Parkman" (Farnham); "Wild Animals I Have Known" (Seton-Thompson); "More Fables in Slang" (Ade); "Napoleon" (Rosebery); "China, the Long-Lived Empire" (Scidmore); "Letters of R. L. Stevenson" (Colvin); "L'Aiglon" (Rostand).

In England the six-shilling novel "continues to pour in a continuous stream" from the press, according to reports from London, altho the public has some time to give also to another highly spiced branch of literature—war books. The following are the most popular books in London, all, it will be observed, by British authors:

"The Master Christian." By Marie Corelli.
"Boy." By Marie Corelli.
"Quisanté." By Anthony Hope.
"Tommy and Grizel." By J. M. Barrie.
"The Brass Bottle." By F. Anstey.
"The Isle of Unrest." By H. S. Merriman.
"The Host of the Lord." By F. A. Steel.
"The Infidel." By Miss M. E. Braddon.
"Rue with a Difference." By Rosa N. Carey.
"The Mantle of Elijah." By I. Zangwill.
"The Stickit Minister's Wooing." By S. R. Crockett.
"Eleanor." By Mrs. Humphry Ward.
"Richard Yea-and-Nay." By Maurice Hewlett.

## THE FICTION OF 1900.

THE past year in the book world appears to have been chiefly remarkable for its phenomenal sales. Fiction, in both branches of the Anglo-Saxon race, has assumed a position of such preponderating importance that so far as the great "general public" is concerned all other kinds of new literature seem to have comparatively slight chance of a hearing. The New York *Bookman* (January), which keeps careful record of book sales each month throughout the United States, contains a short commentary on the novels of the year 1900, mainly as to their relative popularity. It says:

"There have been a great many very admirable stories; several books have enjoyed sales which would have seemed incredibly large to the readers, authors, and publishers of ten years ago; but there has been no one book which has stood out above all others either by reason of its popularity or of its intrinsic literary merit. As to the ultimate importance of the novels of 1900 we shall say nothing here. It is too soon. The autumn books are as yet not fairly started, and in any ranking in order of quality they would be necessarily to some extent ignored in favor of the books of last winter and of the early summer. The question of popularity, on the other hand, rests substantially upon figures, and it is rather interesting to note how the best-selling books varied from month to month. With the close of the year 1899 'David Harum,' 'Richard Carvel,' and 'When Knighthood Was in Flower' were in the full swing of their popularity. True, according to the returns which appear in *The Bookman* for January, 1900, the first place had been taken by Mr. Ford's 'Janice Meredith,' but the three above mentioned were books whose sales had been large for many preceding months, and so they may be said to have been the three most popular books during the closing months of 1899. By March, however, 'David Harum' had dropped back to a somewhat obscure place in the race, whereas 'Janice Meredith' and 'Richard Carvel' and 'When Knighthood Was in Flower' sturdily maintained their positions until midsummer."

*The Bookman*, after reprinting the reports of the most popular books for each month of the past year, makes some comparisons. Miss Johnston's "To Have and To Hold" leads as the most widely read book of 1900, having been eight times mentioned in the monthly reports. Among the books mentioned six times are "Janice Meredith," "Richard Carvel," "When Knighthood Was in Flower," and "Red Pottage." Next come "Unleavened Bread" and "The Redemption of David Corson," which were mentioned five times. "The Reign of Law," published later in the year, was four times mentioned; while "David Harum," "Via Crucis," and "Resurrection" were mentioned three times; and four books, "The Gentleman from Indiana," "The Voice of the People," "The Master Christian," and "Eben Holden" were mentioned twice. The books which secured one mention were: "Mr. Dooley in the Hearts of His Countrymen," "Santa Claus's Partner," "In Connection with the De Willoughby Claim," "Sophia," "The Heart's Highway," "The Farringdons," "The Bath Comedy," "Philip Winwood," "Tommy and Grizel," "Alice of Old Vincennes," and "The Cardinal's Snuff-Box."

*The Bookman* takes an optimistic view of the literary situation as revealed in these reports:

"One of the most cheerful features of the whole matter is the fact that that growth of Americanism to which we had occasion to refer last winter is becoming steadily more apparent. Of the seventy-five places held among the best-selling books by the novels that we have mentioned, all but fifteen are to the credit of American authors. However, some of the American authors have laid their scenes in other lands, and of the sixty books that may be called American, only forty-nine treat of distinctly American subjects. The historical novel, despite the fact that it had already enjoyed an unusual lease of life, was, during the first six months of the year, extraordinarily popular. During the later summer and autumn months, however, it seems, in a measure, to have lost its hold. For the whole year the historical

novel has been included in these lists thirty-three times, while the story of contemporaneous life has had forty-two appearances. It may also be of interest to add that of the seventy-five times that these books are mentioned fifty-four are to the credit of those written by men and twenty-one to the credit of those written by women."

The following tabulation of largest editions of new books appearing in the United States in 1899–1900 appears in the new edition of the "World Almanac," the figures being given on the authority of the various publishers:

| Titles. | Authors. | Publishers. | Number Copies Printed. |
|---|---|---|---|
| David Harum | Edw. N. Westcott | D. Appleton & Co | 480,000 |
| Richard Carvel | Winston Churchill | The MacmillanCo. | Over 400,000 |
| When Knighthood Was in Flower | Charles Major | Bowen MerrillCo. | 313,000 |
| To Have and to Hold | Mary Johnston | Houghton, Mifflin & Co. | 275,000 |
| Janice Meredith | Paul L. Ford | Dodd, Mead & Co. | 255,000 |
| The World Almanac | The World | Press Pub. Co. | 200,000 |
| Eben Holden | Irving Bachelier | Lothrop Pub. Co. | 125,000 |
| The Reign of Law | James Lane Allen | The MacmillanCo. | 112,000 |
| Alice of Old Vincennes | Maurice Thompson | Bowen-MerrillCo. | 107,000 |
| The Day's Work | Rudyard Kipling | Doubleday, Page & Co. | 102,000 |
| Red Rock | Thomas N. Page | Scribner's Sons | 90,000 |
| The Redemption of David Corson | Charles F. Goss | Bowen-MerrillCo. | 72,000 |
| Wild Animals I Have Known | Ernest Seton-Thompson | Scribner's Sons | 71,000 |
| The Master Christian | Marie Corelli | Dodd, Mead & Co. | 60,000 |
| Tommy and Grizel | J. M. Barrie | Scribners | 60,000 |
| The Gentleman from Indiana | Booth Tarkington | Doubleday, Page & Co. | 60,000 |
| Philip Winwood | Robert N. Stephens | L. C. Page & Co. | 60,000 |
| Prisoners of Hope | Mary Johnston | Houghton, Mifflin Co. | 55,000 |
| In Connection with the De Willoughby Claim | Frances H. Burnett | Scribner's Sons | 55,000 |
| The Forest Lovers | Maurice Hewlett | TheMacmillan Co. | Over 50,000 |
| The Pride of Jennico | Edgerton Castle | " " " | " 50,000 |
| Young April | Edgerton Castle | " " " | " 50,000 |
| Elizabeth and Her German Garden | Anonymous | " " " | " 50,000 |
| Via Crucis | F. Marion Crawford | " " " | " 50,000 |
| Ave Roma Immortalis | F. Marion Crawford | " " " | " 50,000 |
| The Celebrity | Winston Churchill | " " " | " 50,000 |
| Red Pottage | Mary Cholmondeley | Harper & Bros. | " 50,000 |
| Eleanor | Mrs. Humphry Ward | " " | " 50,000 |
| The Mantle of Elijah | I. Zangwill | " " | " 50,000 |

## ENGLISH AND CONTINENTAL VIEWS OF SIR ARTHUR SULLIVAN.

FROM the Queen down to 'Arry the bank clerk, the English people appear to unite with continental critics in accepting the late Sir Arthur Sullivan as the most characteristic representative of British music since the death of Purcell two centuries ago. *The Westminster Gazette* says:

"As to the place to be assigned to Sir Arthur Sullivan among contemporary musicians, Sir Frederick Bridge writes to *The Times* to-day to protest against the remark that Sullivan 'set himself to rival Offenbach and Lecocq instead of competing on the level of high seriousness with such musicians as Sir Hubert Parry and Professor Stanford.' Sir Frederick writes: 'Why it is necessary to make any such comparison, I am at a loss to know. Neither of these gentlemen would, I am sure, claim to have produced work which will rank higher or live longer than the "Golden Legend," the "In Memoriam," and other overtures, the Shakespeare music ("The Tempest"), and his many beautiful songs. Sir Arthur Sullivan's church music is a worthy continuance of the best cathedral traditions, and he has shown light opera writers how to combine wit and humor with perfect taste and fine and original musicianship. Does not all this disprove the statement to which I take exception?' Another correspondent, calling himself 'A Musical Amateur,' dealing with the same point, writes: 'It is perfectly safe to say that for one German or one "European" who is familiar with Parry or Stanford, there are thousands who regard Sullivan, and have regarded him for a generation past, as the only English composer of his day.'"

The same journal says further of the esteem in which Sullivan is held on the Continent:

"The news of the composer's death has been received with profound regret in Berlin, where he had many friends, and where his operas, above all 'The Mikado,' were received with great favor by a very wide public. The Emperor William was from the first a devoted admirer of 'The Mikado,' and not many months ago his Majesty patronized an entire departure from the traditions of the Berlin Royal Opera in the production of the most tuneful of Sir Arthur Sullivan's works in that temple of classical music. It was also on the Emperor's initiative that the opera 'Ivanhoe' was reproduced some years ago in Berlin, and no one in Germany will have heard the sad news with deeper regret than his Majesty.

"A Vienna paper (quoted by *The Chronicle's* correspondent) remarks that with the death of Offenbach, Strauss, and Millöcker the whole genre of operetta seems to be dying out. The world expected that either Italy or France would produce the next master of operetta, but the glory was reserved for England. The success which attended the performance of Sullivan's works at Vienna was phenomenal, and German versions have had long runs. The *Neue Freie Presse* says that Sir Arthur Sullivan was the creator of English national operetta. His death, not only in England but everywhere, will be felt as a loss to music. The *Tageblatt* says Sullivan's 'Mikado' enjoyed world-wide fame. His name will be gratefully remembered wherever it is known."

## NOTES.

IN reference to Mr. Ernest H. Crosby's recent remark, quoted in these columns, that there is only one English version of Tolstoy's "Resurrection" which does not misrepresent his teachings on social and other questions, through an almost incredible use of the "censor's stamp," we learn that the edition referred to is the one published in London in thirteen small pamphlets, to each of which is prefixed some Scriptural texts. The profits of this edition go wholly to aid the exiled Russian Doukhobors in Canada.

ONE of the most curious and interesting of journals is *Vox Urbis* ("Voice of the City"), whose scope is indicated by its subtitle, "De Litteris et Bonis Artibus Commentarius"—a commentary on literature and the fine arts. It is published semi-monthly in Rome ("Bis in mense prodit"), and contains articles in generally choice Latin by Italian, French, and German scholars. Altho antique Roman, it appears to be thoroughly up to date, and contains articles on the latest phases of the "Bellum Transvaalianum" and estimates of Tolstoy, Sienkiewicz, and "Fridericus Maximilianus Müller."

APROPOS of the recently published memoirs of the Countess Potocka (whose name, by the way, is pronounced pō-tots'kā), a writer in the New York *Times* calls attention to the fact that this countess is not the one whose beautiful and *ingénue* face is so often seen in the art-shops. The maiden name of the latter was Hélène Masaleka. The same writer says of her: "She was born in Poland in 1763. Left an orphan, she was brought to Paris by her uncle, the Bishop of Wilna, and placed in the famous Abbaye aux Bois, where she remained for four years. She was married in 1779 to Prince Charles of Lignè, 'a worthy son of a noble father.' He was killed in battle in 1792. The Princess Charles was married only three months later to Count Vincent Potocka, with whom she led a life of very varied happiness. She died in Paris October 30, 1815. The well-known portrait to which I have already referred forms the frontispiece to my edition of her life, published by Calmann Levy of Paris."

A LONDON journal quotes approvingly the following version of "Maud Muller," which, it says, "hails from the other side, of course." Printed as prose, it runs thus: "Maud Muller on a summer's day raked the meadow fresh with hay, and the bumblebee and garter snake she also raked with her little rake. And the wind that blew that summer's day brought Maud freckles in a frightful way; and her neck was roasted and her face was baked, but still she raked and raked and raked. It seems that her pap was away that day to some political fol-de-ray, and her mother, too, was a delegate to a hen convention out of the State. And the hired man in his hand-me-down was attending a circus that day in town. So Maud was left alone that day to do the chores and rake the hay. And she pitched right in her level best and only took an occasional rest, then she'd spit on her hands once more and take a better hold on her little rake. But as she wrestled the new-mown grass, these words from her lips did sadly pass: 'Of all sad words of tongue or pen, the saddest are, "They're gone again."' Busy with other folks' affairs, they've left me here to manage theirs.'"

THE following very timely literary announcements are made by *Life*:

"The editors of *Scribner's Magazine*, fully alive to the demands of readers, announce for the forthcoming year that no novel by J. M. Barrie will appear in the magazine.

"It is said that during the coming year Mr. Marion Crawford will read his own works through, a task that before this he has never had the time to accomplish.

"Miss Marie Corelli has been having her imagination made over and refitted. A lot of new material has been added, and some entirely new and gorgeous effects may be expected for the coming year.

"Some of the reviews of books in *The Bookman* have been so good of late that they are going to be set to music.

"Mr. Frank A. Munsey will shortly offer a prize of a million dollars to any one who has ever read anything he ever wrote for his own magazine. Mr. Munsey is said to be the Russell Sage of Magazinedom.

"Hall Caine and Alfred Austin are thinking seriously of having themselves dramatized, and, if they carry out their plan, will appear soon in this country as rivals to the Rogers Brothers."

## SCIENCE AND INVENTION.

### DO ANIMALS HIDE BEFORE DEATH?

THERE is a popular belief that wild animals go into retirement as they feel death approaching. This belief is examined by Dr. Paul Balliou in an investigation regarding the death of animals, part of which has already been referred to in these columns. His results are detailed by M. Henri Coupin, in an article in *La Nature* (Paris, December 8), from which it appears that, altho there is some foundation for the popular opinion, the facts on which this opinion is based must be largely explained in another way. Says M. Coupin:

"It is a fact that in the country dead bodies of animals are almost never found, whether they are mammals, birds, reptiles, or insects. And this fact is the more striking when we remember the extremely great number of living animals on the earth's surface. The phenomenon may be explained in two ways: either the bodies disappear very rapidly or animals are accustomed, at the moment of death, to take refuge in holes and so to escape from sight. The question has not been settled, but certain known facts, which we shall proceed to describe, will put those who wish to clear up the matter in the way of so doing.

"It is a habit with dogs and cats, at the moment of death, to go into some corner, and often into a place far removed from their usual home. Doubtless this is what they did also in the savage state.

"As for rabbits, they seem to do exactly the opposite, leaving their burrows to die, not put out by their companions as some have said, but of their own free will. Field mice do the same; but it is not a general habit among rodents. Mice in particular often seem to leave their holes to die; but it is only to seek other shelters, such as hollow roof-tiles.

"The chamois, when it has received a serious wound, so we are told by Tschudi, leaves the herd and goes into a deserted place, where it lies down among the rock and licks its wound. There it either recovers or perishes.

"Elephants retire to distant places when about to die. . . . Llamas . . . have special death-places which become in time vast heaps of bones. 'It has been noted,' says M. Houzeau, 'that these animals, both domesticated and wild, select a special place where all retire to die. There are found on river-banks great spaces all whitened with their bones.' Perhaps we may explain in like manner the abundance of fossil bones of bears, hyenas, etc., that are found in caves.

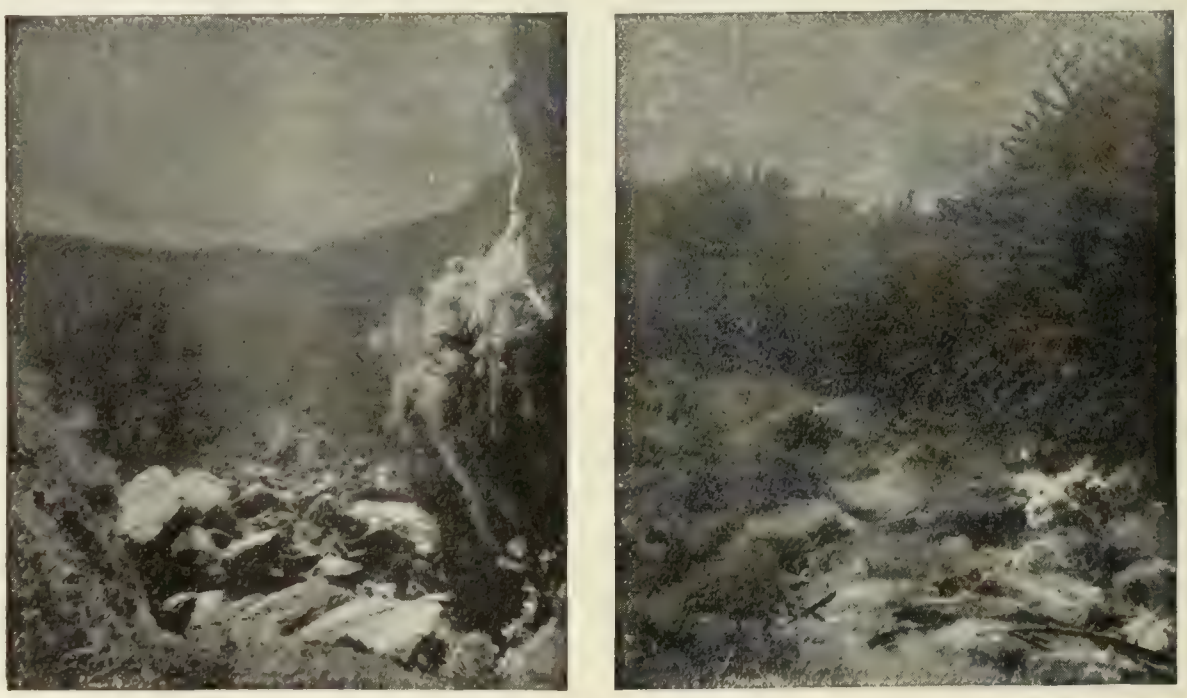
"Birds about to die flee from the light of day and seek the gloomiest retreats. At least so states M. Balliou, and he thus explains why we never find the dead bodies of birds in the paths and roads of public parks. That dead birds are never so found is affirmed by the sweepers in the Luxembourg gardens and the botanical gardens."

According to what precedes, says M. Balliou, it may be supposed that most wild animals, at the approach of death, hide themselves, and thus remove their remains from the public view. It is certainly so in many cases. But it should be added that in most instances the corpses disappear because they become the prey of creatures that live on the dead. We may get an idea of the rapidity with which this disappearance takes place by noticing, for instance, what becomes of sheep and goats when they die on the Landes. Hardly has the buzzing of the carrion flies given warning, when dogs, crows, etc., appear to feast on the viscera and soft parts. At nightfall come wild beasts for their share. Finally, a multitude of insects complete the work of destruction. In a few days naught remains but a few bones and flocks of wool. At the same time, adds the author from whom we quote, I had never supposed that this could be the case with the remains of elephants, whose huge bones, one would think, would not easily disappear. It has been remarked that the skeletons of deceased elephants are almost never found. Is their rarity to be explained by the fact that this animal retires to inaccessible places to die, as we have suggested above? If we are to believe Mr. A. G. Cameron, we see here the action of ruminants. These animals have a pronounced taste for bones, which they wear away little by little, until in a few years they may dispose entirely of a skeleton, no matter how huge it may be. A fact that has often been observed will give color to this opinion, no matter how strange it may seem at first. Our domestic ruminants eat and swallow with avidity mineral substances such as mortar, plaster, or even earth, that contain salts of lime, which are doubtless useful to them in their nutritive processes. How could a bird escape from all these destructive agencies? Its delicate flesh is the favorite food of all predatory animals. . . . Birds that have escaped the voracity of these natural enemies during life, belong to them after death; and even if they have not been swallowed whole, we shall find as their remains only scattered feathers. . . . These will disappear in turn, chewed and pulverized by myriads of insects and by the greedy world of inferior creatures who prey on all dead matter.

"If there were no microbes, the world would be a horrible charnel-house!"—*Translation made for* THE LITERARY DIGEST.

### SUBMARINE PHOTOGRAPHY.

THE interesting experiments in the photography of objects under water that have been going on in France for several years past were described at their outset in these columns. Improvement in methods and results has been rapid. An interesting account of the present status of the art is contributed to *Pearson's Magazine* by Robert H. Sherard, from whose article we make extracts below. The greatest recent progress has been made by M. Louis Boutan, assistant in the marine laboratories of the University of Paris. M. Boutan states that he began the work for the purpose of studying the habits of shell-fish. After numerous submarine excursions in diver's dress the thought occurred to him that he might obtain photographic records of what he had seen. He said to the author of the article from which we quote:



SUBMARINE SCENERY, PHOTOGRAPHED BY M. LOUIS BOUTAN.
Courtesy of *Pearson's Magazine*.

"I could not see any reason why it should not be as easy to photograph at the bottom of the sea as it is to photograph in the

open air. Water is, of course, a far denser medium than air, but as the eye can distinguish things at the bottom of the sea, there did not appear, so it seemed to me, to be any reason why a photographic plate should not be impressed in the same way. . . . To photograph below the water one had to go below the water, and to take one's camera with one. That was the principle on which I started when designing my apparatus. What was wanted was a water-tight case, in which an ordinary camera could be worked from the outside without the risk of the water getting in. I adopted the camera known as a 'detective camera.' This was placed in an outer case made of sheets of copper. The lid of this case, which was clamped down with strong screws, rested on a pad of thick india-rubber. When the camera was put into the case, the lens rested against a window of plate glass of the same size let into the copper side. By means of button handles outside the case the shutter could be opened and closed, and the plates renewed automatically.

"Another thing that had to be taken into consideration in the construction of this apparatus was that of the pressure at certain depths. For instance, at a depth of ten yards there is a strong atmospheric pressure, and in addition to this there is the pressure of a column of sea-water ten yards in height sufficient to force in the top and sides of the outer case, and so to disturb the symmetry of the apparatus.

"In order to obviate this, I fixed a gutta-percha ball, containing about three quarts of air, to a tube communicating with the interior of the case. The pressure of the water and of the air on this gutta-percha ball forced sufficient of its contents into the case to equalize the pressure within and without. The stand for my camera was made of a plate of cast-iron with three iron legs with sliding extensions.

"The next question to be studied was one of light. Beyond a certain depth the light is often insufficient to affect photographic plates, even when the exposure is a very long one. The result of my experiments has been to demonstrate that it is not possible to obtain satisfactory results by natural light beyond a depth of from sixteen to twenty feet, at which depth an exposure varying in duration from thirty to fifty minutes is necessary. By means, however, of artificial light, instantaneous photographs can be taken at any depth to which it is possible for the diver to descend. That, as you know, has its limitations. There is no record of a diver having been able to reach a greater depth than 230 feet. This was in the case of the wreck of the British ship, the *Columbian*, off the Ushant Islands, in 240 feet of water. A diver named Deschamps endeavored to reach the wreck. After he had descended 130 feet, he began to feel serious trouble. However, he continued to descend, but on reaching a depth of 200 feet, after suffering terribly, he lost consciousness and had to be hauled up. His life was for some time despaired of.

"At 120 or 130 feet, with a pressure varying from four to five atmospheres, a diver can work, and it is my belief that in the future divers will be able to descend to even greater depths by halting as they descend at various stages till their bodies have become accustomed to the pressure at each stage, and then descend to a stage below."

Says Mr. Sherard in commenting on these facts.

"The great result obtained so far by M. Boutan's experiments is the fact that is now established that, by means of artificial light, photographs can be taken at any depth in the water to which it is possible for the operator to descend. So far it has not been possible to reach a greater depth than 140 feet. It is also established that it is possible to take photographs at moderate depths by lowering the apparatus, without having to descend oneself, and by working the camera from the boat.

"Of the future of submarine photography M. Boutan was not inclined to speak. 'I dislike discussing possibilities,' he said; 'that is the future, and it sounds like bluff to describe the great things that one expects to achieve.'

"He let slip, however, that the money having been promised —and it has been the want of subsidies which has prevented him till now from testing his discovery to the full—he expects shortly to be in a position to attempt photographing at a depth of 300 feet and more, apparatus to be let down to that depth and worked from above, the light being provided by means of a powerful electric battery.

"So that it is not too much to expect that in days to come the deep seas will be forced to give up their secrets, and their mysteries shall be no more."

RAINBOW TROUT. NEARLY 500 SPECIMENS.
Courtesy of *Pearson's Magazine*.

The same number of *Pearson's* contains an account of Dr. Shufeldt's successful attempts to photograph living fish in the government aquariums at Washington. Some of his results, one of which is reproduced herewith, are of great artistic and scientific interest, altho these particular photographs are, of course, not strictly submarine photographs.

## CLIMATE AND INDUSTRIAL COMPETITION.

OUR English cousins continue to wonder how it is that we can outstrip them in the engineering world. The London correspondent of *The Sun* (New York) is of the opinion that climate has a good deal to do with it. He says (January 7):

"As a matter of fact, the difference between American energy and English energy is largely accounted for by a difference in conditions of which the people of both countries take no cognizance. No one will appreciate my meaning except those Americans who have come to England and worked as hard as they did in America—and have paid the penalty. They know that the 'price of progress' is collapse. They may not learn the lesson the first time. If they fall ill, they may say it is because they are not yet acclimated. But the truth comes home to them finally that it is impossible to work hard and continuously according to American standards in this country without breaking down.

"It may seem absurd to discuss climate in a series of articles on trade competition, but it is literally true that this factor is an important element in the situation. I will not say that indolence is not an increasing national vice in England, but it is a fact that the consuming energy of American business life, unless broken by generous vacations, would be fatal in this country. The simple truth is that the ozoneless atmosphere of London and England will not support the high-pressure existence which most Americans can maintain with impunity. Hence the English

business man's habits of short hours and week-ends in the country, meaning from Friday to Tuesday a large portion of the year, which so exasperate their American confrères who come here and expect to dispose of important affairs in quick order.

"These remarks apply especially to all intellectual exertion. Whether they are equally applicable to physical labor, I do not know, but if the habits of the people are any criterion, they are so in even greater degree. There is an example of it at the present moment, which will be astonishing to most American employers. It is now four days after Christmas, and it would be a conservative estimate to say that a large majority of the factories and mills of Great Britain of every description are idle and silent. What would an American manufacturer say if his operatives took French leave and enjoyed themselves a week on end not only at Christmas, but again at Easter, at Whitsuntide, and during the first week in August? It is a case where the majority rules. A fraction of the working classes are willing to return to their daily routine the day after a bank (legal) holiday. The majority insist on taking a week off, and it is not worth while for a manufacturer to start up his works with only a quarter of his staff on duty.

"Even if we take the charitable view that the enervating climate of England justifies the British workman in being very good to himself, the fact remains that by so doing he handicaps himself in his competition with foreign producers, and he can not complain if full advantage is taken of his disability. It is only justice to add that he does not add vicious self-indulgence to his idleness to any great extent. He keeps reasonably sober during his holidays, and his amusements are most of them innocent."

## A CANINE BIPED.

EVERY one has seen performing-dogs that can walk on their fore-legs; but a dog with whom this mode of locomotion is natural from birth is a rarer phenomenon. Such a dog exists in France, and is described in *La Nature* (Paris, December 22) by M. Pierre Hac'et-Souclet. The animal was forced to take up his curious manner of walking by the fact that he was born without hind-legs; but his agility and good health and the fact that no one taught him how to make up for his congenital infirmity, make him an interesting study for those who are investigating the subject of adaptation to environment. Says the writer:

WALKING. BALANCING ON A CHAIR. RESTING.

"Born with withered hind-legs, but gifted with excellent health apart from this infirmity, he has taken up naturally, without instruction from any one, the trick of walking on his fore-legs. He raises his body, balances himself on his fore-paws, and walks, runs rapidly, stops, eats, and almost lives in this position. He sometimes rests the rear part of his body on the ground (or rather, when he can, on a slight elevation), but only about every quarter of an hour.

"When one sees him running about for several minutes one feels really fatigued, because it is supposed that the poor creature is making great efforts; it is the effect produced by an acrobat who prolongs an exercise in which he is using up a great amount of energy; but when we look more closely, we soon understand that he is not tired. He is not even more out of breath, after running about for a quarter of an hour, than an ordinary dog would be after playing with some animation for the same length of time. The fore-legs of this little prodigy are completely adapted to their new function, which consists in serving as a support for the whole body, the proper muscles having acquired the strength necessary to sustain the trunk above the head.

"The phenomenon is eighteen months old; as I have already said, he is in marvelously good health and spirits. . . . Here, then, is an animal that in a short time has profoundly modified, so far as he is concerned, the mode of locomotion of his species, and who seems to be well satisfied with his innovation.

"We know of several cases that have a certain relationship with this, but they are somewhat less interesting. Thus, we know several dogs born with a single hind-leg who have adopted the habit of taking several steps, now and then, on their fore-legs alone; but this lasts for such a short time that it would not be noticed without close attention.

"The little phenomenon about which we write is, on the contrary, a virtuoso in his own line; in assurance he leaves far behind all the 'learned dogs' of circuses and the stage. Moreover, almost none of the circus dogs know how, as he does, to stand still on their fore-legs and balance themselves for a moment, by letting the body sway more or less above the point of suspension. Almost all balance themselves while walking, while our subject can perfectly well, on occasion, stand in equilibrium just as a man does, keeping his fore-legs still and moving his body so as to bring it continually above the point of support.

"I have said that our prodigy performs on the same principles as a professional gymnast, but he does so with much more facility than ordinary clowns. I know only one man who can be compared with him in the strength and activity displayed in balancing tricks. I do not know whether this 'artist' exhibits in Paris, but I have met him in England. His name is Jules Keller, and he can rightly be called 'the king of balancers on the hands.' If he can rival my subject, it is only because he has the same infirmity. Keller comes on the stage on his hands, runs, waltzes, leaps from a table to the floor, climbs up and down a ladder placed obliquely—all the while sustaining himself on his hands. The public does not know that his wide trousers enclose his own withered limbs and artificial ones in addition. All Keller's strength seems to be concentrated in the muscles of his arms.. . . There is then a great deal of similarity between this balancer and the little dog that is the subject of our article."—*Translation made for* THE LITERARY DIGEST.

## SOME UNANSWERED RIDDLES OF SCIENCE.

FOR every question that science answers she asks two that are apparently unanswerable. As the limits of the known in nature are pushed farther and farther away, the sphere of the unknown beyond it expands still more rapidly so that he who looks for the riddles of science has not far to seek. M. Gabriel Prévost states a few of them in *La Science Française* (Paris, December 21). He says:

"In treating of unexplained phenomena, we have no hesitation in omitting all mention of those whose authenticity is in need of proof, such as those of hypnotism or animal magnetism. . . . But there are others, perfectly well established, that are nevertheless treated with magnificent disdain. This is a pity, for if we knew their laws we should be in a position to reproduce them at will for the greater profit both of science and of mankind. Everything leads us to believe that the causes of such phenomena are related to what is called the 'infinitely little.' . . . . . .

"For instance, it was a long time before we were able to explain why two varieties of beer, made with the same chemical elements, with the same vegetable substances, and under the same conditions of environment, should differ sensibly in quality

according to the water used. When the water was analyzed, it was discovered that when it contained sulfate of lime, this substance had a special influence on the microbian fermentation. The cause having been found, the phenomenon could be reproduced at will.

"We could fill several volumes with questions of this kind that remain to be solved. . . . The learned societies ought to promulgate a list of them every year; their pride, perhaps, would suffer, but science would gain much. We shall try to indicate a few of them:

"Why, by importing Russian skins into France, by treating them by the same processes and using the same substances as in that country [Russia], can we not succeed in obtaining the qualities of solidity, permanence, and flexibility found in Russia leather? Is the difference between the two products due to the tanning, to the skins used, or to the temperature? When this 'infinitely little' has been discovered, we can make Russia leather as well at Limoges as in St. Petersburg.

"Why is Chinese lacquer superior to all others, when in preparing it the same materials are used in the same way as elsewhere?

"Why are the qualities of steel different, according to the water used for tempering it? Is the difference due to the temperature of the water, or to the vegetable or mineral substances that are held in suspension therein? . . . . . .

"Why should a virus, inoculated in an animal, become more active for an animal of the same species if previously inoculated in an animal of a different species?

"Why are most reptiles, even non-venomous ones, refractory to a very large number of toxic substances, vegetable and animal? . . , . . . ,

"Why, instead of following a constant progression in their effects, do alternating currents, which cause death by asphyxia at 25,000 oscillations a second, become inoffensive beyond 20,000 oscillations a second?

"Why is the horse, whose strength is greater than a man's, killed by an electric discharge that a man can bear? . . . . . .

"Why does oxygen, which increases the activity of intraorganic combinations, impede them, on the contrary, when administered to excess?

"Why can white-hot iron be handled with impunity, when red-hot burns? The so-called 'spheroidal state' does not explain it, for the evaporation of the skin is equally active at both temperatures. . . . . .

"Why do the effects of thein and caffein, which are composed of the same chemical elements, differ according to the temperament of individuals? . . . . . .

"Why does dynamite explode in artillery caissons when the noise made by them gives the sound of upper *la?* . . . . . .

"Here we stop, not because the questions have given out, but because we should never finish asking them. Conclusion: Let us verify all the facts and then direct our studies toward the 'infinitely little.'"—*Translation made for* THE LITERARY DIGEST.

---

**The Rare Metals.**—This epithet is applied to a class of metals little known to the uninitiated. All are precious, altho their use is limited by their high price, says the *Moniteur Industrial* (Paris). In the cases of some of them this price is due not so much to their rarity, properly speaking, as to the fact that the processes of isolating them and so obtaining them in the pure state are costly. In this case, the effect becomes the cause; it is often because no serious efforts have been made to utilize them industrially that the process of extracting them has not been improved. Witness aluminum, and more recently thorium and cerium; the two last were worth about 4,000 francs a kilogram [about $400 a pound] before their utilization in gas-lighting by incandescence. Among others may be cited the following:

"Vanadium, which oxidizes in air with great difficulty, melts at 2,000°, and becomes red-hot in hydrogen. . . . Neither hydrochloric acid nor nitric acid attacks it. The addition of vanadium considerably augments the ductility of copper, aluminum, and iron. These properties would be valuable to electrometallurgists if the price of the metal were not still very high—6,130 francs per kilogram [about $600 a pound]. Its use is therefore limited to coloring glass and to preparation of indelible inks by mixture with anilin.

"Uranium, worth 900 francs a kilogram [$90 a pound], is used in the glass and porcelain industries. It has been found that uranium carbid is superior to nickel or tungsten in the manufacture of high-grade steels.

"Titanium is peculiar in being universally diffused in nature, even the flesh, bones, and muscles of animals containing appreciable traces of it.

"Iridium, worth 8,000 francs a kilogram [about $800 a pound], is the hardest metal known and is used to tip gold pens. This hardness makes it very difficult to coin Siberian gold, and the Russian mint requires that gold for coinage shall be free from all traces of iridium.

"Palladium, which has the smallest coefficient of dilatation, is used for the mountings of astronomical instruments. The standard meter is made of palladium. The pure metal costs 5,000 francs a kilogram [$500 a pound].

"Selenium, which has the curious property of losing its resistance to the electric current under the influence of light, is used in the telelectroscope, and is worth 220 francs a kilogram [$22 a pound].

"Lithium, worth 12,000 francs a kilogram [$1,200 a pound], is used only in medicine, its salts being valuable in rheumatic affections.

"Molybdenum, worth 15 francs a kilogram [$1.50 a pound], is used in metallurgy. . . . Molybdenum-steel possesses the rare quality of preserving its hardness even when heated to redness.

"Tungsten, worth 8.5 francs a kilogram [80 cents a pound], is also largely used in metallurgy, and gives to steel qualities similar to those imparted by molybdenum."—*Translation made for* THE LITERARY DIGEST.

---

**How to Run a Furnace.**—The following directions addressed to those who take care of their own hot-air furnaces are given at the end of an article on the subject by T. N. Thompson in *Science and Industry* (January):

"Keep the furnace clean outside and inside. It is part of the house. Do not let the ashes accumulate in the ash-pit, or the grates will soon burn out.

"Fire lightly and often if you can, and you will not use so much coal. If you must fire thick, pile it up first on one side, then on the other. This will give you fire on top all the time; otherwise the fire will be alternately dead and alive on top and the heating results will be intermittent.

"Keep the fire-door shut. If you want to deaden the fire, do so by closing the bottom door only. If this will not shut tight enough, you had better get the furnaceman to make it fit close.

"Never open the check-draft at the back of the heater, otherwise this will allow furnace gases to flow through the joints of the furnace and poison the fresh air that comes up the registers; rather open the by-pass damper that is fitted to all modern furnaces to prevent ash dust from getting into the cellar when the grates are shaken. This should check the draft.

"Do not use a damper in the cold-air box, but regulate your heat at the registers. This is the best safeguard against furnace gases getting into the house.

"Keep the water-tank filled with water, to moisten the air, for in winter the hot air is too dry.

"Keep the ground around the mouth of the fresh-air box clean.

"Do not sweep dirt from the floors into the registers.

"Train your wife to run the furnace when you are sick.

"Finally, do not jump on the furnaceman because you can not run your own furnace."

---

## SCIENCE BREVITIES.

"SINCE electricity has been substituted for steam in London's 'tuppeny tube,' as the underground railway is familiarly called, it is averred that a trip over the road is a pronounced appetizer," says *Popular Science.* "Persons who for years have not had a speaking acquaintance with a respectable appetite insist that they have been entirely cured by taking a ride on the underground every few days. There is a possible reason in all this, for the electricity creates a certain amount of ozone which, being confined within the tunnel, gives the passengers bracing air to breathe."

FROM experimental observations made by a German scientist into the effect of various paints upon bacteria, it appears that the kind of paint which may be used on walls is really of considerable importance from a hygienic point of view, quite apart from the question of esthetic appearance and cost of material. Upon oil-paint coatings the bacteria were found to be destroyed much more rapidly than in the case of other paints. It is recommended, therefore, that oil-paint alone should be used in hospitals, schools, barracks, and other places where large numbers of persons sleep or are congregated together.

# THE RELIGIOUS WORLD.

## THE ROUND-TABLE CONFERENCE AND THE ENGLISH CHURCH CRISIS.

THE report of the Round-Table Conference, convened with the hope of arriving at some *modus vivendi* between the Evangelical and the Catholic or Ritualistic Party in the English Church, has once more brought the long-enduring church "crisis" into public prominence in England. The conference, composed of leading representatives of both religious parties, concerned itself chiefly with discussions of the Eucharist. While wide divergencies of view were revealed as to the mode of Christ's presence in the communion, Zwinglianism, or the merely symbolic, commemorative view, had apparently no advocates, and the London *Guardian* (moderate High Church) remarks that "both sides appear to have agreed that in the Eucharist we partake of the body of Jesus Christ, crucified and glorified." No decisive results were obtained, but the suggestion made in the conference by Lord Halifax, that the Catholic Party might be satisfied to take the "First Prayer-Book of Edward VI." as the maximum of ritual liberty, and in return disband the English Church Union, has been widely received in England as an important contribution toward a satisfactory settlement of the church problem. Of course, neither *The Rock* (Protestant) on the one extreme, nor *The Church Review* (Catholic) on the other, views this solution with enthusiasm. The latter says:

"The conference has done nothing but bring into clearer prominence the inherent incompatibility, nay, more, the essential opposition between the Catholic religion and Protestantism. Dr. Wace, the president of the conference, sums the matter up by stating that such members of the conference as Mr. Dimock and Dr. Moule 'offer an unqualified denial' to the statement of other members, such as Lord Halifax and Canon Newbolt, that there is an 'actual Presence' (the term is Lord Halifax's) of our Lord 'under the outward visible part, sign, or form of bread and wine.' Says Mr. Dimock: 'The Church of England took her stand on one side of a doctrinal gulf, on the other side of which stood the teaching of "the real Presence."' But we utterly and entirely deny that such a position is, considered in itself, consistent with, or can possibly be squared with, the assertion of the whole church, following the words of our blessed Lord, that that which lies on the altar after the consecration is in simple truth His sacred Body and Blood. This is the teaching, we have said, at once of our blessed Lord and of His Holy Catholic Church. It is, therefore, the teaching of the Church of England—for the Church of England is nothing if she be not an integral part of the Holy Catholic Church."

Upon this statement the London *Tablet* (Rom. Cath.) says:

"Quite so. But with what face, in view of the results of the Fulham Conference, can *The Church Review* venture to say what is the teaching of the Church of England? Nobody knows; and so devout Anglicans will continue to affirm and deny with equal zeal. But surely it is hardly honest for any individual to say of his own belief, 'This is the true teaching of the Church of England,' when he knows all the while that the Establishment has no teaching at all, but leaves her sons perfect liberty to believe as much and as little as they like."

*The Rock*, organ of the extreme Protestant Party in the Established Church, grits its teeth over the outlook as revealed in the conference, and especially as shown in the refusal of the Bishop of London to order the prosecution of three metropolitan clergymen who were lately publicly indicted for alleged illegal ritual practises. It says:

"That prosecution for the maintenance of church discipline in religious matters is, in any event, to be prevented, seems to us an indefensible contention. It cuts at the root of all law and order, and, if generally held, would render all milder measures ineffectual. . . . The Romanizers of to-day leave us in no doubt as to their determination to defy all authority and to carry on the de-Protestantizing of the church to the bitter end. No one can read their organs without being forced to the conviction that expulsion is inevitable. The only question is, who are to be driven out of the national church—the Protestant people, as they are being all over the country, or those servants of theirs who are betraying their trust into the hands of the nation's greatest civil and religious enemy, the Church of Rome."

*The Saturday Review*, on the contrary, sees in the pacific attitude of Bishop Creighton and of Archdeacon Sinclair, of London, ground for believing that calmer methods will prevail than those exemplified by extreme Protestants like Lord Portsmouth and Mr. Kensit. Referring to the recent letter of Dr. Sinclair, a conspicuous evangelical, advising Bishop Creighton to interpose his veto and stop the prosecutions, *The Saturday Review*, whose opinion in this matter represents that of most secular London journals, says:

"It thus marks in very practical manner a breach between the main body of evangelical churchmen and the malignants, who are willing to recognize brawling in church, vulgar abuse in the press, the political caucus, as legitimate weapons wherewith to fight a great school of fellow churchmen, whom they seem to hate with a virulence unknown in party politics. With such men it is impossible to treat, but let the great body of evangelicals openly dissociate themselves from those who bring only odium on the name, and the differences between High Churchmen and Low Churchmen will soon prove themselves to be nothing in the shape of division incompatible with mutual respect and, in most fields of church work, active cooperation."

## HUXLEY ON THE LIMITS OF KNOWLEDGE.

THE "Life and Letters of Huxley," who first used the word "Agnosticism" to express his own mental attitude and that of the great modern school of thinkers who agree with him, contains one striking statement of his position. To Charles Kingsley, the novelist and Broad-Church clergyman, who had won his heart by sympathy in the death of his son, he wrote as follows on May 22, 1863 (we quote from an extract in the New York *Evening Post*):

"I don't know whether Matter is anything distinct from Force. I don't know that atoms are anything but pure myths. *Cogito, ergo sum* is to my mind a ridiculous piece of bad logic, all I can say at any time being 'Cogito.' The Latin form I hold to be preferable to the English 'I think,' because the latter asserts the existence of an Ego—about which the bundle of phenomena at present addressing you knows nothing. In fact, if I am pushed, metaphysical speculation lands me exactly where your friend Raphael was when his bitch pupped. In other words, I believe in Hamilton, Mansell, and Herbert Spencer, so long as they are destructive, and I laugh at their beards as soon as they try to spin their own cobwebs.

"Is this basis of ignorance broad enough for you? If you, theologian, can find as firm footing as I, man of science, do on this foundation of minus nought—there will be nought to fear for our ever diverging.

"For you see I am quite as ready to admit your doctrine that souls secrete bodies as I am the opposite one that bodies secrete souls—simply because I deny the possibility of obtaining any evidence as to the truth and falsehood of either hypothesis. My fundamental axiom of speculative philosophy is that *materialism and spiritualism are opposite poles of the same absurdity*—the absurdity of imagining that we know anything about either spirit or matter.

"Cabanis and Berkeley (I speak of them simply as types of schools) are both asses, the only difference being that one is a black donkey and the other a white one.

"This universe is, I conceive, like to a great game being played out, and we poor mortals are allowed to take a hand. By great good fortune the wiser among us have made out some few of the rules of the game, as at present played. We call them 'Laws of Nature,' and honor them because we find that if we obey them we win something for our pains. The cards are our theories and hypotheses, the tricks our experimental verifications. But what sane man would endeavor to solve this prob-

lem: given the rules of a game and the winnings, to find whether the cards are made of pasteboard or gold-leaf? Yet the problem of the metaphysicians is to my mind no saner."

## ROMAN CATHOLICS AND HIGHER EDUCATION.

DURING recent years, a marked revival of interest in higher education has been noted in the Roman Catholic Church, of which the establishment of the Catholic University of America and the more recent founding of a higher college for women in Washington are among the most prominent tokens in this country. Most of the ancient universities of England and the Continent, all of which were founded by Roman Catholics—often by ecclesiastics—under bulls of the popes, have since that time come under Protestant or secular influence. Now the church appears to be slowly arousing itself to a sense of the necessity for new educational establishments. In this movement the writings of Dr. J. L. Spaulding, Bishop of Peoria, have had an important influence both here and abroad. His recent sermon on "Education and the Future of Religion," preached in Rome last spring, and since printed, is a further contribution to this subject. He thus brings out the Roman Catholic position as to science:

"The fundamental principle of the Catholic theologian and apologist is that there is harmony between revelation rightly understood, and the facts of the universe rightly known; and since this is so, the deepest thought and the most certain knowledge must furnish the most irrefragible proof of the truth of our faith. The Catholic who holds this principle with profound conviction will not shrink from any test or any adversary. If faith does not give new strength to the mind, the heart, the whole man, is it genuine faith at all? Shall we cease to desire and to strive to know because we believe? Is it not the property of vital belief to impel to thought and action? Are not faith and hope and love, if they be living, the fountainheads of the highest energy? Does not all history prove that right human life is possible only when men are self-active in a free and noble way, when they strive bravely for more real knowledge and greater virtue? Where we strive there is indeed danger of error and mistake; but where we rest in spiritual lethargy, decay and ruin are inevitable. A faculty unused dwindles until it ceases to be. They who dare must take risks: danger can be overcome only by encountering danger. Shall the church speak words of approval and cheer to all her children except those who labor with honest purpose and untiring zeal for deeper and truer knowledge? . . . . . .

"If mistrust of our ablest minds is permitted to exist, the inevitable result will be a lowering of the whole intellectual life of Catholics, and as a consequence a lowering of their moral and religious life. If we have no great masters, how shall we hope to have eager and loving disciples? If we have no men who write vital books—books of power, books which are literature and endure—how shall we expect to enter along an inner line into the higher life of the age, to quicken, purify, and exalt the hopes and thoughts of men? . . . Is it credible that if St. Thomas of Aquin were now alive he would content himself with the philosophy and science of Aristotle, who knows nothing either of creation or of providence, and whose knowledge of nature, compared with our own, is as that of a child? St. Ignatius of Loyola says that to occupy oneself with science, in a pure and religious spirit, is more pleasing to God than practises of penance, because it is more completely the work of the whole man. Is not theology, like the other sciences, bound to accept facts? To deny a fact is to stultify oneself. But how shall we know what is, if we are ignorant of the world-wide efforts of men of learning and intellectual power to get at the facts of the universe? The supreme fact is life, and only that is true, in the best sense of the word, which is favorable to life, to its growth, its joys, its strength, its freedom, its permanence. Whatever dwarfs, whatever arrests, whatever weakens life, is evil."

In France, where both Monsignor Ireland and Monsignor Spaulding are much admired, a movement for the higher education of women is making rapid progress. The Paris correspondent of the Liverpool *Catholic Times* writes:

"Enlightened priests, fosterers when not pioneers of every new and at the same time good movement, are favoring so-called 'Feminism.' But, be it understood, they accept the term only in its highest and Christian sense. They give warm support to that enterprising religious, Madame Marie du Sacre Cœur, whose advanced projects on education were suppressed about the time when the question of 'Americanism' was in the air, tho really she had nothing to do with the question, but who came out of the fray with the Pope's blessing nevertheless. Now the directress of an educational institution in Paris known as 'l'Institution Ste. Paule,' where every facility is afforded for the higher education of women, she enlists in her cause not only enlightened priests like the Abbé Foussagrive, but also such men as Brunetière and M. Olle-Laprune. She has just removed her establishment from Rue d'Assas to the Rue Servandoni, near the Luxembourg Gardens. This lady, too, is a pioneer. When she set herself to the task of raising the standard of feminine education in France, she had not benefited by the lofty views of Bishop Spaulding on the matter of education. A flood of light has just been thrown here on this subject by the publication in French of the bishop of Peoria's treatise on the higher education of women."

## REPORT OF THE PRESBYTERIAN REVISION COMMITTEE.

THE report of the committee on revision appointed by the General Assembly of the Presbyterian Church to ascertain the will of the local presbyteries throughout the United States, made December 8, is regarded as an important event in the religious world. The following statement was authorized by the committee:

"I. That the returns plainly indicate that the church desires some changes in its creedal statement.

"II. These returns indicate plainly that no change is desired which would in any way impair the integrity of the system of doctrine contained in the Confession of Faith.

"III. These returns also indicate that a large plurality desires that changes should be made by some new statement of present doctrines rather than by revision.

"IV. The returns also indicate a desire on the part of many presbyteries for some revision of the present confession.

"V. Therefore, it was unanimously agreed by the committee to recommend to the General Assembly that some revision or change be made in our confessional statements. Substantial, but not final agreement was reached as to the method of preparing changes embodying both revision and supplemental statement, but the determining of the whole matter was deferred to a subsequent meeting."

The Stated Clerk of the Assembly has published in pamphlet form an account of the action of the presbyteries, of which the following is a summary:

"For revision (Question 1), 44; for an explanatory statement (Question 2), 10; for revision and an explanatory statement (Questions 1 and 2), 1; for a supplemental statement (Question 3), 47; for revision and a supplemental statement (Questions 1 and 3), 14; for an explanatory statement and a supplemental statement (Questions 2 and 3), 1; for a substitute creed, 15; for an alternative creed, 1; for some change, 6; negative on all four questions, 4; indecisive vote, 1; for a dismissal of the whole subject (Question 4), 45. Presbyteries not reporting, 43."

Various opinions are expressed of the committee's statement and of the report concerning the presbyterial vote. *The Herald and Presbyter* (December 12) says of the former:

"Several things in the statement are worthy of special notice. First. Nothing is to be done which conflicts with the system of doctrine taught in the Confession. Second. Moderate revision will be proposed. The committee says in general terms that many presbyteries desire it. The number as given in the leaflet of the Stated Clerk is fifty-nine. Third. The statement that 'a large plurality desire that changes should be made by some new

statement of the present doctrines' does not mean that a large plurality desires a supplemental creed, tho many readers will so understand it. 'Some new statement' may include a substitute creed, a supplementary creed, an explanatory statement, a statement for popular use only, and a formula for receiving members. Indeed, all of these must be included in order to make 'a large plurality,' and even then the votes will amount to only about a third of the whole number of presbyteries. We do not see the wisdom of thus lumping votes which are mutually contradictory. We do not believe that any new statement can be prepared which will be satisfactory to the presbyteries which have favored one or the other of these different forms of new statement. We suppose that the majority of the committee is favorable to a new supplemental creed, which shall qualify the ordination vow, but we do not believe that the presbyteries have favored it or will agree to it."

The New York *Observer* (Presb., December 13) says of the Stated Clerk's report:

"The returns of the presbyterial vote, as presented to the committee on revision, indicate:

"1. That there is no wish to abandon the Westminster Confession, since only 15 out of 232 presbyteries desire a substitute creed.

"2. That a large number, 124 others, out of 232, desire some supplementary or explanatory statement of certain doctrines.

"3. That a large number desire no action or a dismissal of the whole subject, 93 out of 232 being included in this category.

"4. That the movement for revision has come chiefly from ministers and not from elders or members of the churches. It is hardly to be expected that the committee will be able to formulate a statement which, under these conditions, will obtain a two-thirds vote of the Presbyterian Church."

On the other hand, the Chicago *Interior* (Presb., December 20), which has taken a more radical view of the subject from the outset, says:

"A legend prevailed at one time of the authorship of the Apostles' Creed. Peter led off by saying, 'I believe in God the Father Almighty, maker of heaven and earth.' He was followed by John with an affirmation, and he by James, and by the other apostles in their turn, so that each apostle was the author of some part of the creed, and it proved to be a full and a harmonious statement of the faith of Christianity. The above report of the committee shows that it is of the same composite character, but that the modern apostles were not so harmonious in their views as the ancient. There is a very simple way to the harmony of more or less antagonistic propositions, with which the committee were familiar, and of which they were free to avail themselves; that employed by the Westminster divines to pull cross-purposes together. It is in the simple formula, 'Yet so as.' There should have been a 'Yet so as' between the first and second, and one between the second and third sections. That would have united them as glue unifies mahogany and pine. This is highly satisfactory progress. The committee follows the church hesitatingly, and yet it follows. The 'unanimously agreed' shows a capricornic docility which was more than could have been hoped for. There is but one word of caution now needed. The church must run by her compass. If she neglect it she will describe a circle. The dexter foot, being the more aggressive, pushes continually over to the left, and if intelligence do not insist upon a straight line of progress, we shall stop where we started."

The Philadelphia *Church Standard* (Prot. Episc., December 15) says:

"It seems to be now quite settled that the Presbyterian Church will make some change in its standards of doctrine. None of the parties who have urged the change express a desire 'to impair the integrity of the doctrinal system' contained in the Confession of Faith; but just what changes can be made which will not 'impair the integrity' of that system of doctrine, or why so general a desire for change should exist unless important changes in the system of doctrine were felt to be necessary, it is difficult to imagine. We sincerely hope that our Presbyterian friends may yet see their way to discriminate faith from doctrine, the faith of the true creeds of Christendom from the Confession of Faith [Prebs.] and the Thirty-nine Articles [Anglican], and all other like 'systems of doctrine' which have served a useful purpose but which may lawfully be changed when that service is ended. We have a sincere sympathy with the aversion of conservative Presbyterians to abandon the Confession or to risk the dangers of a doctrinal revision. But why not let the Confession stand with some explanatory preamble, recognizing its limitations as well as its historical uses, as a system of doctrine and not a standard of faith?"

---

## THE PAST CENTURY IN RELIGION AND MORALS.

WIDELY divergent views of religious development in the last century have been expressed in the many summaries of the century's progress lately printed. As usual, the optimist and the pessimist are each in evidence. A good example of the optimistic view is an article by the Rev. J. G. K. McClure in *Harper's Weekly*. Dr. McClure's view of religion is confined to Christendom, and he does not mention other religious forces in Europe and America than the religion of Christ, to which he attributes most of the secular progress made by the race. He says:

"*Politically*, Christianity has woven its ideas into the web of national life with an ever-wider woof. The test of national integrity, in rulers and in people alike, is conformity to Christian principles. The criticisms passed by John Stuart Mill on the state are criticisms suggested to him by the essential teachings of Christianity. The 'civic conscience' of Christendom has become a factor to be primarily reckoned with by all legislators: the inspirer of that conscience is Christianity. The nations thus influenced are becoming the world-rulers. They practically divide the earth between them, either in the form of colonies, suzerainties, or 'spheres of influence.' . . . . .

"A new understanding of the Scriptures has been secured. Their place is more fixed and their mission more practicable than ever. Criticism has been very incisive and has cut away many theories concerning the nature of inspiration that had nothing to do with the validity and usefulness of the Scriptures, but the preeminence of the Scriptures both remains and triumphs. It has been a century of hard fighting concerning the authenticity, content, and purpose of Scripture. The battle has raged about the New Testament and the Old Testament—each in turn. As the century closes, the Bible has ceased to be an end and has become a means; it is not regarded idolatrously, but it is regarded reverently; its ministry to lead men from sin to righteousness is understood, and its sufficiency and suitableness so to do are realized.

"High among the triumphs of Christianity is its achievement of the scientific spirit. Jowett wrote: 'Religion is another word for science in its highest and broadest definition, and it must be of such a nature that no man's mind can brush aside its demands: that every one can see that it is reasonable, that it is imperative, and that without it we can not reach the highest spiritual elevation of which the soul is capable.' The Japanese scholar who after studying in America returned as a professor to Japan and applied scientific methods to the history of ancestral religions produced dismay in the minds of the adherents of those religions. But Christianity has learned that the deeper the investigation and the more exact the historical study into Christianity, the better for Christianity's life and usefulness."

Among the best fruits of Christianity, the writer continues, is the spirit among Christians of dissatisfaction with present results, and their realization that Christianity must be made to evangelize our cities and make itself triumphant in palace and hovel alike.

From a far less optimistic standpoint Mr. W. T. Stead views the same subject (in *Success*), and concludes that in the realm of morals the past century has on the whole been one of retrogression. "Never before, in any century," he says, "has man achieved such brilliant victories over matter. To make steam his carrier, electricity his messenger, the sun his painter, have been achievements so conspicuous as to stamp the century with

a glory all its own." But in the moral realm, while there have been currents of progress, there have been tremendous forces, especially at the century's close, which make for selfishness and iniquity. There is only one criterion, he says, by which we must measure moral forces:

"Is the average man or woman more like a god now than he or she was at the beginning of the century? Has the race climbed higher toward the ideal which was presented in realized shape before the world in the Man of Nazareth? There are more people in the world now, on this threshold of 1901, than were living in 1801. Are they better people? Judged by the famous tests by which the sheep were to be divided from the goats at the day of judgment, has the percentage of sheep risen or fallen? There is more material wealth in the world, no doubt. Is there more love in the world? From time of old and till time shall be no more, the chief fount and source of love is to be found in the family. God is love, and so God is reincarnate amongst us in the filling of the cradle. What has the century done for family life? Has it made it more close, more affectionate, more sacred?

"Two things stand out on the dark side: the decay, in many cases the entire abandonment, of family prayers; and the increase in the facility and the practise of divorce. But on the brighter side there is the great and continually increasing attention paid to the welfare of the child. Universal compulsory education is practically the creation of this century. The state and society recognize in many ways the obligation to protect and care for the child in a fashion entirely unknown a hundred years ago. Bnt this is done largely outside the family, and the state, which is almost exclusively male, has thereby, to a certain extent, diminished the influence of woman in the education of her children. In the latter half of the century, however, this tendency has been, to some extent, counteracted by the movement in favor of the recognition of the right of women to full citizenship. The woman's rights movement, often ignorantly sneered at, contains more promise of contributing to the moral progress of the race than any other movement of our time.

"Another evidence of moral progress is the growth of socialism, which is the aspiration to realize in economics the Christian ideal. The century which has witnessed the triumph of democracy in politics will be followed by another which would enthrone plutocracy, if it were not for the leaven of Christian sentiment working out in more or less socialistic effort. The victory over slavery, however, which is rightly described as one of the triumphs of moral principle in the nineteenth century, is far from being complete. The exploitation by one man of another takes different forms, but the thing itself continues. The conscience of man is troubled, and will continue to be troubled more and more; nor ought it to know any rest until there is not a human being in the world whose lot we should be ashamed that Christ should share if He were again to visit earth in natural shape.

"It is often said—by none more eloquently than by Mr. Lecky in his 'History of Rationalism'—that the decay of dogmatic religion has been followed by a great outburst of humanitarian philanthropy. This, no doubt, is true. We are softer than our sires. Jails, lunatic asylums, workhouses, attest an increased reluctance of man to torture man. But whether this will be permanent or not remains to be seen."

In the recent outbreak of militarism and imperialism, however, Mr. Stead sees a sinister cloud overhanging the world, and this he attributes to the influence of Nietzscheism and the Darwinian doctrine of the survival of the fittest.

## RELIGIOUS NOTES.

ACCORDING to the latest official statistics, the Protestant Episcopal diocese of New York, which comprises Manhattan, the Bronx, and some outlying towns, now has 239 churches and chapels, 391 clergy, and 71,862 communicants. It thus constitutes in numerical strength over one tenth of the whole denomination, which, according to the statistics of the churches just given by Dr. E. M. Bliss in *The Independent*, has 716,431 communicants.

THE Catholic or High-Church Party in the English Establishment is so wholly divorced from Protestant sentiment as sometimes to seem "more Catholic than the Pope." The London *Church Review*, in speaking lately of the rendition of Luther's hymn "Nun danket alle Gott" in St. Paul's, refers to the reformer as "that solifidian heresiarch," and says that "it seems to us a lamentable thing that a service of this kind in a Catholic cathedral" should open with such a hymn.

## FOREIGN TOPICS.

### IS THE FRANCO-RUSSIAN ALLIANCE DISSOLVED?

STARTLING intimations have been made recently in the French nationalist press, the relentless enemy of the present republican government in France, and in one or two Russian papers which, violently anti-Dreyfusard from the beginning, have echoed the assaults on Waldeck-Rousseau, the premier, and General André, the present French Minister of War. These intimations are, in substance, that the Russian Government is displeased with the "war" of the French cabinet on the army, and fears that, in consequence of General André's reforms and punitive measures, the army will become so disorganized and demoralized that the value of the alliance, from a military standpoint, will be nil. These hostile sentiments are said to be known to the French Government, and hence the alliance, it is asserted, is practically a thing of the past. The St. Petersburg *Novoye Vremya* has ventured to make this last assertion, and a despatch from Paris has pointed out that in the messages between Delcassé, French Minister of Foreign Affairs, and Count Lamsdorf, recently appointed foreign minister of Russia, the words "allies" and "alliance" are not used to describe the relations between the two countries, but the vaguer terms "friendship" and "consolidation of common interests."

The French press attaches great importance to the following episode, whose correctness is not denied:

At a reception given by Prince Ouroussoff, the Russian ambassador at Paris, a grand duke, uncle of the Czar (whether Vladimir or Alexei is not stated), met General Brugère, a stanch republican and a friend of General André, and accosted him in these terms: "Well, is this thing going to last much longer? Are they going to continue to disorganize the French army?" Brugère, taken aback, said he, as present generalissimo of the army, did not deserve the reproach. "It is not you, then, I blame," replied the grand duke, "but General André, whose corroding work places France in grave danger." "In that case," asked Brugère, "why does not your imperial highness formulate your complaints to Delcassé, who is near by?" The grand duke replied: "Oh, no! They will at once accuse me of meddling with your internal affairs. However, if you wish to report my remarks to M. Delcassé, I have no objection."

A few days after this alleged occurrence, a long article appeared in the *Novoye Vremya* attacking General André and his policy as fatal to army unity, integrity, and discipline, and concluding with these words:

"Till lately the French army very justly commanded the respect of her European sister-armies. It was a body organized in accordance with modern principles of military science, admirably equipped, strong in discipline, spirit, and faith. The Dreyfus agitation best of all proved her high moral status, her contempt of partizan struggles. The 'great silent one' quietly did her work, remaining an impartial spectator of the conflict. But now, with the reforms of General André, she may change her function and activity. She may become 'political,' feeble, impotent as a defensive force against external enemies, and cruel, tyrannical to the people of the country itself."

In commenting upon this and a subsequent article in the same quasi "inspired" Russian paper, the French editors are apparently eager to magnify its importance. Jaurès, the Socialist leader, says in his paper: "If this signalizes the rupture of the alliance, all right; so much the better!" Ernest Judet, in *Le Petit Journal*, says that France is anxious to preserve the alliance, and that "it is time she knew how, in a friendly country, they interpret the blundering activity of our strange reformers who, some from ignorance and others from a perverted conscience, are destroying our military puissance." *Le Soleil* says: "The Czar has not claimed, by a single word, the right to inter-

fere in our domestic affairs; he has never made a move or a remark of an indiscreet character. But, since Russia and France are bound by contract, each of the parties has the right to watch how the other conducts himself and whether he is in a position to live up to his obligations." Rochefort writes in his *Intransigéant:*

"When Félix Faure returned from St. Petersburg, the treaty of alliance in his pocket, throughout France celebrations were held in honor of the 'fraternity of arms' duly sealed between the French and Russian soldiers. But André has delivered our arms to the enemy. It is thus natural that the fraternity should disappear."

Of course, the disruption of the dual alliance would be an event of far-reaching consequence in almost every branch of international politics and diplomacy. Official utterances on the subject may be expected.—*Translations made for* THE LITERARY DIGEST.

## THE FRENCH AMNESTY AND THE DREYFUS CASE.

THE French parliament has passed an amnesty law. Ostensibly, the object was to secure "national safety and public peace" by pardoning all offenders against the state up to the present year, especially those who may have committed unlawful acts without realizing the import of their doings. In reality, the object is recognized by everybody as to put the Dreyfus affair out of the world. Altho but few members voted against the amnesty, the majority abstained altogether from voting, the inference being that the French people, as a whole, are not even yet satisfied regarding the justice or injustice of the *affaire.* The *Journal des Débats* (Paris) says:

"It is easy to understand with what repugnance this general amnesty is received by all connected with the affair. They regard it as anything but a pardon. 'We pardon all guilty ones,' says the ministry. They have no right thus to speak of the many persons who have never been sentenced, nor judged, nor even accused. The pardon is tantamount to a condemnation of many people, and that is neither lawful nor just. It is not proper for the ministers to convert into guilty criminals a number of people for the sake of granting grace and mercy, especially as that ministry is not free from the passions which it pretends to pardon in others."

The *Gaulois* declares that the people will not rest satisfied with a "Dreyfusard" amnesty, which implies the guilt of the anti-Dreyfusards. The *République*, M. Meline's organ, fancies that the enemies of the Government have it in their power to revive the affair at any time, because many agitators have been omitted, while Anarchists and incendiaries are included in the pardon. The *Temps* consoles itself with the reflection that the passionate outbursts that have marked some of the discussion "are the last convulsions of the evil from which France has suffered too long." It continues: "The country longs for rest; it wants to work; it counts on a new era of practical reform, industrial enterprise, and social peace, and will put its trust in those who can understand its needs."

Journals outside France comment much more calmly than heretofore on the case, especially in England, where the passage of the bill is regarded as the end of "l'affaire Dreyfus." "The 'affaire' is over," says *The St. James's Gazette*, "and the world is heartily thankful." It continues: "France has definitively made her compromise between justice and intrigue. That such a compromise should be necessary in a civilized country is a fact most uncomfortably significant, and most profoundly to be regretted." "The policy of amnesty," observes *The Spectator*, "is essential to the welfare of France. It ought to triumph. To the Government it is a matter of life and death to get the Dreyfus question out of the way." *The Saturday Review* declares that the Government deserves sympathy, and it continues: "It is very easy to object on general grounds of morality to the proposal to pass a sponge over the Dreyfus conspiracies and forgeries, but the Waldeck-Rousseau ministry have had to allow the guilty to escape and deny the innocent redress, under the old maxim that the safety of the republic is the supreme law."

As already noted, the bill has been strenuously resisted during the course of its passage by a number of those for whose benefit it is ostensibly designed. Zola wrote a letter, which appeared in the *Aurore*, characterizing the bill as infamous and a 'supreme degradation of justice," and warning President Loubet not to permit his term to be "tainted with the same stain that attached to the presidency of M. Félix Faure." Major Cuignet, who played a prominent part in the Rennes court-martial, which condemned Captain Dreyfus, wrote a letter to the premier accusing M. Delcassé, Minister of Foreign Affairs, of having "produced in the so-called Panizzardi telegram shown to the court of cassation a forged document." For refusing to reply to questions put to him by the minister with regard to these allegations of forgery, Major Cuignet has been sentenced to sixty days' detention in a fortress. Moreover, a letter was written by Captain Dreyfus himself to the premier, in which the captain refers to a recent newspaper charge that he is the author of the famous letter written in 1894, "annotated by the German Emperor and stolen from the German embassy," indignantly denying this authorship and asking for an inquiry.—*Translations made for* THE LITERARY DIGEST.

## CHINA AND THE POWERS.

AS predicted, the Government of China is in no hurry to make peace. China still hopes, and, remarks the *Vossische Zeitung* (Berlin), "not without reason," that lack of unity among the powers will yet enable her to obtain some advantages. Meanwhile, the factions in China endeavor to use the present troubles for their own purposes. Kang Tu Wei, the leader of the so-called reform party, has addressed the ambassadors in Peking to the following effect:

China's misfortune is due to the fact that the Dowager-Empress and such of her advisers as Tuan, Tung Lu, Ching, and Kan Ti are permitted to rule the country. Neither they nor their helpers must be permitted to negotiate for peace. The thing most needful is to arrest these reactionaries, to free the Emperor from their influence, and to enable him to choose his advisers for himself. The Southern viceroys are not to be trusted, as they are in league with Prince Tuan and furnish the court with money, arms, and ammunition. No peace can be lasting unless Prince Tuan and his helpers are arrested; if they go free, they will declare that the allies are, after all, powerless. The reformers, on the other hand, are the friends of the Western nations and are anxious to introduce Western civilization.

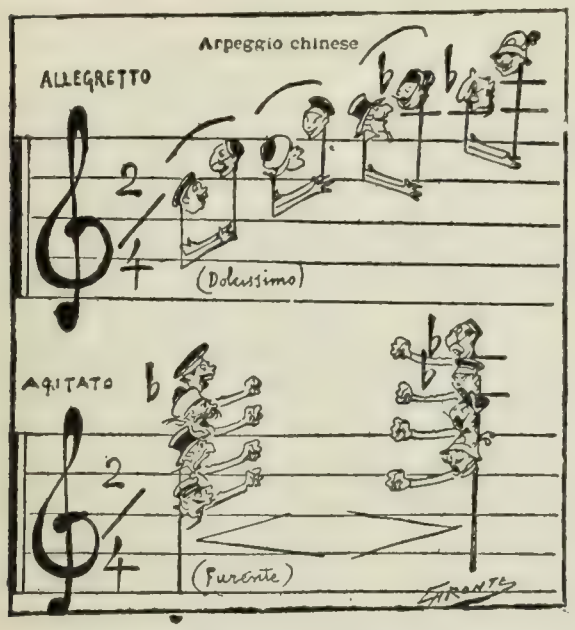
The *Deutsche Tages Zeitung* (Berlin) does not believe in the friendship of the reformers. It says:

"The Chinese 'reformers' are as little to be trusted as the most conservative mandarins. The difference is merely that the latter believe they can get rid of the foreigners by force of arms, while the 'reformers' think they can do it in an easier way. They hope, no doubt, to accomplish much with the help of England, by whom they have always been assisted, while the conservatives trust mainly to Russia."

The Southern viceroys have certainly endeavored to prevail upon the court to return to Peking. That they could do more than petition the throne is doubtful. *The Celestial Empire* (Shanghai) suggests that they should bring the Emperor back by force; but they have not yet shown any disposition to proceed to such a length. The firmness of the allies, as exhibited in executing undoubted leaders of the anti-foreign movement, has prevented the mandarins from "saving their faces," and the

*Shen Pao* (Shanghai) expresses itself (as quoted in *The Japan Gazette*) to the following effect:

The fate of the Paoting-fu officials is not likely to encourage Prince Tuan and his associates to trust themselves with the allies. If they are ever apprehended, little mercy will probably be shown to them. The fate of the Paoting-fu officials calls to mind the treatment accorded to Viceroy Yeh, of Canton, in the time of Hienfeng. Having fallen into the hands of the English, he was taken to India, where he was exhibited in a glass cage, being carried about the streets like a wild beast. It is said that when he was taken aboard, a faithful servant urged him to commit suicide, but the viceroy loved life more than honor, and his people still lament the weakness which made him an object of ridicule in Western eyes. The Paoting-fu officials, having been executed by the foreigners, are still more disgraced. This might have been avoided had they taken their own lives, and it is to be hoped that others, for whom the allies are still clamoring, will take the warning and prefer an honorable death.



ARPEGGIO CHINESE.

One after another they are all right, indeed good. Altogether they form a discord.
—*Fischietto, Turin.*

The London *Spectator* complains that the British public, engrossed entirely with the South African war, take little notice of the Chinese affair. Yet much is at stake there. There is even danger of military disaster if the trouble lasts long. This seems hardly in accord with the views of the Germans, who, with their more immediate allies, proceed with heavy hand against armed forces, Boxer or otherwise, wherever they gather. The diversity of interests of the various powers is described by Auguste Moireau in the *Revue Bleue* (Paris) substantially as follows:

Russia's aim is chiefly to extend her territory, to make herself mistress of Manchuria and Korea, and to exercise a permanent control over Northern China. Russia needs a well-ordered China, but a China which is weak and depends upon Russia for support. Japan, therefore, must be prevented from exercising great influence at the Chinese court, and Russia naturally does not wish that the powers should establish a new régime in China, as new men might be strong men, able to render China completely independent. Hence Russia must stay in the concert to prevent others from obtaining too much influence.

Great Britain has no great territorial interests in China, but her commercial interests are greater than those of all other powers together. Not only the mother country but India is concerned about the trade with China. England therefore is anxious to preserve the integrity of China, and to prevent other powers from obtaining preponderating influence, as this might interfere with the freedom of trade. England needs above all the "open door." She knows well enough that she can not maintain her policy completely in the North; but she is determined to uphold it in the center and South, and altho Great Britain has no wish to hasten the partitioning of China, she can not ignore her stake in Central China.

France has already a large share of what formerly was part of China in the South, and she exercises considerable influence in Kwangtung, Kwang-si, Yunnan, and Szechuen. To preserve this interest, France desires the integrity of China, but she also wishes the Chinese court to be influenced by Russia, confident that Russia will not permit intrigues which might be opposed to French interests. Moreover, France has capitalistic interests in the North which are most likely to thrive under Russian protection. Besides, France has the not unimportant task to guard the Catholic missions. For a long time she was the sole protectress of Christianity in the far East, and altho the other powers have now undertaken to look after their own missionaries, the influence and prestige which France retains as guardian of Catholic interests is still very considerable.

Germany's interests in China are not ancient, but she has established a large commerce and shipping, and she has taken hold of the first occasion to obtain a foothold, a place where she is mistress as much as England, Russia, and France in the ports they have occupied. No doubt the ambition of William II. is to possess all Shantung, and perhaps Ngan Hwei and Kiang-su, an empire of forty to fifty millions of people who would be customers of Germany. Hence Germany can not wish to see a strong government established in China. But neither does she desire the formal partitioning of China. Her interests can easily be guarded by exercising a little pressure at court, and by working the viceroys of the provinces in which Germany wishes to establish herself. The big German battalions are not without influence.

American interests are purely commercial. American missionaries have been persecuted and even killed, but the task of the Washington authorities was comparatively light, as it could be carried out in unison and with the help of the other powers. What the Americans desire most is that business should be resumed, under the principle of the open door; and for the sake of business they are quite willing to treat the semi-barbarous mandarins as if they could be trusted, and to affect to believe that the punishment of the guilty may be safely left to the Chinese court.

Japan's position, however great the interests which she has at stake, is not easy to define. Altho the Japanese beat the arrogant Chinaman in 1894, they are now evidently anxious to protect him, especially since Russia established herself at Port Arthur, England at Wei-hai-Wei, and Germany at Kiao Chou. Japan could probably have saved the ambassadors in Peking single-handed, but Russia would not permit her to do so, and Japan exercised wise self-restraint and took her place among the powers. But whether or not Japan would like to see China strong, is not easy to tell. It may be supposed that Japan would

LI HUNG CHANG: "Come on, all of you; I have sugar for every one."
—*Amsterdammer.*

assist the Peking authorities in reforming China as Japan herself has been reformed; but it is just as possible that Japan is influenced chiefly by the attitude of Russia, and that the fate of Korea will shape her future action.—*Translations made for* THE LITERARY DIGEST.

## THE NEW COMMONWEALTH OF AUSTRALIA.

THE first international political event of the new century was the formal institution, on New Year's Day, of the new commonwealth of Australia, by the inauguration of the Earl of Hopetown as first governor-general. Impressive ceremonies were held in Sydney, the Duke of York figuring as the personal representative of the Queen.

This federation is the culmination of a movement originating more than fifty years ago. Definite shape was first given to the idea in 1886, when a federal council met in Hobart, Tasmania. In 1890 a constitution was drafted, but it failed to secure the support of all the colonies and the entire scheme lapsed till 1898. Then a convention met in Melbourne and prepared the present constitution, which has been adopted by all the colonies and approved by England.

THE BIGGEST JUMP OF THE CENTURY.
—*Montreal Herald.*

The federation, which takes in all the Australian colonies, namely, New South Wales, Victoria, Queensland, South Australia, West Australia, and North Australia, forms a new commonwealth territorially nearly as large as the United States, omitting Alaska and our new dependencies. It has a white population of about 4,000,000. Under the constitution, the executive power is vested, as in Canada, in a governor-general, appointed by the crown, assisted by a cabinet to be known as the Federal Executive Council. The parliament consists of two houses: a senate composed of six senators from each state, chosen for six years by direct popular vote; and a house of representatives, the members of which are elected for three years, the apportionment being according to population, each district having a minimum representation of five. A High Court of Justice hears appeals from the federal and the state supreme courts. Appeal may be had from the decisions of the High Court to the Privy Council of Great Britain except in "matters affecting the Australian constitution." There is to be a federal capital situated in a federal district which shall have not less than one hundred square miles of area, and this capital city must not be within one hundred miles of Sydney. In the foreign relations of the new commonwealth, as in those of Canada, the assent of the imperial Government is a *sine qua non* of all negotiations.

Australia is the youngest of all the nations of the world. It is less than eighty years old. Hugh H. Lusk, in an article entitled "The New Power in the South Pacific" (in *The North American Review*) sketches the history of its short national life as follows:

"Seventy years ago, it existed only as a handful of adventurers, set down beside a penal settlement, where something like twenty thousand banished criminals were expiating their offenses against society. Fifty years ago, it was a pastoral community, whose flocks were scattered widely over the fringe of an unexplored country, supposed by most people to be a vast desert, and looked upon, even by its own little band of pioneers, as only fit for growing sheep and cattle, free to roam over its wide plains. To-day, it is a people, small in numbers, even now, when compared with the size of its territory, but energetic, enterprising, ambitious, and already wealthy beyond the experience of other countries or the dreams of most other nations. They have occupied the belt of land that encircles their continental island over a coast line of eight thousand miles; they have penetrated and explored the great interior plains of the country, till they have everywhere ascertained its general character; they have established agriculture suited to its varied climates; they have discovered and developed mineral treasures hardly surpassed in richness elsewhere in the world; they have opened harbors large enough to contain the navies of the world; they have built cities that rival most of those to be found in the oldest countries. It is no exaggeration to say that the achievements of the people of Australia in the last seventy years are unsurpassed by those of almost any other nation."

At the time of their consolidation, Mr. Lusk further declares, the people of Australia "find themselves, man for man, the wealthiest of any nation in the world." Last year the total value of the products of all the colonies amounted to $550,000,000, or $137 per caput, "a sum probably twice as great as that representing the average earnings in any European nation," and at least half as great again, according to Mr. Lusk, as in the United States. From investments in Australia, the mother country draws an annual interest of $72,000,000. In addition, England finds in Australia "her best customer for the goods she produces, and, with the single exception of India, among all her possessions, quite her largest supplies with the raw material which she manufactures."

The Australian press has been practically a unit in demanding federation and in approving the constitution as adopted. The Sydney *Morning Herald* declares that "the island continent shouts for joy," and calls for some monument to commemorate federation. *The Weekly News* (Auckland, New Zealand) declares that New Zealand would like to join the union: "We would far rather be one among its brethren than lord it over Fiji." The Canadian papers congratulate the new commonwealth and, in the far East, *The Celestial Empire* (Shanghai) says:

"Never have British colonies been so close to the mother's heart as they are at this moment. They have fought for her, and bled for her. They have given their best and noblest to die for her, and the indissoluble bond of blood relationship has been rendered trebly binding by the spilling of many of those 'ruddy drops which warm' the heart of England and Australia alike."

This paper also points out that Australia "must, of necessity, have a controlling power upon the future of the Pacific."

Turning to the journals of the mother country, we find only cordial approval of the federation and well wishes for its future. "Never was the bond that unites the Australian people to their motherland stronger than now," says *The Times* (London); "as they pass the threshold of a new and larger political life, the British empire enters with them on a new and on a grander stage of imperial development."

The continental European journals generally content themselves with recording the fact of federation, without comment. The *Kreuz-Zeitung* (Berlin), however, devotes a "leader" to the new commonwealth, in the course of which it says:

"There is some natural misapprehension lest what Germans call 'Americanismus,' that is, a contempt for historically established international and treaty law, as well as the encroachment of capitalism upon politics, may be displaced by 'Australianismus,' which is merely a more intense form of the same thing."

The questions that will first press for settlement when the new parliament meets are the tariff and the location of the federal capital.—*Translations made for* THE LITERARY DIGEST.

# You get 4 magazines for the price of one.

By special arrangements we are enabled to offer the readers of The Digest two of the most extraordinary clubbing offers that the publishing world has ever known, but, of course, only a limited number can be accepted at these prices. Send your orders as soon as possible. Remember that the periodicals and the premium will be sent to one address, or to different addresses.

## Another Great Inducement

**Regular Price $9.50** || **We will send The Great Round World, Success, Review of Reviews (new), Current Literature (new), all four one year, and the Atlas for** || **Our Price $4.00**

**The Great Round World** has been so extensively advertised as to make a description in detail almost needless. One of its strongest features is that *it explains things.* It does not take for granted that the reader knows all about a subject, but makes perplexing matters so clear that even the youth may understand. Dry subjects are robbed of their terrors; the world's news is made as attractive as romance, but without sacrificing the truth. It avoids giving personal opinions, but presents both sides, leaving readers free to form their own conclusions. **Regular price, $2.00 a year.**

To THE GREAT ROUND WORLD COMPANY, 150 Fifth Avenue, New York. Pittsburgh, Dec. 10, 1900.

DEAR SIRS: It is with genuine pleasure that I renew my subscription to your paper, for which I have quite an affection. I use the word advisedly, for there are books which seem like human beings, and your magazine has a way of sitting down with you and talking things over in a cosy, comfortable way that is quite delicious, and as far as I know, entirely unique. Instead of tucking it under my arm, I always feel as though my arm has been tucked under its wing! In other words, THE GREAT ROUND WORLD has a delicate way of making its readers feel they are not utterly and hopelessly stupid. I enclose cheque for $3 for renewal and your "Post" Pen. If more women read your magazine there would be fewer "Current Topics" classes in our clubs. Cordially yours, A. M.

New York, March 7, 1900.

In renewing my subscription, I want to say that there is no publication which gives me so much accurate and impartial information on matters of current history, and that is told in such interesting and condensed form as is given in THE GREAT ROUND WORLD. Less than an hour's reading each week enables me to keep well informed on the important topics of the world.

*It is well worth many times the subscription price as a "time-saver," to say nothing of its greater value as a purveyor of clean news to the family.*

CHAS. G. BLISS.

**You will find a full description of the strong points in the publications offered above, fully given in our full-page announcement in The Digest of Dec. 29th, page 813.**

**RULES** The periodicals will be sent to one address or different addresses. The subscriptions may be either NEW OR RENEWALS, except to Review of Reviews and Current Literature, which must be NEW NAMES in each and every case. No mixing of the offers allowed. No periodicals can be substituted except as follows: McClure's Magazine, Leslie's Monthly, Current Literature (new), and Review of Reviews (new), may be substituted one for the other in these offers. Either Pearson's or Cosmopolitan may be substituted for any magazine (not the Atlas) in the above offers, except for The Great Round World and Success.

**Be sure to use the coupon when ordering, or make a copy of it and mention The Literary Digest.**

"MUSIC IN THE HOME"

Is the title of a handsome illustrated brochure published by The Aeolian Co., 18 West 23d street, of this city. It tells of the Pianola, the much-commented-upon piano player—how it is operated, and the reasons for its great popularity.

The booklet also contains a list of some of the music which every one, with the aid of this remarkable invention, can play upon his or her piano.

The pamphlet is sent to any address by the Aeolian Co. on receipt of two cents for postage.

PIANO Do You Want a Genuine Bargain in a Piano?

We have hundreds of Upright Pianos returned from renting by persons moving which must be disposed of at once as we cannot make room for them in our salesrooms. These pianos include Steinways, Knabes, Fischers, Sterlings and other well known makes. Many of them cannot be distinguished from new, yet all are offered at an enormous discount from prices when new. Uprights as low as $100. Very easy terms of payment to reliable persons. It would probably cost about $5 for freight to have one of these pianos shipped to you. New large size mahogany pianos, with mandolin attachment, $175, sent anywhere on easy payments. Write at once for complete list and full particulars. You can make a great saving by securing your piano from us. Every piano warranted exactly as represented. LYON & HEALY, 46 Adams St., Chicago.

## CURRENT POETRY.

### To a Cynic.

By MAY BROWN LOOMIS.

Tell me why music stirs my soul with bliss,
  Stay the deep waters of the restless sea,
Fathom the mystery in a baby's eyes,
  Then bid me cast out faith and follow thee.

Shall I shrink cowed beneath thy mocking glance
  Who canst not tell how grows a blade of grass?
Since thou art powerless their place to fill,
  Leave me my dreams, and onward let me pass.

Ah faith, hope, love, and even chastened grief!
  They ne'er shall vanish at thy stern command.
Thou wouldst have taken from me all Life's best,
  In leaving only what I understand.

—*Harper's Magazine* (December).

### Epigrams.

DISPARITY.

My eyes have seen you, yet they know you not,
  Our toils how similar, how wide apart!
You labor in a healthy garden plot,
  I plow bare furrows in the fields of Art!

HAPPINESS.

He loved, when weary threw his love away,
Nor ever found it more, but every day
Happier he grew, light-hearted, sound, and whole,
For with his love he cast aside his soul.

LOVE.

You gave me what you had; the gift was small
  And worthless, yet tho one more worthy came,
I, when he gave me his tremendous all,
  Kept yours, and cast his treasure to the flame.

—*London Academy.*

### A Wilderness Lullaby.

By HELEN W. LUDLOW.

[The Indian words are sung to a soothing melody by mothers of the Winnebago tribe living on the shore of the Missouri in northern Nebraska. Their literal translation is, "To sleep go, little Brother; good little one, go to sleep, go to sleep."]

Purple and gold in the sunset glow,
The undulant prairie rolls
  Its waves to the west,
  Where cloudlets rest
Like the Islands of Happy Souls.

Dusky and still as the pointed sails
Becalmed at the river's bend,
  Stand Indian homes
  On grassy domes,
And the camp fires' wreaths ascend.

Cradling a wilderness babe to rest,
A little gay hammock swings,
  Like New Moon's boat
  In air afloat,
While the mother her lullaby sings

"*Hi-sunk nink ha-mo-o nigajé,*
*Ho chin-chin pin nink,*
  *Ha-mo-o, ha-mo-o.*

"Oh, hush thee now, little Brother.
Thy bright eyes droop
  So low, so low.

"The red sun's smile on the prairie
That fell like a rose
  Is fading slow.

"Then close thine eyes, little Brother;
The wise Owlet cries,
  'To dreamland go!'"

Melting from vision like wind-swept sails
Or gold of the sunset sky,
  The camps disappear,
  Yet oft I hear
In a dream-song that low lullaby—
That wilderness lullaby:

"*Hi-sunk nink ha-mo-o nigaje,*
*Ho chin-chin pin nink,*
  *Ha-mo-o, ha-mo-o.*"

—*Harper's Magazine.*

SAVE ONE-HALF YOUR FUEL
We Tell You How.

way between Johannesburg and Pretoria, but were driven back and are being pursued.

General Kitchener also reports that three agents of a Boer peace committee were flogged and one shot in De Wet's laager, by order of the Boer commandant.

OTHER FOREIGN NEWS.

January 8.—President Deschanel is reelected by the French chamber of deputies, after a close contest with Henri Brisson.

January 10.—The French Senate reelects M. Fallieres president without opposition.

January 11.—In Copenhagen, it is reported that negotiations for the sale of the Danish West Indies to the United States are nearing completion.

January 13.—Lord Lionel Cecil, half brother of Marquis of Salisbury, dies at London.

### Domestic.

CONGRESS.

January 7.—*Senate:* In considering the army reorganization bill, the amendment providing for a veterinary corps is defeated.

January 8.—*House:* The Burleigh reapportionment bill is passed, providing for a House of 386 instead, as at present, of 357 members.

January 9.—*Senate:* The action of the House in abolishing the army canteen is concurred in by a vote of 34 to 15.

January 10.—*Senate:* Amendments authorizing the retirement of General Shafter as a major-general and Fitzhugh Lee and James H. Wilson as brigadier-generals, are adopted.

January 11.—*Senate:* The Burleigh reapportionment bill is passed just as it came from the House and is sent to the President for signature.

Senator Hoar's amendment to the army reorganization bill, proposing an attempt to conciliate the Filipinos, is defeated.

*House:* One hundred and seventy private pension bills are passed.

January 12—*Senate:* Business is suspended while eulogies of the late Senator Cushman K. Davis are delivered by Senators Lodge, Hoar, Pettigrew, and others.

DOMESTIC NEWS.

January 9.—The Connecticut General Assembly convenes.

January 10.—Senator W. E. Chandler is defeated in the Republican legislative caucus at Concord, N. H., Judge H. E. Burnham being nominated United States Senator on the first ballot.

St. Louis reports 10,000 cases of grip.

Rear-Admiral J. S. Phelps (retired) dies in New York of pneumonia.

January 12.—The State Department receives official notice that the amendments to the Hay-Pauncefote treaty are under consideration at the Foreign Office in London.

AMERICAN DEPENDENCIES.

January 7.—*Philippines:* General MacArthur orders the deportation to Guam of a number of Filipino generals and subordinate officers, who have assisted the insurgents.

The first municipal election is held successfully at Bagnio, Province of Benguet, Luzon.

January 8.—*Cuba:* The mayor of Santiago de Cuba is removed from office on charge of irregularity in the conduct of municipal affairs.

January 10.—*Cuba:* The Cuban Constitutional Convention decides to give universal suffrage to the future republic.

January 11.—*Philippines:* In a hearing before the Philippine commission at Manila representative Filipinos oppose a proposed law permitting religious teaching in the public schools after school hours, while a Catholic committee urges the adoption of the law.

**Pears'**

Pears' soap is dried a whole year. That's why it lasts so. It wears to the thinness of a wafer.

All sorts of people use it, all sorts of stores sell it, especially druggists.

THE plague of lamps is the breaking of chimneys; but that can be avoided. Get Macbeth's "pearl top" or "pearl glass."

The funnel-shaped tops are beaded or "pearled"—a trade-mark. Cylinder tops are etched in the glass—"MACBETH PEARL GLASS"—another trade-mark.

Our "Index" describes *all* lamps and their *proper* chimneys. With it you can always order the right size and shape of chimney for any lamp. We mail it FREE to any one who writes for it.

Address MACBETH, Pittsburgh, Pa.

# The Army of Health

## THE ARMY IN THE PHILIPPINES INSIGNIFICANT COMPARED WITH THIS ONE.

If all the people in the United States, Canada and Great Britain, who make daily use of Stuart's Dyspepsia Tablets, could be assembled together it would make an army that would outnumber our army of one hundred thousand by at least five to one.

Men and women, who are broken down in health, are only a part of the thousands who use this popular preparation; the greater number are people who are in fair health but who know that the way to keep well is to keep the digestion perfect and use Stuart's Tablets as regularly as meal time come to insure good digestion and proper assimilation of food.

Prevention is always better than cure and disease can find no foothold if the digestion is kept in good working order by the daily use of Stuart's Dyspepsia Tablets.

Mr. Thomas Seale, Mayfield, Calif., says: "Have used and recommended Stuart's Tablets because there is nothing like them to keep the stomach right."

Miss Lelia Dively, 4627 Plummer St., Pittsburg, Pa., writes: "I wish everyone to know how grateful I am for Stuart's Dyspepsia Tablets. I suffered for a long time and did not know what ailed me. I lost flesh right along until one day I noticed an advertisement of these tablets and immediately bought a 50 cent box at the drug store. I am only on the second box and am gaining in flesh and color. I have at last found something that has reached my ailment."

From Mrs. Del. Eldred, Sun Prairie, Wis.: "I was taken dizzy very suddenly during the hot weather of the past summer. After ten days of constant dizziness I went to our local physician, who said my liver was torpid and I had overheated my blood; he doctored me for two weeks without much improvement; I finally thought of Stuart's Dyspepsia Tablets (which I had used long before for various bad feelings) and the first three tablets helped me.

"They are easily the best all around family medicine I ever used."

The army of people who take Stuart's Tablets are mostly people in fairly good health, and who keep well by taking them regularly after meals. They contain no opiates, cocaine or any cathartic or injurious drugs, simply the natural peptones and digestives which every weak stomach lacks.

Stuart's Dyspepsia Tablets are sold by druggists everywhere in United States, Canada and Great Britain.

# Rheumatism

A lawyer of Washington, D. C., National Safe Deposit Building, writes:

"I have been taking Tartarlithine for an attack of Inflammatory Rheumatism and it has benefited me very noticeably, relieving all pain and stiffness of the joints."

# HAVASMOKE

The above is an exact representation of a package of twenty-five "Havasmoke" Porto Rican Cigars. They are packed in the native style in tissue paper and tin-foiled packages, in order to preserve the delicacy of their flavor and aroma, and are imported by us direct from the factory in San Juan. Every package bears the Custom House Duty Stamp, and as an after-dinner smoke they are conceded to be equal in every respect to the higher cost Havana cigars. Their quality, fragrance and bouquet are appreciated by every lover of fine tobacco.

If your dealer cannot supply you as yet, we will forward you a roll, charges prepaid, upon receipt of two dollars. If you are not satisfied with them you can return them and money will be refunded. Address

NELSON B. CLARK & CO., Importers,
29 Central Street, - - - Boston, Mass.

## Artistic Dens and Cozy Corners

Dens, Cozy Corners, Oriental Rooms, Libraries, Halls, Lodge Rooms, and in fact any wall or corner that may properly be decorated with relief models can be fitted up most artistically and inexpensively from our collection of Papier Mache Art Models, a few of which are shown above. Superiority of Papier Mache over metal or plaster reproductions are: takes more artistic finish; does not chip, peel, or break; and greater than all, it weighs but 1-10th to 1-20th as much as plaster or metal.

**Armor** 806, is 32x30 inches, finish antique or bright iron, by express prepaid .... **$5.00**

**Oriental Heads** 852, 853, 854, 856, life size, in colors, wt. 6 oz., express paid, each **$2.00**

Send for "Artistic Decorations," a booklet showing our entire collection. If your dealer will not supply you, remit direct to us. Reference, First National Bank, Milwaukee.

| 3 Kt—Q B 3 | Kt—K B 3 | 16 Kt—K 5 | Q—Q 4 |
| 4 B—Kt 5 | B—K 2 | 17 P—K B 3 | Q—R 4 ch |
| 5 P—K 3 | Castles | 18 Q—B 3 | Q x Q Kt |
| 6 Kt—K B 3 | Q Kt—Q 2 | 19 Kt x Q B P | Kt x Kt |
| 7 Q—B 2 | P—Q Kt 3 | 20 Q x Kt | Q R—B sq |
| 8 P x P | Kt x P | 21 Q—Kt 5 | Kt—Q 4 |
| 9 B x B | Kt x B | 22 P—K 4 | Kt—K 6 |
| 10 B—Q 3 | P—K R 3 | 23 K—B 2 | Kt—B 7 |
| 11 B—K 4 | R—Kt sq | 24 Q R-Q sq | K—R—Q sq and wins (a) |
| 12 Kt-Q Kt 6 | B—Kt 2 | | |
| 13 Kt x R P | B x B | | |

(a) In this games a piece is lost by the Champion in a peculiar way, but the game is deep and there is some play of high interest.

The score and notes are from *The Times*, London.

### Murray's Mate.

In a game played recently, the following position was brought about:

WHITE (11 pieces): K on Q R sq; Kts on K B 5 and K R 6; Rs on K B 7 and K Kt sq; Ps on K 3, K B 2, K R 5, Q 4, Q Kt 3, Q R 2.

BLACK (11 pieces): K on K R sq; Q on Q 6; Bs on Q B 7 and Q R 6; Rs on K B sq and Q R sq; Ps on K R 2, Q 4, Q B 3, Q Kt 2, Q R 3.

Murray Marble (White) says: "Black had just played Q—Q 6, and I was about to resign, when I saw I had mate in three."

### Chess-Nuts.

*The B. C. M.* tells us that Mrs. W. J. Baird, the Queen of Chess, has in contemplation the publication of a volume comprising 500 specimens of her compositions, and adds: "We do not remember, with the exception of S. Loyd, any composer issuing such a large number of compositions in one collection."

**TERMS OF SUBSCRIPTION.**

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

## TOPICS OF THE DAY.

### GROWING COMMERCIAL POWER OF THE UNITED STATES.

IN 1801 Thomas Jefferson, then President of the United States, wrote to his friend in Paris, Dupont de Nemours: "We are an agricultural people, poor in money and owing great debts." This was written in reference to our inability to pay a high price for the island at the mouth of the Mississippi and for some land on the left bank necessary to give the United States control of the navigation of the river. One hundred years later, on January 7, 1901, Senator Lodge said, in a speech in the Senate:

"Look at your map, a great symmetrical country, all under one flag, no separate Government, your railroads running in steady connections and carrying freight from the Atlantic to the Pacific and from the lakes to the Gulf. Europe can not beat that. Every separate state system, every separate railroad she has, enhances the cost of her articles. We are beating her in iron and steel. We can turn them out at a price Europe can not meet. We are going to surpass her in other articles. She has to take coal from us. It is a mere question of time when her last stronghold, the carrying trade, will be invaded. . . .

"We occupy a great position economically. We are marching on to a still greater one. You may impede it, perhaps, by legislation; you may check it; but you can not stop the work of the economic forces. We may blunder here in legislation, but the American people and the economic forces which underlie all are carrying us forward to the economic supremacy of the world."

These remarkable statements were in substance reaffirmed less than ten days later by the Earl of Rosebery in a speech before the Wolverhampton (England) Chamber of Commerce, in which he spoke of the "great commercial warfare being waged against England," and said: "The chief rivals to be feared are America and Germany. The Americans, with their vast and almost incalculable resources, their acuteness and enterprise, and their huge population, which will probably be 100,000,000 in twenty years, together with the plan they have adopted for putting accumulated wealth into great cooperative syndicates or trusts for the purpose of carrying on this great commercial warfare, are perhaps the most formidable." On the same day that Lord Rosebery made this speech attributing our commercial success, in large part, to the trusts, the New York *Journal of Commerce*, in an editorial on the same subject, attributed our success to the fact that "American methods are based upon individualism, the freedom of every capitalist and every laborer to do the best he can for himself," agreeing in this with Sir Hiram Maxim, who thinks the success due to the fact that "in the United States every man tries to do as much as he can; in England he tries to do as little as he can, to make his job last."

Whatever the reason for it, however, everybody seems to admit that the United States has "arrived" commercially, and while industrial depression is reported from almost every quarter of Europe, American manufacturers are enjoying an almost unprecedented period of prosperity. The American press have quoted very widely the following comment of the London *Times*: "It is useless to disguise the fact that Great Britain is being outdistanced. The competition does not come from the glut caused by miscalculation as to the home demand. Our own steelmakers know better, and are alarmed. The threatened competition in markets hitherto our own comes from efficiency in production such as never before has been seen." Even the British naval supremacy is in danger, continues the same paper, "for if we lose our engineering supremacy our naval supremacy will follow, unless held on sufferance of our successful rivals." The British iron-trade journals continue to comment pessimistically on the condition of that industry. Of the 3,153 locomotives built in the United States last year, 505 were sent abroad, British railroads buying more of them than the roads of any other country. A Connecticut firm has just shipped 1,000,000 pounds of trolley wire to a road in British India, and Clyde shipbuilders have recently placed orders for 150,000 tons of plates in the United States at a saving of $250,000. The London *Ironmonger* says sarcastically of a similar incident:

"A good deal has been made of the fact that the Ebbw Vale Company have secured a contract for 10,000 tons of heavy rails for the West Australian Government, the price being not far short of £1 above that at which American material could have been purchased. We congratulate the Ebbw Vale Company upon their good fortune in having secured so important an order, and our congratulations are no less due to the Government of West Australia upon finding itself in the happy position of being able to pay £5,000 or so more of taxpayers' money for the material it required than it need have done. . . . At the present time the British rail trade is hopelessly out of it where competitive work is concerned."

Turning from Great Britain to the other countries of Europe, one finds that American coal can now be exported to the Mediterranean ports at a profit, and that one steamship line has arranged for regular tri-weekly sailings between Newport News and Marseilles, carrying coal when no other cargo offers, and bringing back Spanish iron ore. The European woolen and boot and shoe trades, too, are being interfered with by the invasion of American goods. In Germany it is said that some 50,000 to 100,000 workers in the boot-and-shoe trade are threatened with loss of work by American competition. The German workers earn an average of $4 a week, the American workers from $10 to $15 a week. One cause of the present hard times in Germany, according to the annual report of the Berlin Society of Merchants, is "the specter of American competition in European

markets," and the *Frankfurter Zeitung* is quoted in the cable reports as saying: "The entrance of the United States into the ranks of creditor nations signifies a change in the times. Ever since the war with Spain the United States Government has pursued undeviatingly a world policy of world conquest. European states must familiarize themselves with the thought that the United States will have a very weighty word in determining the new political constellations among the leading nations." The *Wiener Tageblat*, too, is reported as saying that owing to the almost intolerable burden of taxation imposed on Europe by militarism, America, whose national wealth shows enormous and steady increase, is gradually becoming the creditor of the whole world, and that within the next few decades all the European States, as well as Australia, Japan, and China, will be her debtors if they do not take precautions in time to prevent themselves from falling into a state of economic dependence upon the new commercial world power. "The only remedy," it declares, "is the abolition of militarism, which is a cancer upon European agriculture, trade, and industry." Many German trade journals, it is reported, in their panic over the inroads of American competition, are even refusing to accept American advertisements.

Perhaps the best description of the American invasion of Europe is given in a recent issue of the *Hamburger Fremdenblatt*. The New York *Journal of Commerce*, which quotes the article in full in its issue for Wednesday of last week, declares that "none of the articles hitherto appearing have shown a clearer comprehension" of the situation. This Hamburg writer says:

"Competent experts, well informed as to the industrial and export conditions which prevail in the United States, have established the following facts: The steel manufactories of the United States, which two decades ago were in their infancy, to-day control the markets of the world, dictate either directly or indirectly the prices of iron and steel in all countries, and, partly through the richness of their supply of iron ores and coal, partly by the use of labor-saving machinery and skilful, effective means of transportation, have attained a position not only to compete with the older iron-and-steel-producing countries, but even to profitably export their products to England. American tools, especially hatchets, axes, files, saws, boring implements, etc., enjoy by reason of their excellent quality the best reputation, and, in spite of their higher price, stand above competition in nearly the whole world. Also in sewing-machines, bicycles, and agricultural implements of every kind, the United States has begun to drive England and Germany from the world's markets, especially that of Russia, which may be partly attributed to the fact that American firms are protected in their own market from foreign competition and can thus sell their manufactures cheaper abroad than at home. A remarkable change has also taken place in the field of boot-and-shoe production. Hardly more than ten years ago the United States imported shoes from Europe—especially women's foot-wear from Austria, while other grades were made of leather imported from England and Germany. To-day it not only makes its entire supply of leather at home and exports it in considerable quantities, but it floods Europe with ready-made shoes, competes with the products of cheap labor in England, establishes shoe depots in Paris and even in the principal cities of Germany. That the United States, by reason of its richness in mineral oils and aided by its unrivaled facilities for refining and transporting this international necessity, controls the petroleum trade of the world and is held in check only by Russia, is well known. The experience of the past few months proves that within a not far distant period the coal of the United States will play the same rôle in the markets of the world. Incidentally, it may be remarked that the typewriting-machine, with which this article is wirtten, as well as the thousands—nay, hundreds of thousands—of others that are in use throughout the world, were made in America; that it stands on an American table, in an office furnished with American desks, bookcases, and chairs, which can not be made in Europe of equal quality, so practical and convenient, for a similar price. The list of such articles, apparently unimportant in themselves, but in their aggregate number and value of the highest significance, could be extended indefinitely. But it would seem more interesting and characteristic to cite the fact that an American syndicate is now planning, and has even taken the initial steps in a scheme to take in hand the whole sleeping-car service of Europe, to improve it and make it cheaper than is now possible. Moreover, American manufacturers of underclothing, gloves, and men's clothing, as well as women's cloaks—all articles which a few years ago were exported in vast quantities from Europe to the United States—are already beginning to calculate how they can place their surplus output in European markets.

"But enough of examples. Every one who understands the existing conditions and has followed these conclusions, drawn from the best sources and based upon thorough knowledge of the facts, will agree that the threatened danger from America is neither exaggerated nor painted too darkly, but is, in fact, real and serious. But the mere recognition of the peril avails nothing; what is demanded is to face it, to overcome it, or at least to minimize as far as possible its effects. We must ask ourselves whether this is still possible, and, if so, what are the means, the methods that must be employed to secure a successful result. There is but one answer to this question. We must fight Americanism with its own methods; the battle must be fought with their weapons, and wherever possible their weapons must be bettered and improved by us. Or, to speak with other and more practical words, Germany—Europe—must adopt improved and progressive methods in every department of industry; must use more, and more effective, machinery. Manufacturers as well as merchants must go to America, send thither their assistants and workingmen, not merely to observe superficially the methods there employed, but to study them thoroughly, to adopt them, and wherever possible to improve upon them, just as the Americans have done and are still doing in Europe."

*The Journal of Commerce* says that our financial relations with the European centers have also been "virtually revolutionized." It declares, indeed:

"In a very important sense, we have become the creditor nation of the world. From a chronic condition of dependence upon the banking forces of London, Paris, and Berlin, we find those centers now dependent upon the large floating balances of the United States, subject to our lending ability in periods of exigency, carrying the largest stock of gold in the world, and holding the largest resource for dealing with crises in international finance. Three of the foremost European governments—England, Germany, and Russia—have found it necessary to come to New York for important loans, and the two former have not applied in vain. Thus, if this city may not be said to have yet become the financial center of the world, yet we may incontestably claim a foremost rank among the few metropolitan cities which have won that distinction."

A discussion of measures proposed by European economists for heading off the United States in its march toward commercial world supremacy will be presented next week.

---

**The Venezuela Broil.**—What looked like a fight the middle of last week now appears likely to become merely a lawsuit. The cause of all the excitement in Venezuela, Washington, D. C., and Syracuse, N. Y., was very much like the common police court case of a farmer who mortgages his land to one man, and later sells it to another. Mr. Castro, president of the republic of Venezuela, by grace of revolution, recently found his own rule threatened by a revolt, and little or no coin in the treasury. "Once caught, twice taught," says the Spanish proverb, and as not many months have passed since Great Britain assimilated a rich slice of Venezuelan domain by raising a dispute about maps and surveys, President Castro, profiting by this example, proceeded to overhaul the maps of the region containing Venezuela's rich asphalt lake, and found, just as he suspected, that the grant of land made to the New York and Bermudez Company in 1883, which had been supposed all along to include this lake, did not include any part of it. So he sold the lake to the Warner and Quinlan Company, of Syracuse, and ordered the Bermudez Company to evacuate. The president of the Bermudez Company

is Gen. Francis V. Greene, who was with the Russian army in Turkey in the seventies as attaché, gained distinction in our war with Spain and in the military rule of our new possessions, and has fought his way to prominence in the perilous arena of New York State politics. His appeal to Washington was not unheeded. There was talk of sending a gunboat in Castro's direction, and a "war-cloud" began to loom. At the end of a couple of days, however, word was received in Washington that force would not be resorted to by the Venezuelan Government, and it now seems likely that President Cipriano Castro's geographical discoveries will be settled by the courts, and not by the stern arbitrament of war.

So much for a statement of the situation. As for comment, the New York *Times* says:

"The Government of that republic, and of all the Central and South American republics, can well understand that the confiscation of the property of Americans is not a good way to encourage the use of American capital for the development of their resources. In the coming years an increasing part of the capital of the United States will be employed in foreign investments. There is thought to be a great field for its use in the countries to the south of us. Under the protection of just laws and friendly governments the money of citizens of the United States would accomplish wonders in opening up the resources and augmenting the national wealth of these republics. But capital will not go where it is liable to violent seizure. We hope the President of Venezuela will consider this aspect of his present action."

## TRIBUTES TO QUEEN VICTORIA.

THE sorrow awakened in this country by the news from Cowes seems to be more in the nature of personal grief than of international political concern. As the Philadelphia *Ledger* expresses it: "Victor Hugo, in recalling the many men and women of high and low estate that he had known, said in a beautiful generalization of his estimate of humanity that there is only one thing before which we should kneel, and that is 'goodness.' This is the homage that the world is in spirit paying to the stricken Queen. The regal state and the sceptered race strike the imagination; but the homely virtues of Victoria, her maternal love, her lifelong, touching devotion to the memory of the Prince Consort, the picture of domestic felicity in which she is represented as the central and venerable figure, appeal to the common heart." The New York *Press* says, similarly: "There is no other mortal monarch whose death would so little disturb the current of affairs—not the boy King of Spain, nor the girl Queen of Holland, the youthful Czar of Russia, the elective heads of the republics of the United States and France. Yet scarcely could the passing of all these rulers bring home so widely a sense of personal loss." The same paper continues:

"Sometimes in her reign it was thought that she was to be England's last Queen. Now it is seen that she was rather Britain's first Empress. That is the story of her life politically: that it bridged the way for the passage of the government of her realms from an aristocratic monarchy to a democratic empire. Under the ægis of her spotless name and moderate wisdom freedom broadened slowly down again in Britain, while elsewhere in Europe the peoples plunged wildly into Socialism, Nihilism, Anarchy, to rear as wildly into the absolutism in one form or another dominant everywhere on the Continent. Her greatest benefit to the institutions of her land has been in simply being herself, so that when the hot republican fit was on the nations in the earlier years of her reign her gentle, gracious life calmed and disarmed possibly insurgent elements. Far different might have been the story had a stubborn or dissolute George or William occupied the throne. Beyond this it may be said that she was probably a better judge of men than the people of her time, and that she appraised more nearly their true worth than contemporary public opinion Palmerston, Gladstone, Beaconsfield, the three most famous of hers and her people's servants. True it also is that at the most acute crisis of the affairs of our Government and her own she kept a higher mind and a serener temper than did her Ministers, including the veteran and venerable Russell.

"Yet, after all, it is not the Queen whom the world which so long has known her will really miss. There have been greater queens by far. She was no Catharine and scarce an Elizabeth. It is the woman who, ripe as were her years, will be sincerely mourned—the woman who has in her long, patient, useful life glorified and dignified her sex as never yet has perhaps another woman of her station. In very truth, it may be said that never was another woman queen of so many reverent, respectful hearts."

## IS THE PRESIDENT TRYING TO INFLUENCE THE SUPREME COURT?

THE appointment of sons of Justices Harlan and McKenna to be attorney-general and inspector-general, respectively, in Porto Rico, have stirred up not a little comment, especially in view of the fact that the son of Justice McKenna takes the place made vacant by the discharge of Lieut.-Col. Russell B. Harrison, whose father, the ex-President, has been expressing anti-administration opinions. The critics of the President remark that the appointments have the appearance of an effort to influence the opinion of these two justices, and many newspapers which think that the appointments will not have any such effect, and which doubt whether the President had any such intention, admit that the appointments are in bad taste at this time and might better not have been made.

The Hartford *Times* (Ind. Dem.), recalling the importance of the case before the court, regards the President's act as "probably the most scandalous and shocking incident in our political history," and the Philadelphia *Times* (Dem.) remarks that "what makes this insult to the integrity of the bench more flagrant is that these appointments are made in the colonial service, at the very time when the legality of that service is an issue before the court." The Chicago *Record* (Ind.) believes that it "argues a deplorable lack of tact and discretion, if, indeed, it implies nothing worse"; the Detroit *Free Press* (Ind. Dem.) thinks that "Mr. McKinley's conduct is in execrably bad taste, to say the least," and the Chicago *Times-Herald* (Rep.), in a comment that is widely commended, says:

"It is incredible that the President should have harbored for a moment the idea of influencing the judgments of Justices McKenna and Harlan by favors to their sons. Nor can he have conceived that their appointments would suggest such a possibility. The very impossibility of the thing itself probably blinded him to the inevitableness of the suggestion in the public mind.

"But the damage is done. Across the undimmed mirror of the Supreme Court has passed the breath of a suggestion of personal influence from the Executive. Absolutely baseless we most firmly believe, but undeniable. It has already deprived Justice Harlan's son of the congratulations due his personal worth and legal fitness. It has discounted the decision of the court and prepared a way for the 'I told you sos' of the disappointed.

"There seems only one way to rob the suspicion of its sting. Justices McKenna and Harlan should decline to sit longer in the island cases."

The Philadelphia *Ledger* (Ind. Rep.) suggests that "the proper correction of this unfortunate mistake would be for Mr. Harlan and Mr. McKenna to decline the offices to which they have been nominated," and that "should they neglect this obvious duty, the Senate should reject them," while the Minneapolis *Times* (Ind.) argues that "the President should acknowledge the error and withdraw the appointments with such explanations as may seem fitting." "If the force of the argument is not at once apparent to the President," remarks the Brooklyn *Citizen* (Dem.), "his real friends will lose no time in making it perfectly clear to him."

The defenders of the Administration consider the charges in-

TWO VIEWS OF THE QUAY VICTORY.

sulting and preposterous. "In other words," says the Philadelphia *Evening Telegraph* (Rep.), "Justices Harlan and McKenna so lightly regard their honor as men, and their integrity as members of the highest judicial tribunal in the country, that they are ready to sell their opinions to any purchaser who is willing to pay their price; and, further, that the President of the United States is so utterly destitute of honor and integrity as to be determined to secure an indorsement of his insular policy by the defiling of the very fountainhead of justice." The Columbus *Dispatch* (Ind.) declares that "this ill-supported accusation affecting the integrity of the President and the Supreme Court is a disgrace to American politics"; and the Rochester *Democrat and Chronicle* (Rep.) says that it is "absurd," and "in its more serious aspect it is a vile and atrocious insult." The Chicago *Tribune* (Rep.) remarks: "Probably the stern censors of the Administration will be confounded in the end when they discover, as they may, that Justice Harlan is opposed to its colonial policy. He is quite as likely to vote against the President's constitutional views as he is to vote in favor of them."

## SENATOR QUAY'S TRIUMPH.

THE reelection of M. S. Quay (Rep.) to represent Pennsylvania in the United States Senate, which was brought about last week by the defection of several legislators elected as Democrats and anti-Quay Republicans (the latter having signed agreements not to vote for Quay), is taken by the press as another example of the possibilities of our political system. It will be recalled that Mr. Quay failed of election in the Pennsylvania legislature two years ago, and that since then one of Pennsylvania's seats in the Senate has been vacant. A majority of the present legislature were elected as anti-Quay or anti-Republican members; but despite that fact he is back in the Senate for four years. The Philadelphia *Times* (Dem.) calls it "the most astounding victory in the history of American politics." How the necessary number of anti-Quay legislators were led to a change of heart has not been made public, tho there is considerable speculation on that subject.

Not all the insurgents against his rule have come in and taken the oath of allegiance, however. The Philadelphia *North American* (Republican organ of John Wanamaker, leader of the anti-Quay forces) regrets that "Pennsylvania will again be represented at Washington by a man whose name is synonymous throughout the United States with everything that is vile in politics and bad in government"; but says that this "does not end the fight against Quayism." "On the contrary," it declares, "whatever is honest and clean and patriotic in the State will be inspired by this outrage upon free institutions, this daring defiance of the verdict of the ballot-box, to renewed ardor in the battle for better political conditions in this debauched and pillaged State." The Philadelphia *Press* (Rep.) calls the election a "triumph of the boss, of boss methods, and boss principles." It adds: "Boodle wins, corruption funds carried the day. Decent politics for the time goes to the wall, and those who have striven and labored and hoped for a better era and better influences in Pennsylvania political life must accept defeat with what grace they may while they gather strength for a more determined struggle hereafter." The Pittsburg *Post* (Dem.) thinks Mr. Quay's election is due to "the methods of persuasion, intimidation, and corruption of which he is a master-hand," and declares that his machine "represents all that is vile and pernicious in the politics and legislation of the State." The Boston *Herald* (Ind.) thinks that "Quay's presence in the United States Senate is a national scandal," and the New York *Times* (Ind.) agrees that it is a "disgrace to the country."

Mr. Quay's friends are not less warm in their friendship than his foes are in their enmity. When Mr. Quay went to Washington to take his place in the Senate, his friends are said to have "brought with them floral offerings literally by the carload," and the Washington correspondent of the Associated Press said of his reception in the Senate chamber: "Within the memory of the oldest Senators nothing approximating to-day's scene ever was witnessed in the Senate on a similar occasion." "Colonel Quay's victory," declared Senator Carter, of Montana, to a newspaper correspondent, "is universally received in the Senate without reference to party as a vindication of an honorable man who has been outrageously assailed"; and the Washington *Post* (Ind.) rejoices that Mr. Quay "stands triumphant on the wreck of the base contrivances of his enemies—holding now, as he has ever held, the confidence, the affection, and the loyalty of the Republican masses of the great State of Pennsylvania." The Philadelphia *Inquirer* (Rep.), Senator Quay's organ, calls his opponents "as despicable and malignant a band of political desperadoes as ever disgraced a State," and rejoices that "now they have met their Waterloo."

It seems to the Scranton *Tribune* (Rep.), however, that "the

demoralization of the legislature at the very commencement of its labors is a costly price to pay for the election of a United States Senator, and furnishes another strong reason why the people of the State should attend to this matter themselves and elect United States Senators by direct vote at the polls."

W. A. Clark (Dem.), of Montana, who resigned his seat in the Senate last session while charges of bribery in connection with his election were under investigation, was elected last week to succeed Senator Carter.

## EXTRADITION OF NEELY.

MUCH satisfaction is expressed in American newspapers over the decision of the Supreme Court, confirming the judgment of the circuit court of the Southern district of New York, to the effect that C. F. W. Neely, former chief financial agent of the Cuban Post-Office Department, shall be sent back to Cuba to stand trial for embezzling about $500,000 of government money. "Already there has been too much interference with the course of justice," says the Baltimore *Herald* (Ind.); "Neely's dishonesty was brought to light eight months ago, but notwithstanding the fact that subsequent investigations proved the frauds to be of far greater magnitude than had been supposed, and in spite of the virtual conviction of the accused, he has been able, under one pretext or another, to resist extradition until now." "Justice has traveled with a leaden heel in this case," adds the Philadelphia *Telegraph* (Rep.), "but it bids fair to overtake him in the end."

The chief questions at issue in the Neely case were, whether the special act of June 6, 1900, passed by Congress to cover the present instance and extending the extradition law of this country to a foreign country "occupied or under the control of the United States," was constitutional, and whether Cuba was a "foreign country." The Supreme Court now decides, without a dissenting voice, that Cuba is a foreign country and that the act of last June is constitutional and applicable to the case of Neely. "What legislation by Congress," declares the decision, "could be more appropriate for the protection of life and property in Cuba, while occupied and controlled by the United States, than legislation securing the .urn to that island, to be tried by its constituted authorities, of those who, having committed crimes there, flee to this country to escape arrest, trial, and punishment?" Justice Harlan, in delivering the opinion of the court, added that "Cuba is foreign territory within the meaning of the act of June 6, 1900." It can not be regarded, he said, in any constitutional, legal, or international sense a part of the territory of the United States, for the reason that the declared object of the war with Spain was not to make Cuba "an integral part of the United States," but only to compel "the relinquishment by Spain of its authority and government in that island and the withdrawal of its forces from Cuba and Cuban waters." While it is true that as between Spain and the United States, and as between the United States and all foreign nations, Cuba was to be treated as if it were conquered territory, yet as between the United States and Cuba "that island is territory held in trust for the inhabitants of Cuba, to whom it rightfully belongs and to whose exclusive control it will be surrendered when a stable government shall have been established by their voluntary action."

Public interest in this decision centers chiefly upon the indication it is supposed to afford of the court's attitude on the great constitutional question pending before it, relating to the status of Porto Rico and the Philippines; and in Administration circles the opinion is freely expressed that the decision is an emphatic "victory for the Government." "President McKinley could have had no more sweeping vindication of his course than this well-considered and clearly spoken declaration by all the justices of the Supreme Court," says the Columbus *Dispatch* (Ind.). In view of this decision, adds the Philadelphia *Press* (Rep.), "it appears evident that the Porto Rican tariff act will be upheld as constitutional." "From the bearing of the Neely decision on the insular test cases," declares the Washington correspondent of the New York *Tribune* (Rep.), "it need scarcely be stated that the Government is more certain to-day than ever before that its colonial policy will be completely sustained by the Supreme Court."

A very different tone of comment, however, prevails in the Democratic press, as well as in many independent papers. The New York *Times* (Ind.) thinks that the decision of the court "has and can have no bearing" on Porto Rican and Philippine territory, "held on entirely different conditions." With this view the Philadelphia *Public Ledger*, the New York *Herald*, the Baltimore *Sun*, the Springfield *Republican*, and many other influential independent papers concur. "The court has ruled that Cuba is a foreign country," says the New York *Journal* (Dem.), "which it is. Porto Rico and the Philippines are not foreign,

JUSTICE FOLLOWS THE FLAG.
—*The New York Tribune.*

COLONIAL PROBLEMS IN CARTOON.

and the court will doubtless recognize the fact in their case as well as in that of Cuba."

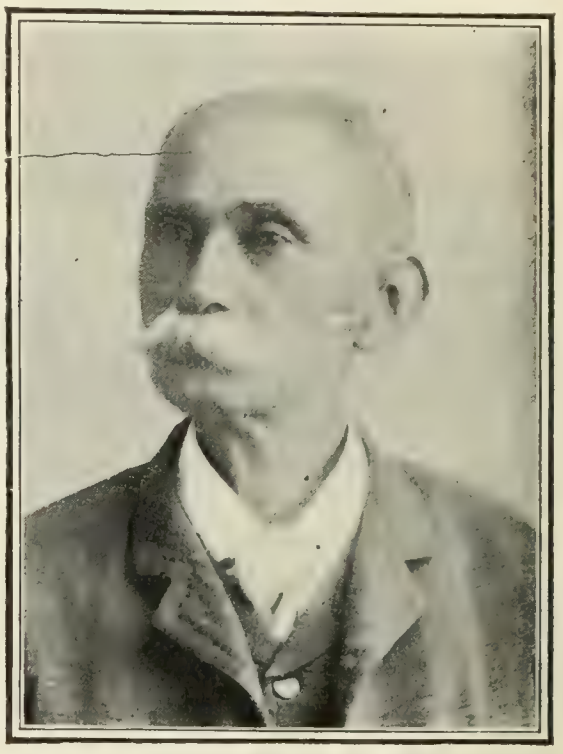
The Cleveland *Plain Dealer* (Dem.) believes that one of the best effects of the decision will be its assurance of the intention of this country to keep its promise with Cuba. Judgment has now been given by the highest tribunal that Cuba "belongs to its own people." The Boston *Journal* adds that the decision will be hailed in the simple interests of justice, apart from all broader aspects. "Now," it says, "the stern work of justice can be done, not only in the case of Neely, but of other officials who were false to their thrust; and we can show the Cubans that the difference between Spanish and American looters is that American looters, when caught, suffer for their crimes."

## UNIVERSAL SUFFRAGE IN CUBA.

THE almost unanimous decision of the Cuban Constitutional Convention, as expressed in secret session in Havana recently, to insert in the constitution a clause providing for universal suffrage, has brought the question of Cuba's future government into prominence again. It is believed that this particular provision was incorporated owing largely to the efforts of General Maximo Gomez's adherents, and that the proposed clause in the constitution making eligible to the presidency of the new republic not only native-born Cubans, but also any citizen who took part for ten years in the revolutionary war against Spain, was formulated for Gomez's special benefit. "It is a splendid tribute to pay to the great guerilla warrior," says the New Orleans *Times-Democrat*; "but that it is thoroughly well deserved will be everywhere recognized, for no less commanding and resourceful chieftain than he could have held the revolutionary forces together for half so long a time, and inspired them with courage and with hope." A very different view of Gomez is that taken by the Philadelphia *Inquirer*, which describes him as "the man who, of all that have been prominently named in connection with the presidency, is the least fitted to hold the office to which he notoriously aspires," because he had shown himself to be "a military adventurer without any experience in or proved capacity for statesmanship." *The Inquirer* says of the suffrage proviso:

MENDEZ CAPOTE.
President of the Cuban Constitutional Convention.

"If ever there was a country in which the principle of universal suffrage could not be judiciously or safely applied to the election of the national government that country is the island of Cuba. The proof of this is to be found in the revelations made by the recent census with regard to the racial division and the educational condition of the population. It is doubtful, moreover, whether more than a very small fraction of the Cuban people, even among the minority who do know how to read and write, or how, at least, to read, are fitted at this time to be intrusted with the function of self-government. Even those who are not so ignorant as to be debarred by an indulgent educational qualification from the privilege of the ballot are totally devoid of the true republican spirit and do not understand that the liberty and freedom and safety and independence which they claim for themselves they must be ready to accord to others irrespective of race or politics. But to say not only that all these shall be empowered to vote, but that every male adult over twenty-one years of age shall be similarly entitled, would be to work a monstrous perversion of the republican idea and to foredoom the projected republic of Cuba to failure from the start."



GEN. MAXIMO GOMEZ.
Who, it seems probable, will be the first President of the New Cuban Republic.

In the opinion of the Chicago *Evening Post*, on the other hand, such arguments as this, emanating from the United States, will prove a double-edged weapon, since the Cubans are simply following the example of this country. It declares:

"Some critics in this country say that giving the right to vote to 'ignorant negroes and poor whites' in Cuba will be the surest way to ruin the new republic. And the Cubans will ask: 'Then why do you do it? You have negroes as ignorant as ours; you have whites as poor as anything on earth; yet you let them vote. Your only qualification for voting is citizenship, and yet you tell us this is a bad plan. Which shall we follow, your plain example or your plausible precept?'

"Universal suffrage in Cuba would be far from ideal. The Cubans would be wise to make some intelligent voting qualification a part of their new constitution. But these things apply with equal force to ourselves, and the Cubans are bright enough to see the point. If we would escape the imputation of being inconsistent we should ask some other nation, in a quiet way, to advise the Cubans on those lines which we wish them to follow, but have not been wise enough or courageous enough to follow ourselves. . . .

"The problem is not a simple one, but all heated and tall talk from American politicians is extremely indiscreet, since its sincerity is decidedly open to question. Let them remember that Cuba is still 'of right free and independent,' and that suffrage is a purely domestic, internal matter regarding which the people of the island need consult no one."

**Aided Immigration to Hawaii.**—The sugar-planters of Hawaii suffer from a scarcity of labor, and are making strenuous efforts to induce immigration of colored men to the islands. "Hawaii wants labor, wants it desperately bad," says the New York *Mail and Express*, "for it is lacking nearly one third of the force needed to get in its big sugar crop. It holds out to the negro, the mulatto, the Porto Rican, the prospect of an ocean voyage and steady employment at $16 a month, with his cabin free, in a mild and salubrious climate, where the color line is not drawn and half-caste races are not made to feel any social inequality." The particular circumstances that have caused a clamor to be raised in these far-away American islands, it continues, have been brought into play by the action both of climate and of law. The native Kanakas are indisposed to work outside of the cities; the white workers are enervated by the climate; and the tides of Chinese and Japanese immigration have both been recently checked, the first by the Chinese exclusion act

which took effect when the islands passed under the control of the United States, the second by a decree passed by the Japanese Government restricting the emigration of its people. *The Mail and Express* thinks the present opportunity an attractive one to colored men "to see a good deal of the world without expense and earn a nice living in a pleasant country." On the other hand, the San Francisco *Chronicle* maintains that the practise of importing aided labor under contract and under supervision is a bad one. It says:

"The objection to aided labor is not on account of the injury, if any, to the aided laborer, but on account of the unfair competition with labor already on the ground, and by reason of the fact that aided laborers are not likely to make desirable citizens. In the Hawaiian islands the sugar-planters are making enormous fortunes, and are in sore need of labor, but instead of seeking to obtain that labor by offering such wages as will attract it and amount to a fair division of the profits of the business, they endeavor to find some place where there is an excess of labor which can be had at low prices and import it under contract."

## FREEDOM OF SPEECH IN STANFORD UNIVERSITY.

THE enforced resignation of Dr. George E. Howard, head of the department of history in Stanford University, at Palo Alto, Cal., because of his protest against the virtual dismissal of Dr. Edward Ross (discussed in our pages, December 1), followed by the resignation of Prof. William Henry Hudson, Prof. Charles O. Little, and Prof. David Spencer, and the threatened resignations of several other professors, has given renewed interest to the question of academic freedom of speech, and is the subject of vigorous comment in newspapers all over the country. It is stated in the press dispatches that Professor Hudson, who is a well-known man of letters in the English department of the university, and Professor Little, who is head of the mathematical department, "are friends of Dr. Howard and took this method of showing their disapproval of the efforts to crush free speech in the university." The vacancies caused by the resignations of Professors Howard and Spencer have been filled by the appointment of Professors Lepsey and Warren, of Harvard; but as the courses in several departments are now badly crippled, it is thought probable that many students will leave and go to the State University. Great excitement is reported among the students, those of the scientific department having recently shown their loyalty to President Jordan's policy by ducking in a pond a student from the University of Kansas who expressed sympathy with the boycotted professors. The students in the literary courses, however, seem to be arrayed in opposition to the course of President Jordan.

The comments on this subject in the press range from the most caustic condemnation of the university authorities to warm defense of their actions in the matter. "Petticoat government and a muzzle are the characteristics of Stanford administration as carried on by President David Starr Jordan," remarks the Hartford *Times*. "They have the honor in California of being the first in the twentieth century to oust a professor for his opinion," declares the Boston *Transcript*; "the stream can not rise higher than its source, even tho that source can be a gold-mine. . . . How can such an institution hope to grow or obtain efficient or self-respecting teachers?" The New York *Evening Post* thinks that the general revolt of professors "is indisputable proof that, whatever may have been said and may now be said, Mrs. Stanford's policy has now become intolerable to self-respecting scholars." On the other hand, the New York *Tribune* says:

"It appears to us that such resentment as may have arisen on this account is due to erroneous ideas on the subject of 'free speech,' as Professor Howard describes the privilege which he seems to have abused. President Jordan's reputation justifies the supposition that he would always choose not to abridge that legitimate liberty of instruction which a university should foster. But it is obvious, in spite of a good deal of declamation to the contrary, that a line must be drawn somewhere, and it is not drawn too strictly when it deprives a college instructor of the opportunity which his chair has afforded him to give importance to demagogical outgivings at the expense of the institution by which he is employed and tending to the personal disparagement of its founder."

"The professors evidently misconceived the terms of their original employment," satirically observes the Philadelphia *Times*; "if a millionaire hires a man to sail his yacht, he expects to sail it according to its owner's desires. Mrs. Stanford, instead of a yacht, keeps a university, and she has a right to have the university run to suit her. The professors should have learned her views before expressing themselves. Mr. Rockefeller had some trouble of this kind with his professors a while ago; but he got rid of some of them and read the riot act to the rest, and now

SNAP SHOTS OF PEKING AND CAPE TOWN.

his university is getting on finely, and announces a new and ridiculous discovery every few days." This flippant reference to the University of Chicago is decidedly at variance with the public statement which its president, Dr. William R. Harper, made with great earnestness last December, in announcing another gift of $1,500,000 to the institution from John D. Rockefeller. He said at that time:

"Whatever may have happened in other universities, in the University of Chicago neither the trustees, nor the president, nor any one in official position, has at any time called an instructor to account for any public utterances which he may have made.

"In order not to be misunderstood, I wish to say that no donor of funds to the university, and I include in the number of donors the founder of the university, Mr. Rockefeller, has ever by a single word or act indicated his dissatisfaction with the instruction given to the students of the university or with the public expression of opinion made by an officer of the university. I vouch for the truth of this statement, and I trust it may have the largest possible publicity."

## IS DRUNKENNESS INCREASING?

IT would be interesting to know whether New York State fairly represents the country in the alarming increase of drunkenness reported by the New York State commission of prisons. The New York *Evening Post* condenses and comments on the commission's report as follows:

"There has been a general feeling that drunkenness was on the decrease. The annual report of the State commission of prisons warrants no such optimistic conclusion. During the year ending October 1 last, the commitments to penitentiaries, jails, and workhouses for this cause reached the enormous total of 32,859, about one third of the total commitments for all causes. In this reckoning no account is made of the cases punished only by fine in the police-courts. Adding these, it is estimated that fully half the total number of convictions for the past year were for intoxication. It is not easy to find the cause of this alarming showing. There has certainly been no manifest inclination on the part of the police to treat this offense more strictly than before, while conditions of general prosperity such as the State has enjoyed are supposed to be favorable to temperate living. Whatever the cause, a practical suggestion of the commissioners of prisons deserves the prompt attention of the legislature, that New York adopt the 'probation law,' which has worked successfully, first in Massachusetts and then in Vermont and Minnesota. By this law a first offender is released, under parole, and put in the charge of a probationary officer for a definite period. If at the end of this period the report is favorable, the offender is released; if unfavorable, the suspended sentence is imposed. The effect of this policy has been excellent, and the reasonableness of sparing a first offender the humiliation of fine and imprisonment requires no argument. It is obviously better not to stamp a man as a drunkard until his offense is flagrant or reformation seems hopeless."

THE CANTEEN MUST GO.

WESTERN SENATOR: "Yes, the army canteen is surely a bad thing and must go!"

KENTUCKY SENATOR: "A bad thing! Well rather!! They don't sell whiskey!!!"

—*The Minneapolis Journal.*

A more optimistic view is taken by the Buffalo *Express*, which says:

"One of the most notable advances of the century just past, and one which has been commented on very little, is the decline in the prevalence of hard drinking among business men and, indeed, among the people in general. Half a century ago the average man of affairs, according to those who remember those 'good old times,' began the morning with several eye-openers and repeated the prescription more or less frequently all day long. Whenever an important business matter came up for discussion, drinks were certain to be called for, and a sideboard was an indispensable piece of office furniture. To-day, however, it is certain that the man who drinks during business hours is the exception rather than the rule. There may be just as much drinking after the day's work is done as there was in the early years of the century, altho that is doubtful; but liquor as a lubricant to business is no longer tolerated in any business house.

"Commercial travelers who used to get allowances for treating their prospective customers are now prohibited from drinking with those with whom they are doing business, and when you see a couple of business men standing at a bar in the daytime it is generally the case that they are going to luncheon and have a couple of hours before them before they take up business again. The change in habit in this regard is not based on sentimental or religious grounds to any great extent, but is a cold, hard business proposition. The increase of competition, the larger game that the successful man of business must play to-day, require the full use of all his faculties, and the man who would succeed realizes that he can not afford to take any chances with stimulants."

## TOPICS IN BRIEF.

AN additional reason for the Constitution following the flag is that it can bring it back in case it should go too far.—*The Philadelphia Times.*

IF there is any change to be made in the House of Representatives, it ought to be made in the way of quality, not quantity.—*The Detroit Free Press.*

THERE is one serious objection to establishing communication with Mars. It will inevitably bring on more dialect stories.—*The Memphis Commercial-Appeal.*

GENERAL DE WET'S operations are proof that military genius is not entirely dependent on an early application of Tabasco sauce.—*The St. Louis Globe-Democrat.*

HOPE springs eternal in the human breast, but the human breast doesn't seem to have any advantage in this respect over the British War-office.—*The Chicago Times-Herald.*

THERE is talk about having Senator Hanna for President in 1904; but he is ruled out under the unwritten law against giving any man a third term.—*The Philadelphia Ledger.*

MAKING SOME PROGRESS.—At least Mr. Cleveland has converted Mr. Bryan a little way. The gentleman from Nebraska has been shooting ducks.—*The New York World.*

FROSTY.—It is barely possible that President McKinley contracted his cold by reading ex-President Harrison's views on the Porto Rico question.—*The Kansas City Journal.*

THE kind of interviews and communications we get from the planet Mars will be grateful to yellow journalism. Nobody will arise to contradict them.—*The Philadelphia Times.*

PROFESSOR LOEB'S discovery of the vitalizing power of salt explains how the Democratic Party manages to survive so many defeats. It goes up Salt River and recuperates.—*The Kansas City Journal.*

PROFESSOR SEE, the astronomer in charge of the telescope at the Naval Academy in Washington, calculates that in 3,000,000 years the sun will have burnt out, the solar system will be in darkness, and all life will be frozen to death. Don't deny this unless you are able to furnish the proof.—*The Louisville Courier-Journal.*

TOPEKA, KANS., January 16.—The Kansas House of Representatives today fixed by resolution the fee of five cents for shining the shoes of the legislators. This was done in granting the shoe-shining right to Representative Hall. The Populist and Democratic minority fought for a ten-cent fee, but the Republicans won the five-cent victory easily.—*Despatch to The New York Sun.*

# LETTERS AND ART.

## RELATION OF LITERARY CULTURE TO THE WAR SPIRIT.

WE have heard a great deal of late about the relation of religion to war. Among ecclesiastics, Dean Farrar on the one side has defended war, while on the other side Dr. Parkhurst has condemned it, each with arguments drawn from the Bible. Two laymen also, Captain Mahan and Mr. Ernest Crosby, have still more recently, in the Episcopal Church Congress at Providence, respectively defended and denounced before the assembled Christian delegates the resort to arms and bloodshed. The relation of literature to war is a subject less understood and less often referred to. Mark Twain's speech the other day condemning the campaign in the Philippines recalls to mind, however, the fact that from the days of Greece and Rome literary men as a class—perhaps even more than churchmen—have been inclined to deprecate war and violence. This speech is hailed by Mr. Moncure D. Conway as "a *sursum corda* to the intellectual leaders and public teachers of America." Mr. Conway, who, as a descendant of the Virginian Washingtons, comes of fighting stock, says that the summons is needed. He writes (in the New York *Times*, January 11):

"The cause of peace has certainly declined during the past fifty years. The authors who gave America its literary fame in the middle of the past century—Emerson, Longfellow, Sparks, Hawthorne, Bryant, Holmes, Lowell, Whittier, Motley, to name only some—were celebrants of peace. I can remember the universal wonder when Carlyle's discordant note sounded. But their principles apparently survive only in a few old-fashioned writers; war is defended as a divine method, applause of bloodshed pervades new and popular novels, and apologies for ferocities like lynching and for the culture of brutality in our colleges have become familiar. . . . As lynching, and the whipping-post, and tortures by 'White Caps' and hazers, have taken their place as institutions, and eloquent divines clamor for Chinese heads, and wish us to slaughter Turks for $90,000, one hardly ventures to pronounce any proposal too inhuman to find cultured support. One would know, of course, that any such extreme instance among authors must be sporadic; nevertheless the literary testimony on such matters has become doubtful, and it is well that one trump should announce a day of judgment, and every author realizes his or her responsibility for what looks like American decadence.

"People look back to the great American authors and orators who in the last generation made their influence felt throughout the land, and talk of the decline of genius. There is, I believe, no decline, but an abdication. There is no genuine leadership of a country except its literature. Preachers are in sectarian bonds, politicians are in partizan bonds, and if the scholars and independent thinkers do not tell the boss-ridden, parson-ridden masses the truth, and uphold national and international justice, the people must gravitate downward. And we may presently hear a new classification of the world into men, women, and literatists. Is there not courage and magnanimity enough among the scholars of this country to tear the mask of 'patriotism' from the base, inhuman principles that have gained the authority of virtues? It appears, for instance, that by some informal acts of Congress the commandment 'Thou shalt not kill' has been superseded by 'Thou shalt not remove the American flag from any place where it has been raised.' I suppose if bulldogs had a decalog the first commandment would be: 'Wherever you once stick your teeth, never let go! Be it in a weak and harmless animal, be it in man, woman, or babe, if your teeth are once fastened heed no cries, but hold on! This is the first and greatest commandment.' Is there a thinking man in America who does not see that if a flag is wrongly raised in any place the honor is in lowering it, the dishonor in keeping it there? . . . The nation has already heard the protests of some of its finest intellects, among them Howells and Charles Norton, and it may be now hoped that the bugle call of Samuel Clemens will be the signal for an uprising of intellectual forces in America similar to that which in France has just laid low the militarist dragon and plucked the spoil out of its teeth."

Mr. Conway lived in Paris during the last two years of the Dreyfus struggle; and he then for the first time realized, he says, "what tremendous power lay in the united intellectual forces of a cultured nation," even when almost the united religious sentiment was ranged upon the other side. He says:

"With the exception of two or three timid dilettantists, neither of whom ventured to discuss the Dreyfus case on its merits, the authors, professors, artists, confronted the python coiled around France in a phalanx that could not be broken by any military menace or ministerial persecution. I counted more than four hundred of these men of intellectual, literary, scientific, or artistic distinction. They were razed from the Legion of Honor, deprived of professorships, fined, challenged to duels, shot at by assassins, and went on inflexibly with their articles—articles never surpassed by the greatest publicists in history, Junius, Paine, Cobbett—and one after another hostile ministries fell before their terrible pen, until militarism, after crawling through all the mires of falsehood, perjury, forgery, was reduced to cover its defeat with the verdict at Rennes, at once perjured and ridiculous, that there were 'extenuating circumstances' for high treason!

"Such is the splendid record made by the genius of France at the close of the nineteenth century. One twentieth of the number of those French 'intellectuals'—that was the proverbial epithet for them in France—in America and in England equally united and heroic for justice and peace could have prevented the wars that in the Anglo-Saxon world have caused the sun of a century to set in blood.

"The admirable sermon of Cardinal Gibbons [preached in the cathedral at Baltimore, on January 6] may remind us that it is on the chief Protestant nations that the bloodguiltiness rests. In this day of judgment the Czar and the Pope rise up and condemn the Protestant powers that frustrated their efforts for peace. It was Protestant pulpits that shrieked for Spanish blood and Turkish blood; it is Protestant missionaries that clamor for Chinese heads. The shame of it all can not be effaced. But whether the twentieth century is to swell the outrages and the shame will depend on the adequacy or the inadequacy of our scholars and thinkers to recognize that man alone is the providence of this world, that the nation will be what men make it, that there is no law of progress any more than of retrogression, and that it rests mainly on them to restore the control of reason and righteousness, or by default permit the agencies of decay to have it their own way."

## FAILURE OF ITALIAN ORATORY.

WHY has oratory, particularly political oratory, so far been a failure in Italy? Admitting the fact, as attested by writers and observers generally, we find reasons for it given by Count di Ronzaglie. Despite the fact that Cavour was one of the greatest orators of his own age, and that other Italian leaders possessed great power of speech, yet, declares the count, Italian oratory is as yet very crude, and likely to remain so for an indefinite period. He asserts (in the *Deutsche Revue*) that the low state of general education in Italy, the lack of "an official speech" ("local dialects so often and to such an extent supplanting the pure Italian tongue"), and the unfortunate custom, in the Italian parliament, of speaking from the seat, not from a rostrum, have all combined to deprive the orators of Italy of "convincing power." But there is a deeper-seated cause than these. We quote from his article in the *Revue*:

"The power to convince is what the Italian political orator lacks first of all. . . . This lack is the result of an inborn and conscious want of seriousness, earnestness, which a superficial academic education has not helped. Rather, indeed, this natural inborn lack has been aggravated by what is called education in Italy. It is still further aggravated by a skepticism which is the inheritance of the Italian people, that skepticism peculiar to a people or an individual which has lived too long. The orator

himself is a skeptic, and feels that he is talking to a skeptical audience. He has no faith in his hearers, and feels that they have no faith in him. So he watches himself, constrains himself, and does not permit himself to be natural. He avoids the inspiration of the moment just where and when he should seize it. He holds himself back; more, he thrusts himself back. . . . He dares not give free rein to his thoughts and emotions.

"The consequence is that his hearers feel mistrust of him. They do not believe in the genuineness of his emotion because they do not feel it themselves. In the warmth of the orator, they always suspect some party politics, some 'ax to grind.' They fear to be led; each proposition appears to them as a bit of stagecraft, every oratorical development as solely a work of art."

Nothing, concludes this writer, will develop great Italian oratory and great Italian orators but higher general culture, a stereotyped national tongue, and, above all, "the revival of a belief in something."—*Translation made for* THE LITERARY DIGEST.

## A ROYAL BARITONE ON THE CONCERT STAGE.

SCIONS of royal houses not infrequently, like Prince Max of Saxony, go into the church, and still more often into the army or navy; but hitherto the professional musical world has not been thus graced. Recently, however, a royal singer has appeared on the European concert stage and is soon to be heard in America, in the person of the Marquis Francisco de Souza Continho, a second cousin to His Majesty the King of Portugal. *The American Art Journal* asserts that European critics pronounce his voice to be the greatest baritone of the age. It says of the royal singer, who in face and figure bears a striking resemblance to his cousin, King Carlos:

MARQUIS FRANCISCO DE SOUZA.

"The Marquis de Souza received his vocal training directly from the King, who was extremely interested in the beautiful voice and praiseworthy ambitions of the young grandee. He has received the best instruction obtainable, and it is perhaps natural that the best successes have followed. Aside from the popular, perhaps sensational, features concerning him, De Souza is an artist of dignity and rank. He created the part of Tonio in 'I' Pagliacci,' and the European critics unite in saying that modern Italian music has no greater exponent than he. The marquis is an intimate friend of all the present-day composers of Italy, and their works seem specially suited to his voice, which is powerful beyond belief, while it remains rich, warm, mellow, fresh, and sympathetic. He will come to America from triumphs all over Europe, lately from Norway, Sweden, and Denmark. He has excited more interest and comment than any other singer who will be here this year. A baritone voice with the attributes of his is even rarer than a tenor. He will be able to impart to students, through his singing, a very complete idea of the Italian method applied to a superb voice."

## HAS THE STAGE DECLINED IN THE PAST CENTURY?

THE lugubrious view of the modern drama lately taken by the critic of a great London daily has caused some stir in England. The dramatic writer of *The Daily Mail* is of the opinion that things are in a bad way in the stage world, and that they have been going backward for a hundred years. To be sure, he says, the nineteenth century has seen "an advance in scenic architecture, in stage-management, in financial prosperity, in personal advertisement, in social aggrandizement"; but a mere glance at the past "is proof enough that the art of drama has been steadily declining":

"A hundred years ago the stage was dominated by the Kembles, who, despite a certain grandiosity, might have founded a national tradition. Elegance and restraint—these were their characteristics; they despised realism as heartily as they hated violence, and they guarded the refinements of their art as jealously as the long line of actors which descends from Molière. Indeed, they achieved for England very much what the Comédie Française has achieved for France. They were interpreters rather than creators, and believed that the whole duty of acting was beautiful gesture and noble rhetoric. . . . Nor could the Kembles, incomparably talented as they were, be expected to survive the onslaught of Edmund Kean. For Kean cared as little for the authority of his predecessors as he cared for the opinion of the public. His turbulent genius inspired him to remake the art of acting; to cut away all the tones and movements of convention, and by a fierce return to nature to eclipse the past and to defy the imitation of the future. . . . . .

"For twenty years Kean ruled the stage without a rival, and when he died a reaction was inevitable. Once more genius was replaced by talent, and Macready reverted, as best he might, to the example of the Kembles. Now, Macready was in all respects the antithesis of Kean. He was a scholar, a gentleman, and a patron of letters. He was not content to win all his success by the representation of Shakespeare, and he did his best to encourage such talent as he could find. Sheridan Knowles, Bulwer, Robert Browning, and Westland Marston are among those whose plays he produced; and tho not even curiosity is ever likely to revive 'Virginius' or 'The Blot on the 'Scutcheon,' the plays of Bulwer still hold the stage, for which their falsity befits them. But Macready, like many another actor-manager since him, did not despair of a union between intellect and the stage. He knew enough of his own profession to despise it; and he is the link which binds the cultivated actor of to-day to the inspired barnstormer of eighty years ago. . . . . .

"And to-day, who are the actors who carry on the old tradition, so often and so pitilessly broken? They are like the sands for number, since talents are as common as blackberries. There are no actors yet with us great as Kemble and Kean were great. Our most famous tragedian—Sir Henry Irving—is an incomparable actor of farce and melodrama, who has wantonly attempted tasks for which his talent does not fit him. And the rest—Mr. Tree and Mr. Wyndham, for instance—have distinguished themselves in eccentric comedy far more highly than in the serious drama; nor do we see among the younger actors a single talent for tragedy or emotional comedy. As with the actors, so with the actresses, the level is higher than heretofore, but it seems as tho no one emerges from respectable mediocrity."

This criticism has been strongly resented by Mr. Beerbohm Tree, who is now acting in Stephen Philip's "Herod." Mr. Tree, who always takes a rosy view of the dramatic situation, and who last year replied tartly to Mr. Sydney Lee's criticism of modern Shakespearian productions, terms the foregoing strictures

"fatuous vaporings of an anonymous paragraphist." Addressing a recent meeting of dramatists he said:

"I have read in a great daily newspaper to-day with mingled feelings of amusement and contempt an attack on the drama of the nineteenth century by one of its enemies, in which the writer states that the drama has been steadily declining since the year 1800, until to-day it is moribund. Such an article is, I think, unworthy of the columns of a great newspaper. Nearly all the important journals have given a survey of the stage's progress during the past century, and this gentleman alone has had the 'courage of his ignorance' in reviling the stage and its representatives. But detraction was ever the weapon of the impotent. Happily the well-being of the drama is in the hands of those who are gathered within these walls—they will take care of it. And I think it is not too much to say that in no times and in no country has the influence of the drama—artistically, ethically, socially—been greater than it is at the present moment. At no time have its exponents been inspired with greater enthusiasm of effort—even if they have sometimes failed in accomplishment."

*The Pall Mall Gazette* says:

"Considering Mr. Tree's reputation and the manner in which the play which he is now producing at Her Majesty's has been boomed, so that one day you read it is Shakespearian, and another day that it is Marlowe that you are reminded of when you listen to the mighty lines declaimed by Mr. Tree, while on the third day you are told that the author of this wonderful drama is a classic at heart, one who more resembles Æschylus and Sophocles than either Shakespeare or Marlowe—when you read all this in the papers and magazines, you can well understand that Mr. Tree should be indignant at the 'ignorant' 'vaporings of an anonymous writer' who says that the drama is moribund. Out on such a libel upon genius! 'Tis preposterous!"

## "THE LEADING HISTORIAN OF AMERICAN LITERATURE."

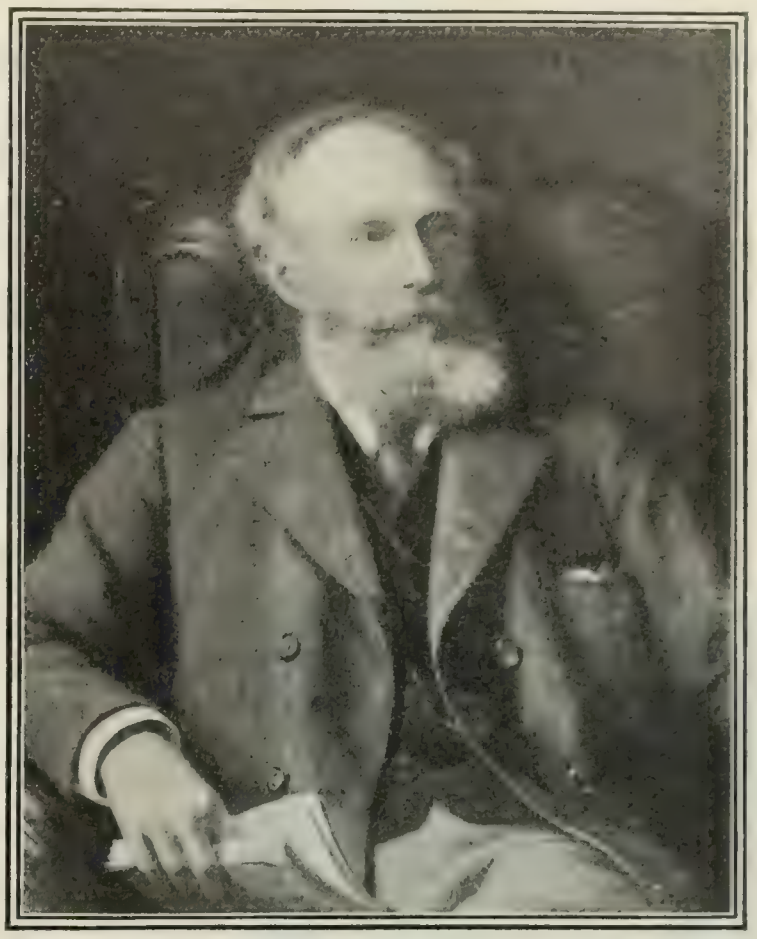
PROF. MOSES COIT TYLER, whose death was chronicled a few days ago, was known as an educator, an editor, and a lecturer; but his most enduring fame will undoubtedly rest upon his volumes on the "History of American Literature during the Colonial Period" and "The Literary History of the American Revolution." The first of these works was published in 1870 and the latter in 1888, and *The Outlook* (January 5), commenting upon the former, says that it "remains the most comprehensive and carefully prepared account of our literature which has yet been given to the world." It adds: "The work is notable for breadth of view, for sanity, and for first-hand knowledge of the material; it is full of literary insight and discriminating criticism. Professor Tyler's treatment of Jonathan Edwards as a man of letters is a capital example of his ability to see for himself before other people had begun to see."

Speaking of the later work, the Chicago *Times-Herald* says:

"It is not only an excellent piece of literature in itself, but it is also a political revelation. Tho the traditional view of the great struggle [American Revolution] is in the main the true view, tho as we look back upon that time we can never hesitate for a moment to believe that what we call the patriot cause deserved its name, no one who has studied Professor Tyler's interesting and instructive volumes can fail to recognize that the American tory was not that villain of melodrama so long cherished in the popular imagination."

Professor Tyler, had he lived a few days longer, would have been elected president of the American Historical Society, of which he was one of the founders. At the time of his death he held the chair of American history in Cornell University, having been previously professor of English language and literature in the University of Michigan (Ann Arbor), and having declined in 1896 a call to Yale University to become head of the English department. He was also, in the early days of *The Christian Union*, its literary editor, and still earlier in his life, in the sixties, he acquired a very considerable reputation as a lecturer, and, according to the Boston *Transcript*, "it was predicted he would become the natural successor of George William Curtis in that popular field." The same journal says of Professor Tyler's works on the history of American literature, already mentioned:

"These volumes are very fascinating reading, the first two [on the colonial period] especially. They involved much research,



THE LATE PROF. MOSES COIT TYLER.

and they present in a picturesque way the fragmentary material from which American literature is an outgrowth. He sketched the influence and the development of that early period of evolution with remarkably clear discernment, and the product either as a work of reference or a source of entertainment will hold for years to come a valued place in historical family libraries."

The tributes to Professor Tyler's personality form a notable feature of a large number of editorial notices of his death. This from the Detroit *Free Press* will serve as a sample:

"In his personality, Professor Tyler was attractive beyond resistance. His magnetism was gentle and soothing, but perpetual and irresistible. In all his attributes he was good, earnest, of enlightened conscience, and captivating. Whether in the pulpit, in his responsible chair of the faculty, or writing with that delightful simplicity of style of which he was a master, he was guided by a lofty and unerring sense of duty, speaking with the aid of profound knowledge and exhaustive research. To sit under his teachings was an inspiration to the best that can be made of life. In all that he said or wrote there was a noble expression of thought adorned and strengthened by the manner of its expression."

**Will American Painters Lead the World?**—Amid the accumulation of reviews of the nineteenth century and its varied achievements, we find an article by Charles H. Coffin on a century of American painting. The most interesting part of the article (*Harper's Weekly*) is its conclusion, which runs as follows:

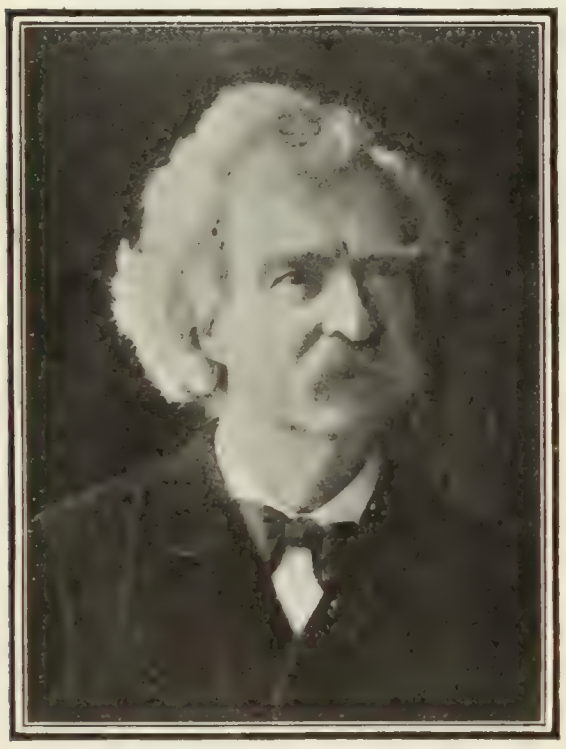
"The American student to-day has no need to go abroad to learn his craft; the means of instruction at home are at least as good as any he can obtain elsewhere. At a later stage of his training Paris will enlarge his horizon, but it is no longer a necessity, and least of all will it supply him with artistic motive. Paris, to-day, is almost without motive even for its own painters.

They know how to paint, but they have little or nothing to say. For motive, purpose, and the higher qualities of imagination and conception, to which the technique of painting is merely a vehicle of expression, the American student must rely upon his Americanism. Tho it is overlooked, this is really a very trite fact; admirably illustrated in the art of Norway, Denmark, and Holland particularly. They are self-centered communities and their art is national. Figure-painters, as well as landscapists, find their motives all around them.

"A Danish critic at the recent Paris Exposition, who had also been a commissioner at the World's Fair, and therefore could form an estimate of the progress made by Americans, expressed the opinion that, if the rate of progress were maintained for another ten years, American painting would lead the world. He meant, I believe, that in technique our painters are already in the front rank, and that progress in the future will depend upon what they have to say catching up with their ability to say it."

## A LITERARY ASSAULT ON MARK TWAIN AND GOLDWIN SMITH.

SINCE his return from abroad, Mr. Samuel L. Clemens has been received by the American public with conspicuous marks of respect, even of affection, and various literary bodies in New York have celebrated his return to his native land and his final accomplishment of his self-imposed task in paying off the heavy indebtedness contracted by a business failure some years ago. There are some signs, however, that this hitherto uninterrupted pillar of European and American praise does not please some of his literary friends. Mr. Harry Thurston Peck, who is an authority on a good many subjects, including Latin literature, the principles of feminine beauty, the United States army, and the nature of humor, thinks that this "indiscriminate eulogy" has gone far enough. Mr. Clemens, he says, has been "slavered with praise," so that "life has been to him of late what Mr. Grover Cleveland many years ago described as just 'one grand sweet song.'" Mr. Peck, therefore, since others will not do it, proposes himself to furnish "an antidote." He says (in *The Bookman*, January):



THE LATEST PORTRAIT OF MARK TWAIN.

"Putting aside all prejudice and looking at his work in a purely achromatic way, a critical and truthful judgment upon Mark Twain can be summed up in a very exiguous space. Mark Twain is first and last and all the time, so far as he is anything, a humorist and nothing more. He wrote 'The Jumping Frog' and 'Innocents Abroad' and 'Roughing it,' and these are all the real books that he ever wrote. He set forth the typical American characters of Colonel Sellers and Tom Sawyer and Huckleberry Finn, and these are all the real characters that he ever drew. His later publications that are humorous in intention contain many gleams of the old Mark Twain; but, taken as entities, you can not read them from beginning to end. Some unduly optimistic persons who are fond of literary cults grown under glass have tried very hard to make the world believe that Mr. Clemens has great gifts as a serious novelist and romancer. By dint of iteration the world, perhaps, has temporarily come to think that this is true; but, all the same, it will not read these novels and romances, and it thereby shows that common sense and real discrimination may exist in practise even while they hold no place in theory. A hundred years from now it is very likely that 'The Jumping Frog' alone will be remembered, just as out of all that Robert Louis Stevenson composed, the world will ultimately keep in memory the single tale of 'Dr. Jekyll and Mr. Hyde.'

"This spasmodic and ephemeral outburst of enthusiasm over Mr. Clemens emphasizes for the thousandth time a melancholy truth about contemporary criticism. When a writer is doing good and forceful work and winning readers and laying the foundation and erecting the superstructure of an enviable reputation, our critics, even tho they may admire him, have not the 'sand' to say so. They are poor dumb sheep that never dare to take the lead in anything; but they stand around with unintelligent and foolish bleatings until some one whom they are not afraid to follow shall tell them what they ought to say. When Kipling was doing his finest work, such as he has never equaled in these later years, the critics did not dare to take him seriously. He was so unconventional and rough and strong that he frightened them; and so they slunk timidly behind their inkstands and said little feeble nothings and joked a little and called him a mere journalist, and then looked around to see if any one was going to hit them. After they had found out that his work was instinct with true genius, and that he was in reality the one real literary phenomenon of the last quarter of our century, they all rushed in at once and spattered him with praise and daubed him over with their flattery, and did their very best to make him seem absurd. By this time, as it happened, Kipling's best had all been done, and he was entering upon a period of a decline which may or may not turn out to be temporary. But the critics were as blind to his decadence as they had been previously blind to his great power; and, therefore, all the things they should have said about his early work they said about his later, so that he has been going on for the last two years receiving praise and admiration that are clearly a misfit. The same thing is quite true concerning Mr. Clemens. In the speeches that he has lately made he has said some things that recalled his earlier humor; but in the majority of his utterances the humor has been forced and the laughter which it has evoked has been extremely hollow. Yet just because it was Mark Twain, and because Mark Twain was once a true, spontaneous, and original humorist, the poor creatures who now write about him believe that everything he says must be amusing and delightful. If they do not feel the fun of it themselves, they think they ought to, and they write about it just as tho they did."

Mr. Peck, in a postscript, also takes up "the case of Mr. Goldwin Smith," who, he says, has, like Mark Twain, reached an age when he has "gone off," altho people, remembering his former powers, "refuse to recognize in him a very obvious deterioration." "As a matter of cold fact," he continues, Mr. Goldwin Smith's recent article on suicide in the New York *Sun*, so highly praised by that journal, showed that even in style he had committed "suicide"; "half a dozen young reporters in *The Sun's* own office could have taken the same material and set it forth in far more telling English." The conclusion of the whole matter is, in Mr. Peck's opinion, that there ought to be a "Scribe Killer, to put an end to any writer's literary existence as soon as he shows markedly the symptoms of incipient decay."

## NOTES.

PADEREWSKI'S new opera "Mauru" will be brought out early this spring under Schuch in Dresden. The libretto, by the Polish poet and sculptor, Nossig, deals with the tribal conflicts between Slavs and gypsies in medieval times. The music is said to be intricate, but melodious and full of local color.

ALONG with the continuous abandonment of the ancient classics, M. Anatole France points out that the tendency of the French language appears to be away from Latin usages and traditions, and toward Anglo-Saxon phrase. In commenting on this, the London *Academy* says: "We can understand this. To an imaginative Frenchman the acquisition of a racy English word, which he knows is understood in the East, in the West, on every sea, and in every port, must bring a sense of exaltation. Hence the English 'hall' is ousting the French 'antechambre,' and the English lunch is eaten instead of 'déjeuner.' 'Un vigoureux shake-hands' occurs in a new French novel, and even such expressions as 'to boss' and 'to give 'em beans' contribute to the growing anglicization of French."

## SCIENCE AND INVENTION.

### AN ALLEGED MESSAGE FROM MARS.

IT is claimed by Nikola Tesla, if we are to believe interviews published in the daily papers, that while he was experimenting recently with long-distance space-signaling, his instruments persistently recorded a signal that could not have originated on the earth and must have come from some point outside. He believes that it may have been an attempt on the part of intelligent beings in Mars to communicate with us. In an interview printed in the New York *Herald*, Mr. Tesla is made to speak as follows:

"In my investigations, disturbing atmospheric influences were almost wholly excluded. It would have been impossible for other experimenters to note the effects which I have discovered, for with the Hertzian devices only a very narrow region can be explored, whereas I was able to observe the electrical condition of a large portion of the globe, a stretch of land 2,200 miles in width and breadth. That these actions are due to causes heretofore unknown I am convinced.

"I feel that I have not been led away by my imagination, but that my sight was true as ever before, and I am confident that future investigation will confirm my statement.

"Nor have I the slightest doubt, judging from my experiments and measurements, that with a properly constructed electrical oscillator an amount of energy can be transmitted to a planet, as Venus or Mars, even at their greatest distance, sufficient to bring into action a sensitive instrument, such as I have been using in my own observations.

"Furthermore, it is an error to believe that a great expenditure of power is necessary for interplanetary communication. What is needed is an effect specifically great—an enormous rate of energy delivery, but lasting each time only a fraction of a second, so that the total power used up is small. Now, with my oscillator I can make this rate equal to five million horse-power and more, if necessary, and my calculations show that a small fraction of this rate is amply sufficient for conveying a message to Mars.

"Heretofore light was the only known agent for communicating with a planet. It is easy to show that by its means such a result is virtually impossible, owing to the rapid diminution of energy, with the distance and the impossibility of concentrating in an instrument the energy falling upon a large area. By the method and machinery I have devised we are enabled to convey an immeasurably greater amount of energy to the planet, and the observer there, instead of utilizing in his instrument only an infinitesimal amount of the entire energy conveyed, can avail himself of a large portion of the same.

"A practical solution has thus been found both for transmitting and receiving messages, and we can only hope that there are beings as far advanced, and possibly further than we are ourselves. I see no harm in holding fast to this possibility. This thought can not but make us better and give us a fresh interest in life."

Scientific journals have not commented upon these claims, and other scientific men, when interviewed by reporters of the daily press, have expressed incredulity. Some have been outspoken in ridicule. An interview is printed in *The Sun* (January 8), purporting to have been held with Sir Norman Lockyer. Sir Norman is reported in a later issue to have denied the substance of this interview, and to profess admiration and respect for Mr. Tesla's work. What Sir Norman is represented to have said does, however, fairly well represent the general attitude of the scientific world, and we reproduce it here. He is reported as saying:

"I attach no importance whatever to them [electrical disturbances reported by Tesla]. The earth is always in a state of vibration. When these vibrations are on a large scale they are called earthquakes. When they are infinitesimal, they are not noticed, except by the most delicate magnetic instruments. If Mr. Tesla received a message from Mars, the electric transmitory influence must have been general, not local.

"Why should electric energy transmitted from Mars have made its presence manifest solely in Colorado? All the magnetic observatories in the world would have been aware of it simultaneously. Paris, Peking, Berlin, and Moscow would have recorded it as soon as Colorado. Any solar magnetic disturbance affects the whole earth, and the same law governs planetary disturbances. Thus the whole of our planet would be conscious of a message from Mars at the same moment.

"Regarding the immense accumulation of electrical energy which Mr. Tesla says is necessary for the delivery of his interplanetary signals, it is quite possible for him to concentrate the enormous electrical power he speaks of. He can also launch it into space, but whether it would reach Mars is more than I should like to assert."

The editorial comments of the lay press are various. The Philadelphia *Inquirer* believes that "one man's opinion is as good as another's" on such a subject, but is disinclined to credit Mr. Tesla. The Boston *Journal* is inclined to doubt the accuracy of the interviews with Tesla, and concludes that the true scientist is content with demonstrating facts. "Beyond that kind of demonstration," it says, "the wise man will not venture." The Providence *Journal* publishes half a column about what would be true if Tesla's assertions are to be credited; but it ventures no opinion as to the facts in the case. Mr. Garrett P. Serviss writes in the Atlanta *News* on methods by which it might be possible to communicate with the inhabitants of a planet, and on devices that they might be expected to use to attract our attention; but he, too, fails to state either belief or disbelief in Mr. Tesla's reputed claims. There can be no doubt, however, that the scientific world believes him to be either trying to make a new sensation out of nothing, or to be the victim of self-deceit. As the Boston *Herald* puts it:

"The readers of Mr. Tesla's periodical announcements have borne patiently with his flights of fancy. At the same time it seems pertinent to remind him that in performance he has fallen several long laps behind promise. The world has yet to witness the realization of revolutionizing discoveries for which he claimed credit. . . . There is not an electrical advance of note which has failed to elicit from him a definite and specific asseveration that he would presently bring it to a wonderful state of perfection.

"During the earlier stages of his career Mr. Tesla did accomplish some practical results; but the clear-headed technologist who deals in concrete facts seems to have been merged in the dreamer, who beguiles his hours with fantastic visions and lives in a realm of unreality."

### PRIGGISHNESS IN SCIENCE.

THE modern tendency toward specialization is doubtless a good thing, and it is probably inevitable whether it is good or not; but it has more than one regrettable feature that has frequently been noted. The specialist is apt to lose sight of the whole field of knowledge beyond his specialty; in other words, he becomes a narrower, instead of a broader, man. One phase of this is noted in a recent paper in *The Engineer* (London), which is quoted and commented upon in *The Engineering Magazine* (January) under the heading "The Priggishness of Science." Says the writer:

"Modern engineering has become so entirely a matter of applied science that it is to a great extent identified with scientific teaching, and hence the interest taken at the present time in technical instruction.

"This demand for practical instruction appears to have encountered a decided obstacle in the form of the great army of scientific men who believe in knowledge solely for its own sake, and somehow feel as if it is degraded by practical application. We hear of pure mathematics, and pure science, these terms necessarily implying that there are forms of science and mathematics which may be considered as impure. Indeed, a German professor, in the introduction to an otherwise excellent treatise on the infinitesimal calculus, gravely stated that he objected to the use of any illustrations of rates and variables taken from such subjects as falling bodies and other physical phenomena, because

they tended to introduce conceptions incompatible with the idea of pure mathematics, which should be devoid of any material connections."

The writer of the paper in *The Engineer* has to say on this:

"A great deal of harm is done to technical progress in this country by scientific cant. The Royal Society represents both science and scientific cant. According to scientific cant nothing that is technical is scientific. Science is only concerned with phenomena, and not with their useful application. If you experiment with 37 grams of steel in a Berlin porcelain crucible, or especially in a tiny electrical furnace, with a standardized platinum pyrometer and a spectroscope, you are doing scientific work; but if you work with a ton in a converter, this is merely technical—tho you will be patronizingly told that your work may throw some light on scientific questions.

"No scientific man will deny in words that the probable ultimate use to man is the criterion of value of a scientific discovery; but all the same the tacit assumption is that anything technical is unscientific. The common type of scientific man thinks his knowledge of necessity includes all technical knowledge; but he can not for a moment believe the technologist's knowledge may include his. The result of this sort of scientific priggishness is that technology is discouraged, and made out to be less important than it is, while unimportant work is exaggerated as to its value. Pure science, as it is called, is considered something much higher than applied science."

This, thinks the writer, is an entirely wrong way of looking at things, and probably most readers will be inclined to agree with him.

## WHAT IS A POM-POM?

THE ordinary reader will remember that the "pom-pom" has been used successfully by the Boers in South Africa; but he will not be quite sure whether it is a musical instrument or something to eat. From an article in *Cassier's Magazine* (January) by Capt. E. L. Zalinski, he may learn that it is a gun important enough to be described by the author as a "new element" in warfare. Says the captain:

"Briefly, the 'pom-pom' is a one-pounder automatic gun. It uses metallic cartridges similar to those used in small arms, but of a caliber of 1½ inches, throwing a shell weighing one lb. The cartridges are placed in a looped belt, and this is attached to the gun. By a simple operation, one of the cartridges is inserted in the barrel and is fired by pulling the trigger. After this the force of recoil is utilized to continue the firing automatically as long as belts with cartridges are supplied. The automatic principle has been applied in calibers up to 14-pounders. . . .

"When a gun is operated by hand it can be loaded and fired only a certain number of rounds in a minute, the rapidity of fire depending upon the time occupied by the cartridges falling into position by gravity. A small percentage of cartridges hang fire. These explode in hand-worked guns while the breech is open and the cartridge is being withdrawn from the chamber. This is the fatal trouble that was obviated in the automatic gun. It is very obvious that if, with a hand-worked gun, the gunner, in a moment of excitement, turns the crank or handle a little faster than the cartridges will fall in, the gun will jam and be put out of action. And this is exactly what did happen, and it discredited all kinds of machine-guns. When it was announced in the London *Times* that an American engineer had invented a firearm with a single barrel which would load and fire itself by energy derived from the burning powder, and also that, with a single barrel, the rapidity of fire was considerably greater than with the multiple barrels employed in the ordinary hand-worked machine-guns, the statement was received with a certain amount of incredulity. It was too good to be true. However, the gun was on exhibition at the time, and the little workshop where it had been constructed was soon visited by the Prince of Wales, the Duke of Cambridge, and hundreds of other distinguished people, both lay and professional. It was found that the story was no idle tale, but that a great discovery had been made, marking a distinctly new epoch in firearms. . . . . .

"Attempts were made to get this gun into the British service, but it was objected to on the ground that the projectile was unnecessarily large to kill a man and not large enough to be considered a piece of artillery. It was stated that an entire battery of these guns could be quickly put out of action by a single piece of field-artillery, and that there was no place for them in either service. Had it been stated previous to the South African war that a British field-battery of artillery could be put out of action by a single one-pounder in the hands of half-a-dozen farmers, the statement would have been regarded as ridiculous—quite as ridiculous as the statement would at one time have been considered that the little American yacht *Gloucester*, commanded by Wainwright, could destroy two Spanish torpedo-boat destroyers at Santiago. There is no question that a single piece of field-artillery would stand a very good chance of putting a one-pounder Maxim automatic gun out of action, on a perfectly level field, with no cover. But the Boer did not fight these guns in that way. It was only after the beginning of the Boer war, when the 'pom-pom' had demonstrated its practical value, that the British Government began to realize how important an element had been introduced into warfare in the field. They at once ordered Messrs. Vickers' Sons & Maxim, Limited, of Sheffield, to turn out as many of these guns as possible, giving them practically an unlimited order. . . . .

A "POM-POM," OR ONE-POUNDER MAXIM GUN.

Courtesy of Cassier's Magazine.

"The wonderful and unexpected success of these guns in the South African war was due, in a large measure, to the peculiar tactics employed by the Boers, who did not come out in the open to fight. With a piece of ordinary field-artillery the charge is such that sufficient dust and gas are blown into the air to make the gun visible even when using smokeless powder. It is difficult, also, to conceal a piece of artillery, with its horses and other accessories. Moreover, a piece of artillery recoils and has to be brought back into position and resighted for each discharge. This, however, is being somewhat minimized by improved non-recoil carriages, which are now introduced.

"With a pom-pom the recoil is all taken up inside of a stationary casing, and but little of its force tends to displace the carriage. The gun does not, therefore, budge when it is firing. The gunner takes deliberate aim, guessing at the range. He fires about five shots, which can be done by holding the trigger in the 'pull' position for about one second. As soon as the projectiles explode, he is able to observe exactly where he is hitting, and quickly readjusts his sights. After a few trials he is able to explode the projectiles on the exact spot required, and, as the recoil does not disturb the position of the gun, he can go on firing as long as he wishes.

"It is stated that the Boers seldom fired more than twelve shots

at a time without waiting for the gas to blow away. If they fired more, their position might be discovered by a cloud of gas and dust, sufficient to make them visible."

## A SAFETY SPY-GLASS.

MODERN optical devices will not enable one to see through a stone wall, but they are quite equal to the task of seeing over one without making it necessary to raise the head above the top. This is quite convenient when the presence of sharpshooters on the other side makes sudden death the penalty of rashness in this regard. *The Scientific American* describes (January 5) a new military spy-glass that seems to fulfil all the

THE FIELD-GLASS IN USE.

Courtesy of *The Scientific American.*

requirements of the officer who values his safety and yet wishes to look at his enemy. It says:

"The ordinary telescope and spy-glass which military officers have used for more than a hundred years is gradually giving place to an instrument far more powerful and less likely to expose an observer to the long-distance fire of an enemy. The list of dead and wounded sent home from South Africa shows that the modern high-power magazine rifle has rendered the lot of the commanding officer far more hazardous than it once was. This increased danger and the great ranges at which modern battles are fought have been the chief reasons why the ordinary spy-glass has been found inadequate by the modern army officer.

"The new instrument consists of two tubes hinged together and carried by a central handle. Each tube is provided with an objective and with an eyepiece. By means of a system of total reflection prisms the image formed by the objective is so deflected that the eyepiece, mounted at right angles to the tubes, may properly present it to the eye.

"When the instrument is open, the distance between the two objectives is about sixteen inches. The lenses and tubes are so arranged that a stereoscopic effect is obtained.

"In order to make use of the stereoscopic spy-glass, the eyepieces are first purposely focused. Since, in the majority of cases, both eyes of the same person are not equal, the two eyepieces are focused independently. The instruments are regulated for a 26-inch spacing of the eyes, which is the average. For persons having eyes differently spaced, there is a very simple mechanism for regulating the apparatus. A marking arrangement permits of making such regulations once for all.

"The stereoscopic spy-glass may be employed in two different positions of the telescopes, one nearly horizontal and the other nearly vertical.

"The first position increases the spacing of the eyes through an optical illusion. In this position of the telescopes remote objects situated in different planes can be seen. The second position increases (artificially likewise) the stature of the observer. In both cases, the observation may be made from a place of concealment. For the horizontal position of the telescopes, the observer merely takes shelter behind a tree and allows the ends of the instrument to project behind the sides of the tree. The observer [in illustration] can calmly make his observations while concealed behind a wall, with the two extremities of the apparatus carrying the objectives projecting above the obstacle."

The writer remarks that it is hardly necessary to dwell upon the utility of the instrument from a military point of view, and he quotes as follows from a report made by Lieutenant-Colonel Becker, of the Swiss army:

"With a common ordnance field-glass we observed, at a distance of about two miles, a trigonometric signal situated at the same height as ourselves and on the verge of a forest. It was impossible to recognize whether this signal was upon the very outskirts of the forest or remote therefrom. Upon making the same observation with the stereoscopic spy-glass, the signal appeared remote from the edge of the forest, and it was possible, besides, to estimate the distance that separated it therefrom at 40 or 50 feet. The artilleryman will at once recognize the advantages that may be derived from so precise an observation."

The writer concludes:

"The instrument under consideration magnifies ten times and embraces a linear field of 65 yards. Its weight is about a pound and a half, and it may be easily carried in a case."

## CENTER OF POPULATION OF THE UNITED STATES.

ACCORDING to the official announcement of the Census Bureau, the center of population of the United States is still moving westward, tho at a decreasing rate. It has gone fourteen miles farther west since the census of 1890, and this movement is the smallest in any decade during the past one hundred and ten years. Says the Pittsburg *Post* (January 9): "The journey of this interesting little star, as it stands on the census map, tells a whole story in itself of the general movement and distribution of the nation's population in the one hundred and ten years which have followed the first enumeration." It gives the following table and comment:

| Year. | Approximate Location. | Decade's Distance Westward. (Miles.) |
|---|---|---|
| 1790, | 23 miles east of Baltimore | .. |
| 1800, | 18 miles west of Baltimore | 41 |
| 1810, | 40 miles northwest by west of Washington | 36 |
| 1820, | 16 miles north of Woodstock, Va. | 50 |
| 1830, | 19 miles southwest of Moorfield, W. Va. | 39 |
| 1840, | 16 miles south of Clarksburg, W. Va. | 55 |
| 1850, | 23 miles southeast of Parkersburg, W. Va. | 55 |
| 1860, | 20 miles south of Chillicothe, O. | 81 |
| 1870, | 48 miles northeast of Cincinnati | 42 |
| 1880, | 8 miles southwest of Cincinnati | 58 |
| 1890, | 20 miles east of Columbus, Ind. | 48 |
| 1900, | 7 miles southeast of Columbus, Ind. | 14 |

"The exceptionally long distance the center traveled from 1850 to 1860 was due to the rush to the California gold-fields following the discovery of gold in that State in 1848. The present comparatively small movement westward since 1890 tells of a large Eastern growth of population when read between the lines."

This announcement of the continued Western movement of the center of population seems somewhat surprising to those who have noted that the States east of the Mississippi made most of the large gains in the past decade. Such a movement, therefore, does not seem consistent with the known changes of population in the last ten years. The explanation, we are told by the Cleveland *Leader* (January 8), is to be found in the method adopted by the census authorities in finding the position of the "center":

"The Census Bureau does not get at the center of population merely by ascertaining the dividing lines, east and west and north and south, on each side of which half of the people of the United States live, and fixing the center of population at their intersection. If that method had been followed, the official bal-

ancing-point would always have been far east of the places where it has been located, and the changes of the past ten years would have resulted in an eastward, not a westward, movement. More than half of the gain in population has been east of the point taken as the center of population in 1890.

"The Census Bureau system is to take account of distance as well as numbers. The center of gravity, so to speak, is located by counting every person living 2,000 miles away as equal to ten persons only 200 miles distant. The gain of 100,000 population in Oregon or Washington may offset an increase of half a million in New York. That is what keeps moving the official center of population westward, and it is the only reason why there has been such a change in the past ten years.

"But even under the government system of computation the westward progress of the central point of the nation, in the sense of numbers and distance together, has been less in the decade just ended than it was in any earlier like period. . . . The indications are that the end of the movement is about reached. Henceforth the region east of the present official center of population will almost certainly increase much faster in the total number of inhabitants than the part of the country which lies west of the point where the national center of gravity is now located.

"Already the growth of the eastern half of the country is far outstripping the progress of the western part, and there is no reason to suppose that the future will change this state of things. The course of empire is not so much westward as it used to be, and many young men born in the West are reversing Greeley's advice and going East to grow up in the part of the country which has given the greatest and most impressive proofs of vitality and continuing development."

## BACTERIOLOGY AND RELIGIOUS RITES.

MORE than one time-honored religious rite is the reverse of hygienic, and this has been particularly realized by scientific men since the recent development of bacteriology. A writer in *The Lancet* (London, December 1) says that the fact that bacteriology is a modern science, whereas religious rites and ceremonies date back as far as historical records will allow us to go, sufficiently explains the want of harmony between them. He adds:

"It would, indeed, have been a proof of marvelous prophetic intuition if those who first initiated religious ceremonies had foreseen and prepared for discoveries to be made many centuries later. Several of our correspondents have expatiated on the risk attending the promiscuous use of the communion-cup. This, however, is far from being the only risk of this description. The holy water in Roman Catholic churches is quite as serious a mat ter. The shallow, shell-shaped receptacle is placed barely three feet or so from the floor, so that the dust stirred up by the feet or shaken off from the persons who pass by readily falls into it. Innumerable fingers, not always scrupulously clean, are dipped into the water. Also, it is just at the moment of danger and trouble that the faithful are most prone to resort to their church for prayer and consolation. Coming straight from the sick-bed of some loved parent or friend, can we expect that the hands are always thoroughly disinfected before they touch the holy water? In Spain especially, and during the great cholera epidemic of 1885, we have noted that the holy water was absolutely dirty and living organisms could be seen with the naked eye, so what the microscope would have revealed may well be imagined. Now the fingers convey this water to the forehead and breast of the devotee, and of course the mouth might also be touched with the same fingers. But we do not see that there would be any lack of reverence shown if this holy water was changed more frequently, nor are we aware that it would be a sacrilege to mix with it some strong antiseptic solution. Again, at the Ahmed Mosque of Constantinople there is a small piece of the black stone brought from the Kaaba of Mecca. Against this piece of stone the true believers come and rest their heads for a considerable time. By so doing it is supposed that various illnesses can be cured, and as there are certain affections that can be favorably affected by the force of suggestion the results sometimes attained seem to confirm this superstition. But tho a hard stone is less dangerous than water and germs of disease deposited upon its surface would soon be oxidized, still patients following each other in rapid succession might convey to one another pathogenic microbes. The same may be said with regard to the kissing of the toe of the bronze statue of St. Peter at St. Peter's, Rome. Would it be too much to ask that this stone, this bronze toe, and other similar objects of reverence and adoration should be frequently wiped with a rag moistened in an antiseptic solution? Why should science and religion be divorced one from the other? If we have been endowed with the intelligence to foresee a danger, may we not, with all due reverence, take the necessary precautions to ward off this peril? With regard to the communion-cup, Count Leo Tolstoy, in his recent novel 'Resurrection,' describes the celebration of the liturgy in the chapel of a Russian prison. Here the priest cuts the bread into little pieces and dips them in the cup containing the wine. Then with a spoon he places the piece of bread and wine into the penitent's mouth. Thus there is no drinking out of the cup, and it would be much easier to have a clean spoon for each communicant than a separate cup. This is the general practise of the Orthodox Greek Church, and one which lends itself better to sanitary precautions than that of the English Church and her sister communions, as we have already pointed out."

**Bees and Mathematics.**—The construction of geometrically perfect cells is not the only mathematical operation performed by bees, according to Abraham Netter, who has just read an interesting paper on the subject before the Paris Academy of Sciences. The *Revue Scientifique* reports that he brought out the following facts:

"Not only is the construction of the cells carried on by mathematical rule, but many other operations of the insects also; for instance, the collection of the maximum amount of honey in the minimum time, and the division of the workers among the plants proportionally to the number of plants of the same species. In the hives, the number of bees engaged in ventilation is almost rigorously proportional to the daily increase of weight of honey, etc. Facts of this order relate to arithmetical proportion, while those having to do with cell-building relate to geometric ratios."

M. Netter is of the opinion, however, in spite of this show of apparent intelligence on the part of the bees, that "all their movements, without exception, are of the nature of reflexes"; that is, performed without conscious action, just as we close our eyes instinctively when a motion is made toward them.—*Translation made for* THE LITERARY DIGEST.

## SCIENCE BREVITIES.

A SURGICAL case that has been exciting much attention is that of Miss Rockefeller, daughter of the president of the Standard Oil Company. As described by Dr. Isidor Müller, a celebrated specialist of Vienna, in a lecture reported for the New York *Herald*, the left ear was "affected by the growing together of the 'hammer and anvil' bones. The trouble originated during the dentition period of infancy, and was so far advanced when the treatment began that the bone was partly destroyed. The left ear was apparently entirely deaf and the right was sympathetically affected After a treatment of twenty weeks the affliction was partly cured, a new drum having been built and the old one entirely destroyed. The 'hammer and anvil' bones were separated by the insertion of gold plates, this measure enabling the drum to grow freely in places where this would have otherwise been impossible.

"NATURAL gas in the United States, according to the last annual report of the United States Geological Survey, has sunk to about one third, in its fuel value, of what it was a few years ago," says *Cassier's Magazine*. "In 1899 the production of natural gas equaled in consumption the heating capacity of 5,400,000 tons of coal. Ten years ago, when this industry was at its height, the equivalent of the heating output of natural gas was equal to about 15,000,000 tons of coal. Both the great gas-producing fields are reaching extinction. The Ohio division, which once had 480 pounds to the square inch, has now no rock pressure whatever. The original rock pressure in Indiana, once 325 pounds, averages now 165 pounds, showing that two thirds of the product has been taken out and consumed. Over a very considerable area of Indiana, covering an area of about 1,500 square miles, industries which were using natural gas are either discontinued, working at a disadvantage, or substituting coal. The effect of this is plain in various directions, particularly in reduced business and opportunities for labor in part of the State. The aggregate value of the gas produced in 1899 was $20,024,864, a gain of $4,730,951 over 1898. This is in part due to a slight increase in the cost, but still more to an increased demand."

# THE RELIGIOUS WORLD.

## "THE NEXT AGE OF THE ROMAN CHURCH."

A ROMAN CATHOLIC observer, writing in an English weekly journal, calls attention to what he deems a distinct change in the religious atmosphere at Rome. A year or so ago, he says, the reactionary party in the Curia appeared to be in the ascendant, "Americanism" was condemned, Father Zahn's book of evolutionary biology was put on the Index, and Leo, in his encyclical "Testem Benevolentiæ," seemed to imply that a large party in the American church and on the continent of Europe were tending toward heretical views not unlike the Quietism of Molinus. Now, says the writer (in *The Pilot*, December 29, 1900), all this has changed:

"This year a succession of events has cleared the air. Cardinal Mazzella is gone. The Society of Jesus, which never will come to terms with democracy as long as it can help, is not now represented in the Vatican by that unrelenting and uncritical professor of divinity, who dealt with European scholars as if they were schoolboys, and reduced the world's history to a syllogism. Other cardinals are in the ascendant—Rampolla, who is not a theological expert but a politician, and who would fain be a statesman; Vives, the Spaniard, who has brought with him into the Sacred College a certain air of Franciscan *bonhomie;* perhaps the Vannutelli, exercised in all the arts of winning for themselves the liberal reputation not unloved of men who aspire to the papacy. The wind has changed; prelates are human, and in Rome itself there seems to be an understanding that American 'Progressives' shall be kindly entertained. Under such auspices it was that Archbishop Ireland journeyed to Paris, with the distinction almost of an ambassador from the United States. The name of Lafayette—the reception by President Loubet—the Grand Cross of the Legion of Honor, had their effect. When the archbishop arrived in Rome, he found a profuse welcome. Pope Leo invited him to address the circle about his throne; the archbishop dwelt on his favorite topic, the reconciliation of the Catholic Church with the English-speaking races. He was applauded on all sides; Cardinal Ledochowski embraced him; and Leo bade it be made known that the heresies called 'Americanism' were French and German. Nothing remains except that the Pope should declare officially what he has affirmed in conversation. The charges made against American Catholics are already withdrawn. And Dr. Keane, whom a French pamphleteer described as the most daring of Freethinkers, is now Archbishop of Dubuque, appointed by the Vatican with the full consent of the American hierarchy.

"But it does not follow that the questions so awkwardly handled under a misleading name have found their solution. America is out of the debate; France and Germany are not. A few weeks ago Mgr. Lorenzelli, the Nuncio in Paris, met at Lille a great gathering of the French clergy, and addressed them on the needs of the hour. Mgr. Lorenzelli is from Bologna—one of those grave Northern Italians who have little in common with the smiling South. Trained in the school of St. Thomas Aquinas, unacquainted with the movement of literature or criticism outside Italy, his argument was the familiar appeal to tradition, his warning against those 'who under the pretext of defending Christianity would dig up its foundations.' The moral had its sting, for Cardinal Richard, almost at that moment, was putting his veto on a series of articles in which the Abbé Loisy dealt with the Old Testament from a more or less modern point of view. If Mgr. Lorenzelli represents the Pope—and what is he doing at Paris unless he represents him?—the hopes of the 'Progressive' who thinks to get a free hand in questions of Scripture, and to smuggle in evolution by the way, are doomed to disappointment. . . . . .

"In the sphere of politics the Roman Church is not bound. Quite unlike is the situation as regards philosophy, science, and criticism. On all the subjects comprehended under these three titles she has given hostages to fortune or to history. There is a received view of the Bible. It can not be altered. There are dogmas which scientific men judge to be irreconcilable with ascertained facts. The dogmas will be maintained. There is a philosophy of the schools now largely fallen into discredit among thinkers, and hard pressed by the squadrons which Kant, Hegel, Herbart, Schopenhauer, and their lieutenants have brought up against it. The philosophy will be taught in all Catholic seminaries as long as they exist. To these things the church is pledged. If she can not advance, still less can she retreat. Her system is literally crystallized. Were it to change, it would fall into dry powder and float on the wind.

"These facts are plain, if we will not turn our eyes from them. And it is the conviction of her people, as of her bishops and the Pope himself, that to them the church owes her strength and dignity. But they may be disguised a little by the vague language, sometimes heard on Catholic platforms, in which excellent, well-meaning men declare that Rome has never been the enemy of learning; that she welcomes the results of science: and that truth can not contradict truth. Does this imply that Rome will surrender Adam to Mr. Darwin? Or the deluge to Mr. Huxley? Not the least in the world. She will surrender nothing. But she may be long in expressing a final judgment, altho it is anticipated in every one of her approved text-books. She may deal gently with individuals. Where the mysteries of psychology are concerned, she may tolerate—that is to say, not condemn outright—views sanctioned by an illustrious name, on condition that her school-system is left in its pride of place. With democracy she can come to terms, and she will do so, if it holds its own in the age before us. But her dogmas, her Bible, her metaphysics, her autocratic claims, she will never modify—and the world is agreed that she never could without denying herself in the face of mankind. The *semper eadem*, which is her boast, is likewise her *ne plus ultra*."

## "RITUAL MURDER" AND ANTISEMITISM IN EUROPE.

THE singular belief that Jews murder Christian children to obtain blood for ritual use has been gaining strength in Europe of late, particularly in Germany and Austria. *The Independent* (January 10) speaks as follows of this delusion, which has frenzied the minds of Christians against the Jews much as similar stories have inflamed the Chinese against the Christians:

"The case has been fomented by a number of cases of mysterious murder, like those of the as yet undiscovered 'Jack the Ripper,' whose bloody deeds in the Whitechapel district caused such excitement in London a few years since. Recent victims in Bohemia were boys and girls, whose assassination in districts largely inhabited by Jews, the populace, failing to discover any plausible cause, account as 'ritual murder.' A young Jew, who on a second trial has been found guilty as an accomplice in one such case, endeavored to clear himself by falsely accusing two other Jews as the real murderers, and asserted that he had seen them drawing off the blood, thereby strengthening the popular delusion. Millions of people in Germany, Austria, Hungary, and Russia remain fixed in the superstitious belief that certain secret Jewish services are performed with the blood of Christian children."

A caustic arraignment of these Christian Jew-baiters appears in the London *Register* (November 30), which, tho one of the two leading Roman Catholic weeklies of England, often treats what it deems reprehensible beliefs among Roman Catholics with unsparing vigor. It says:

"Jew-baiting still continues to be the weekly pastime of the Catholic press in Rome—a press controlled by, if not actually owned by, a section of the Catholic clergy in the Eternal City. That mischievous journal, the *Voce della Vérita*, and its contemporary, the *Osservatore Romano*, persist in exerting their influence in encouraging the antisemitic campaign in Austria, and their thinly disguised joy at the result of the recent Polna so-called ritual murder trial makes but sorry reading for tolerant Catholics. According to the Roman correspondent of *The Morning Post*, a committee of Belgian Catholics has been formed to appeal to the Holy Father to instruct the clergy not to encourage antisemitism nor to uphold the calumnious ritual murder theory. A somewhat similar appeal was addressed to Rome a few months ago by some representative English Catholics, including members of the nobility—for Rome thinks little of memorials not

subscribed to by at least one *principe*—with apparently no practical result. Whether the Belgian petition will fare better we much doubt; antisemitism is too deeply ingrained in the minds of some of our coreligionists to be removed by threats of memorials to the Holy Father. There is a great difference between the despatch of a petition to a sovereign and its receipt by the person to whom it is addressed. The Finns have realized this time out of mind, and sometimes a too vigilant custodian of a sovereign's person hesitates to trouble his master with complaints of the justice of which he is not himself fully convinced."

## BARON DE HIRSCH'S BENEFACTIONS AND THE FUTURE OF THE JEW.

SURPRISE is often expressed that so little public acknowledgment has been made of the benefactions of Baron and Baroness de Hirsch, which in munificence and impartiality of distribution equal or perhaps excel those of Peabody and many

THE PROPOSED DE HIRSCH MONUMENT.

of the chief philanthopists of the race. Mr. Oscar S. Straus, our late minister to Constantinople, recently summed up the good deeds of the De Hirsches by saying that "their benevolence reached from the center of Arabia to the Pacific coast—the five continents bear witness to their benefactions." Nearly five hundred millions were spent by them in promoting the welfare of their fellow beings without regard to race or creed. It is now proposed to recognize in a fitting manner these deeds and at the same time to inaugurate a movement for the eradication of racial prejudice. The monument soon to be erected in Central Park, New York, to "the Spirit of Philanthropy," as shown in the lives of Baron and Baroness de Hirsch, is regarded by men of all beliefs as a worthy way of inculcating this lesson of catholicity and tolerance. Such men as Cardinal Gibbons, Benjamin Harrison, Lyman Abbott, Edwin Markham, Minot J. Savage, and R. Heber Newton have joined in commending this monument; and this high public testimonial to a Jew by men of various faiths is regarded as one of the most pleasant events of the opening century.

The De Hirsch Monument Association, in its appeal for subscriptions "To Those Who Love their Kind," says:

"The Baron and Baroness de Hirsch never knew want themselves; both were born to wealth, and the baron was the third of his line enjoying a title of nobility. Neither cared for the applause of the world. One can not say of them, as it has been said of some other benefactors of mankind, that it was the memory of bitter days of struggle with poverty which made them tender-hearted toward the poor. Both belonged to families of bankers who had all that heart could desire of comforts and luxuries. Nor did religion especially guide them. Religion often seems to move men and women to charitable deeds through the implication that the reward will come in another world, that through gifts on earth riches are being laid up in heaven for the giver. With these two the motive seems to have been a desire to help their fellow men without any ulterior hope of benefits to be reaped in the hereafter. Altruism rather than obedience to the behests of the Bible was the motive power. And they were concerned with the idea of seeing that their wealth did its good before they died, at the same time that they did not forget to provide beforehand that it should continue to distribute its blessings after they had passed away. . . . . .

"Observe that it is not a statue to one or both of them. Their profiles may be found in the tablet which the female figure holds. This monument is a symbol, not an effigy of human beings. It is designed on a higher level of thought. Not so much will it recall the human beings themselves as the spirit that informed them, the spirit that dwells in all other human beings who, with their superfluous wealth, have done what these two did. It is the monument of all liberal, unselfconscious, unselfish givers. And it will remain as a stimulus to men hereafter, teaching them the lesson of Christ the Galilean, of Hatim Tai the Arab, of the Jewish, Hindu, Mohammedan, and Christian saints and seers, who overflowed with the love of man, and won deathless renown by forgetfulness of self."

The sculptor is Mr. George Bissell. The chief figure will be "Philanthropy." Says the committee:

"The group will be of bronze, cast at the Henry-Bonnard foundry. The pedestal carries out the same idea. It is widely hospitable, opening broadly its wings and offering rest to the weary. It will be of pink granite, polished, so that there will be an agreeable contrast between it and the rough greenish surface of the bronze. From twenty-five to thirty feet wide, the long bench at the feet of Philanthropy will beckon to the children and the footsore pedestrian as the homes and hospitals and schools and agricultural settlements of the Hirsches invite the people of every nation and every faith to come and partake of their hospitality."

## HAVE ANIMALS IMMORTAL SOULS?

THE suggestion of the survival of animal existences beyond death has always met a response in some minds. It has seemed to many lovers of the brute creation that such qualities as love, self-sacrifice, and loyalty—existing to a degree almost beyond that shown by the higher types of humanity—must persist after the physical change called death, and find a place in some *paradisus animalium*. Such is the view advocated by the Rev. J. Frewen Moor, late vicar of Ampfield, England, and the biographer and friend of Keble. In his recent book, "The Future State of Animals," he sets out to show that it "has been the opinion of many good and learned writers that there will be a future life for those whom we call the 'lower animals,' and that Holy Scripture favors, if it does not clearly demonstrate, that idea." And so ultra-orthodox a journal as the London *Church Review* (December 28, 1900), in commenting on this book, says:

"From the natural impulse of a generous heart to reject extinction for any creature that can give and receive affection, onward to the conclusions reached by devout inference from Revelation, we find much to support and little to condemn the idea, so long as it rests at the stage of a pious opinion. No principle of justice or of mercy makes against it. That the church does not discountenance the interpretation of Holy Scripture in its sense, we may infer from the teaching of such Catholic churchmen as Dr. Pusey and Canon Carter, the former, in his 'Parochial Ser-

mons,' reminding us that 'all nature having suffered together shall be restored together,' while the venerable canon, in his 'Parish Teachings,' dwells on 'the hoped-for restoration of the entire creation,' and maintains that 'as the whole world of creation around us suffers from the effects of the fall, so, in some mystery, they will know a resurrection, and be transformed into a pure, more blessed, more beautiful state.' 'In some mystery': true spiritual insight will not attempt to define; sufficiently disastrous instances of a bald realism are to be found in the secular press, in whose columns a recent controversy on this subject was settled, from the popular Biblical point of view, by the quotation of such texts as 'Without are dogs!' In this light, the warning of St. Paul, 'Beware of dogs,' is simply the yard-gate notice of the suburban householder. . . . The thoughts of poets, saints, and scholars are not a negligeable quantity; and the individual utterances of the author, friend, and biographer of Keble are too evidently the outcome of a mind holy and meditative, 'stay'd in peace with God and man,' not to command attention and reverent regard."

## DO ROMAN CATHOLIC PAPERS REPRESENT ROMAN CATHOLICS?

MUCH has been said of late about the influence of the Roman Catholic press on political questions. Shortly before the presidential election we pointed out that with scarcely an exception these papers were Democratic and strongly supported Bryan's candidacy. In a recent issue of the New York *Sun*, however, a writer who signs himself "Catholicus" claims that the Roman Catholic press misrepresents the real sentiment of his church. Ninety-five per cent. of them, he says sweepingly, "are edited or owned by humbugs and charlatans. Hence intelligent Catholics seldom read a Catholic paper." Alluding to what he regards as a typical editor of his own state, who "believes that editing a Catholic paper comes by nature, like Dogberry's reading and writing," he says:

"Just think of editing a Catholic paper without any training or any previous experience in journalism of any shape or form! His knowledge of Catholic theology is on a par with Sancho Panza's or Teresa Panza's. Such men will put on the armor of Achilles and, of course, get slain every time they attack the Hectors of the secular press. I believe Sir John Falstaff or Ulrica would succeed in journalism as soon as the editors of many of our so-called Catholic papers. We shall be told that we are not competent to give judgment on the question. We shall be told that we could not do as well ourselves. Their argument may be summed up in a few words: Who drives fat cattle must himself be fat. . . . . .

"It will be interesting to read the editorial comment of so-called papers on the President's message to Congress. They can not ignore it. They will probably assail its author with a bitterness and meanness worthy of themselves. They will attack him with a flippancy and impudence that only men of small intellectual caliber or men with a smattering of knowledge would be capable of. What they read never seems to pass through the alembic of their own minds. They will give us what their employer suggests or dictates, which is equivalent to saying what his Majesty of Hades commands. Let some unfortunate Catholic layman protest against the vile manner in which the civil magistrate of the United States is treated. The victim of the editor's hate is handled without gloves. He is spat upon, buffeted, dragged from the hall of hypocrisy to the hall of prejudice; is crowned with thorns, scourged at the pillar of mendacity. How shall we permit the productions of these men's brains to become the intellectual pabulum for our children?"

The writer criticizes the Roman Catholic press for its espousal of the cause of the Cubans and Filipinos against the United States, and hints that these editors are thus the friends of Freemasonry, even if not actual Freemasons themselves. He says:

"So-called Catholic editors have written a good deal within the past few years on the nobility and Catholicity of the Spanish and the Portuguese and their possessions. The histories of those countries are accessible to every one. Within the past two hundred years Spain has robbed the church six times. Philip II. brought his Spanish bishops and priests to Holland, and made that great liberty-loving people Protestant. Charles III. went from Naples to Spain in 1759. Most of his courtiers were Freemasons. The brethren were controlled by the Grand Lodge of London, and England encouraged the brave Spaniard to join the order. The Spaniard did, and soon found Spanish commerce in the hands of England. Llorente, head of the Inquisition, was a good pious Freemason. In 1800 Urquijo, the prime minister, was a Mason of the thirty-third degree, and these holy Catholics wished to sever all relations with Rome. He and Zorilla, another knight of the three points, tried to import Russians and Jews into Spain in order that they might dominate the Christians. These be patriots and Catholics! Zorilla hoped to bring English Protestants to supplant the Catholic Spaniard. The dear friend of the so-called Catholic editors, the brilliant luminary of Freemasonry, Sagasta, tried to bring 80,000 Russian and Polish Jews to his native land to drive out his own countrymen. Some few years back the rector of the Catholic seminary of Salamanca was a Freemason. He taught atheism to the future priests of Spain. His name was Estalla. The professors in the seminaries of Osma, Cordova, and Murcia followed Estalla's example. The holy Chapter of Saint Isadore knew all about the square and the compass. Here are a few names of pious Catholics—God bless the mark!—who were devoted Masons: Aranda, Urtijo, Campomanes, Jovellanos, Espartero, Prim, O'Donnell, Castelar, Zorilla, and America's friend, Sagasta. Don Pedro, son of John VI., was a follower of the dark lantern. In Catholic Brazil, members of religious orders, priests and even bishops know all about the secrets of Masonry. A person could not join the Third Order of St, Francis unless he had been previously enrolled in some Masonic lodge. The children of the seraphic Francis drove the daughters of Vincent de Paul from Porto in Portugal. In the dioceses of Para and Olinda a priest had to get the key of the Tabernacle from a Mason to bring the viaticum to the dying. The bishops of South America who did their duty were imprisoned at hard labor. A priest can not say prayers outside a church in Mexico, or he shall be fined 200 piasters, or imprisoned for fifteen days. A priest can not appear in the enlightened republic of Mexico with an ecclesiastical dress on him. He is tolerated to do so in the church. Four hundred Sisters of Charity were banished a few years ago because they were Christians.

"The reader will please note that the editors of so-called Catholic papers would pour the vials of their wrath upon the poor layman who raised his voice in protest against the Spaniard, or in defense of his country, the home of freedom."

## KORESHANITY, OR THE UNIVERSE AS A HOLLOW GLOBE.

ONE of the most remarkable religious products of the fecund West is the system which has attracted attention for several years under the name of Koreshanity, founded by "Koresh," or, in temporal nomenclature, Dr. Cyrus R. Teed. "Koreshan universology" is, in the words of its founder, "a complete system of the science of the great universe of life," and the new religion "must supplant Christianity, as Christianity supplanted Judaism." Koreshanity, he explains, "has come to fulfil the hope of the world in the liberation of humanity from the curse, in the establishment of the kingdom of God on earth, the introduction of the New Era of Light and Life, of universal harmony and happiness."

The following summary of the system is taken from *The Flaming Sword* (Chicago, December 28), the official organ of the society, and published under the auspices of Koresh and Victoria Gratia, the latter called the "Preeminent of the Koreshan Unity. The writer says of the Koreshan creed:

"It is the antithesis of all modern theories, of all schools of thought. It is the climax of all mental progress, the ultimate and absolute truth of being and existence; it is the revelation of all mystery, the uncovering of the occult; the true explanation

of all phenomena, the scientific interpretation of nature and the Bible.

"COSMOGONY.—The universe is a cell, a hollow globe, the physical body of which is the earth; the sun is at the center. We live on the inside of the cell; and the sun, moon, planets, and stars are all within the globe. The universe is eternal, a great battery, and perpetually renews itself through inherent functions, by virtue of which it involves and evolves itself.

"ALCHEMY.—The science of alchemy is the philosopher's stone, the key to the mystery of life. Chemistry is false; alchemy is true! Matter and energy are interconvertible and interdependent; they are correlates; matter is destructible; the result of its transmutation is energy. Alchemy is the key to the analysis of the universe.

"THEOLOGY.—God is personal and biune, with a trinity of specific attributes. God in His perfection and power is the God-man or the man-God, the Seed of universal perpetuity. Jesus the Christ was God Almighty; the Holy Spirit was the product of His transmutation, or the burning of His body.

"MESSIANIC LAW.—The coming of the Messiah is as inevitable as the reproduction of the seed. The divine Seed was sown nineteen hundred years ago; the first fruit is another Messianic personality. The Messiah is now in the world, declaring the scientific Gospel.

"REINCARNATION is the central law of life—the law of the resurrection; reincarnation and resurrection are identical. Resurrection is reached through a succession of reembodiments. One generation passes into another; the millions of humanity march down the stream of time together.

"THE SPIRITUAL WORLD.—Heaven and hell are in humanity, and constitute the spiritual world; the spiritual domain is mental, and is in the natural humanity,—not in the sky.

"HUMAN DESTINY.—Origin and destiny are one and the same. The origin of man is God, and God is man's destiny. God is the highest product of the universe, the apex of humanity. Absorption into Nirvana is entrance into eternal life—in the interior spheres of humanity, not in the sky or atmosphere."

## DOES THE FREETHINKER THINK?

THE Freethinker is accustomed to giving and receiving hard knocks in the controversial arena, and so he will probably not be made hopelessly "groggy" by the forcible blows dealt him by a recent writer who bears the classic name of Addison Steele. Mr. Steele is hard on the average Freethinker, who, he says, "is a Freethinker because he doesn't think. He lets the other man think for him. His mental ability is such as to preclude the possibility of his investigating intelligently any advanced subject. He possesses just enough knowledge to make it dangerous for himself." Mr. Steele (who is the editor of *Kit Kats*, a Hubbardian "Periodical of Independent Thought," published in Pittsburg) proceeds to make the following sharp indictment of several types of Freethinkers:

"I next met the average Freethinker at a meeting of Theosophists. Here his predicament was truly painful. In the matter of ridiculing the Bible he, at least, could acquit himself creditably. But Theosophy involved such deep reading, to say nothing of the scores of unfamiliar terms used, that he was truly bewildered. In an off-hand sort of fashion I asked a few of the members for a little light on Theosophy. They stumbled about in the most painful manner. Their minds could not grasp the fundamental principles of the belief. They, however, were advanced thinkers and Theosophists. Some of them wanted to be odd, so they joined. Some were attracted by the mysterious phrases employed. Some were Theosophists because they could wear a badge. Everything that was said by the leaders was accepted without a murmur. No one would think of coldly analyzing the statements. They, too, thought themselves liberal.

"Then I met the average Freethinker deeply immersed in the contents of Mrs. Eddy's book on science and health. Mrs. Eddy has a few initials before and after her name which have slipped my mind. But it is the Christian Science Eddy to whom I refer. This young man admitted that he could not fully comprehend Mrs. Eddy's masterly production. He had read it through dozens of times, and he hoped some day for divine inspiration to assist in the interpretation. Yet he was a devout Christian Scientist because he had been cured of dyspepsia of seventeen years' standing. He was through with orthodox beliefs. He was done with the narrowness of creeds. He threw himself unreservedly into the arms of Mrs. Eddy. Yet upon cross-questioning him he confessed that he possessed but the most superficial knowledge of the subject. He admitted his inability to master the profound mush which Mrs. Eddy doled out. This was a true type of the average Thinker Who Thinks He Thinks.

"The fourth and last instance that I desire to cite to illustrate the species was found in a meeting of a Society for Psychical Research. This society was burdened with a high-sounding Hindu name, some Oriental paraphernalia, and a little incense. Here the profound thinker was in his element. He was in close touch with a superior being, who knew more about the ways of the Creator in one evening than the orthodox churchman does in a life-time. This society had its rooms directly opposite a church, and I well remember the contemptuous glances which were cast upon those who were wending their way to divine worship. Each glance seemed to say, 'Poor fools.' All the wisdom was possessed by the members of the high-sounding, Hindu-flavored organization. The leader discoursed on almost everything, showing a knowledge of nothing. Yet the foolish Thinker sat with his mouth open, drinking in the nonsense he couldn't begin to understand. He felt that he was being initiated into the mysteries of a higher life. He felt that he was transcending all creeds. He felt that his condition of mind was the height of free and unrestricted thought. It just goes to prove the pitiable plight of a man who knoweth not that he knoweth not. The members had been attracted by a yellow flag and some mystic characters. A glib talker mouthing in the abstract. A few lectures on subjects that have puzzled the best minds of the world and utterly meaningless to the members. Thus are converts made. No one was able to explain the doctrines preached. They were just Freethinkers.

"Whenever I see a man carrying 'Tom Paine's Common Sense' in his pocket every Fourth of July, I can tell you the books he reads. He has the entire 'Liberal Classic Series.' He lives on them. He becomes so lopsided and bigoted that the term 'Freethinker' becomes a misnomer."

## RELIGIOUS NOTES.

JUDAISM as well as Presbyterianism and Anglicanism has its "old school" and "new school," its broad church and high church, altho not under these names. The union of Orthodox Hebrew Congregations represents the conservative section of the Jewish church. At the recent biennial meeting in New York, resolutions were passed looking to a conservation of the ancient Jewish rites and ceremonies. The president, the Rev. Dr. H. Pereira Mendes, indicted Reform Judaism in his opening address, saying that "even laymen, as trustees of congregations, presume to introduce innovations," and still worse, that "the logical result of this is that as individuals they carry the principle of liberty to do as they please into their homes and personal lives."

IT has been decided to send out a new American expedition to Ur of the Chaldees if sufficient funds can be raised. The New York *Times* says: "Dr. Edgar James Banks, the director of the expedition, an Assyrian specialist, will be accompanied by a trained engineer and a United States government naturalist. New methods of excavating will be employed, notably, the removal of the dirt by wire cable, and soon the entire temple of the moon god, the most perfect specimen of Babylonian architecture known, will be laid bare. A map of Southern Babylonia, a country almost unexplored, but of the greatest interest to Bible students, will be made; specimens of the flora and fauna will be collected, and the priceless literary treasures of the Babylonian empire of Abraham's time will be recovered. . . . Dr. Edgar James Banks, Columbia University, will answer inquiries regarding the work."

IN spite of the iron hand of the imperial Government, the dissenter swarms in Russia. Among the many singular sects in that land are the Subbotniki, which signifies "seventh-day people." Of them *The Christian Work* says: "These people are Jewish in almost all the peculiarities of their worship. They reject the New Testament, learn to read the Old Testament in the original Hebrew, attend Jewish synagogs whenever this is possible, and attach equal value to the Talmud and to the Old Testament. A sub-variety of the Subbotniki reject all Scripture except the Pentateuch. On the other hand, large numbers of Molokani, disgusted with this Judaizing tendency among them, are joining the Baptists, and are moving out of their villages to establish settlements of their own, chiefly in the province of Baku. The Orthodox [Eastern Russo-Greek Church] missionaries, therefore, when they arrive at the scene of their future labors, will be confronted with the original Molokani, with Baptists, with the Judaic sects, and several other varieties of heretics."

# FOREIGN TOPICS.

## RUSSIA IN MANCHURIA.

ACCORDING to the London *Times*, an important agreement has been reached between Russia and China regarding the Russian military occupation of Feng-tien, the southern and most important province of Manchuria. Russia consents to the resumption of Chinese authority in Feng-tien and Mukden (the capital) on the following conditions:

"(1) The Tartar General Tseng [one of the signers of the agreement] undertakes to protect the province and pacify it, and to assist in the construction of the railroad.

"(2) He must treat kindly the Russians in military occupation, protecting the railway and pacifying the province, and provide them with lodging and provisions.

"(3) He must disarm and disband the Chinese soldiery, delivering in their entirety to the Russian military officials all munitions of war in the arsenals not already occupied by the Russians.

"(4) All forts and defenses in Feng-tien not occupied by the Russians, and all powder magazines not required by the Russians, must be dismantled in the presence of Russian officials.

"(5) New-Chwang and other places now occupied by the Russians shall be restored to the Chinese civil administration when the Russian Government is satisfied that the pacification of the province is complete.

"(6) The Chinese shall maintain law and order by local police under the Tartar general.

"(7) A Russian political resident with general powers of control shall be stationed at Mukden, to whom the Tartar general must give all information respecting any important measure.

"(8) Should the local police be insufficient in any emergency the Tartar general will communicate with the Russian resident at Mukden and invite Russia to despatch reinforcements.

"(9) The Russian text shall be the standard."

This agreement is regarded by the European press generally as the establishment by Russia of a *de facto* protectorate over Manchuria. The Peking correspondent of the London *Times*, Dr. Morrison, asserts that the functions given to the Russian resident in Mukden are "precisely similar to those of the Russian resident at Bokhara, or of the British residents in the native states in India."

Most of the press comment is to be found in British journals. Says the London *Times*: "A more complete abdication of the main prerogative of territorial sovereignty by one state to another could hardly be devised." Referring to Russia's previous assurances in favor of the territorial integrity of China, and adhesion to the Anglo-German agreement, *The Times* goes on to say:

"Her [Russia's] present course of action is as inconsistent with the natural interpretation of the Anglo-German agreement as it is inconsistent with that of Russia's own statements to the powers. It obviously confers upon Russia all the 'territorial advantages' in Feng-tien ordinarily involved in a protectorate, with the least possible share of the corresponding disadvantages. It disturbs that 'territorial condition' of the Chinese empire which England and Germany have declared it to be their purpose to maintain undiminished, and tends to lead to that partition of the Chinese empire which Russia has declared she regards with aversion."

In the judgment of *The Westminster Gazette*, such an arrangement was inevitable, and the British must be content with safeguarding their interests. British journals published in Japan and China regard the Russian advancement with considerable uneasiness. The Kobe *Herald* points out that if Japan had moved more quickly she might have secured Korea as a *quid pro quo* for the Russian occupation of Manchuria; but it is now too late. Russia "has clamped Manchuria to her dominions with clamps of iron—military occupation and military dictatorship," and "no sane man expects her to stop at a mere protectorate." Russia's professions about preserving the integrity of China, declares *The Japan Daily Herald* (Tokyo), are "so much moonshine and merely intended to fool statesmen of the mental caliber peculiar to the British Foreign Office." Russia, says *The North China Daily News* (Shanghai), is the only power that can feel really satisfied with the situation.

The Russian papers generally represent the Manchurian agreement as a necessary temporary safeguard for the province against disturbance, and as in the interest of the Chinese themselves. The semi-official *Novoye Vremya* (St. Petersburg) asserts that the agreement has been known for several months and has excited but little comment. Russia, this journal adds, does not interfere with France in Tonking or with Germany in Kiao-Chau. Why should these powers block Russia in Manchuria? The *Novosti* (St. Petersburg) declares that Russia is entitled to treat Manchuria as a conquered country, but will be faithful to her earlier declarations.

The *Temps* and *Journal des Débats* (Paris) recently devoted leading articles to the Manchuria agreement. The former journal points out that this agreement is "radically irreconcilable both with the official policy of the European concert and with the fundamental dispositions of the recent Anglo-German agreement, as well as with the solemn declarations of Russia herself." The situation, concludes the *Temps*, "is big with a series of complications of the highest gravity." The *Journal des Débats*, which is strongly pro-Russian, thinks that there is no doubt that the occupation is only provisional.

The *Volkszeitung* (Cologne) asserts that "Russia's extraordinary energy in Manchuria has so surprised the Japanese that public opinion in Japan has completely changed, with respect to Russia, from a tone of boasting to one of fear." The *Vossische Zeitung*, the liberal organ of Berlin, comments as follows:

"German interests are not affected by the growth of Russian influence in Manchuria; British interests are alike untouched by the military occupation of Feng-tien. It is probable, therefore, that the Russian action does not call for the adoption of compensatory measures on the part of the two contracting powers."

A writer in a recent issue of *The Contemporary Review* declares that all Russia's efforts in the far East are, in the main, merely wasted energy. What Russia needs, he holds, is "not acquisitions of unproductive territory, or high-sounding and rather costly protectorates in Asia, but a working alliance with the Western states." Territorial annexation is a mistake for Russia, he asserts, and he quotes from the St. Petersburg *Viedomosti* the conclusions of Prince Uchtomsky, to show what enormous sacrifices in men and money Russia has made to acquire the Ussuri and Amur territories. Commenting on this, the writer continues:

"The hundreds of millions of rubles expended in this unproductive manner would have been decidedly better employed in the improvement of agriculture and commerce in European Russia. It is unnecessary to look so far as Asia to find a proof of defective administration. What real gain, for example, has Russia derived from the possession of the Caucasus? After many years of coddling, a few cotton, tea, and tobacco plantations have been called into existence, perfectly useless, so far as industry and commerce are concerned; and all the while the administration of the Caucasus costs millions of rubles every year. Territories acquired under such unfavorable conditions are only a source of weakness to Russia. They are an unnatural and abnormal development that might be compared to the rapid growth of a youth beyond his strength. One peep into the ledger of the Russian state debt will sufficiently demonstrate to any one who cares to know that the indebtedness of the Russian treasury abroad has been steadily increasing during the last century."

This same point is emphasized by the New York *Journal of Commerce* in its recent "Economic Retrospect of the Nineteenth

Century." The following figures are given of the trade of the four chief European nations:

| | Per Head. In 1840. | Per Head. In 1897. | Per Head. Increase. |
|---|---|---|---|
| United Kingdom | $31.52 | $98.00 | $66.48 |
| France | 8.47 | 38.70 | 30.23 |
| Germany | 8.00 | 39.74 | 31.74 |
| Russia | 2 10 | 6.03 | 3.93 |

*The Journal of Commerce* comments as follows:

"With such an insignificant commercial status and so nominal a rate of progress as this comparison shows for the Czar's dominions, it is not easy to explain the political influence and the military standing which are so very generally accorded to Russia in the world's popular estimate. Measured by the mere standard of brute force, the Czar's empire may present to the popular eye a very imposing spectacle; estimated from an economic standpoint it is found the most inert and least civilized of all the European states. Russia leaves a humiliating record in the nineteenth century, and enters the twentieth with an equipment very inadequate to her pretensions."

## FRANCE AND THE RELIGIOUS ORDERS.

THE bill known as the Law of Associations, which has been eliciting such earnest debate in the French parliament, includes all associations, religious and other, in the same category with commercial and financial companies, subject to the regulations of the state and, when necessary, to be forced into liquidation. It forbids the formation of any religious society by Frenchmen and foreigners in combination, and of any association directed by foreigners and having adherents in France. This would render impossible in France the existence of any of the great religious orders whose superiors reside in Rome. It would also interdict the Salvation Army.

The *Matin* recently published an interview granted by the Pope to M. Henri des Houx, a member of its staff, which has been generally regarded as an attempt on the part of Leo XIII. to make known his objections in advance of the discussion in order to induce a spirit of compromise. After admitting that France has, in general, been the most loyal of all nations to the Holy See, the Pope declares that he "still can not think without bitterness of the enterprises now being undertaken by anti-Christian sects against France without any opposition from her Government." "It is my apostolic duty to speak out," he continues:

"The Pope can not consent to allow the French Government to twist the Concordat from its real intent and transform an instrument of peace and justice into one of war and oppression. The Concordat established and regulated in France the exercise of Catholic worship and defined, between the church and French state, mutual rights and duties. The religious communities form an integral part of the Apostolic Church as much as the secular clergy. They exercise a special and a different mission, but one not less sacred than that of the pastors recognized by the state. To try to destroy them is to deal a blow at the church, to mutilate it, and to restrain its benefits."

The Concordat referred to is of course the treaty between Napoleon and Pope Pius VII., made in 1801, which reestablished papal authority in France. This Concordat is silent in regard to the religious communities. This silence, in the opinion of His Holiness, means that "the regular clergy have no share in the special rights and relative privileges granted by the Concordat to the members of the secular ecclesiastical hierarchy"; but it does not mean that the religious orders are to be "excluded from the common law and put outside the pale of the state." Yet what is this proposed government bill, he asks, "if not a collection of measures the sole object of which is the dissolution and spoliation of the communities, a code of exceptions and exclusions to be applied to a certain class of citizens owing to their religious character?"

The Pope declares that what he asks for the congregations in France, as elsewhere, is "merely free existence under the general laws applied to all French citizens," and denies that he has ever encouraged any political activity on the part of these associations. He warns France that the consequences of passing such a law would "certainly be fatal to France and contrary to her most serious interests." Referring to France's traditional rôle as "defender of the faith" in the Orient, His Holiness continues:

"Why does France figure to-day by the side of the great nations in the concert of the powers settling the Chinese question? Whence have your Ministry for Foreign Affairs and your representative in Peking the authority which gives weight to their opinion in the assembly of plenipotentiaries? What interest have you in the North of China? Are you at the head there in trade and industry? Have you many traders there to protect? No. But you are there the noblest champions of Christian civilization, the protectors of the Catholic missions. Your foreign rivals are envious of this privileged situation. They are seeking to dispute your rights laid down in treaties that assign to you the rôle of defenders of native missions and Christian settlements. This is why you have heard statesmen far from friendly to France calumniating the Catholic missions, accusing them of being the cause of the ills let loose in China."

When the Emperor of China, several years ago, sent an embassy requesting direct diplomatic relations with the Holy See, the Pope refused, because, so he informed M. des Houx, he wished France to know that he did not want in any way "to diminish her prestige, her influence, and her power." He continues.

"Suppress the spirit of sacrifice and devotedness, stifle the faith which makes apostles, the charity which provides for the needs of the propaganda, suppress the regular discipline which alone accustoms minds to renunciation, and where would you find missionaries and martyrs? Compare other missions to Catholic ones. France, being no longer Christian, would be no longer expansive. She would herself subscribe to the abdication desired by her enemies."

"Have I not urged Catholics to serve the republic instead of combating it," he asks, and then adds:

"Is there now a desire to reconstitute the union of Catholics against the republic? How could I prevent this if, instead of the republic liberal, equitable, open to all, to which I have invited Catholics to rally, there was substituted a narrow, sectarian republic, ruled by an inflamed faction governed by laws of exception and spoliation, repugnant to all honest and upright consciences and to the traditional generosity of France? Is it thought that such a republic can obtain the respect of a single Catholic and the benediction of the supreme pontiff? I still hope that France will spare herself such crises, and that her Government will not renounce the services which I have been able to render and can still render it."

If France "abandons her inheritance in the East," other nations will eagerly take it up, says the Pope:

"Because I love France, and wish to remain faithful to the policy which I have pursued toward her, and which has brought on me so many contradictions, I am anxious to deter her from the rocks which she is nearing. Raised by my magistracy above crowns and states, I have no other thought than that of the flocks which my Master has confided to me. It is with tenderness that I call back those who go astray and rush toward the abyss."

The publication of this interview was almost immediately followed by the publication of an official letter addressed by the Pope to Mgr. Richard, archbishop of Paris. This letter, which was published in the *Croix*, presents substantially the same views as those set forth in the interview.

These declarations have created a great sensation in France.

The semi-official *Temps* fears an open warfare between Catholics and their adversaries, and advocates a compromise. It says:

"The policy of a great country like France can not be founded on the principle of reprisals. The *lex talionis* can not be the last word of progress. The republic, which has the right of self-defense, has no need whatever of taking vengeance. Resentments, moreover, even when most legitimate, can not possibly confound all the congregations and members of religious bodies in one and the same implacable verdict. By the side of the religious communities which have made the mistake of devoting their activity and resources to political propaganda, there are others to which France is grateful for services rendered abroad, where they carry far and wide our name, our language, and our influence."

The *Temps* affirms that a number of the religious orders in France have systematically ignored the wise counsels given them by Leo XIII., and that they have been and still are "persevering in the use of every means to procure the overthrow of the republic with the object of obtaining political domination and change of régime." The *Journal des Débats* emphasizes the loss France would sustain by the expulsion and dispersion of the congregations whose missionaries give her a special prestige in foreign lands. It attributes hostility to the church shown by Socialists and Radicals to ignorance; but this will not excuse the Government. It says: "When it [the Government] dismantles one of our last fortresses abroad, it knows perfectly well what it is doing. It sacrifices a real material interest of France with the object of prolonging its own existence for a few months or weeks."

Catholic journals in England regard the proposed bill as but an additional indication of the decadence of France. *The Tablet* (London), the personal organ of Cardinal Vaughan, declares that the "poison of revolutionary leaven is still working in France." It continues:

"The *affaire Dreyfus* was but a symptom of the deep-seated antagonisms which rend French society underneath the surface of official and constitutional unity. It would almost seem as tho they must end by wrecking it, unless she should fall again under the domination of some strong will capable of imposing peace on the hurly-burly of her discordant elements. The breathing-space afforded by the truce of the Exhibition might have been utilized to initiate some healing process of permanent reconciliation, but M. Waldeck-Rousseau's position as the representative of compromise between incompatible ideals is too precarious to render such action possible. The extreme party have only given their support to his Government for a consideration, and now demand their pound of flesh in a new instalment of anti-clerical legislation. Hence the introduction of the promised Associations bill, which means war to the knife on the church, through her second line of defense, the religious orders. The attempt of the French official orators to represent the latter as an excrescence on her organization is a barefaced travesty of facts, since they have been an integral part of it since the dawn of Christian civilization in Western Europe. The pretense that they are outside the scope of the Concordat because not expressly named in it, is equally baseless, since they were, when that instrument was negotiated, sufficiently protected by the common law of the land from the benefit of which it is now sought by special legislation to exclude them."

*The New World* (Chicago), organ of Archbishop Feehan, characterizes the bill as an attempt to "confiscate the property of certain religious orders, to drive these orders out of France, and to prohibit by law the education of boys in schools or academies in which religious and moral instruction is given." The reference in the last few words of this characterization is to M. Waldeck-Rousseau's declaration that he intended offering an amendment to the bill to the effect that "all persons who have not been educated in the public schools of the state shall be deemed unfit to occupy any military, naval, or civic position drawing a government salary." Speaking of religious toleration in Protestant and Catholic countries, *The New World* says:

"The situation in the world to-day, as regards the toleration of the religious orders and of Catholic education by Protestant and Catholic governments, is certainly a curious one. In Protestant England Catholic religious orders of all kinds enjoy the fullest toleration, while the Government subsidizes, to a small extent, a number of the Catholic schools. In Protestant Germany all the religious orders are tolerated except the Jesuits, and the Reichstag has once more passed the measure for their readmission with the approval of the Chancellor. There, also, Catholic schools receive aid from the Government. In this country, where the Catholics form about one seventh of the population, the religious orders are tolerated, and the Catholic schools, if they are not aided, are not molested. It is in Catholic countries alone that religious orders are persecuted and religious education is proscribed."

ENGLISH POLICY IN SOUTH AFRICA.

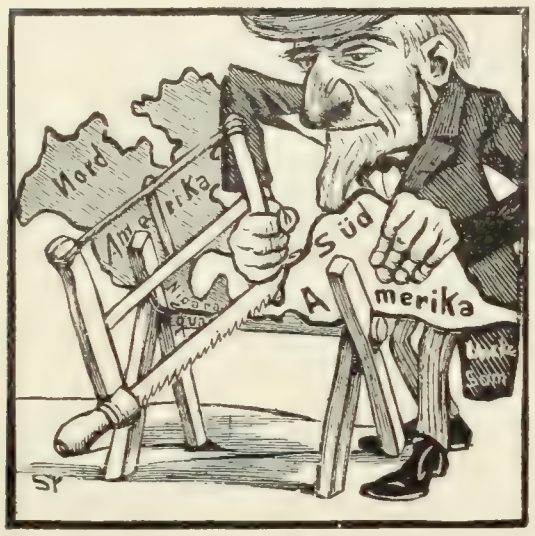
DUKE OF ALVA (to Lord Roberts): "Plunder! Fire! Death! So did I also to the fathers, but the sons fought themselves free."

—*Amsterdammer.*

## TRANSVAAL TROUBLES IN CARTOON

## MORE ABOUT THE NICARAGUA CANAL TREATY.

IT is generally supposed abroad that Great Britain, tho with a bad grace, will accept the amended Hay-Pauncefote treaty. Almost unanimously this is described as one of the results of the South African war, the United States benefiting, as other powers have benefited, by the determination with which the Boers defend their independence. Many papers outside of Great Britain admit the justice of the American position, but many influential English papers declare that Great Britain will not recede from the Clayton-Bulwer treaty. *The Times* (London) says:



UNCLE SAM TRIES TO SAW NORTH AND SOUTH AMERICA APART.
—*Kladderadatsch, Berlin.*

"We have to look on the amended treaty from the international standpoint, and looked at from that standpoint we can treat it in only one way. It is a bargain to which we can not agree, and to which no reasonable American who takes the trouble to reflect on our side of the question can expect us to agree. . . . By adopting these destructive amendments to the original Hay-Pauncefote agreement Mr. Lodge and his colleagues have simply played into the hands of the railway Senators, whose sole desire is to prevent the construction of any canal at all. If that agreement is not to be adopted in a form acceptable to us, we shall stand quietly upon our indubitable rights under the Clayton-Bulwer treaty—rights which are not and can not be affected by any action the American Senate may choose to take."

*The Times* and many other prominent papers can not believe that the United States would act according to the amended treaty in direct opposition to British wishes. *The Spectator* (London) thinks the Senate has shown very little ability to manage foreign affairs. It says:

"If ignorance is the cause, then it is strange that a body so ingenuous and so ill-versed in the practise of nations should be entrusted for one moment with foreign affairs. But it seems more probable that conflicting interests, connected, perhaps, with the transcontinental railways, are strong in the Senate, and that its aim is really to wreck the canal scheme, in the belief that such high-handed abrogation of treaties and alteration of agreements will never be passed over by Britain. In that case the matter is even more serious, for it seems a doubtful policy to entrust an interested body with questions of great national importance."

*The Weekly Freeman* (Dublin) scouts the idea of a determined British stand:

"As if Lord Salisbury or any other British Prime Minister will ever go to war with America to prevent America making an American canal with American money and defending it with American guns. Even the authors of the South African war would be incapable of such folly as that."

Continental European papers generally regard the amended treaty as a distinct worsting of England, and most of them rejoice accordingly. The *Kreuz Zeitung* (Berlin) says:

"American statesmen have been trying for years to abrogate the Clayton-Bulwer treaty, but the Senate now does it at one stroke. This is the same as if the Assemblée Nationale of Bordeaux were to adopt the Frankfort treaty after striking out the clause ceding Alsace-Lorraine. If, however, John Bull complains of Uncle Sam's perfidy, it can reasonably be answered, 'Measure for measure.'"

French journals point out that France can have no sympathy with the United States in this matter of the Nicaragua Canal since the chances of a successful Panama Canal are thereby materially lessened. Pierre Leroy-Beaulieu, the French political economist, has a long article on this phase of the subject in *L'Economiste Française*, in which he consoles himself by reflecting that it is Britain that has been "euchered." "What an insult it all is to England," he observes, "and what a bitter disillusioning for those English innocents or rogues who believe, or try to make themselves believe, in that chimera of an Anglo-American alliance!"

The *Handelsblad* (Amsterdam) does not doubt that the Senate took advantage of Britain's South African troubles. It says:

"The present helplessness of England just suited the American Senate, and so that body not only violated justice, but destroyed all faith in international agreements in which it is concerned. The incident is specially interesting because of this specifically American way of looking at international treaties. The Republicans are evidently just as bad in the matter as the Democrats. The attitude of Britain, on the other hand, is anything but that of a strong power. The English statesmen endeavor to forget that Blaine made them unpleasantly aware of the existence of the Clayton-Bulwer treaty when it suited the Americans to take that treaty more literally."

Exceptionally friendly to the United States is the Russian press. The *Novoye Vremya* (St. Petersburg) declares that time is a very powerful factor in altering treaties, and adds:

"Some people pretend to believe that altered conditions have no influence, and that the United States may not rid itself of an obligation which, fifty years ago, appeared just and equitable. The Americans give a corrupting and dangerous example, say these people. All this would be extremely naive, were it not hypocritical. The statesmen of the North American republic can point to many historical precedents for their action. One notable example is the declaration of Russia in 1870 that she no longer regarded as valid her promise to abstain from keeping a fleet in the Black Sea. If we had then followed 'hallowed traditions,' we might still be waiting for Europe to permit us to do what we had good right to do."

The *Birshewya Viedomosti* says:

"The principle 'America for the Americans' may not suit the English who have to fear for their own possessions in Canada, and it may be displeasing to some other powers having large interests in America; but it certainly does not disturb Russia. Since the war of the Revolution, Russia's sympathies have always been on the side of the republic. Fifty years ago the United States was still weak as a maritime power, and England could force the Americans to accept her as a partner in so important a matter as the construction of an isthmian canal, just as England formerly was able to interfere with Russia in the Orient. But during the past half century Russia and the United States have developed their powers, and they can afford to tear the nets which British diplomacy has woven around them. The victory which the Americans have won in this case can give us only satisfaction."—*Translations made for* THE LITERARY DIGEST.

## FOREIGN NOTES.

ACCORDING to *The Lokalanzeiger*, the Emperor of Japan will undertake a journey next spring to Europe. He will first visit the Czar, and expects to reach Vienna in May.

M. DE BLOCH, the apostle of peace, says an Italian journal, has subscribed a large sum for the museum of war, in which will be exhibited all the arms, models of different machines for warlike purposes, etc.

THE director of the official stenographers of the Reichstag, Mr. Edward Engel, who has charge of the reports of all the Emperor's speeches, states that from 1889 to 1900 Emperor William delivered more than 789 discourses, all of which are inscribed in the official reports. He is said to speak with great rapidity, pronouncing 275 syllables a minute, and sometimes 300; that is to say, five syllables a second. The above information comes from *The Nuova Antologia*. It may, perhaps, be interesting to others beside stenographers, to compare this statement with that in relation to the late Phillips Brooks, who is said to have delivered a short prayer at the rate of 275 words per minute. At a rough estimate English words average about one and one-half syllables each, and German words about two syllables, so that while Phillips Brooks delivered on that one noted occasion 275 per minute, which would give an average number of syllables per second of 6.9, the five syllables per second of the Emperor William would give him an average of 150 German words per minute.

## CURRENT POETRY.

### On a Fly-Leaf of Burns's Songs.

By FREDERIC LAURENCE KNOWLES.

These are the best of him,
Pathos and jest of him;
Earth holds the rest of him.

Passions were strong in him;
Pardon the wrong in him;
Hark to the song of him!

Each little lyrical
Grave or satirical
Musical miracle!

—From "On Life's Stairway" (L. C. Page & Co.).

### The Hilltop.

By CLINTON SCOLLARD.

Yonder the hilltop rises; were you there
How opulent a prospect would unfold,—
Forest and field beneath the morn outrolled,
And summits climbing skyward like a stair!
About you and above you lucent air;
Around your feet the gleaming kingcup gold,
And little vestal violets, snowy-stoled;
And near, in shadowy nooks, the maidenhair.

In the adjacent boughs the boon of song,—
Bird-harmonies with leafy interludes,
Guides to content and calm, sequestered moods;
And far, so faint and far you can not ken,
The oppressive city with its moiling throng,
The clamor, and the ceaseless surge of men!

—*The Critic* (January).

### Wild Flowers.

By MONTROSE J. MOSES.

"They called me wild," the rosebud cried,
"When they spied
Me blooming by the woodland side—
They brought me where no silv'ry streams
Mingle with my dreams,
Where no bird seems
To sing its song;
They did me wrong—
To tear me from my simple station—
As woodland rose; by cultivation,
They called me Maréchal Niel;
For the weal
Of Trade, they called me Jacqueminot;
But oh!
Despite the names they give me in their art,
I am a rose at heart!"

A maiden cried, "They called me wild—
A girl—a child,
Until they brought me from my Latin,
And gowned me in their silk and satin;
They judged me by my outward grace
And face;
They called me woman of the world—
Unfurled
Vain compliments about my duty
As an American Beauty;
They called me débutante;
For the want
Of better titles, called me belle—
Ah, well!
Despite the names they give me from the start,
I am a girl at heart!"

—*Life.*

### Unloved.

By EDNA KINGSLEY WALLACE.

Once, as I watched, did thou, my king, pass by
Absorbed, unheeding of my eager cry;
But evermore amid the bitter pain
Of losing thee is this, my soul's great gain—
That if thou had'st not, tho unknowing, passed,
I might have learned a lesser love at last—
With loving thee my spirit grows, nor mourns
To wear Love's crown, e'en tho it be of thorns!

*Truth* (January.)

**A Wholesome Tonic**

**Horsford's Acid Phosphate**

Dr. S. L. WILLIAMS, Clarence, Iowa, says: "I have used it to grand effect in cases where a general tonic was needed. For a nerve tonic I think it the best I have ever used."

# Two Practical Questions

A practical question put to a practical man is sure to receive attention, and pretty sure of a practical answer:

**If a piano, costing from $200 to $1,200, is played upon but two or three times a month, or even a year; and if the same hackneyed pieces are always played; is not an instrument which enables every member of the family to play upon that piano at will any selection he or she desires to hear, of interest as an investment as well as a source of pleasure?**

**Does the unanimity with which the Pianola has been indorsed by the musicians signify an error of judgment by them all?**

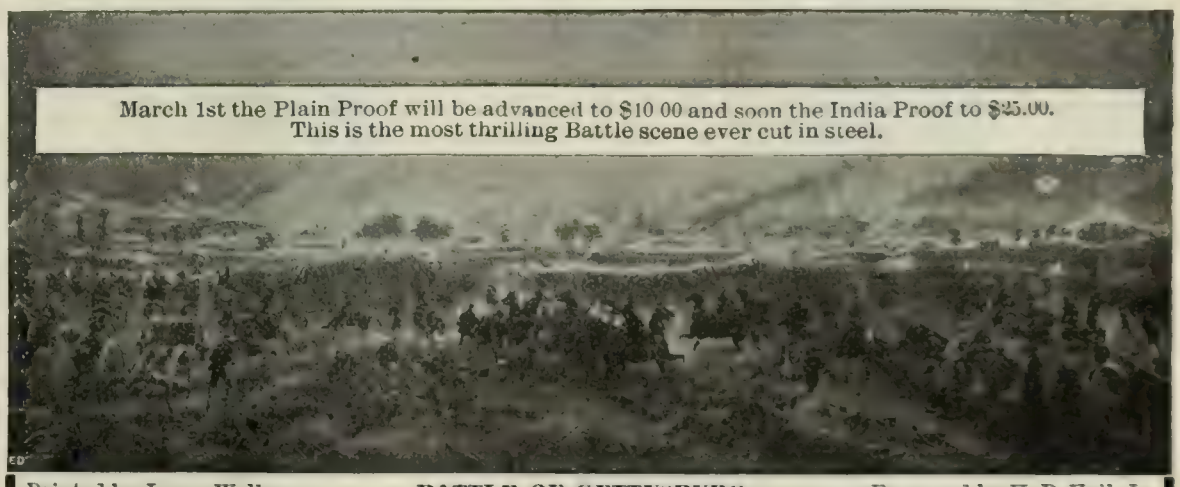
The Pianola costs but **$250.**

You owe it to your own self-interest to see if it is not worth it.

If unable to call send for catalogue No. 12.

## The Aeolian Co.,

**18 W. Twenty-third St., N. Y. - 500 Fulton St., Brooklyn.**



Painted by James Walker. **BATTLE OF GETTYSBURG.** Engraved by H. B. Hall, Jr.

**IT COST $50,000.00** and took **12** years to make Bachelder's famous steel engraving, "Battle of Gettysburg." It was begun within 48 hours after the Battle, by Col. Bachelder, the historian and military topographer of the United States Government for this Battlefield, to whom was voted **$50,000** by Congress for his services. **1,000** officers, including **47** generals, who were in this Battle, met the **Artist** on the Battlefield and arranged the details of this picture, thus insuring absolute accuracy. The whole Battlefield, **5** miles long and **5** miles wide, is shown in complete detail in the original, which we offer for a short time at such a sacrifice. The figures of the men and horses and other details in our original **steel** are **50** times as large as shown in the above reproduction, which gives only a faint idea of the beauty and grandeur of the original. It is so realistic that one can easily imagine the roar of cannon and the movement of the soldiers. **150,000** men were engaged in this Battle, and are represented and located in this picture. In a short time every owner of this engraving will hold it at many times the present price—which we will **quadruple** as soon as it is introduced. **Generals Meade, Hancock** and **Long-treet** said: "It is correct in landscape and the position of troops." Captain Long and Luther Minnigh, the official guides for the **Battlefield, say**: "It is historically correct in all its features, and is the most **beautiful, interesting** and **accurate** war picture in the world." A noted educator writes; "It should hang on the wall of every **Home** and **School** to inspire patriotism in the young." With each engraving we send an outline Key giving 200 references, showing locations of the **Generals, Corps, Divisions, Regiments, Companies, Cavalry, Infantry** and **Artillery** at time of Pickett's charge. **On Heavy Steel Plate Paper, size 24 x 48 inches.** Only a few will be sold at these prices.

**Original selling price of Engraving $100.00**
**Special price, on easy payments.**

## PERSONALS.

**Mr. Howells's First Visit to New England.**—William D. Howells went to New England from Ohio, in 1860, and saw the great literary lights of the New England of that day in their home surroundings. He was in the mood of a hero-worshiper, and he found his heroes all that his young imagination had foretold. Now, with the perspective of years behind him, he looks back with a fine sense of reverence, but with a more critical eye. In a new volume of reminiscences entitled "Literary Friends and Acquaintances," he gives us some graphic pen-pictures of men whose fame has become a national heritage.

When he called on Nathaniel Hawthorne, Mr. Howells had the feeling, he says, that possibly the great author, spying him in the distance, would climb to his fabled tower, drawing his ladder up after him, and there escape him. Mr. Howells writes:

"The door was opened to my ring by a tall, handsome boy, whom I suppose to have been Mr. Julian Hawthorne; and the next moment I found myself in the presence of the romancer, who entered from some room beyond. He advanced, carrying his head with a heavy forward droop, and with a pace for which I decided that the word would be *pondering*. It was the pace of a bulky man of fifty, and his head was that beautiful head we all know from the many pictures of it. But Hawthorne's *look* was different from that of any picture of him that I have seen. It was somber and brooding, as the look of such a poet should have been; it was the look of a man who had dealt faithfully and therefore sorrowfully with that problem of evil which forever attracted, forever evaded Hawthorne. It was by no means troubled; it was full of a dark repose. . . . After a few moments of demoralization which followed his hospitable attempts in me, he asked if I would not like to go up on his hill with him and sit there, where he smoked in the afternoon. . . . He asked me about Lowell, I dare say, for I told him of my joy in meeting him and Dr. Holmes, and this seemed greatly to interest him. . . . He was curious about the West, which he seemed to fancy must be more purely American, and said he would like to see some part of the country on which the shadow (or, if I must be precise, the damned shadow) of Europe had not fallen. . . . With the abrupt transition of his talk throughout, he began somehow to speak of women, and said he had never seen a woman whom he thought quite beautiful."

After a while, Mr. Howells tells us, he talked about Concord, about Mr. Alcott, his neighbor, and about his books. When the two parted, Mr. Howells was given an introduction to Emerson in the shape of a card on which Hawthorne had written: "I find this young man worthy."

The interview with Henry David Thoreau, whom Mr. Howells called upon the next day, was a failure. Thoreau was then much exercised over the war and was deeply interested in John Brown's cause. Mr. Howells writes:

"He came into the room a quaint, stumpy figure of a man, whose effect of long trunk and short limbs was heightened by his fashionless trousers being let down too low. He had a noble face, with tossed hair, a distraught eye, and a fine aquilinity of profile, which made me think at once of Don Quixote and of Cervantes; but his nose failed to add that foot to his stature which Lamb says a nose of that shape will always give a man. He tried to place me geographically after he had given me a chair not quite so far off as Ohio, altho still across the whole room, for he sat against one wall, and I against the other."

The next visit was to Emerson, with Hawthorne's letter. Mr. Howells continues:

"I think it was Emerson himself who opened his door to me, for I have a vision of the fine old man standing tall on his threshold, with the card in his hand, and looking from it to me with a vague serenity, while I waited a moment on the doorstep below him. He must then have seen about sixty, but I remember nothing of age in his aspect, tho I have called him an old man. His hair, I am sure, was still entirely dark, and his face had a kind of marble youthfulness, chiseled to a delicate intelligence by the highest and noblest thinking that any man has done. . . . He questioned me about what I had seen of Concord, and whom besides Hawthorne I had met, and when I told him only Thoreau, he asked me if I knew the poems of Mr.

**TO CURE A COLD IN ONE DAY**

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

# Catarrh, Bad Breath.

**A Wonderful Treatment that Destroys the Offensive Odors and Permanently Cures Catarrh.**

A Free Trial Package of the Remarkable Remedy is Mailed Free to All Who Send Name and Address.

Out of the myriads of experiments and remedies offered there comes a new and remarkably effective treatment that is unquestionably the best Catarrh remedy ever discovered. It is particularly valuable in all cases of Catarrh in which bad breath is one of the most offensive symptoms. It would pay any sufferer to give this treatment a trial since it cost nothing, and anything which promises relief and immunity from such a disgusting disease should certainly be given a trial.

Any one who has Catarrh must necessarily, to a certain extent, be a nuisance on account of the hawking and spitting, and it should be remembered if you have Catarrh your breath must be offensive to all you meet. Send your name and address to C. E. Gauss, 298 Main St., Marshall, Mich., and he will gladly send you a free trial package.

The remedy is meeting with astonishing success. Do not delay, but write at once.

**Vapo-Cresolene**

**"We Were Not Disturbed All Night."**

Parents tell us this who have vaporized Cresolene for their children with Whooping Cough or Croup. The record of twenty years shows the great curative and preventative power of Cresolene for Bronchitis, Influenza, Measles, Catarrh, Coughs, Scarlet Fever, and other contagious diseases. Recent tests made at the Yale Pathological Laboratory proves that vaporized Cresolene kills the germs of diphtheria. Send for descriptive booklet with testimonials. Sold by all druggists.

William Henry Channing. I have known them since, and felt their quality, which I have gladly owned a genuine and original poetry; but I answered then truly that I knew them only from Poe's criticisms: cruel and spiteful things which I should be ashamed of enjoying as I once did.

"'Whose criticisms?' asked Emerson.

"'Poe's,' I said again.

"'Oh,' he cried out, after a moment, as if he had returned from a far search for my meaning, '*you mean the jingle-man!*'"

## Current Events.

### Foreign.

CHINA.

January 15.—The German Foreign Office receives official despatches confirming the press report that the Chinese plenipotentiaries have signed the joint note of the powers.

January 16.—The Ministerial council at Peking prepares to take up the second stage of the peace negotiations, and the Chinese Government is urging a cessation of military operations by the allied forces.

January 17.—The German Foreign Office states that the first sitting of the peace conference in Peking will be appointed immediately after the different foreign envoys have convinced themselves that their copies of the joint note have been properly signed and sealed by the Chinese plenipotentiaries.

January 18.—A message is received from Minister Conger at Peking stating that the Chinese plenipotentiaries have signed and delivered the protocol. This removes the last doubt that had arisen as to the sealing of the agreement.

SOUTH AFRICA.

January 14.—Lord Roberts requests the Lord Mayor of London that no more fêtes be held until the war in South Africa shows more encouraging aspects.

January 15.—Lord Kitchener reports continued activity among the Boer forces, but no material change in the situation.

The British War Office arranges to reinforce the army in South Africa, and calls for 5,000 yeomanry volunteers.

January 17.—Defense measures are continued at Cape Town, and Lord Kitchener reports large forces of Boers massing in the Transvaal.

January 18.—Lord Kitchener reports the repulse by the British of two recent attacks by the Boers near Ventersburg and Standerton.

January 19.—The Boers capture a train in the Transvaal filled with mining material.

OTHER FOREIGN NEWS.

January 14.—The Right Rev. Mandell Creighton, bishop of London, dies in London.

January 15.—Johann Faber, founder of the Faber lead-pencil factory, dies at Nuremberg.

January 16.—In a speech at Wolverhampton the Earl of Rosebery speaks of the danger to England's commercial supremacy from the enormous resources of America and the energy and skill of the Germans.

It is reported from Copenhagen that under certain conditions the Danish Government would sell its West Indian possessions.

January 17.—In a speech at Sydney, N. S. W., Premier Barton outlines the policy of the new Australian Commonwealth; he declares that free trade is impossible.

January 18.—Alarming reports regarding the Queen's health are circulated in England.

The British Cabinet considers the Nicaragua

# LARGE EXPENSE
on horses
# STOPPED AT ONCE

**And slipping completely and surely prevented,—giving your horse a free, confident, firm footing on any kind of icy or slippery road by the Goodyear-Akron Perfect**

# RUBBER SHOE

**$1.50 a pair complete ready for use**

**$1.50 a pair complete ready for use**

## HALVES SHOEING BILLS

DOUBLES horse's work value. They stop the pounding concussion that soon makes him bow-kneed or disables him. They improve his action and looks. They increase a horse's selling price. They make life and work more pleasant for him. They are "wings" for a horse's feet.

Whether you own one or a hundred horses you should have at once the facts about the Goodyear-Akron Shoes. Every day you delay costs you shoeing bills and horse value. A Goodyear-Akron Shoe is a combination of iron with a peculiar sort of rubber pad that wears better than steel. It is a new production of rubber which no other manufacturer in the world can produce. It is a miracle for Horse Shoes.

canal treaty, as amended by the Senate, but no conclusion is made public.

January 19.—The illness of Queen Victoria takes a decided turn for the worse. Most of the members of the royal family are summoned to her bedside at Osborne, in the Isle of Wight.

A despatch from Curacao states that the United States minister at Caracas has delivered a note which is practically an ultimatum to Venezuela, in relation to the recent asphalt troubles.

The annual dinner of the American Chamber of Commerce is held in Paris.

January 20.—The latest news from Osborne is that the Queen's death is momentarily expected. The Prince of Wales meets the Emperor of Germany at London.

## Domestic.

CONGRESS.

January 14.—*Senate:* In the debate on the army reorganization bill, Senator Teller makes a bitter attack on President McKinley for his action in retiring General Eagan.

January 15. *Senate:* The army reorganization debate continues, and a lively colloquy on "imperialism" takes place between Senators Bacon and Hanna. In executive session Senator Pettigrew attacks the nomination of James S. Harlan to be attorney-general of Porto Rico as an attempt to influence Justice Harlan and the United States Supreme Court.

January 16.—*House:* The river and harbor appropriation bill is passed.

January 17.—*Senate:* The election and return of M. S. Quay as Senator from Pennsylvania are made the occasion for a remarkable demonstration. The debate over the appointment of Harlan is continued in executive session.

January 18.—*Senate:* The army reorganization bill is passed and sent to a conference committee of both houses.

January 19.—*Senate:* The Senate devotes the greater part of its session to the eulogies of the late Senator Gear of Iowa.

OTHER DOMESTIC NEWS.

January 14.—The United States Supreme Court decides that Neely shall be sent back to Cuba to be tried for embezzlement of postal moneys.

The electoral votes of all the States are cast in their respective capitals.

New governors are inaugurated in Illinois, Indiana, Missouri, and Texas.

January 15.—M S. Quay is elected to the United States Senate from Pennsylvania; Senator Hoar from Massachusetts; Senator Frye from Maine; Henry E. Burnham from New Hampshire.

January 16.—Ex-Governor James A. Mount of Indiana dies suddenly.

W. A. Clark is elected United States Senator from Montana; Thomas Patterson from Colorado; B. R. Tillman from South Carolina; James McMillan from Michigan.

Congress continues its investigation at West Point; Mr. Driggs severely denounces hazing and the cadets responsible for it.

January 17.—Grover Cleveland makes an address at the Holland Society dinner in New York, condemning the wars in South Africa and the Philippines.

The resignations of Professors Spencer, Hudson, and Little at Stanford University, in protest against the virtual dismissal of Professors Ross and Howard, cause great excitement in the university.

January 18.—The verdict in the Bosschieter case at Paterson, N. J., is murder in the second degree.

January 19.—The West Point cadets abolish hazing in a decree signed by members of the four classes and addressed to Col. A. L. Miles, superintendent of the academy.

AMERICAN DEPENDENCIES.

January 16.—*Philippines:* The demoralization of the native forces and lack of concerted resistance are thought to presage a more hopeful outlook and an early end to hostilities.

*Cuba:* The constitutional convention continues in secret session at Havana, and a provision in favor of universal suffrage is adopted. It is expected that public sessions will be adopted in the near future.

# THE WONDERFUL MISSION OF THE INTERNAL BATH

DO YOU KNOW that many of the greatest physicians of this city, including such authorities as Dr. Daniel Lewis, President of the State Board of Health, New York; Dr. Cyrus Edson, Late Chief Inspector of Contagious Diseases, New York, and Drs. Herman J. Boldt and W. B. DeGarmo, both Professors at the Post-Graduate Hospital, endorse and prescribe this treatment? Also that the following distinguished people are among its patrons: Admiral Tyrtoff, Cnief of Russian Navy; Princess Hatzfeldt; ex-Governor Goodell, of Vermont; U. S. Senator A. P. Gorman, of Maryland; Col. A. O. Granger, of Georgia; General Williams, G.A.R., Vt.; Miles Devine, Late City Attorney, Chicago, Ill.; Lillian Russell, New York, and hosts of others? Do you know that it goes to the root of and eradicates scores of the most troublesome and dangerous diseases that afflict mankind? Do you know that an occasional Internal Bath is a better preventive of illness and preserver of health than any other single means?

The record of its cures and benefits reads like revelation to those hitherto unacquainted with it. It is used (by means of the **"J. B. L. Cascade,"** the only scientific appliance for this purpose) by hundreds of the best known people in New York and by innumerable ministers, lawyers, actors and other persons whose intelligence gives unequivocal weight to their testimony.

It is known that seven-tenths of all disease arises from the retention of foreign matter in the human system; also that the greatest part of this waste is held in the colon, which is Nature's sewer. Hence the flushing of this sewer removes the greatest cause of disease. While immeasurably the best treatment for constipation, indigestion, etc., there is scarcely any known disease for which the **"J. B. L. Cascade"** may not be confidently prescribed.

We have thousands of testimonials from well-known people. The one we print here is from one of Philadelphia's most prominent and respected merchants.

JOHN LUCAS

One of Philadelphia's most prominent and respected merchants.

PHILADELPHIA, June 10, 1899.

DEAR PR F. TYRRELL:

In response to yours of the 5th, no man living has greater cause to speak highly of your J. B. L. Cascade than myself, for had it not been for its use a few years ago, I should not be living today. I was in charge of a faithful man nurse and the best medical attendance at Portland Springs, and so low and ill it was considered questionable by the doctors if I could reach my home alive, and death considered certain within a week after arrival. My attendant followed out your instructions to the letter in persevering with the use of your Cascade, and though now in my 76th year I am enjoying a fair share of health, apart from weakness of my heart

I recently returned from Jamaica, West Indies, traveling from one end to the other, per rail and in carriages, with comfort I have bought and made presents of your Cascade to several personal friends, all of whom are delighted with the wonderful results of its use.

Very sincerely yours,
JOHN LUCAS,
Firm of JOHN LUCAS & Co.

We wish to send free to every person, sick or well, a simple statement setting forth this treatment. It contains matter which must interest every thinking person. If you live in New York, you are earnestly invited to call and make an appointment for a free treatment, but if you cannot call, write for our pamphlet, "The What, The Why The Way," which will be sent free on application together with our special offer for this month.

"I do not like the key; it conceals nothing and threatens much"—W. W.; "While not as difficult as some 2-ers, it is as beautiful and attractive as any. The variation that takes B—B 5 is brilliantly attractive"—A. K.; "The rather extreme simplicity of the key detracts from the merit of the composition"—W. R. C.; "A shrewd key and eight clear mates"—G. D.

ERRATUM.

In Problem 531, the Q should be White.

### Pillsbury Mated.

Pillsbury's latest and best move was given to the public in Chicago, last week, when he wrote on the hotel register: "Mr. and Mrs. H. N. Pillsbury, Philadelphia." We tender the American Champion our sincerest congratulations.

### A Game Worth Studying.

This game, recently played in London between two amateurs (consulting) and the great Lasker, is, in the opinion of Dr. Shapiro, Chess-editor of the Batimore *American*, "a regular text-book for beginners." The notes are by Dr. S.

| AMATEURS. *White.* | LASKER. *Black.* |
|---|---|
| 1 P—K 4 | P—K 4 |
| 2 Kt—K B 3 | Kt—Q B 3 |
| 3 B—B 4 | Kt—B 3 |
| 4 Kt—B 3? | Kt x P! |

This wrinkle always develops Black's game. Study it and look out for similar chances.

| | |
|---|---|
| 5 B x P ch | ..... |

Castling bristles, leaving Black five available plays for his Kt, besides B—K 2, etc.

| | |
|---|---|
| 5 ..... | K x B |
| 6 Kt x Kt | P—Q 4 |
| 7 Kt—Kt 3 | P—K 5 |

Do you see that Black has two more Bishops in play than White?

| | |
|---|---|
| 8 Kt—Kt sq | B—Q B 4! |
| 9 K Kt—K 2 | Q—B 3 |

Forestalling P—Q 4.

| | |
|---|---|
| 10 Castles | P—K R 4! |

Black, in this game, accomplishes the high art of bringing all his pieces into play without moving them, implying, at the lowest estimate, a balance in the Savings Bank of Time.

| | |
|---|---|
| 11 Kt—B 3 | P—R 5! |
| 12 Kt x Q P | ..... |

Hoping to exchange Queens on the 15th move by Q—B 3 ch (with equality in material), but overlooking a masterly stroke in (14) Kt—Q 5.

| | |
|---|---|
| 12 ..... | Q—K 4 |
| 13 Kt x K P | Q x Kt (K 4) |
| 14 Kt—Q B P | Kt—Q 5!! |
| 15 P—Q 3 | ..... |

Mate in six if White had taken Q R.

| | |
|---|---|
| 15 ..... | Q—B 3 |
| 16 B—K 3 | P—R 6 |
| 17 P—K B 3 | P x P |
| 18 R—B 2 | Q x Kt |
| 19 R x P | Kt x Q B P! |

And the German wins easily with a little French polish.

### The Common Law of Problems.

Mr. Paul A. Towne, in his criticism of 518, said, "The key-move violates the common law of Chess-problems." We wrote to him asking: In what way does 518 violate the common law? and we have received the following interesting letter:

*Chess-Editor*, LITERARY DIGEST:

I have a collection of from 20,000 to 30,000 Chess-problems of all possible species, and have solved all of them in "ancient days." Their construction, for the most part, as I now remember, observes the following common laws:

1. The key-move of a problem must not be a check.

2. If a White piece is *en prise*, it must not be used.

3. The key-move should not *diminish* the moves of the Black K.

4. There must be only one key-move.

5. The key-move should not be a 'capture.'

Problem 518 takes the R out of *en prise*, and a mere observation of the result of its capture shows that it *must be taken out of danger*. Non-observance of common law 2 makes the construction and solution of problems comparatively easy."

PAUL A. TOWNE.

On this subject, James Rayner, late Problem-editor of *The B. C. M.*, says: "A piece *en prise* to another should not be used as a key unless it go to a similar position; whilst not positively objectionable, it does not commend itself as a chivalrous proceeding."

THE ANGLE LAMP

This lamp has been sold to thousands of people all over the country on an unconditional guarantee that it will be found as represented or money will be refunded. This should certainly tempt you to discard that smoky, ill-smelling affair called a lamp with which you are familiar, because you can try this lamp without a particle of risk. It never smokes, smells, or gives any trouble, is lighted and extinguished as easily as gas, and burns about eighteen cents' worth of oil a month. It is rapidly replacing gas and electricity in many hundreds of homes, stores, offices, halls, churches, etc., with immense satisfaction and economy. Ask for Catalog W.

The INTERNATIONAL Cyclopedia & Year Books

*We take other Cyclopedias in exchange.*

*If yours is unsatisfactory allow us to make quotations.*

FOR all classes of readers, and for office and school use this is a practical convenient up-to-date reference work. It treats satisfactorily every subject whose importance entitles it to a place there, gives information from the earliest period to the present year, and embraces every branch of knowledge.

The facts are easily accessible, concise, yet comprehensive, well arranged, accurate, unprejudiced, international, and up-to-date. The hunting has been done, and here is the wheat winnowed from the chaff. It is just the work required by the student, the professional man, the busy merchant, the public speaker, the schoolboy or girl. It has been officially adopted for use in the public schools of New York, Boston, Chicago, and Philadelphia.

"We find the INTERNATIONAL CYCLOPEDIA invaluable as a constant and daily reference."—CHAS. R. SKINNER, *State Superintendent Public Instruction, Albany, N.Y.*

IT IS A LIBRARY IN ITSELF. 17 ROYAL VOLUMES.

The whole set delivered at once on small monthly payments. Write for terms and sample pages.

# The Literary Digest

VOL. XXII., NO. 5 NEW YORK, FEBRUARY 2, 1901. WHOLE NUMBER, 563

Published Weekly by
FUNK & WAGNALLS COMPANY,
30 Lafayette Place, New York. 44 Fleet Street, London
Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

## TOPICS OF THE DAY.

### PROBABLE INFLUENCE AND POLICY OF EDWARD VII.

ALTHO Albert Edward has represented the Queen at public functions of every kind so continuously for many years that he has really lived in a fiercer light than that which beat upon the throne, his accession finds most of the American press unable to state his opinion on public questions or to predict his probable policy. The Baltimore *American* fairly represents newspaper opinion, or the absence of opinion, on this side of the Atlantic when it declares that "what the presence of this new figure may mean for England time alone can tell." Some, however, remember that when the present Emperor of Germany came to his throne the colossal figure of Bismarck overshadowed the influence of the crown to a far greater degree than the power of the Cecils now dominates Great Britain. William, at the age of thirty, thought himself able to rule through a prime minister of his own choice, and in the dozen years since his accession he has devoted himself to building up the industries of Germany with a zeal and success comparable to the splendid work accomplished by Frederick the Great for his people after the Seven Years' War. The declining industries of Great Britain offer a similar opportunity for the new sovereign. "In spite of the constitutional limitations that have shorn the British sovereign of former powers," says the Chicago *Tribune*, "it is a mistake to imagine that the occupant of the throne is a mere figurehead." The Philadelphia *Times*, too, thinks that "while it is commonly said that the King reigns but does not govern, it is easily possible for him to exert a commanding influence upon the policy of his country"; and, referring to the situation in South Africa, it goes on:

"More than one of the monarchs most famous in English history have earned their place in the popular affection by rising to just such an occasion as this, to release the nation from the control of a ring of aristocratic ministers. In the last years of Victoria's reign, Lord Salisbury and his family have been the actual rulers of Great Britain. Tho they have an assured support in parliament, their government is entirely discredited. They have led the nation into an unnecessary, disastrous, and fruitless war, which they are incompetent either to carry on or bring to an end. The resources of the nation are drained, its industries depressed, its commercial supremacy shaken, its prestige and influence impaired. The old Queen recognized all this, and, recognizing her own impotence, died heart-broken. The new King must recognize it as well. And he has the power to change it.

"He comes to the throne with the confidence and affection of the whole people, who know him as a liberal-minded man of affairs in sympathy with their own best interests. He comes untrammeled by any personal or party obligations. He is not bound by the blunders of the Cecils and the Chamberlains. He has the power, if he has the courage, to put England back in her old place among the forces of civilization. He can call off this cruel war in South Africa. He can proclaim immediate peace and amnesty to the Boers and invite them to an honorable adjustment of differences. He can send out wise statesmen to replace the military tyrants and bring home the brave soldiers who are wasting their lives upon the veldt. He can make it known to all the world that the flag of England is not to stand for greed and butchery, but for liberty and peace.

"The English people would welcome such a deliverance. The whole civilized world would rejoice at it. It would do more than any other thing to command the deference of Americans, for it would encourage this country likewise to a right dealing with our foreign troubles. A bold, brave course like this would appeal to the conscience of England and inspire the nation to fresh confidence and hope, and it would give Edward VII. at once a place among the great English kings. Has he the requisite courage, the wisdom, and the strength?"

Most papers, however, agree with the Boston *Advertiser* that "when a man is sixty years old, and a grandfather, he does not begin for the first time to struggle up a steep, toilsome, and perilous path, in order to reach a goal of power and glory. And most assuredly it is not at an age beyond threescore that a self-indulgent, sensual, easy-going man begins to live the strenuous life." The New York *Times*, indeed, thinks it is best for Britain that Edward is the non-political man of the world that he is said to be, for "if he were such an irrepressibly active-minded person as his nephew, the German Emperor, he would constitute a standing threat against the peace of his realm," and "if he were a dreamy scholar, such as has not sate upon the throne of England since James I., he would run the risk of bringing the monarchy as well as himself into contempt." "Opinions and preferences he must have," says the New York *Tribune*, "but he has never uttered a word which could furnish any positive indication of his personal feelings upon any of these subjects—save one. That one is his belief in an understanding between his country and the United States. And he may be relied upon, therefore, to continue the course pursued by his mother from the very outset of her reign, namely, the development of sentiments of friendship and of unity between the two great English-speaking nations, who are bound together by ties of kinship, by community of speech, of jurisprudence, and of character—that is to say, by ties far more lasting than mere treaties, made to be broken."

Some confirmation of the opinion that the King will not attempt to interfere with the rudder of the ship of state is found in his speech of accession delivered before the Privy Council, in which he declared: "I am fully determined to be a constitutional sovereign in the strictest sense of the word."

Disparaging comment is not infrequent. The Chicago *Inter Ocean*, for example, says:

"Albert Edward has done nothing but waste his days in idleness or worse. His activities have been chiefly displayed in various forms of sport. He has not been the patron of art or literature or science, tho such patronage has ever been deemed the duty of princes. He has led the way to no reform and left no mark upon administration.

"He is master of no science, not even the military. He has neither aided his people to prepare for conflict nor led them in war. 'He is the only crown prince in Europe,' as Bismarck truly said, 'never seen upon a battle-field.' His principal accomplishment is his social tact, and his chief distinction that of an arbiter of fashion. He has done nothing, and he is nothing more than hundreds of other Englishmen born to wealth and high station.

"When such a man comes to the throne of the British empire, what remnant of the 'divine right of kings' can attach to his person? How can strong and honorable men—men who have done work in the world—kneel and kiss his hand without a sense of disgust and a feeling of degradation? How can they truly 'honor' such a king and sincerely pray that he may long be spared to reign over them? How can they regard him as a superior being? They can not conscientiously do these things, and all Englishmen honest with themselves must admit the fact.

"The accession of Albert Edward to the British throne, not so much by reason of what he is as on account of what he is not, bids fair to give the deathblow to the monarchical idea among the English-speakers of Europe. Victoria the Gracious, by power of her womanhood, kept alive that waning ideal for more than sixty years. Now it seems about to vanish. And it is well for the world that this should be."

He is, however, adds the New York *Tribune*, "blessed with the companionship of a queen who commands the love of the people and the esteem of all the world in a measure well comparable with that of his lamented mother. Her presence will assure for his court a degree of purity and grace not unlike that which for more than sixty years has prevailed there and has given the British court an honorable preeminence."

---

## PROGRESS OF THE BRITISH EMPIRE DURING QUEEN VICTORIA'S REIGN.

THE growth of Great Britain's population from 18,000,000 to 41,000,000 during Victoria's reign, and the addition of India, rich portions of Africa, Hongkong, most of Australia, and many islands of the sea, bring the grand total for the empire up to 388,000,000 souls, inhabiting 11,355,000 square miles—the largest empire on the globe in area and outdone in population by China alone. The sixty-three and a half years since June, 1837, when the young Queen ascended the throne, have seen the British fleets and British commerce supreme on the sea, British industries leading the world, the British people gaining by peaceful means the liberties the French people achieved by sword and fire, and the British isles never ménaced by a foreign foe. The marvelous advance of human thought, activity, liberty, and material comfort during this reign, the longest actual reign the world has known (during nine of the seventy-two years of Louis XIV.'s reign affairs were administered by Anne of Austria as regent), make it a topic of deep interest and wide discussion in the American press.

Steam, steel, and electricity, which have almost changed the face of civilization, have achieved practically all their triumphs in Victoria's day, so that in scientific achievement alone, as the New York *Times* says, "there is no other reign to be mentioned in the same sentence." Mankind have not only been bound more closely together by the railroad, the steamship, the postal system, the telegraph, and the telephone, and material wants more abundantly supplied by cheap transportation and factories of every kind; but political conditions also, as every review of the Victorian era points out, have been vastly improved. It was during the brief reign of William IV., it is true, that the Reform Bill, equalizing representation in the House of Commons, was passed (1832); but its beneficent results became most effective during the reign of Victoria, and led the way for the extension of the franchise in 1867, and for the laws of 1884 and 1885, giving practically universal suffrage in England, Scotland, and Ireland. The repeal of the import duties on grain, which were a cause of great suffering to the poor, was accomplished by Cobden and Bright in 1846, and the resulting prosperity allayed the alarming demonstrations of the Chartists, who were preparing to demand political reforms at the point of the bayonet. The wretched plight of the working men and women in the mill-towns and in the mines, the cruel and inhuman employment of little children, and other harrowing conditions that accompanied the dawn of the age of steel in England are now happily only memories, and many papers recall that the Prince Consort devoted much of his activity to this kind of reform.

Turning to the British dependencies, the press pretty generally recognize the addition of India to the empire in 1858 as the greatest colonial achievement of Victoria's reign, altho the Boston *Transcript* thinks that "the greatest political stride in the history of colonial Britain has been taken in the erection of the commonwealth of Australia, a federation comprising all the Australasian colonies except New Zealand." As the federation of Australia has recently been treated in our pages, it is unnecessary to dwell upon it here. The consolidation of the British possessions in North America (except Newfoundland) under the title of the Dominion of Canada, in 1867, was of high importance in North American affairs, while in the north of Africa Egypt has been practically added to British domain, and in the south of the Dark Continent the situation is too familiar to require description. No review of the Queen's reign omits the failure of the potato crop in Ireland in 1845, resulting in such distress that the population of the island decreased fully two millions by death and emigration, immense numbers of the Irish coming to America.

So much for the achievements of peace. In war, England has only once been in conflict with a first-class power (Russia) during Victoria's reign, and then the war was confined practically to the siege and capture of one city, Sebastopol. France and Turkey were allied with England in this attempt to bar Russia's southward movement toward the Bosporus, and the losses still cause astonishment. England lost 24,000 men (all but 3,500 by disease), France lost 63,500, and Russia, according to English statistics, nearly half a million. This war added $200,000,000 to England's national debt, and brought down on the British War Office a storm to which the recent storm in this country was a zephyr. One of the least of the blunders of the War Office, it is said, was the shipment of a cargo of boots for the army, *all lefts*. Most of the American press rate the present war in South Africa next in importance to the Crimean war, and next to that the Indian mutiny of 1857–58, which resulted in the transfer of the government of India from the East India Company to the British crown. In 1861, the Trent affair might easily have led to hostilities between England and the United States if Victoria, by the advice, some papers think, of the Prince Consort, had not modified the tone of the British note to Secretary Seward. The fall of Khartum and the death of Gordon in 1885, the recovery of the Sudan by Kitchener's victory at Omdurman in 1898, and the opium war with China in 1839–43, resulting in the cession of Hongkong to Great Britain, are considered the most important of the minor wars of the reign.

While it is generally admitted that during Victoria's reign England has been at the height of its glory and power—more powerful in the arts of both peace and war, perhaps, than any other nation—some American journals seriously doubt if Great

- PRINCE PHILIP OF COBURG.
- COUNT MENSDORFF.
- PRINCESS FERDINAND OF RUMANIA.
- GRAND DUCHESS SERGE.

THE QUEEN AND SOME OF HER DESCENDANTS.—A GROUP TAKEN AT COBURG.

## A PAGE OF BRITISH ROYALTY.

Britain will ever again see such an era of preeminence, if, indeed, the British are not already beginning to lag. The Springfield *Republican* says, in a thoughtful comment:

"Two events of world-wide significance, and of immense import to Britain, occurred in the last half of the nineteenth century. One was the American Civil War in 1861–65, which confirmed and sealed forever the national unity of the American republic; the other was the war between France and Prussia in 1870–71, which unified modern Germany. Those two events ended the era when Britain was practically without competition in industrial and commercial supremacy, for they brought to the front the two great powers of the present time whose extraordinary material energy is now regarded by all thoughtful Englishmen as the gravest menace existing to British predominance in the world's commerce and finance. It is apparent that the last thirty years of Victoria's reign really witnessed a steady decline in the international potency of Britain as a financial and industrial power; while in diplomacy and war her former prestige has been gradually dimmed by the formidable territorial growth of Russia through the arts of diplomacy, by the creation of the modern continental armies, and by the large increase in the naval strength of the other maritime powers. This important fact of the relative decline of Britain since 1870 must be understood in considering the future of the empire now that the Queen is gone. . . . . .

"Politically, Victoria leaves her empire with three weak points —Ireland, India, and South Africa—while the entire network of so scattered a dominion depends upon the maintenance of the most powerful navy afloat. Now it ought to be clear that an empire that depends for its solidarity upon its perpetual control of the sea by means of war-ships has a precarious prop to rest upon. In this respect, Britain is inferior to powers so compact and yet so huge territorially as the United States and Russia, whose destiny can never be decided by one or a dozen naval fights. Britain's position is just this: The power that controls a stronger navy holds the British empire as a mere pawn in the international game. The melancholy isolation of Britain adds an element of danger to her future, for it can not be forgotten that her greatest successes in the past have sprung from the coalitions she was able to organize and finance, while her severest reverse, the loss of the American colonies, resulted from a coalition against her. . . . . .

"It is difficult to escape the conclusion that the nation can never be more puissant, compared with other powers, than during the memorable reign now ended. The Victorian age will probably be distinguished in history as marking the culmination of Britain's greatness."

---

## QUEEN VICTORIA.

TENNYSON'S words, written fifty years ago, that "her court was pure, her life serene," and that "a thousand claims to reverence closed in her as mother, wife, and queen," are quoted over and over again at this time and strike the keynote of American comment on the death of Victoria. "In the death of Victoria, the Empress-Queen," says the Boston *Advertiser*, "the British empire has lost a mighty sovereign. In the death of Victoria, the Christian woman, mankind has lost a dearly beloved friend." The Philadelphia *Record* goes so far as to say that "if to be well beloved be a token of greatness, Queen Victoria was the peer of our Washington"; and the Richmond *Times* says, similarly: "Victoria was not a woman of great mental capacity, but she had what is greater than mind: she had morals, she had character. It is these rather than brilliant intellect that make a truly successful life. 'It is only noble to be good,' sang the Poet Laureate, and doubtless his Queen's example inspired the thought. Victoria was, in this sense, as in the other, a very queen among earth's nobility." The Washington *Post* declares that "she leaves the noblest memory that any monarch ever left to posterity," for "her whole career has been a protest against the profligacy of courts, as it has been a sermon on the domestic virtues. She has been an example for palaces and for hovels alike. Her lesson was for the poor as well as for the rich, for the highly placed as well as for the humble. She was a great queen. She was a greater woman." Many papers are led to compare the reign of Victoria with that of Elizabeth, and the St. Paul *Dispatch* says:

"It is a significant fact and it is a rebuke to Salic law that the two most glorious sovereigns of Albion, the two under whose reign England at home has lived most brilliantly, and the two under whom England abroad has wellnigh been the world, have been women. Elizabeth and Victoria, regal names for regal women. And yet how different! In the popular mind one thinks of Elizabeth as king, of Victoria always as queen. Elizabeth was king and king only, a man of tremendous purpose dwelling for purposes of diplomacy in a woman's body. Victoria was queen, and more than queen, she was the queen woman, the queen mother of all. It has been tremendously to the advantage of domestic England that in a time of social crisis and shifting social laws the Queen has shown how eminent and how beautiful are the old-fashioned virtues."

The report that the Queen's death was hastened by interviews with Lord Roberts, Lord Salisbury, and Mr. Chamberlain, in which she extracted some unwelcome truths about the state of affairs in South Africa finds wide belief, and William T. Stead, in a cable despatch to the New York *Journal*, says: "The Boer war has killed the Queen." *The Irish World* (New York), on the other hand, holds that "Victoria was lacking in imagination as well as devoid of that sort of sympathy which makes its possessor share in the sorrows of others," for, it says, "if she had possessed those two qualities her heart would have been wrung with anguish by the terrible sufferings of millions in India and Ireland during the famines which have periodically swept over those countries." It goes on:

"A woman gifted with imagination and sympathy might, if in her place, have done something for Ireland and saved British rule in that land from the heinous crimes that have made it a hiss and a byword throughout the world. When she succeeded her uncle, William IV., the population of Ireland was over eight millions; to-day, it is something over four millions. One half the population swept away by famine and emigration. Such is the record that Irishmen and Irishmen's sons can not forget as Queen Victoria descends into her grave."

Such comments as those just quoted lead to a consideration of the political side of the Queen's character, and of this the New York *Tribune* says:

"This sovereign was a potent and masterful force, albeit it was so often said of her that she reigned but did not rule. In fact, she did rule, often most arbitrarily. She did not meddle with party politics. She did not aim at personal government. The beginning of her reign marked the complete establishment of constitutionalism in the United Kingdom. Nevertheless, her will was felt in almost every department of national existence. In more than one great issue of state she was the personal factor that turned the scale for peace and righteousness. There was no statesman in her service who paid more diligent attention to even the details of government work than she, and there was not one who did not recognize in her a quality and a force of statesmanship that must be taken into account. There were few philanthropists and publicists who took so keen, so intelligent, and so effective an interest in the social welfare of the people. There never was a Puritan reformer who more inexorably swept out of court all the scandal and license and intrigue that had made the Hanoverian régime odious, or who set and rigidly enforced a higher standard of personal purity and integrity of life. The sovereign was not lost in the woman, as was unworthily the case in the reign of Anne. Neither was the woman lost in the sovereign, as was too often the case amid the splendors of the Elizabethan era. And in these circumstances we may perhaps find Victoria's highest title to illustrious fame. If we may paraphrase the words of Antony, her life was gentle and the elements so mixed in her that the world must proclaim her to have been at once a great queen and a noble woman."

## FOREIGN COMMENT ON THE QUEEN'S DEATH.

CABLE despatches from European capitals sent by the Associated Press and by special correspondents give fleeting glimpses of European newspaper comment on the change of rulers in Great Britain. Whether these cabled bits of comment are typical or not will be seen later, when the newspapers themselves arrive by mail; but many of them are interesting enough to warrant quotation. How general is the emotion expressed in the London papers upon the death of the Queen is best evidenced, perhaps, by the following paragraph from *The Star*, a radical journal. Quoting Wordsworth's lines, "A perfect woman nobly planned," etc., it says:

"That was our Queen. Ah, how loving was the love with which we loved her! How proud our pride! How we, her sons and daughters, all over the world, exulted in her as the most priceless possession of our race. How we wore her spotless name as a jewel on the forehead of our empire! How we trusted her! How we acclaimed her, with filial cries, when she came among us, with her simple, motherly smile, and her good gray head, bowing benedictions on the children that were her people! It is hard to think that she will never see us, that we shall never see her more. The thought of all she has been sends an ache through our hearts, and fills our eyes with tears, for too well we know that never shall we look upon her like again."

Henry Labouchere's *Truth*, too, another exponent of democratic ideas and a frank critic of royalty, says: "She has been indeed the mother of her people, and as a mother she will be mourned. In all the affairs of state she manifested the same wisdom that inspired her private life, nor did her own country alone enjoy the fruits of her experience and sagacity. Through her kindred and descendants abroad her influence for many years has been felt in continental politics, always on the side of peace; and, in at least one crisis, she is known to have rendered service to the whole of Europe." The Paris papers seem to think it is no time for critical comment. The *Journal des Débats* says: "If there are occasions in the lives of nations where they ought to forget, momentarily, the opposition of their interests, it is in the presence of the death of their rulers. Thus it is on the field of battle; when one of the contending camps loses its leader, the other side does not refuse funeral honors." *Le Gaulois* sums up Victoria's reign in the brief phrase, "little authority and much influence," and adds: "The changes which are about to take place express better than blind and foolish flattery the place she occupied in Europe. That will be her true funeral oration, the final word of which will be that she, the possessor of most ordinary faculties, accomplished more than certain conquerors, and has left a greater gap than Catherine or Elizabeth." The *Boersen Courier* (Berlin) praises the Queen as a model of beautiful human qualities, and declares that "history knows but few examples of such a pure, noble, womanly figure upon a throne. Foreign peoples accord her the palm as a noble woman and as an honor to her sex." The Cologne *Gazette* expresses its admiration not only for Victoria, but also for her successor. He is a gracious and affable prince, it says, free from prejudice and ripe in experience of the world, and it believes that "these qualities guarantee an undisturbed continuance of the excellent relations between Great Britain and Germany."

Criticism of the English Government at this transitional time, however, is not lacking. The St. Petersburg *Herold*, for example, takes occasion to remark: "The Prince of Wales has passed as a friend of Mr. Joseph Chamberlain—will the same be true of the King? Will the glowing persuasiveness of a Chamberlain, which up to now has hypnotized the English masses, also prevail in the palace, or will the new King see that Chamberlain's way is the way of destruction? It would be good for England if Chamberlain's time were ended." The Berlin *Tageblatt* believes that "a large part of the world, which condemns the war in South Africa as undertaken by Messrs. Chamberlain and Rhodes and other mining speculators for their self-enrichment, and the destruction of a little, freedom-loving, heroic people, will see in her death at such a moment a large measure of divine justice, for, according to trustworthy information, it can not be doubted that the unfavorable turn of the war for the English arms during the past few months bore heavy on the Queen's heart, and contributed to hastening her end." M. Lockroy, formerly French Minister of Marine, is reported as saying: "The death of the Queen is most unhappy, as it destroys the element of peace in European politics. Her age, authority, experience, and knowledge of mankind enabled her to render great services to this end. She was personally opposed to all wars. The Prince of Wales, on the contrary, has been entirely dominated by Emperor William and influenced by Colonial Secretary Chamberlain and his friends." And the Paris *Matin* observes, apparently without great regret: "For two years the marvelous edifice of Britain's greatness has appeared to be shaken to its foundations. Now the keystone has fallen."

---

## LIGHT FROM THE PHILIPPINES.

THE report of the Taft commission, which the President sent to Congress on Friday of last week, makes an interesting contrast when compared with the Filipino petition which was read in the Senate two weeks before. *Harper's Weekly*, a strong supporter of the President's policy, is much impressed by the Filipino petition, and calls it a "remarkable document." There is "a note of real sincerity about the petition," it says, "and an atmosphere of patriotism which is the real and not the spurious thing," and "it inspires respect for those to whose energies and brains it owes its being." The petition is signed by two thousand inhabitants of the Philippine Islands, who, as Senator Teller said in introducing it, "are not in hostility to the United States" and "can not be called insurgents or bandits or rebels," as "they have submitted to the jurisdiction of the Government of the United States."

The Taft commission, appointed in March of last year to "continue and perfect the work of organizing and establishing civil government already commenced by the military authorities," says in its report:

"From all the information we can get, it seems clear that a great majority of the people long for peace, and are entirely willing to accept the establishment of a government under the supremacy of the United States. They are, however, restrained by fear from taking any action to assist the suppression of the insurrection. Any one suspected of giving information to the Americans concerning the insurgents is immediately marked for assassination. The ramifications of the conspiracy are so wide that it has effected the terrorism of an entire people. It is a Mafia on a very large scale."

The Filipino petition, on the other hand, declaring that neither annexation nor autonomy will be accepted, and pleading for independence, says, in part:

"The people of the Philippine Islands, in view of their calamitous condition, demand, in the name of her sons, in the name of all races, in the name of humanity, that an end be put to the misfortunes which afflict them, which, while they distress and agonize her, compel her to struggle for the rights that are hers, and for maintenance whereof she must, if necessary, continue to pour out her blood as she has so constantly and generously done, on battle-fields, in the woods, on the mountains, in the city, everywhere! The blood which has been shed and that is still being shed, and which will continue to be shed until she has secured her rights, is not shed because of the intrigues of a few who, according to misinformed persons, desire to exploit the people and enrich themselves at the cost of their brothers' blood. It has, gentlemen, sprung from the hearts of the people, who alone are the real strength of nations, the sovereign kind of races, the producers of the arts, of science, of commerce, of

wealth, of agriculture, of civilization, of progress, and of all the productions of human labor and intelligence, in all of which the people of the Philippine Islands have made great progress. . . . . .

"Since the revolution began until now the peaceful people who are engaged in their ordinary vocations have liberally supported in private the national soldiers, and they seem to be disposed to support them all the time so long as the war lasts."

The recent surrenders of insurgent bands, amounting to about 50,000 altogether, have occurred in the island of Panay, south of the main island of the group, Luzon, where the insurrection has always been strongest, and where the guerilla warfare is still going on.

---

## EUROPEAN EFFORTS TO HEAD OFF AMERICAN TRADE.

IN view of the rapidly increasing economic power of this country (as described in our pages, December 26 and January 29), the renewal of the proposal that the leading European countries should form a trade alliance for mutual protection against the encroachments of American competition arouses special interest at this time, and draws not a little ridicule from the American press. "That such a wild idea should ever have been seriously entertained by a responsible statesman seems almost incredible," observes the Chicago *Times-Herald;* "and yet its first advocate was Count Goluchowski, Austrian Minister of

HOW WOULD YOU LIKE TO BE—OH, WELL, WHAT'S THE USE OF RUBBING IT IN?

—*The Minneapolis Tribune.*

Foreign Affairs, and it has been taken up very earnestly of late by influential political leaders and newspapers." M. Paul Leroy-Beaulieu, the well-known French economist, is the latest to raise the cry of pan-Europe against pan-America, using the Vienna *Tageblatt* as his mouthpiece. "In my opinion," he says, "Europe ought no longer to remain economically divided into small sections which parcel it into markets of insufficient size, now that it finds itself in the presence of the United States, whose population will have increased to about 100,000,000 in 1920 and to some 150,000,000 in 1950." M. Leroy-Beaulieu therefore urges the necessity of an "economic alliance of the European continent," and recommends that "a permanent European customs commission should be appointed and intrusted with the task of providing for successive reductions of the duties, and of establishing the closest possible relations among the European nations." He expresses the hope that such a combination may subsequently develop also into a political alliance and lead to friendly cooperation among all the European powers. "I hold this project to be in the highest degree essential for the rescue of Europe, and it should have the cooperation of all good Europeans," he declares.

The proposal of M. Leroy-Beaulieu is dismissed by the London *Economist* as "peculiarly absurd and impossible," and American papers view the matter in much the same light. The Kansas City *Times* characterizes the proposition as "chimerical and impracticable." "If the European nations wish to 'beat the Yankees at their own game,'" it remarks, "there is an easy and a simple way to do it. All they need do is to offer as good or better products at lower prices." The San Francisco *Call* believes that the "Yankeephobia" prevailing in European circles is inspired in part by the German Kaiser, who, having been thwarted by the United States in his Chinese policy, now seeks reprisal by stirring up "the quite general condition of European jealousy of our trade supremacy." The Baltimore *American* says:

"To Americans these spasmodic efforts of Europe to circumvent our energy and enterprises are amusing. We can afford to regard them lightly, as a new and mild sort of divertisement, for we are practically assured that they will come to naught. Not until all Europe undergoes a revolution can she hope to stay our progress toward commercial supremacy. . . . . .

"The advantages we have secured, the profits that have accrued to us—the size of which now excites Europe's apprehensions—are traceable to one source. Institutions and forms of government in this country place each individual upon an equal footing. Every man is thrown upon his own resources, and, instead of working to hold his place, he strives to bring out the best there is in him, in order that he may become possessed of the fortunes and honors which in the United States are the rewards of industry and thrift. Of this competition there has been born an industrial, commercial, and agricultural activity that is the wonder of the world. This activity has not only brought us fabulous wealth, so that we are rapidly becoming the world's creditor, but in commerce and the industries has equipped us to outstrip all other competitors. As matters stand now, the spirit that has wrought so mightily for us in the past will bring forth even greater wonders, and until Europe becomes imbued with a somewhat similar spirit, her fears are almost certain to be realized, even more terribly than she now apprehends."

---

## MRS. NATION'S CRUSADE.

MRS. CARRIE NATION, of Wichita, Kans., has become a "topic of the day"; and her progress through Kansas, marked by a trail of smashed saloons, contends for prominence in the daily newspapers with Mr. Roosevelt's slaughter of wild animals in the neighboring State of Colorado. Some newspapers take Mrs. Nation's crusade with grave seriousness and reprove her in long editorials, which she seems to disregard. The Detroit *News* approves her course heartily and cheers her on with an editorial headed: "Sail In, O Nation, Strong and Great." The Chicago *Evening Post*, however, thinks that she "inspires pity rather than humor," and urges that her friends "should place her in a nice, quiet retreat and keep her there until the sight of a saloon sign does not unduly agitate her bump of destructiveness." Such comments as this last lead the Kansas City *Journal* to say:

"The impression throughout the country is that this woman is a wild, fanatical temperance agitator whose zeal has run away with her discretion. But those who are acquainted with her and with the Kansas situation say there is method in her madness. Her purpose, it seems, is not merely to destroy a little saloon property. She desires to test the right of liquor sellers in Kan-

sas to the protection of law for their saloon merchandise and fixtures. Her attorneys were surprised and disappointed that the previous case against her was dismissed. They had prepared for a full trial of the case on its merits, and expressed confidence in their ability to win.

"Mrs. Nation is merely putting into practical effect a principle which the W. C. T. U. of the State generally upholds—that the liquor traffic being an illegal business, those conducting it are entitled to no protection of the law for property devoted to its uses. The 'joint,' they say, has no standing in law, and, like any other outlaw, may be destroyed with impunity so far as any redress in the courts is concerned. The W. C. T. U. organization at Emporia a few days ago adopted resolutions to this effect, in support of Mrs. Nation's crusade. It is quite possible that the saloonists did not care to press the former case against Mrs. Nation for fear that this position might be sustained by the courts. Either this or they did not desire to inflame the temperance sentiment by making too much of a martyr of their assailant.

"Just what the Kansas law is in respect to property rights of saloonists in their business remains to be determined. If the courts should hold that there are no such rights, that saloons are outlaws and entitled to no legal protection, then the most important victory for Prohibition will have been won that Kansas has yet witnessed. Any one, male or female, will be privileged to break into or break up 'joints' whenever and wherever he or she finds them. If the jointist does them injury in resisting the attack, he will be amenable to the law on the charge of assault and battery. As there seems to be no way of stopping Mrs. Nation except with a prosecution in the courts, the legal rights of a joint smasher will probably soon be determined. The progress of the case will be watched with a great deal of interest."

## ABOLITION OF HAZING AT WEST POINT.

THE four classes of cadets at West Point have entered into an agreement to abolish all forms of hazing, and presented to the congressional committee on January 19 a statement to that effect. "Having been cognizant of the manner in which the system of hazing is regarded by the people of the United States," so runs the document, "we, the cadets of the United States Military Academy, while maintaining that we have pursued our system from the best motives, yet realizing that the deliberate judgment of the people should, in a country like ours, be above all other considerations, do now reaffirm our former action abolishing the exercising of fourth-class men, and do further agree to discontinue hazing." This is signed by the presidents of each class. "There can be no denying," comments the Boston *Journal*, "that West Point prestige has suffered more severely by the revelations of this congressional inquiry than by any other episode in the history of the institution. This frank action, taken by the cadets on their own initiative, and by unanimous consent of the four classes, will go far to reinstate the great military academy in the esteem of the American people." "That the cadets will keep their word goes without saying," adds the Baltimore *American*, for "it will be a point of honor with them—one point of honor substituted for another which has been banished from their code." A much less optimistic view is taken by the Philadelphia *North American*, which declares:

"It is absurd to say that the cadets have done the graceful

"Terrible Teddy, the young slayer of grizzlies, who killed more than half the wild beasts in Colorado in less than a week, and frightened the rest, said he made the sun-and-wind-tanned faces of the old trappers turn as white as the writing paper on which they kept tally of the steadily rising animal death rate.

"'When I kill grizzlies with a gun,' said he, 'the poor things have no chance. They are handicapped. Hereafter I shall kill them with my bare hands. It's more strenuous.'

"The first bare-fist encounter occurred that day. The Intrepid Theodore sighted a grizzly, weighing from two to three tons. Theodore uttered a low, strenuous roar, threw away his rifle and knife, and, tucking up his sleeves as he ran, charged upon the fearful creature.

"It was a grand, weird sight. The Intrepid Theodore, his eyes sparkling with strenuousness, seized the beast by the throat and tripped him up. Man and bear rolled in the dust, biting, kicking, fighting, swearing, in all the fervor of a battle to the death.

"The fight was short. The unfortunate grizzly soon began to utter cries of pain and terror, as he realized that his last moment was near, and that he could not get away. He grew weaker as he felt the death clutch of the hunter upon his throat. In five minutes from the first impact the bear lay dead upon his native greensward.

"The hunter rose, and shaking bear's blood and dust from his face, adjusted his glasses and pushed on for more grizzlies. The snarls of frightened bears and mountain lions echoed down the canyon as they scurried for safety. The Hunter proceeded, swearing to have more ursine blood before the setting of the sun. A few moments later his thirst for terrible adventure was satisfied. Looking around, he discovered that he was in the clasp of the most awful-looking monster he had ever beheld. With a wild roar, the creature raised its paws to wipe him out of existence." (To be continued in our next.)

## GLIMPSES OF STRENUOUS LIFE IN COLORADO.

thing in adopting resolutions by a unanimous vote of the four classes to abolish hazing and similar outrages. They took this step against their own youthful inclinations because a sense of prudence made them realize that the hostile sentiment of the people of the United States was not to be lightly disregarded. . . . A man who wilfully indulges in falsehood and deception, as the cadets have done by their own acknowledgment, and when found out defends himself by saying he acted 'from the best motives,' can not expect a clean certificate of character until he gives proof of his change of heart. There will be reason for disappointment if Congress relents and takes the cadets at their word. The penalty of prompt expulsion against all hazers should stand, and should be rigorously enforced."

## GOVERNOR PINGREE ON PENAL REFORM.

IN the severe criticisms passed upon Governor Pingree for the many pardons issued by him during his last month as governor of Michigan (THE LITERARY DIGEST, January 12), the critics were unanimous in the opinion that the governor's generosity had got the better of his judgment, to the injury of the public welfare. It was remarked by us at the time that "a later report may show that Governor Pingree's large-hearted month of forgiveness was less injudicious than the newspapers represent." A letter from Governor Pingree now comes to hand in which he says:

"I have been a constant reader of THE LITERARY DIGEST for some time and have induced many others to read it by subscribing to it for them. I take time to read it, because I have been impressed by your effort to treat honestly and fairly current events, and such other matters as you handle. In your issue of January 12 you have been forced, as I can see, by the one-sided report of our local newspapers to publish what I consider an unfair statement of my use of the pardon power during the closing month of my term as governor of Michigan. The fact is that during my four years as governor I pardoned 138 convicts, and paroled 297 convicts. During my first term I pardoned 53 convicts and paroled 122 convicts; during my last term of two years I pardoned 85 convicts and paroled 175 convicts—a total for my entire four years of 138 pardons and 297 paroles. Of this number only 17 violated the conditions of their paroles during my entire term, and were sent back.

"Instead of blindly wielding the pardoning power during the closing month of my administration I wish to say this: That many of the cases acted upon during the closing days of my administration had been before me and the pardon board during my entire term. To the investigation of these cases I had given a great deal of time and serious thought. Toward the end of my term the cases had accumulated, and it was not until November and December that I took the time to dispose of them, altho I had made up my mind how I should act on the cases long before that time. In studying the history of these convicts and the proceedings of our criminal courts I came to the conclusion that a very large percentage of the inmates of our three state prisons were wrongfully there; that the prisoners themselves were not receiving any benefit on account of long terms for excusable first offenses, nor was society being benefited by supporting them while their families were starving from sympathy, the support in the outside world. The consequences of overzealous inhumanity on the part of prosecuting attorneys and judges in criminal cases shocked me as I reviewed officially their conduct and procedure."

In his final message to the legislature of Michigan, Governor Pingree devotes considerable space to a justification of his conduct. He points out that the average number of pardons granted by him annually was but 21⅓ per cent., as compared with 18¾ per cent. granted by his predecessor, Governor Rich. Moreover, President McKinley, during the year ending June 30, 1900, extended executive clemency in no less than 63 per cent. of the cases brought before him. "These comparisons are made," says Governor Pingree, "merely to show how senseless and groundless has been the criticism and vituperation and abuse which has found ready publication in the sensational press." The governor recounts several cases in which he has granted pardons, as typical instances of the kind of injustice for which the courts and our present prison system are responsible. "I have released men," he says, "upon the recommendation of the judge and prosecuting attorney and entire jury who participated in their trial, and yet am criticized for my so-called pardon record." He instances letters from judges who state that they "can not sleep nights" because of wrong convictions, and assert that if they had to try the cases over again they would "deal more leniently." One investigation revealed the fact that a prosecuting attorney, who afterward became State Senator, publicly made the statement that if the defense in a certain case had had the evidence that he possessed at the time of the trial the man concerned "would never have been convicted."

Governor Pingree maintains that radical reform in the criminal code and prison system of the State is absolutely necessary. He asks that the power of the circuit judges to impose sentences be circumscribed by law, and hopes that his successor will recognize the justice of "commuting all sentences for murder in the second degree from life to a fixed term," so that at least a hope may be held out "that such unfortunates may close their eyes in death outside the prison walls." In conclusion, he recommends that a law be passed providing that the governor in granting pardons follow the course that he has himself adopted, of embodying in the pardon the reasons for granting it.

## LETTERS AND ART.

### ONE HUNDRED YEARS OF AMERICAN VERSE.

THE publication of Mr. Stedman's anthology has, almost inevitably, directed attention to the general character of the poetry created in the first century of our national existence. The London *Academy* promptly and frankly expressed its disappointment over our poetical output, as shown in the anthology, and reached the "especially depressing conviction" that the promise of advance indicated in the verse of Poe, Emerson, Lowell, and Longfellow has not been realized. More cheerful conclusions are reached by some of our own critics, among them Mr. William D. Howells and Prof. Oscar Lovell Triggs. Mr. Howells in particular finds no reason for depression in the comparison of even our minor bards with classical poets of Great Britain, tho he admits that to express such a conviction is to take one's life in one's hand, metaphorically speaking. First as to the relation of early American poetry to that of England, he writes (*North American Review*, January):

"We had not only taken our language from the English, but we had got our whole literary culture and technique from them, down to the smallest convention. There could not be an American meter, say, expressive of some spiritual rhythm peculiar to us. We came into the world when nations were long past inventing such things. For good or for ill, we had come into a civilized world and were joint heirs with the English in a learning as old as the Christianity of the mother isles. But we did not continue altogether in their tradition, tho it would not have been surprising if we had. As soon as we felt our national life we began to pipe up in a note at least partly our own; to use an imagery proper to our skies and woods, and to enrich our song from the voices of the environing nature; to color it from our conditions and to kindle it from our aspirations. The American poetry of one hundred years ago no more reflected the English poetry of that day than the American poetry of the present reflects the English poetry of our own time."

If no new literary forms and new language were produced, a new hope and a new faith became evident in our verse; and our best blossoming periods have been those in which national vigor has been called upon to confront some mighty problem, as in the war for independence and the Civil War.

Of Bryant and Poe as pioneers, Mr. Howells says:

"What Bryant did was to make American nature habitable to American imagination, and in this way he doubtless pioneered what may be called, for want of a better word, the bucolic school of the West, whose spirit is most, tho it was not earliest, recognizable in the work of J. J. Piatt, and which has found in the tender humanity of James Whitcomb Riley and the sensuous susceptibility of Madison Cawein diverse ultimations alike oblivious of their source.

"What Poe did was to enlarge our earth and sky by giving us, through the rifts he made in either, glimpses of the preternatural which have a perennial glamour; but the influence of his art, which once so thrilled and fascinated, is no longer felt in our literature. Yet if one comes to naming of names, his must be almost the first, as one perceives with a certain sense of hardship, suspecting as one does something essentially voluntary, not to say mechanical, in his witchery.

"There are traces of Bryant before Bryant, as there are after him, in our poetry, but none of Poe. The nature-worship runs all through it; but the supernature-worship begins and ends with a sole hierophant."

In considering the present-day poets and comparing them with the classical singers of England, Mr. Howells writes:

"I am willing, rather than unwilling, in coming down to the close of the century, to find in Emily Dickinson, in Richard Hovey, in Stephen Crane, in Paul Dunbar, and in Edwin Markham assurance of continued vitality in our poets, who, if they no longer roll the psalm to wintry skies or put our national consciousness into verse, or have not, like the great New Englander, the pathos of escape from the imminent deadly moral into the keeping of a somewhat timorous and self-doubting Beautiful, are still poets of as sure calling and election as most of those remembered from the former centuries.

"In considering their work, it is well also to consider the much greater ease with which immortality used to be achieved. To be quite honest with oneself (at the risk of one's life, rather), it must be owned that the English classics are largely of a quality which leaves even the minor poets of our American anthology little to envy them. They are, in truth, powerfully dull company, as any one must own who has passed much time with them. They do not really exist, but continually perish in a deplorable perpetuity of print; and tho it may seem bold to say that our minor poets, as Mr. Stedman has remembered them in his anthology, are no deader than most of the minor poets in the complete editions of the British poets, still this praise shall be hazarded."

THE LAST OF HIS RACE.

"It is forbidden to throw things to the Poet."

—*Lustige Blätter, Berlin.*

Speaking of the tendencies in American poetry, Mr. Howells finds that satire, which so flourished in English poetry, has in America become political rather than literary; and this decay of satire has been followed by the development of humorous verse in which John Hay, Bret Harte, and James Whitcomb Riley excel. The narrative poem, which in Longfellow, in Whittier, and in Lowell to a less degree, attained its heights, has, save in very few instances, gone the way of satire.

In conclusion, Mr. Howells writes:

"It does not very much matter that during the hundred years of our national life we have given no poet to the world like those whose cumulative fame in the long past is not the truest measure of their greatness, but it does very much matter that in each stage of our advance from coloniality we have had adequate expression in our poetry. In our overweening sense of size, we have always been more aware of our length and breadth than our thickness; but if the alien critic feels a comparative thinness in our poetry, he will probably infer that our life has been somewhat wanting in density. Our life is still sparse, and, like our territorial area, it has been cultivated here and there only. It has not been wanting in high moments; it has flowered in heroic events, and fruited in as rich results as any national life known to the history of the race. But it is one of the most grotesque and unfounded of the superstitions that such facts have ever

been mainly the stuff of poetry. Which of the national epics treats of the national epochs? We have only to ask ourselves such a question in order to realize how absurd a kindred expectation of achievement from our own poets must be. The national epics, the Iliad, the Cid, the Nibelungen Lied, and the like, have their roots in the fabulous aforetimes which antedated national history and even national consciousness, and were heroical merely and personal. So far as an alien race like ours could provide its habitat with a national epic in this sort, we have furnished it in Longfellow's 'Hiawatha.' But if we insist upon a civic sense as the measure of value in our poets' work, they will be found as equal to the test as the poets of other peoples. It is very doubtful indeed if the stirring of a national conscience concerning a national wrong ending in a national tragedy has ever been more fully witnessed in a national poetry than the long struggle against slavery was witnessed in ours. The period of that immense psychological experience was the period of our highest achievement in poetry; our noblest poets belonged to that time; and tho comparatively little of their work directly related to it, it is to their enduring honor and ours that not one of these was silent or indifferent in the presence of our ordeal."

Oscar Lovell Triggs, writing in *The Forum* (January), says that it may take as many secular centuries to create a genuine poet of democracy as, according to Carlyle, it took religious centuries to create Dante. But of the American poets in Mr. Stedman's anthology, Professor Triggs recognizes Poe and Whitman alone as belonging to the order of Makers, creating a distinctive style, the one founding a school of symbolism, the other a school of democratism. Furthermore he writes:

"The sanity and wholesomeness of our poets and their native quality are probably due to the fact that, with few exceptions, they have been active in other directions than the merely literary. Verse-making has been an incident of a strenuous life in more prosaic pursuits. A few men like Madison Cawein have of late years devoted themselves quite assiduously to poetic composition; but I believe Whitman was the only American writer who inscribed 'Poet' on his door-plate, and he is the only American who has recorded practically his entire experience in song. This 'Anthology' represents, accordingly, the inspiration of moments, the issue of intervals of play, the occupation of holidays. This fact accounts for the lyricism of the volume, its transcendentalism, its refinements. American poetry shows better in selections than in complete works of authors. . . . This 'Anthology,' in fine, is only a small measure of the capacities of the American mind. What we have done, what we have thought, and what we have felt far transcend what we have said or written. Our poetry is not absolute; in the sense in which I have used the term representative it is not even that. The volume betokens the inadequacy of poetic literature to sustain a large and vigorous modern national life; it denotes the transfer of power from the Sayer to the Doer."

---

**The Past and the Present in Literature.**—It was Charles Lamb who said that for every new book published he read an old one, a more moderate plan than that of the late Bishop of London, who advised some students to read three books published before 1800 for every one written after. But Prof. Richard Burton, of the University of Minnesota, writing in *The Criterion* (January), says that in regard to the past and present in literature, the present, above all, is important to the existing generation. He writes:

"It would be much closer to the truth to say that three books to one in favor of the nineteenth century were advisable, especially if the literature of the English-speaking race be in mind, and the bishop's words, as reported, would seem to have meant that. Think for a moment what such a dictum implies! It belittles, or at least throws out of proportion, the poetry of Keats, Shelley and Byron, of Wordsworth and Coleridge, of Browning, Tennyson, and Swinburne, of Poe, Whitman, and Kipling, the romances and novels of Scott, Hawthorne, and Stevenson, of Eliot, Dickens, and Thackeray, of later men and women like Meredith, Hardy, Ward, and Barrie; it slights the essay work of Lamb, Hunt, Hazlitt, De Quincey, and Irving, of Carlyle and Ruskin, of Emerson and Lowell. These and many others scarcely less worthy are set aside (by implication), as if in writing later than that arbitrary mark of 1800 they had committed the unpardonable sin. I am running over, be it observed, but a few stellar names, and am confined to authors using our own tongue."

Even supposing that the nineteenth-century literature is inferior to that of any other century, it is of vital interest, Professor Burton continues, because it is a reflection of the present life. To neglect the present would be to sacrifice all modern thought. The past should be studied for the present, not *vice versa*. We do not deprecate the past by saying that we should pay special attention to the present. The early authors should be reverenced, but "a belief in the present, whether it be literature or life which makes literature possible, is, when you come to think of it, a belief in the great laws and unfolding potentialities of the universe. Life greatens toward the light, and the nineteenth century is the heir of the ages."

---

## THE GREAT BOOKS OF THE CENTURY ONCE MORE.

IN our issue of December 29, 1900, we quoted from *The Outlook* the views of seven prominent writers concerning the ten most influential books of the nineteenth century. This is a subject of deep and enduring interest, remarks a recent writer in the Chicago *Dial* (January 1), "because it affords one way, at least, and probably the most important way, of determining what the nineteenth century has done for civilization."

Viewing the subject from the standpoint of what may be called the "books of thought"—books that have "opened men's eyes to a deeper view of scientific and philosophic truth and have made permanent changes in the current of human thought"—the writer says:

"Considered in this respect, the book of the century, beyond any possibility of a successful challenge to its preeminence, is 'The Origin of Species,' by Charles Darwin. The influence of this book ranks it with the treatises of Copernicus and of Newton, with the 'Contrat Social' and the 'Wealth of Nations.' It is doubtful if any other book, in all the history of modern thought, has been so far-reaching in its influence, or productive of such immense intellectual results. There is a difference, not merely of degree but almost of kind, between the intellectual processes of the men who lived before Darwin and those who have grown to manhood during the period in which the evolutionary leaven has been working in men's minds. We no longer think in the same terms as of old, and we see that the true measure of the power of the great thinkers of the past is to be found in the extent to which their work foreshadowed or anticipated the evolutionary method. It is because the influence of Darwin has thus extended far beyond the biological field in which his work was done that his most famous book stands thus preeminent. Among the books that have proved epoch-making in more restricted fields of thought, we may mention Lyell's 'Principles of Geology,' Helmholtz's 'Tonempfindungen,' Froebel's 'Education of Man,' Ruskin's 'Modern Painters,' and Maine's 'Ancient Law.' The science of comparative philology, which hardly existed before the nineteenth century, dates from the publication of Bopp's 'Comparative Grammar'; and the scientific pursuit of historical scholarship, whose ideals are very different from those of the eighteenth-century historians, altho Gibbon did much to anticipate them, really began with the publication of Niebuhr's 'Römische Geschichte.' Dalton's 'New System of Chemical Philosophy' laid the foundations for atomic chemistry, and the 'Mécanique Céleste' of Laplace provided a firm mathematical basis for the nebular theory, previously outlined, it is true, by Kant, but lacking in the confirmation that was brought to it by the masterly analysis of the French astronomer. Here is also the appropriate place for mention of the researches of Pasteur, which have proved so immensely fruitful in the domain of bacte-

riology, and upon which, more than upon the labors of any other investigator, the new science is based. To the work of Pasteur and his followers we owe the first rational theory of disease and its treatment that has ever been formulated, a somewhat surprising fact when we consider the paramount importance of the subject to mankind.

"What were once supposed to be the foundations of religious belief have, during the century just ended, been sapped and mined by many agencies. The study of ancient civilizations has proved to be the merest fables many things that the credulous earlier ages accepted without question. The new scientific view of man and nature has also brought about a silent transformation in many matters of opinion once thought to be indissolubly connected with religious belief, but now seen to have little or nothing to do with it. As far as religion is a question of the interpretation of the Scriptures, the historical methods that have dealt so effectively with Greek and Roman tradition have also made an enduring impression upon the traditions of the Hebrew people and of the Christian church. The 'higher' criticism, which means simply the new historical criticism of sources and ideas, has triumphed so completely that little in the way of superstition is left for it to slay. Many men have fought valiantly in this cause, and it is difficult to specify individual scholars. But if our test be that of direct influence upon great numbers of people, it is probably true that the 'Leben Jesu' of Strauss and the 'Vie de Jésus' of Renan have been the most important popular agencies in bringing about a restoration of the Christian religion to its proper place in the perspective of general history.

"In the domain of economics, the most influential book of the century has probably been one whose teachings are repudiated by those who have the best right to speak in the name of this science. The propaganda of socialism has become so marked a feature in the political life of most of the civilized nations that it can not be ignored in any survey of the tendencies of nineteenth-century thought, and credit must be given to the book which, more than any other, has been responsible for this movement. That book, it need hardly be added, is the 'Kapital' of Karl Marx; and its force is not yet spent. Indeed, we are inclined to think that fifty years hence it will loom even larger than it now does among the writings that have most profoundly influenced the thought of modern times. For the socialist experiment has not yet worked itself out, and it will not be discredited until civilization has suffered some very rude shocks. Mill's 'Political Economy,' on the other hand, while it has profoundly influenced the real thinkers in this field, and has an absolute value far exceeding that of 'Das Kapital,' falls short of being an epoch-making book for the simple reason that, instead of setting new ideas in motion, its energy was devoted to clarifying the old ones, and to setting them forth in logical arrangement. It is still the best single treatise on political economy that has ever been written, and for this, at least, it deserves an honorable place in any review of the intellectual history of the nineteenth century."

Turning, last of all, to the philosophers, the writer says:

"We find the names of Humboldt, Hegel, Schopenhauer, Comte, and Mr. Herbert Spencer to be the conspicuous names of the nineteenth century. The 'Kosmos' of Alexander von Humboldt marks, in a sense, the end of the period of general scholarship and the beginning of the period in which specialization has held full sway. Never again can any one hope to master the scientific knowledge of his time in the sense in which Humboldt mastered it; even the magnificent achievement of Mr. Spencer falls short of that ideal and shows the futility of any further endeavor in that direction. We owe to Mr. Spencer the most thoroughgoing application of the conception of evolution to history that has ever been made, and that is glory enough for one man; but we can not read his 'Synthetic Philosophy' without at the same time realizing that there are gaps in his knowledge and defects in his philosophical comprehension. We have the same feeling in more marked degree when we read Comte; and in his case, while recognizing his great influence, we must admit that it is an influence no longer active. Even the eloquence of Mr. Frederic Harrison can not galvanize the 'Cours de Philosophie Positive' into any semblance of the life that left it a generation ago. Nevertheless, it will always be reckoned among the most influential books of the century just ended. Taking philosophy in the stricter sense, as primarily concerned with the ultimate problems of thought, the names of Hegel and of Schopenhauer stand preeminent in the history of the nineteenth century. The 'Logic' of the one and 'Die Welt als Wille und Vorstellung' of the other have been the chief metaphysical forces of the period, altho now, at the end of the period, we see that the former is a waning influence, while the latter is an influence still to be taken into account in any study of the forces which still sway the minds of thoughtful men. It supplies, better than any other metaphysical system yet produced, the needed corrective for that material view of the universe which would seem to be the outcome of modern science, and enforces the fundamental teachings of the philosophers—of Plato, and Spinoza, and Berkeley, and Kant—in the terms of the modern intellect, and with a cogency that is irresistible to the logical mind. We are inclined to believe that if the 'Origin of Species' is approached in its influence upon nineteenth-century thought by any other one book, 'Die Welt als Wille und Vorstellung' is that book."

---

## INTERNATIONAL COOPERATION OF SCHOLARS.

THE cosmopolitanism of our times has found a most significant expression in the union of all the leading learned societies of the world, effected at a meeting of delegates, after several preliminary meetings, in Paris. This movement, to which we have already referred in these columns, forms the subject of an address by Professor von Zittel, the president of the Bavarian Royal Society, which is published in the Munich *Allgemeine Zeitung* (No. 263), from which address we gather the following particulars:

In recent years the republic of letters has become a fact not even attained at the time when the Latin language was the medium of communication between the savants of the whole world. Now learned literature and research have become international, and the work done by one people is closely watched and keenly appreciated by others. In the world of scholarship, national and political lines no longer exist. The natural expression of this democratic spirit has been found in the new organization and union of eighteen learned societies, representing about all of the nations of the civilized world. It has been felt that many literary undertakings would be impossible on account of their magnitude except by the cooperation of a number of these associations, and that there are great international problems of scholarship the solution of which necessarily falls not to a single association but to the whole learned world. For several years there has been an understanding between the Berlin, Leipsic, and Munich societies, and each of these has published researches that were of special interest to the whole world. The idea of pushing this understanding still further and making it international was advocated by the historian Mommsen ten years ago; but it has only been realized now. The German societies took the lead, and together with the London Royal Society invited the Paris association and others to a conference. As a result, the following eighteen societies have united in an international association, namely: The Royal Society of Sciences in Amsterdam; The Royal Prussian Society in Berlin; The Royal Academy of Sciences, of Letters, and Fine Arts in Brussels; The Royal Hungarian Society in Budapest; The Association of Sciences in Christiania; The Royal Society of Sciences in Göttingen; The Royal Danish Society in Copenhagen; The Royal Saxon Society in Leipsic; The Royal Society in London; The Royal Bavarian Society in Munich; The Academy of Sciences in Paris; The Academy of Inscriptions and Belles-Lettres in Paris; The Academy of Moral and Political Sciences in Paris; The Royal Academy of Sciences in St. Petersburg; The Royal Academy in Rome; The Royal Swedish Society in Stockholm; The National Academy of Sciences in Washington; The Imperial Academy of Sciences in Vienna.

These associations send representatives to a meeting held every two years, at which the work of the association is determined upon. At the first regular meeting held in Paris, the following work was planned: (1) The measurement of a line of longitude in Africa; (2) the international exchange of manuscripts; (3) preparation of an encyclopedia of Islam; (4) publication of Byzantine documents of the Middle Ages.—*Translation made for* THE LITERARY DIGEST.

## A CENTURY'S CHANGES IN THE WORLD'S LITERATURE.

TO what general conclusions does a survey of the literary history and evolution of the nineteenth century lead the critic who tries to forecast the future of literature in the light of the past? Are there any abiding features or tendencies in modern literature which have a definite and discernible relation to the general character of the forces dominant during the century just closed? Ferdinand Brunetière, the eminent French editor and critic, has written a book on the literature of the nineteenth century in which he puts and answers these questions. The summary and concluding reflections of the volume are reproduced in the French journals, which dwell particularly upon the apparent conflict between nationalism and cosmopolitanism in literature. M. Brunetière is an ardent Nationalist, and therefore to many his strong expressions in favor of the "universalization" of literature will appear surprising. He endeavors to effect a reconciliation between the two seemingly contradictory tendencies. He claims that, while without nationalism there is not only no national literature (which is obvious), but no literature at all, we have reached the point in intellectual development where a "world-spirit" is supreme in literature and subordinates, assimilates, and utilizes every vital national element for universal human and humane ends.

This general thesis M. Brunetière elaborates at length. There has, he recognizes, been a revival of nationalism in literature; but it has not arrested the continuous, irresistible interpenetration of cultures between the nations. He asks:

"Take romanticism, realism, nationalism—have they not been European movements apart from which no literature and no writer could have, or has, stood? Are not Chateaubriand, Byron, Pushkin contemporaries; and, similarly, thirty years later, the author of 'Adam Bede,' that of 'Madame Bovary,' and that of 'Anna Karenina'? Was not all Europe at a certain time Byronian; and, again, is she not all at present Tolstoyizing? That which has thus begun will work itself out, and an intellectual cosmopolitanism will level down all the national differences."

But the result will not be sameness, monotony, mere imitation. For literature is a people's conscience. King Shakespeare, as Carlyle said, is the bond of Anglo-Saxondom. What would remain of Shakespeare or of Dante if they had written in Latin? National genius depends, perhaps chiefly, on language, and language on environment, tradition, history, natural features of a country, etc. The great authors not only express nationality, they create and arouse it; they give it self-consciousness and vitality. Ibsen and Björnson, for example, felt that they had something to say which French and German writers had not said. They published their message, and their compatriots recognized themselves in that message. A national sentiment was called into being or intensified. In a like sense Tolstoy and Dostoievsky did more for Russia than Peter the Great and Catharine. What is the upshot of all this? M. Brunetière says:

"There are no ideas in literature save general ideas; hence it is proper to wish that from one end of Europe to another the same ideas should be established. On the other hand, that the embodiment, expression, of these general ideas should be diversified by the spirit of the hour—the spirit of the moment, the *milieu*, the genius of the race and nation."

Subject to this condition of spontaneity and variety within the general and common inheritance of ideas, M. Brunetière continues, we are justified, after the progress made by the nineteenth century, in demanding a second great principle—social utility and service. To quote.

"Literature will cease to be *diverting* and dilettante. It will lose the right it has arrogated to itself—to pluck flowers in every direction for the mere voluptuous pleasure of inhaling the perfume. It will not be esteemed except for the importance of its social function. It may protest from its height against so low, narrow, utilitarian a conception, but the protest will not be heard; it will hardly be understood. Or, if perchance heard, it will be told that of all forms of aristocracy that of intellect is the most unjustifiable in principle and the most dangerous in fact; since, instead of laboring to enlighten the benighted minds of the crowd, it abuses an opportunity purely accidental to aggravate the differences between it and the rest of humanity. In other words, we are marching toward the *socialization* of literature, or, to speak of the French more especially, toward the increasing socialization of literature, for of all literatures the French has been the most social and humane."

M. Brunetière believes that both the stage and the novel should and will concern themselves more and more with social problems. They have demonstrated their capacity along that line, he says, and all that is needed is more talent, more art. The ambition to deal with social and moral problems in plays and novels is noble, he says, but it requires, first, command of all the resources of art, and, second, a personal, an extensive, and a seasoned experience of the realities of life. With such experience for its guide, the dignity and efficacy of literature are bound to increase.—*Translation made for* THE LITERARY DIGEST.

---

**Sarah Bernhardt's Study of L'Aiglon.**—The old definition of genius as "an infinite capacity for taking pains" finds further corroboration in Mme. Bernhardt's account of her study of the character of the Duke of Reichstadt in Rostand's play. She speaks of her methods of study to Mr. Vance Thompson, who reports his interview in *The Saturday Evening Post* (Philadelphia). She visited, of course, the castle of Schoenbrunn, and, at night, the battle-field of Wagram. Then, after the study of the historical character, came the more difficult part of her task, of which she speaks as follows:

"Then the thing was to express it [the character]—to make myself, in walk and gesture and word, not Sarah Bernhardt, but the Duke of Reichstadt, son of the Eagle.

"I had all his costumes here in the house. For three months I wore them, every moment when I was not on the stage or in the street. And think, then—my secretary, my friends, my maids, all my servants had instructions to treat me as tho I were really the Duke of Reichstadt. I went to breakfast with cloak and sword, and the butler would say, 'Your Highness is served.' And so for three months. When I awoke in the morning I saw this white costume of the young prince, his sword, and boots. At once I was not Sarah Bernhardt; I was back in that gloomy chamber in Schoenbrunn. For those three months, before the first night of 'L'Aiglon,' I lived more the life of M. Rostand's hero than I did my own. One night—this was in Versailles—I rode out booted and spurred, cloaked and armed with a sword; that night I felt as he must have felt the night of his flight. It was a trifle awkward at first, for the sword frightened my horse, but we had a wild ride, mile after mile, through the night—I say we, because that night Napoleon's son and I rode together.

"I had learned to walk and talk as he must have done. I thought as he must have thought. Really, during those three months I could not attend to my business affairs. I am quite sure I was not myself—I was that poor boy, dying, an exile, in far-away Austria."

And, Mme. Bernhardt adds: "I think, too, my face had grown a little like his!"

---

WE are assured by the Mohammedans, according to *La Escuela Moderna*, that the three original idioms were the Arabian, Persian, and Turkish. The three were used at the same time in the terrestrial paradise. The serpent which seduced our first parent spoke in the Arabian tongue, that eloquent, strong, persuasive language which, they were told, they would one day speak in Paradise. In speaking with each other, Adam and Eve made use of Persian, that sweet, poetical, insinuating idiom which Eve knew so well how to use in bringing about the sorrows of the human race. The Angel Gabriel, who was sent to expel them from Eden, first gave the command in Arabian, then in Persian, but without effect. He was finally obliged to make use of the harsh, threatening, forcible Turkish language, which finally compelled obedience.

# SCIENCE AND INVENTION.

## DEATH IN THE LIGHT OF SCIENCE.

IN a recently published French book entitled "The Philosophy of Longevity," death is exhibited in quite a different aspect from that usually given to it. The author, M. Jean Finot, attempts to make us view the end of life as an unimportant incident in the infinite history of the substances of which our bodies are composed. These elements do not cease to live; they have formed part of living bodies before and will do so again, time out of mind. Furthermore, dissolution is not painful; why then fear it or grieve over it? These considerations he regards as consolatory. A reviewer in the *Revue Scientifique* (December 1) points out, however, that it is not especially consoling to know that the materials of one's body are to live over and over again in some other form, so long as there is not continuity in the personality. John Smith is not to be regarded as the reincarnation of George Washington, even tho some of the lime in their bones may really be the same. In fact, M. Finot's investigation leaves the great problem of life and death about where it has been for centuries past. Still, we are told, he has written a noteworthy book. Says the reviewer:

"The terror of death comes from the fear of the unknown, nourished by legends and superstitions, by artists, by religions—a product of badly trained human thought and of incorrect definitions accepted without sufficient investigation. This terror of death, bound up with the horrors of hell and inseparable from the fearful accompaniments of departure from life . . . can be weakened, if not entirely rooted out. Death, regarded in a measure as a new phase of life and as its continuation under forms made accessible to our understanding, would contain the treasures of peace. As a source of consolation, it will defend us against pessimism. . . . As faith in the immortality of the soul grows weaker, we shall find ourselves, from the sociologic point of view, forced to make up for it by faith in the immortality of the body.

"The author . . . gives us all the solutions of this problem that the science of to-day has been able to furnish, even opening the vast and vague horizon of the science of to-morrow, by telling us of the attempts at the synthesis of living matter, of the curious experiments made recently in America on the germination of unfecundated eggs, and finally of speculations on the life of inorganic matter. It is because he has chosen to take his stand on the ground of positive science that he has perhaps not succeeded in making of death the negligible incident that he has promised.

"Thus M. Finot reminds us at the outset that the duration of life is increasing and that cases of extreme longevity are more numerous than is generally believed. Doubtless; but death will come at last, and the cases of centenarians interest us in much the same way as the numbers that draw huge prizes in a lottery. Old age, M. Metchnikoff has recently told us, is a special form of disease. Perhaps; but it is an incurable disease, and a mortal one. . . . . .

"Only one thing interests us—our personality, made up of the consciousness of present existence and of memory; and it is just this personality which is everything and yet is nothing, which disappears in sleep and illness, which doubles and changes by hypnotism—a sort of fluorescent screen whose luminosity is connected with the processes of disaggregation and oxidation of a group of nerve-cells—this personality is just that which vanishes on the rupture of the consensus of the cells. This is why nothing in the world is so high as man, who understands vaguely the certainty of this inevitable fact.

"Doubtless matter is immortal . . . and being revivified continually by solar heat, it is destined to live without end; doubtless also no form of energy is lost, and what has been vital activity will live eternally in the form of undulations and vibrations that nothing can annihilate, in the limitless spaces of the universe.

"But what man must have, what he gets with his religious creeds or what he seeks in occultism or spiritualism, is a belief in the conservation of psychic personality, with the consciousness of existence and its train of recollections—not the deceptive metempsychosis which is all that positive science offers us, with a future in the fauna of the tomb or in some undulation of the ether.

"Still we do not reproach M. Finot with not having given us the solution desired by the man who does not want to die, and with not having solved problems that are at present insoluble and will probably remain so always. We ought rather to praise him for keeping closely within the domain of scientific fact, and for having presented to us in the most consoling light the fact that death is a stage in the evolution of living matter and that it does not end anything at all; that the living being starts on the road toward death as soon as it is born, just as a house begins to deteriorate as soon as it is built; that the passage from life, according to the most certain evidence, is neither painful nor horrible, for only illness is dangerous, and not death; and that it is not the act of wisdom to hasten death by the fear of dying."—*Translation made for* THE LITERARY DIGEST.

## HYGIENE OF THE HANDKERCHIEF.

WE are making our pockets into nests of microbes by using handkerchiefs as we do—so we are warned in the *Revue d'Hygiène* by M. Vallin. What we ought to do, he says, is to carry detachable india-rubber pockets and disinfect them at intervals, never using the same pocket both for clean and soiled handkerchiefs. The *Revue Scientifique*, in a notice of this article, says:

"The spittoon is without doubt very useful. . .; but it has been demonstrated that expectoration hurls out to a distance of a yard or more virulent vesicles that remain floating in air like little soap-bubbles. On the other hand, the handkerchief is a repugnant object, and the Japanese make fun of Europeans who carefully preserve in their pockets the excretions of their noses, mouths, throats, and bronchial tubes. . . . M. Jorissenne remarks that the same handkerchief does service in wiping dust from the face or in removing sweat or tears from it; and in rubbing off a spot of dirt from one's clothes after moistening it with saliva; we shake it in token of joy, adieu, or admiration. . . . . .

"But, says M. Jorissenne, we do not limit ourselves to these eccentricities. You put your dirty handkerchief in one of your pockets, not always the same one, perhaps, with other articles. And ladies, who usually have only one pocket in a dress, thrust it in among the collection of small articles that seems to be a necessity to them. This is done by the most careful people, by those who are most easily disgusted, by the most intelligent men as well as by the foolish. Later, when it is thought necessary, the soiled handkerchief is replaced by another, a clean one, which you slide into the pocket that all your soiled handkerchiefs have previously occupied. You still regard it as a clean handkerchief when you take it out of your pocket, and you offer it to the first friend who is in need of it. Have you thought what a bacteriologist would say to this? This handkerchief that is supposed to be clean will soil your hands when you use it. Your pockets are receptacles where, in a warm, dark, and moist environment, there accumulate the germs collected by your handkerchiefs. Ah! it is not wonderful that the origin of diseases is so difficult to discover in the majority of ordinary cases. . . . . .

"Our fathers' handkerchiefs were huge, many-colored cloths, that dried for weeks in their vast pockets before being washed. In the time of Louis XIV. everybody did not use them, and they were regarded as luxuries; sometimes there was only one to an entire family. The Japanese are ahead of us; they have little paper handkerchiefs, made at home, and used only once; but after use they are thrown anywhere—on the floor, out of the window, in the garden, wherever it happens. These contaminated handkerchiefs are agents of propagation for a host of diseases, and so we may turn the laugh on the Japanese.

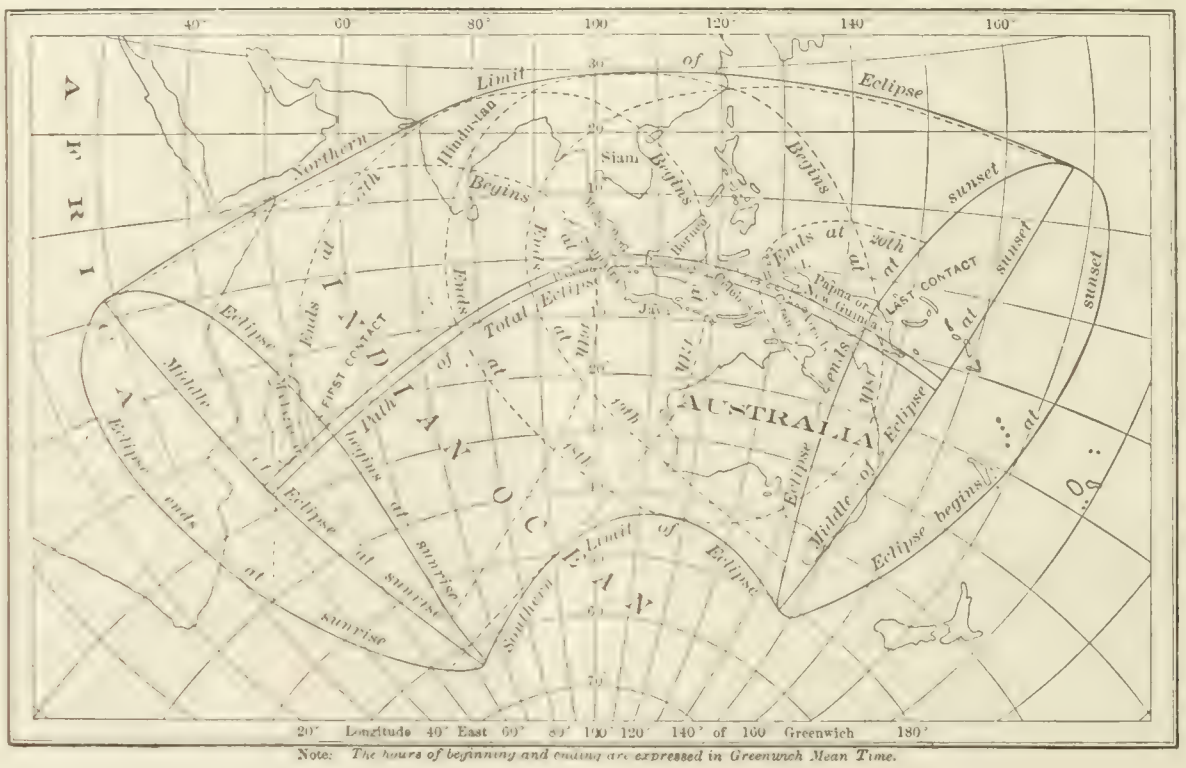
"Two forms of remedy present themselves: a small bag, easily opened and closed, or a similar pocket, impermeable and susceptible of being disinfected without rapid deterioration. India-rubber would be the most convenient material. The pocket could be fastened by a button or other device, whence it could be removed for disinfection. Clean handkerchiefs, of small size,

could be kept in a pocket not less clean, separate, and used only for this purpose. They could be contained or not in a protective case and should be sufficient in number for a day's needs.

"M. Vallin observes that there is a great amount of truth in all this, with a certain degree of exaggeration. It will be a difficult task to alter our customs in this regard. Altho the fashion has somewhat changed, let us not forget that, thirty years ago, ladies at a ball were accustomed to hold in their hands a lace handkerchief worth several hundred francs. Was not this a singular idea—to exhibit such an object as a measure of the good taste and the wealth of the one who carried it, and who, besides, took good care not to use it? An ingenious critic of the period suggested that it be replaced by paper—that is to say, a bank note."—*Translations made for* THE LITERARY DIGEST.

## THIS YEAR'S CELESTIAL PROGRAM.

THE usual number of interesting astronomical events are to take place in the heavens during 1901. We learn from a summary in *Popular Astronomy* (January) that these include two eclipses of the sun, one of the moon, and a "lunar appulse." The last-named phenomenon, the name of which is unfamiliar to the laity, is a kind of abortive eclipse. It will occur on May 3, but it will not be visible in the United States. "The moon will pass through the penumbra of the earth's shadow, almost touching the umbra on the south side. The northern portion of the moon will thus be perceptibly darkened for a short time." The appulse will not be visible in the United States.



Note: *The hours of beginning and ending are expressed in Greenwich Mean Time.*

CHART ILLUSTRATING THE TOTAL ECLIPSE OF THE SUN, MAY 17, 1901.

The first of the two solar eclipses of the year, due on May 17, is, we are told, one of the most important of the new century because of the long duration of totality, 6 minutes 26.8 seconds at maximum. It will not be visible on this side of the globe, nor in Europe. The only available places from which it can be observed on land are the islands of Sumatra, Borneo, and New Guinea the most favorable being Sumatra.

The eclipse of the moon, October 27, will be only partial, and will also be invisible in the United States. The second eclipse of the sun, November 10, will be "annular"; that is, the rim of the sun will show as a bright ring around the whole body of the moon. It also will be invisible in the United States, tho it ends in our new possessions, the path of the "annulus" terminating on the island of Luzon.

Five comets come to perihelion this year, but it is doubtful whether any of them will be seen. Of these, Brorsen's is due in January, Denning's in June, and Encke's in September. Of other heavenly bodies, the greatest importance attaches just now to the tiny asteroid (433) Eros, because of the observations undertaken in nearly all the prominent observatories to determine its parallax, which is very important as a means of calculating the distance of the sun. Says the writer:

"The planet was at opposition October 30, but did not reach its point nearest approach to the earth until December 26, when the distance was only 0.315 of the earth's distance from the sun, or 29,300,000 miles. The planet continues to approach the sun until February 7, and as its distance from the earth increases very slowly after opposition it will continue to be observed for parallax for a couple of months yet."

As to meteors, the Leonid shower, judging from the past two years' experience, will probably not be very remarkable; still it will be possible, no doubt, to observe a few, perhaps dozens, of meteors on the nights of November 13 to 16. The Perseids, with a maximum on August 10, will also be visible.

## STEAM, COLD WATER, AND COLLAPSE.

IT is a common school-room experiment to produce a partial vacuum in a glass globe by filling it with steam, corking it, and then pouring cold water over it. The steam condenses and leaves nothing in the greater part of the flask but a little water vapor at low tension. If the experiment were tried in a thin metallic vessel, the atmospheric pressure would be likely to collapse it with a loud report. This result, according to an editorial in *Cassier's Magazine*, has happened accidentally more than once, to the intense mystification of all concerned. It says:

"A few years ago, a 66-inch diameter by 30-foot oil-tank of its own volition undertook to play the rôle of a surface condenser—very much to its discomfiture. It was a new tank at the works of the manufacturer, undergoing the usual preliminary test, steam being introduced and maintained at twenty pounds. All leaks at rivets and seams were marked and rapidly calked. While this was in progress the whistle sounded the noon hour, followed by the usual stampede. The foreman in charge took the necessary precaution to close the steam-supply valve.

"It was a beautiful April noonday, but out of an almost solitary cloud came the proverbial April shower. It literally poured for less than a minute. 'The unexpected' happened. Now it was not reasonable for the men in charge to anticipate what might, and actually did, happen, namely, the total collapse of the tank with a report that startled the community into the belief that a battery of boilers had exploded. Even had the play of the elements been foreseen, it was not reasonable to suppose that a sufficient vacuum would be created within the tank to produce collapse, since only a preliminary stage of the test had been reached. . . . However, by a rare coincidence, all the elements for a demonstration were present. First, by the introduction of steam, all the air was driven out of the uncalked joints; then the expansion of iron from the heat of the steam closed up such leaks as workmen had not reached. The shower was properly timed, and of sufficient intensity and duration to condense all the steam and produce a vacuum, after which the shell yielded to still greater distortion, and finally collapsed from end to end, bending and breaking both heads.

"A similar incident is related by a man who was interested in the installation of a steam-plant, and who detailed the ever-present small boy on an errand to replenish the oil supply from a shop close at hand. The lad, seizing an empty gallon can and

holding it for a moment under the boiler gage-cock, blew a charge of dry steam into it, by way of cleansing the receptacle; then, quickly inserting the cork, he started on his mission at a run. The road led directly through a covered bridge, spanning a stream of water. The dampness of the place condensed the vapor confined in the can, and it collapsed with a loud report. The boy returned with a look of terror on his face and holding by the handle a flat plate, the remains of what a few moments before was a bright and symmetrical gallon can. However, the lesson was lost on him, as he could never quite understand what hit his can."

## THE LARGEST PHOTOGRAPHS OF THE MOON.

ALTHO the great telescope of the Paris Exposition has not made such a noise in the scientific world as its projectors expected, it has possibilities still before it, and already photographs of the moon have been taken with it that are larger than any obtained before. The story of the telescope is told in *The Strand Magazine* by M. François Deloncle, who first conceived the idea of its construction. M. Deloncle introduced the motion in the French chamber of deputies in 1892, authorizing the recent World's Fair. After noting this fact, he goes on to say:

"I felt that it was not sufficient that the Exhibition of 1900 should be exclusively an artistic triumph; it must also, if possible, mark an epoch in history by bringing science, which bids fair to completely revolutionize the world in the near future, home to the popular mind. For a long time I revolved various schemes in my mind, rejecting one after another as impracticable. A chance visit I paid one day to the Paris Observatory was the means of deciding the point for me.

"At this celebrated establishment, as most people who are interested in the question are aware, M. Loewy has been engaged for some years past in compiling an elaborate atlas of the moon's surface from photographs taken by the large jointed equatorial telescope. Astronomy having long been one of my favorite distractions, M. Loewy's work possessed a special charm for me.

"'With an instrument of double the power of this you could, no doubt, obtain even better results?' I said to M. Loewy.

"'Certainly,' was the answer.

"'And if the telescope were three or four or six times as powerful, or better still, no doubt?'

"'Naturally; but such an instrument is not likely to be forthcoming for a long time.'

"At that moment my resolution was taken. . . . . .

"I lost no time in drawing up the first preliminary outline of the scheme. As I anticipated, the project at once captured the popular imagination, and 'La lune à un mètre!' became in a day one of those catchwords that fly round the world as fast as the electric telegraph can take them. If the public was sympathetic, however, it was far otherwise with most of the specialists, who almost stigmatized the whole scheme as the wild dream of a visionary, incapable of being realized in practise. At first, in my enthusiasm, I was inclined to pooh-pooh all these objections, but the farther I pursued my investigations the more clearly did I perceive how well-grounded some, if not all of them, were.

"At every door at which I knocked I obtained a similar answer.

"'Impossible to make lenses such as you require,' I was assured in Paris, in Dublin, and in New York.

"'Impossible to polish such lenses, even supposing they could be made.'

"'Impossible to poise such a telescope as you describe.'

"'Impossible to see anything through it if it were poised.'"

Persistence, however, overcame all these "impossibilities." The lenses were made of the size wished and polished by machinery specially invented for the purpose. The difficulty of poising a telescope 200 feet in length was met by utilizing an invention of the physicist, Foucault, known as the siderostat, which is a mirror that can be turned in any direction. The celestial bodies are reflected in this, and their images are thus observed instead of themselves. While the telescope remains always fixed, the mirror turns. At last the day of trial came. To resume the writer's narrative:

"As is invariably the case, whenever an innovation that sets at naught old-established theories is brought forward, the prophecies of failure were many and loud, and I had more than a suspicion that my success would cause less satisfaction to others than to myself. Better than any one else I myself was cognizant of the unpropitious conditions in which my instrument had to work. The proximity of the river, the dust raised by hundreds of thousands of trampling feet, the trepidation of the soil from the working of the machinery, the changes in temperature, the glare from the thousands of electric lamps in close proximity—each of these circumstances, and many others of a more technical nature, which it would be tedious to enumerate, but which were no less important, would have been more than sufficient to make any astronomer despair of success, even in the observatories where all the surroundings are chosen with the utmost care. . . . . .

REDUCED FROM A PHOTOGRAPH, TWO FEET SQUARE, OF THE MOON, TAKEN AUGUST 17, 1900, AT 4 A.M.

"In the dark, square chamber at the other end of the instrument, 200 feet away, into which the eyepiece of the instrument opened, I had taken my station with two or three friends. An attendant at the telephone stood waiting at my elbow to transmit my orders to his colleague in charge of the levers that regulated the siderostat and its mirror. The moon had risen now, and her silvery glory shone and sparkled in the mirror.

"'A right declension,' I ordered. The telephone bell rang in reply.

"'Slowly—still slower—now to the left—enough—again a right declension—slower—stop now—very, very slowly.'

"On the square ground-glass plate before our eyes the moon's image gradually crept up from one corner until it had overspread the glass completely. And there we stood in the center of Paris examining the surface of our satellite, with all its craters and valleys and bleak desolation! I had won the day!

"On August 14 the first of a successful series of direct photographs, two feet square, three times as large as the largest that had ever hitherto been taken, was obtained by M. C. Le Morvan, the distinguished astronomer who has long been M. Loewy's right hand at the Paris Observatory.

"For me, at least, the appearances noted in these photographs completely reestablish and confirm the old theory that the moon is but a mass of volcanic basalt, without atmosphere and without life, another proof of the universality of the law of growth and decay, and an awe-inspiring example of what our own planet may some day be when more cycles of millions of years have rolled by."

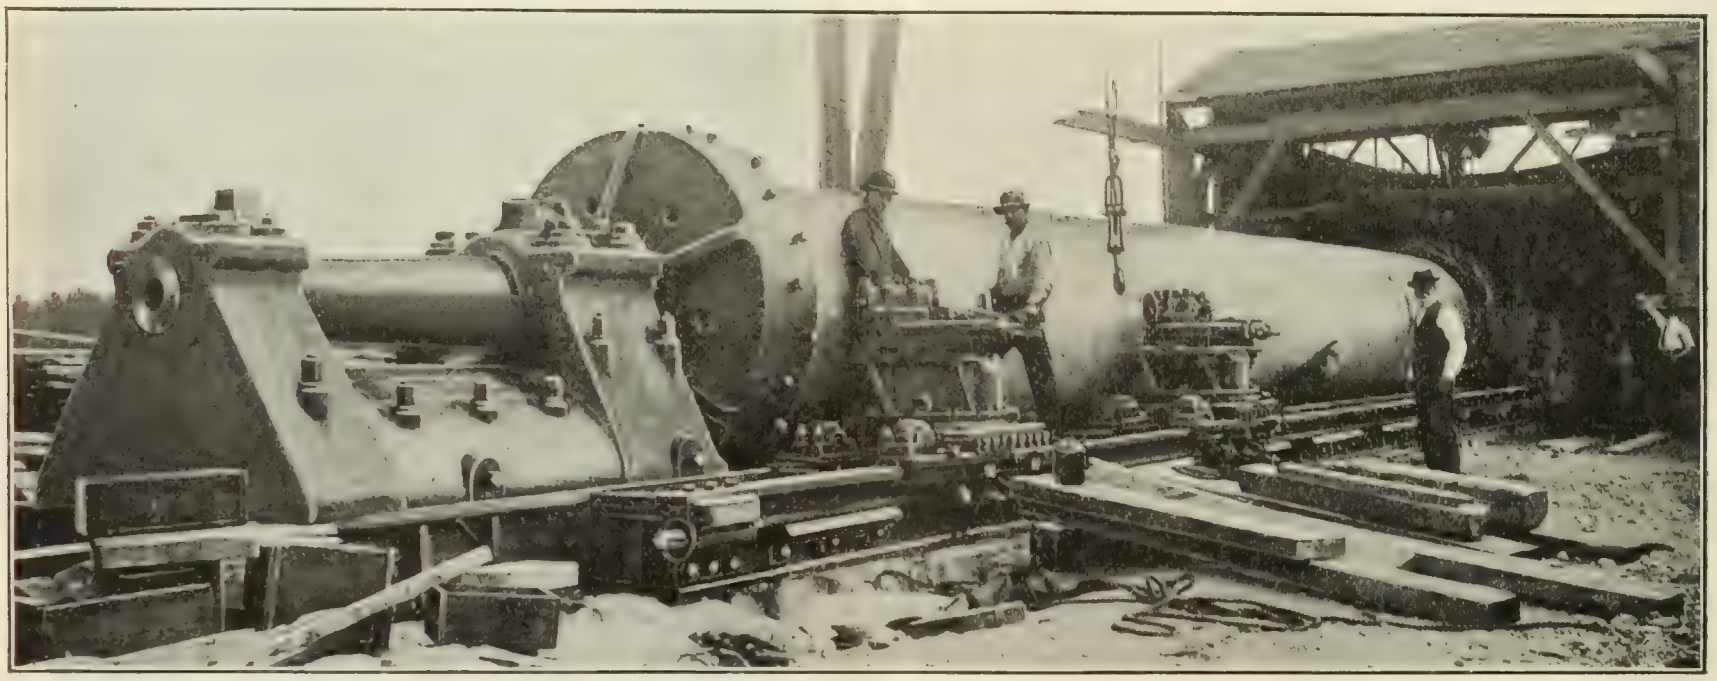
## A LATHE FOR TURNING STONE COLUMNS.

A MONSTER lathe has been designed especially to turn the stone pillars of the new cathedral of St. John the Divine, in New York City. Says *The Scientific American*, in describing the work:

"The quarrying, turning, transportation, and erection of the thirty-two granite columns of the choir presented may difficulties, as each weighs two thirds as much as the obelisk in Central Park, usually known as 'Cleopatra's Needle,' and the successful solution of the questions involved may be regarded as a remarkable feat of engineering. . . . The eastern end of the choir is a semicircle, and on the massive foundations will rest great monolithic columns, 54 feet high and 6 feet in diameter, each weighing 160 tons.-. . . The blank shown in our engraving measured 64 feet in length and was 8 feet 6 inches in thickness one way by 7 feet the other, and weighed 310 tons. To turn an enormous mass like this required the construction of a lathe of vast proportions. It was designed and patented by E. R. Cheney and H. A. Spiller, of Boston, and was built by the Philadelphia Roll and Machine Company, of Philadelphia, Pa.

"The lathe is 86 feet long, weighs 135 tons, and swings 6 feet 6 inches by 60 feet long. Eight tools are used, each taking a 3-inch cut, so that the column is reduced 2 feet each time the cutters traverse the entire length of the bed. . . . . .

"The corners are roughly dressed off by hand, and the stone begins its six weeks of dressing and polishing. As the stone revolves, it imparts a rotary motion to the cutting disks or tools. The cut is really a splintering of the stone, and three inches of the granite are removed at each cut. After the column is shaped it is polished with hardened steel shot, held in position by a kind of cup carried in the tool-holder. The final polishing is done with the aid of emery and water. When cutting, one and three-quarter revolutions are made a minute, and when polishing, three revolutions. The lathe is driven by a 50 horse-power engine, and, notwithstanding the great weight and friction of the moving parts, the lathe runs for about fifteen seconds after the belt is thrown off the pulley."



THE LATHE TURNING THE FIRST COLUMN. VIEW OF TAILSTOCK.

---

**Man an "Associative Memory."**—It is asserted by Professor Loeb, of Chicago University, that man is merely an associative memory, the human personality being only a "phrase for the fact that certain constituents of memory are more constantly or more frequently produced than others." This statement has provoked wide comment. By making it, says the Chicago *Journal* (January 2), the professor "forfeits all right to respectful consideration. It goes on to say: "Science may convince us that man is a mechanism composed of material elements; but when science attempts to make us believe that man is a mere mechanism, merely material, it flies in the face of facts every human being of his own experience knows to be as true as the fact that the red blood is coursing in his veins." Other papers are more interested in the fact that Professor Loeb's opinions, which he avows to be materialistic, are received without protest from the faculty of the University, which is, nominally at least, a denominational institution.

---

**Submarine Telephony: Another Failure.**—In spite of propositions to telephone from New York to London, we are still unable to talk under water more than a few miles. The obstacle is what electricians call static induction. A scientific man of repute, as noted in these columns, recently read a paper before one of the electrical societies, setting forth a method of overcoming this trouble; but, altho the papers report that he has received half a million or so for his invention, his suggestion has not yet materialized, and the solution of the problem seems as far off as ever. Says *Electricity* (January 9), in discussing a recent futile attempt:

"As every electrician is aware, the static induction in a long submarine telephone cable changes the quick, short sound-waves into long, slow vibrations impossible for the human ear to detect. This was forcibly demonstrated in a recent attempt to telephone under the Gulf of Mexico from Havana, Cuba, to Key West, Fla. The experiment was made by a representative of the Southern Bell Telephone Company of Atlanta, Ga. Two long-distance telephones of the most approved type were used, one instrument being connected with a cable in the office at Key West, and the other with the Havana end of the same cable. The report states that after repeated trials and by the aid of a vivid imagination the words 'Hello' and 'I don't understand you' were distinguished as coming from the operator at Havana, but all further attempts at conversation proved fruitless and the experiment was abandoned. The representative of the Bell Company is reported as saying that the voices sounded muffled and were merely indistinguishable blurred sounds. From the above it will be seen this experiment was no more successful than one made some time ago—to telephone by cable between Dry Tortugas and Key West. As the distance between Havana and Key West is less than two hundred miles and the distance across the Atlantic ten times as great, as may readily be inferred, it will probably be some time before telephonic communication is established between this country and Great Britain, unless by some such costly scheme as suggested by Mr. Edison a couple of years ago, namely, by means of a chain of innumerable relay ships."

---

"THAT some of the planets may be inhabited," says *The Scientific American*, "is possible, and there is nothing in our present knowledge of electricity absolutely to forbid the hope that in some future day we may learn how to fling forth intelligible electrical impulses into interplanetary or even interstellar space; but it will certainly need something more than mere observations of some unexplained electrical impulses on a Colorado mountain to prove to a demonstration either the one proposition or the other."

# THE RELIGIOUS WORLD.

## THE RELIGIOUS SIDE OF QUEEN VICTORIA.

AN account of the religious side of Queen Victoria's character has just been written by the Rev. Dr. Alexander MacKennal, a distinguished Congregational minister of Bowden, England, and president of the National Council of the Evangelical Free Churches of Great Britain. Dr. MacKennal (in *The Congregationalist*, January 26) says:

"A prosperous reign is a sore trial to the integrity of a people; we have not come out of it unscathed. We might have been destroyed by it, but we have had a monarch whose personal character has been a standing witness for virtue and godliness, and whose influence has always been exerted in favor of whatsoever things are true and honorable and pure and holy and of good report.

"The Queen had to choose her husband, and the soundness of her heart and judgment is seen in her choice of Prince Albert. He brought the simplicity of Lutheran piety and the largeness of German culture to refine the hard English habit and set its judgment free. To him we owe the inscription on the Royal Exchange in London, 'The earth is the Lord's and the fulness thereof,' and the prominence of a like inscription in the Exhibition of 1851. He loved to have about him men with whom he could talk of religion, the Bible, Christian life and doctrine. A certain intellectual freedom, robustness of faith, and largeness of fellowship mark the piety of the royal household. Dean Stanley and Dr. Caird, Baron Bunsen and Archbishop Tait, and the less known Benjamin Woodward represent different churches and various religious habits, and all spoke freely with the Queen and the Prince Consort. These were, however, cultivated men; one might value their friendship for other reasons than their piety. The Queen was interested in the religion of all with whom she had to do and showed concern for humble as well as for scholarly godliness. When one of her servants died at Windsor, she sent for the minister of the Congregational church, of which the woman had been a member, and asked him to conduct a funeral service in the porch before the body was sent away for burial, and she herself was present. Her religious tastes have also been simple. She has herself told us how her heart rose into her throat when Norman McLeod prayed without a book for her and her children.

"The simplicity and directness of her religious life are the more noticeable because she has been a strict observer of court etiquette. She has regarded the restrictions of her position, and has not attended dissenting places of worship, as have some of her family, both before and after her. Nonconformists have no good ground for resentment of this. They have seen in the personal respect she has paid to Nonconformists, and in her insistence that they should be recognized on public occasions, both what was her own feeling and what her policy in regard to them. One of those on the steps of St. Paul's in 1897 remembered an incident which had happened at Windsor ten years before. 'The three denominations,' as they are called—Baptist, Congregationalist, Presbyterian—have the right of access to the throne in recognition of their services in establishing the present dynasty. They wished to offer addresses to her Majesty on her first jubilee, and were invited to go up, in company with several other deputations. It was a various gathering which went to court that day. There were lords-lieutenants of counties and mayors of boroughs, heads of learned societies, the Scottish and Irish Universities, the Royal College of Physicians and the Royal College of Surgeons, the Royal Society and many others, last of all came five fishermen from Grimsby, in blue jerseys, who were there to represent the North Sea industries. The first to be presented were the lords-lieutenants and the mayors. The Queen received them seated. But when the 'representatives of religious bodies' were announced she rose and received them and their addresses standing. The act was intended to be significant. Perhaps not one of these men was known to her even by name; they had come from the dissenting churches and the undenominational societies. They were representatives of religion, and that was enough."

In a recent article on "The Religion of the World's Sovereigns" (December 22, page 776), we referred to the Queen's distinctly Broad-Church leanings in theology and to her love for hymns, of which her favorite ones were "Nearer, My God, to Thee," "Jesus, Lover of My Soul," "How Sweet the Name of Jesus Sounds," and "Wake, for the Night is Flying."

## STATISTICS OF THE CHURCHES FOR 1900.

STATISTICS of the religious bodies of the United States have lately been prepared by the Rev. Dr. E. M. Bliss, one of the managers of the Ecumenical Conference on Missions. Dr. Bliss has become recognized as an authority on church statistics; but his figures, tho interesting, are criticized by some writers as lacking in clearness of presentation. The more fully tabulated statistics of Dr. H. K. Carroll will appear somewhat later in the New York *Christian Advocate*. Dr. Bliss's chief table, as published in *The Independent*, is as follows:

### STATISTICS OF RELIGIOUS BODIES IN THE UNITED STATES.

TABLE I.—MINISTERS, CHURCHES, AND COMMUNICANTS IN 1890 AND 1900 IN THE UNITED STATES ONLY.

| Denominations. | Ministers. | | Churches. | | Members. | |
|---|---|---|---|---|---|---|
| | 1890. | 1900. | 1890. | 1900. | 1890. | 1900. |
| Adventists: | | | | | | |
| Seventh Day | 284 | 372 | 995 | 1,470 | 28,991 | 55,[illegible] |
| Life and Advent Union | 50 | 60 | 28 | 33 | 1,018 | 3,000 |
| Armenians | 7 | 15 | 6 | 21 | 335 | 8,500 |
| Baptists: | | | | | | |
| Regular (North) | 6,685 | 7,415 | 7,907 | 9,374 | 800,450 | 973,820 |
| Regular (South) | 8,957 | 12,058 | 16,238 | 18,963 | 1,280,066 | 1,608,413 |
| Regular (Colored) | 5,468 | 14,351 | 12,533 | 15,654 | 1,348,989 | 1,864,600 |
| Seventh Day | 115 | 119 | 106 | 115 | 9,143 | [illegible] |
| Freewill | 1,493 | 1,619 | 1,304 | 1,486 | 87,898 | 85,109 |
| General | 332 | 450 | 399 | 550 | 21,362 | 28,000 |

| Universalists | 708 | 735 | 956 | 764 | 49,194 | 48,426 |

*The Independent* later corrects the figures relating to the Christian Scientists, giving the official enrolment of the body as 100,000 and the number of adherents as "from 400,000 to 500,000." It remarks editorially:

"The census of 1890 gave the total population as 62,622,250, and the figures for the current year are 76,295,220, a growth during the ten years of 13,672,970, or twenty-one and eight-tenths per cent. In the table of percentages it will be seen that this is exceeded by the Congregationalists, Disciples, Episcopalians, Lutherans, several Presbyterian bodies, and almost all the colored churches, Baptist and Methodist, while several others come close to it. On the other hand, when we look at the rate of increase in the past year the situation is very different. Any comparison here must be of the nature of an estimate; yet assuming that the increase in the ten years in general population may be equally divided, the growth of the past year would be 1,360,000, or about one and eight-tenths per cent. A look at the second table of percentages makes it apparent that with the exception of some of the small denominations, in which any growth at all means a considerable percentage, the only churches that have kept up with the population are the Disciples, the Protestant Episcopal Church, the Lutherans, the Southern Presbyterian Church, and the Roman Catholics. Of these the Lutherans and Roman Catholics owe a considerable proportion of their growth to immigration, so that the list of churches whose normal growth has been even equal to the growth in population is very small."

*The Watchman* (Baptist) takes exception to the classification of religious bodies adopted by *The Independent*, and claims that a fair statement will give the first place among Protestant denominations to the Baptists. Grouping together as one organic body the regular Baptist Church (North), the regular Baptist Church (South), and the regular (Colored) Baptist Church, but viewing the several Methodist bodies as separate organisms, it says:

"Of the separately organized bodies the Baptists stand first with 4,446,833 members; the Methodist Episcopal Church (North) reports 2,716,437; the Methodist Episcopal (South), 1,457,864; the Presbyterians (North), 973,433; the Disciples of Christ, 1,149,982; the Protestant Episcopalians, 716,431; and the Congregationalists, 629,874. . . . *The Watchman* several years ago exposed the error and unfairness of this method, and *The Independent* modified its statistics so as to show the real strength and standing of the Baptist denomination in this country. We regret that it has returned to its former misleading practise. As we before showed, it is not true nor accurate. It does not give the strength of the Baptists correctly, even according to the arbitrary and groundless division adopted. It is to be much regretted that these otherwise valuable statistics should be marred by this display of denominational prejudice."

The Springfield *Republican* says:

"A study of the percentages of increase seem to show that the large and well-established denominations are holding their own, while the smaller and more narrowly sectarian bodies as a rule are falling off. The Seventh-Day Baptists, the Free-Will Baptists, the German Baptists (old order), the Welsh Calvinistic, the Reformed Presbyterian, all show losses, and others have made insignificant gains. The most notable growth among the Protestant bodies has been that of the Disciples of Christ, who have increased from 871,017 to 1,149,982, a gain of 32 per cent. The Congregationalists, whose numbers have never equaled their influence, have increased at the rate of 23 per cent. The percentages show several remarkable developments due to immigration. The Armenians have increased from 335 to 8,500, or 2,434 per cent., and the Orthodox Greek Church from 100 to 20,000, or 19,900 per cent., 14,000 of the additions being made in 1900. Later and more complete statistics for 1900 will make further analysis possible, but even these imperfect data are interesting as showing in a rough way the general drift of religion in the United States."

The New York *Times* says:

"On the whole, the showing is good, but not good enough to give much cause for self-gratulation to those who count themselves the 'sweet elected few.' They are holding their own so far, but if they are going to continue to do so, still more inherit the earth, they have, in the parlance of the street, got to hustle. The first essential in hustling is recognition of the actual situation. That is before the churches. Next week is to be the week of prayer. With no irreverence we would recommend the churches to precede that exercise with a pretty careful stock-taking. They are, most of them, just within the limits of bankruptcy. That may or may not be subject for encouragement; it can hardly be one for gratulation. They may well remember the old motto, 'Laborare est orare,' and remember that work comes before prayer."

## THE LARGEST SUNDAY-SCHOOL IN THE WORLD.

THE largest and oldest Sunday-school in the world, says Mr. W. T. Stead, is that at Stockport, a large borough town not far from Manchester, England. It has this year the names of 3,328 pupils on its books, of whom 1,574 are boys and 1,754 girls. About this parent school are grouped four other affiliated schools containing 1,304 pupils. The school has a staff of 223 men and 216 women teachers.

In *The Youth's Companion* (January 10), Mr. Stead describes the school, which is a strictly undenominational institution, affiliated to no sect and supported by those of all sects. The Apostles' Creed is repeated at the morning service by all the children; "but there is nothing in tone, temper, or forms of the school that would jar upon the most sensitive Methodist, Congregationalist, or Baptist." Great stress is laid upon personal consecration and the acceptance of service for Christ. Mr. Stead writes:

"The Sunday-school, indeed, has become more and more of a church in itself, lacking the administration of the sacraments. The day on which I visited the school, the service began at about a quarter-past nine in the morning, and the school closed at about half-past eleven. After the pupils had left, the superintendents met in the board room as a committee of management, which did not adjourn until after the noon hour. In the afternoon the school meets at two o'clock, and continues in session until half-past three. In the evening there is no session, altho religious services are often held in the spacious building. . . . The school has three red-letter days: the day of the annual sermon—the third Sunday in November—when a collection of twenty-five hundred dollars is taken; that of the annual procession through the town about the middle of June, and that of the annual concert in December. Each of these days is regarded almost in the light of a civic festival.

"The school has an annual income of about seventy-five hundred dollars, raised chiefly by the annual collection and by subscriptions. It keeps up its numbers year after year. It is esti-

mated that the annual loss from deaths, removals, and other causes is about six hundred and fifty. But this is always made good by newcomers. Sunday-school workers will be interested in a broad description of the distinctive characteristics of the school. Its first notable feature is that it has no master—no one in authority over it. Never was there a more uncompromising, consistent democratic organization. No parson or superintendent is allowed to lord it over this religious republic. The trustees, who consist of all who subscribe twenty pounds or upward to its fund, and the other subscribers every year elect a committee. The trustees and the committee elect what are called visitors, whose duty it is to preside over the various class-rooms, and the trustees, committee, and visitors, of whom there are forty-one, meet as a board of management every Sunday after morning school. The visitors select the teachers, and the teachers every year elect three general inspectors. The only other officials are the secretary and treasurer. No one is ever elected for more than twelve months, altho all are eligible for reelection. The general inspectors are practically superintendents, but their power is limited, and in cases of discipline they report to the board. Only elected persons have any voice in the management of the school; no elected person has any autocratic authority,

THE SUNDAY-SCHOOL BUILDING AT STOCKPORT, ENGLAND.

and every elected person can be turned out of office twelve months after election.

"The second notable thing about the school is that it is in reality a congress of federated schools. There are fifty separate class-rooms, each with its own organization of visitor, teachers, and pupils. Each of these separate cells forms part of the general organization, all are supervised by the general inspectors and all take part in the opening and closing services. Promotion takes place from one class-room to another on the recommendation of the teacher, subject to the approval of the visitor; but for purposes of teaching each class-room is virtually an independent school. The combination of local autonomy for the small unit, with close federation for common worship and common service, is one of the secrets of the success of the school.

"A third distinctive characteristic of the school is that it still preserves the teaching of writing as well as of reading. This is not, however, so prominent as formerly. The copy-books are still served out, but their use is not universal, and the object of the writing-lesson is not so much to teach writing as to impress upon the mind of the pupil some text, hymn, or moral lesson.

"Much more remarkable than the writing-lesson are the adult classes. The problem of retaining elder students has been faced and solved with unusual success. When I visited the school, I addressed the two senior classes, each containing about three hundred pupils, none of whom was under sixteen years of age. In the first and second classes no one under this age is received. In the adult class the minimum age is eighteen. The scholars are promoted step by step from the infant class until they reach the first or second class. From these classes the teachers are usually selected. Students who do not become teachers pass into the adult class, where there are gray-headed men and women who desire to keep up their connection with the school. They organize their own service, which somewhat resembles the pleasant Sunday afternoon meetings so much in vogue in England. The muster-roll of these three senior classes is over one thousand strong.

"In Stockport pupils enter the school as infants, and usually quit it only when they die. Nothing is more remarkable than the attachment of pupils to their school. When I was there I found that one family had three generations of its members represented in the ranks of the students and teachers. *The Quiver*, a popular religious periodical, recently offered a medal to any Sunday-school teacher who could show twenty years continuous service at the same school. Stockport Sunday-school received no fewer than eighty-five medals. Of the medalists, twenty-three had records of continuous service of between thirty and forty years, eight between forty and fifty, and two veterans had served continuously as teachers in the school for fifty and fifty-two years respectively.

"In connection with the Sunday-school are four libraries, containing nearly ten thousand volumes. There is also a tract depot for the sale of religious literature. Among the other institutions are a Band of Hope for the inculcation of temperance, an Improvement Society with classes for technical education, an Ambulance and First Aid to the Injured Association, and the choir; this carries on the work of the Choral Society, which for forty years was one of the most successful musical societies in the north of England."

## THEISM AND EVOLUTION: MR. SPENCER'S VITAL ADMISSION.

WHILE Herbert Spencer has never called himself, or allowed others to call him, an agnostic, in the Huxley sense of the term, he has repeatedly intimated that theism is incompatible with the philosophy of evolution. He has always laid stress on the consciousness of a reality, of an absolute, behind appearances, and his well-known distinction between the knowable and the unknowable has led him to attempt a "reconciliation" between religion and science on the basis of this twofold proposition. It is certain that an inscrutable power is manifested to us in all phenomena, but the nature of this power transcends intuition and is beyond our imagination. That this doctrine is opposed to theism, revelation, and supernaturalism in religion, Mr. Spencer has always frankly recognized.

Now, the new and final edition of "First Principles," the foundation of the Spencerian system, contains a remarkable "Postscript to Part I.," in which Mr. Spencer admits that his "theologico-metaphysical beliefs" are not the basis of the philosophy of evolution at all. It is, he declares, unfortunate that he did not foresee that rejection of the distinction between the knowable and the unknowable, with all that it implies, would be held to involve the rejection of evolution as an account or explanation of mere phenomena. To remove this misapprehension, he says that evolution leaves theology and metaphysics entirely on one side. To quote his paragraph on page 126 *d*:

"But an account of the transformation of things . . . is simply an orderly presentation of facts; and the interpretation of the facts is nothing more than a statement of the ultimate uniformities they present, the laws to which they conform. Is the reader an atheist? The exposition of these facts will neither yield support to his belief nor destroy it. Is he a pantheist? The phenomena and the inferences as now to be set forth will not force on him any incongruous implication. Does he think that God is immanent throughout all things, from concentrating nebulæ to the thoughts of poets? Then the theory to be put before him *contains no disproof of that view*. Does he believe in a Deity who has given unchanging laws to the universe? Then he will find nothing at variance with his belief in an exposition of those laws and an account of the results."

Evolution, according to Mr. Spencer, does not involve the abandonment of theism; in which respect he dissents from the conclusions reached by Professor Haeckel and the monists repre-

sented by the latter. The charge that his philosophy is dualistic and fails to provide a solution of the "riddle of existence" Mr. Spencer admits; but he holds dualism to be an organic necessity or unavoidable fact. He says that as intellect is framed by and for converse with phenomena it leads to nonsense when we try to use it for anything beyond phenomena. "We find it impossible to think of the world as constituted of appearances, and to exclude all thought of the reality of which they are appearances"; but when intelligence tries to form a conception of that reality, it fails. There is a constant effort to pass into the unknowable, and an equally constant inability to pass it. The riddle therefore remains unsolved, and we must be satisfied, so far as science and philosophy are concerned, with the persistent consciousness that the reality exists, tho it is impossible for us to comprehend its nature or its exact relation to appearances.

## CONFLICTING MOVEMENTS IN THE ROMAN CATHOLIC CHURCH OF FRANCE.

ONE of the surprises which recent months have brought to the religious world is the development of diverging movements within the Roman Catholic Church of France, some of which, it is alleged, endanger the historic name of this church as "the most faithful daughter of Rome." A number of recent conventions have been held which are viewed by Protestant journals as indicative of the existence of serious antagonisms. No comment from Roman Catholic journals has yet come to our attention. The following data are taken from the account as given and commented upon by a leading Protestant journal, the *Chronik* (Leipsic), and present, of course, the interpretation of a critic hostile to the claims of Roman Catholicism:

The most significant religious convention that has been held in France for years (says the *Chronik*) was the Priests' Congress at Bourges, attended by fully eight hundred priests. It was the meeting of that element of the Roman Catholic clergy which is not in sympathy with the ultramontane tendencies, but aims to bring the church into closer harmony with the spirit of the times. The leading church authorities frowned on this convention, which was generally regarded as an exhibition of the old liberty-loving Gallicanism that was once so powerful in the ranks of the French church. This opposition found its way into the public press, and Cassaignac wrote in the *Autorité* as follows: "This congress is an important and poorly disguised appeal to the clergy to rebel against the bishops, more or less openly. Only a prelate like the Archbishop of Bourges, who is unscrupulous and devoid of all intelligence and moral conscience, could consent to father such a convention."

Other organs of the church complained that the Government is ever ready to suppress the legitimate liberties of the church, but does nothing to suppress the agitation of the democratic abbés. Notwithstanding these denunciations, four cardinals, five archbishops, and twenty-seven bishops gave their consent to the convention, and the Pope was persuaded to grant his permission.

The addresses that were delivered, however, were of a kind that did not please the church authorities. Three leading subjects had been assigned for discussion, *Études*, *Œuvres*, *Méthodes d'Action* (Studies, Work, Methods of Action). Under the first of these, the studies of the clergy were considered, and emphasis was laid upon the duty of the clergy to make themselves thoroughly familiar with modern thought, in order to crush out the criticism so often made that Roman Catholic and modern scientific thought are irreconcilable, and to convince weak members of the church that true science is not dangerous to her interests. There are no reasons, it was said, for the deep distrust felt in many Roman Catholic circles toward modern scientific research. Without a knowledge of modern science, a true defense of the church is impossible. The weapons which the priest must use in his battle with the heretics must not be sought in the definitions of the church, but in science itself. "Why are we so foolish," it was asked, "as to declaim against our contemporaries in the language that was once in vogue in the University of Salamanca?" The *Chrétien Français* reports that one member of the convention laid before that body a list of scientific theological books for the study of the priest, and that this list included many French and German Protestant works.

The discussion on "Work" was devoted to the sociological duties of the priest, in connection with which Abbé Hemmer, of Paris, severely criticized the modern cultus of St. Anthony.

The discussion on "Methods" was intended to show the priests how to gain influence in modern life and thought, and gave wide scope for the reform ideas of many of the participants. In emphasizing the importance of this matter, the Abbé Pastoret, of Paris, declared that the masses in France were indifferent to religion, and that there was some reasons for declaring that France no longer belongs to the Roman Catholic nations. Bishop Rumeau, of Angers, said: "Fifty thousand priests every day ascend the altars and often preach the word of God; fifty thousand priests, who are the light of the world and the salt of the earth; and yet how dark the light has become, and how the salt has lost its savor! How are we to explain such sad results?" In answer to this, the Vicar-General Birot gave what proved to be the most sensational address of the convention. He said:

"If the priest wants to regain influence in the land, he must have a warm heart for his country and his times. Our patriotism is too morose. We think too much of the France of the past. Our coreligionists in other lands are not so; they live for their country and they love their homes. The French Catholics have not understood how to take part in the noblest movements of the century. We have not loved enough. Modern society has come into existence without us, and indeed in opposition to us. Instead of trying to help in the work of liberation, we have rather tried to gain supremacy over the age."

The protest that this address aroused in the Roman Catholic circles of France, says the *Chronik*, was only partially quieted by the promise that it should not be published in its original shape; but this has not prevented its appearance in the public press.

Different tendencies in the French Roman Catholic Church found expression in the Marian Congress at Lyons, held for the purpose of paying special devotion to Mary. Thirty-five bishops and five hundred priests were in attendance. France was declared to be the favored land of the holy Virgin. "As the divine Savior selected Judea to be the scene of His labors," it was said, "thus Mary has selected France, with its Lourdes, its La Valette, and so many other sacred shrines of the Coredeemer (*corédemptrice*). Our Lady is the Queen over all, just as our Savior is the Lord over all."

Mary was declared to be the Judith of the New Testament, and it is in the devotion to Mary that France must seek her rehabilitation as the leading nation of the earth.

The most pronounced anti-ultramontane movement in the French church is that of the "Former Priests," headed by the late Abbé Burrier, with the cry, "Away from Rome!" The organ of this movement, the *Chrétien Français*, in every number reports accessions, the most important during the past three months being that of the Abbé Arnaud, of St. Romans.—*Translations made for* THE LITERARY DIGEST.

## RELIGIOUS NOTES.

IN "The Existence and Immortality of the Soul," by Henry Frank, head of the Independent Church movement in New York, the author argues on physiological lines that the soul is not resident in the body as a foreign substance, but is the register of the universal spiritual energy in the human organization, penetrating every minute atom. This impalpable presence becomes visible, he says, through the microscopical investigation of the blood. In the second part of the work, the author presents the psychological basis of the question, giving the data of hypnotism, telepathy, spiritualism, clairvoyance, and other subjects relating to the "borderland" of life.

MR. WU TING FANG'S assertion that some of the Christian missionaries in China and elsewhere have been "crying for vengeance" has met some denials and countercharges. Not all Christians, however, condemn Mr. Wu for his recent attitude toward the missionaries, to the indiscretions of some of whom he attributes much of the present trouble. *The Ave Maria* (Rom. Cath.) says: "Mr. Wu's explanation of the unpopularity of foreigners in China seems to us perfectly reasonable; it is the most satisfactory one that we have seen from any source. We should be sorry indeed to misrepresent Mr. Wu Ting Fang. He is a man of estimable character, and his able and honorable representation of this country should command the respect of every American citizen. He is not a Christian, but a disciple of Confucius; however, we will pay him the compliment of saying that if all Christian countries had foreign ministers like him, there would be more peace in the world than there is, more honor and justice among nations."

# FOREIGN TOPICS.

## THE WAR SITUATION IN SOUTH AFRICA.

A NUMBER of papers in Great Britain still continue to speak of the Boer war as practically ended and to censure the Boers for their failure to give up a useless struggle. Others declare that the war *was* over, but has broken out afresh. The majority, however, understand that, either intentionally or in consequence of some misunderstanding, the Boers were declared conquered when they had as yet given no sign that they regarded themselves in that light. "To sum up, another hundred thousand men will have to be sent," remarks the Montreal *Herald* at the end of an account given by a returned Canadian officer. Greater severity is demanded by *The Scotsman* (Edinburgh), which complains of the "ungenerous men like De Wet," who, "after beginning the war without provocation, persist in waging it when all chances of success are gone." The suggestion is also frequently made that if only the Boers could be talked to face to face they would give up the struggle; but some of the most warlike journals, like *The Saturday Review*, see nothing for it but to furnish more troops and more money. But the assumption that plenty of men are to be had is now being doubted. *The St. James's Gazette*, anything but "pro-Boer," says:

"There is room for skepticism as to the alleged enormous candidature for 'B. P.'s' [Baden-Powell's] police. Five or six times the required number, we have been constantly told, have applied, the offices are blocked, and only thoroughly good riders and shots need apply. Yet only a few hundred have so far left for the Transvaal, in spite of the innumerable hosts of first-rate men clamoring to be allowed to join. Mr. Brodrick is reported this morning to be again urgently hurrying on recruiting, and circulating leaflets to all voluntary regiments and Yeomanry brigade adjutants. . . . Let the authorities calculate the number of police probably wanted, and then double it. They have all along been given a free hand as to expense, and the popularity of the force is all a matter of money. If the constabulary can not, as alleged, live on their apparently high pay, it should be increased. There will be a saving in the end."

"There is reason to doubt that the British people know the worst about South Africa," remarks the Toronto *Globe*, and there

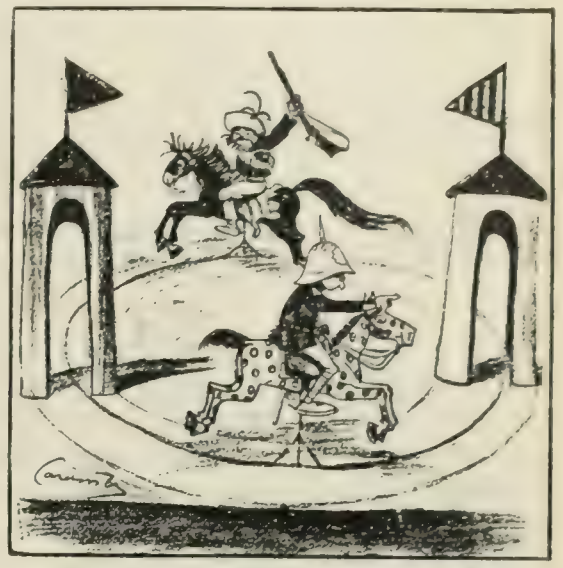
A REAL MESSAGE FROM MARS.

"Send me up a broom, please."

—*Westminster Gazette.*

is a general restlessness in Canada over the situation. *The Speaker* (London), one of the strongest of the Liberal organs, thinks it time to abandon the idea that the Boers must be crushed for the sake of civilization. It says:

"It is a conflict, we are told, between nineteenth-century and seventeenth-century civilization in South Africa. If the nineteenth-century civilization is the better of the two, we might have supposed from the teaching of evolution that the inferior Boer civilization would go under in the ordinary processes of competition and peaceful contact. But things didn't move fast enough, and the superior civilization had to assert itself by force of arms. War then became the criterion; but what our new moralists are blind to is that if war and the virtues that count in war are our standards, the Boers have justified absolutely their right to live as a national civilization by the courage, the endurance, and the skill they have exhibited during eighteen months."



IN SOUTH AFRICA.

The same game of merry-go-round.

—*Fischetto, Turin.*

*The Daily Graphic* thinks it is evidently a hopeless task to overcome the unreasoning prejudice of the Boers against British rule. *The Westminster Gazette* (Liberal) says:

"It is idle to keep boasting that we have established our supremacy. It is not wholly untrue, but it is a half truth which conceals the real point of importance. The Boers may be excused for believing that in the last four months the British have made less than no progress. They know that we are making no real business effort to relieve an army that is wasting with alarming rapidity. They naturally conclude that their chance is to wear the British army out by keeping at it, and by spreading the fighting over the widest area."

"By common report our troops in South Africa are 'stale,'" says the Manchester *Guardian* (Radical). The London *Standard* (Conservative) is one of the few English papers which recognize the fact that the Western, not the Eastern, part of the Cape Colony contains the larger number of Boers, and that the danger to Britain increases as the Boer forces establish themselves in the colony, even if the Afrikanders do not rise in open rebellion. *The Standard* nevertheless wonders why the Cape Boers should be willing to enter into the struggle at all. In a pamphlet published by the Stop-the-War Committee, a letter is published, written by an officer in the field, who offers this explanation:

"Imagine a French army landing in England and setting fire to Hatfield because Lord Salisbury's son or grandson was serving in the English army; imagine an inquisition established at every dwelling, and where any man was accused of being absent in the defense of his country, a French officer ordering the women and children to be turned out on a December day, and their homestead burned before their eyes. Imagine, also, thousands of the women of London and other towns collected in batches, and sent into the English camps, to Wales or Scotland, so as to embarrass the generals and terrify their husbands into surrender by the sight of their sufferings. That is what is being done all over the conquered territories under the name of English civilization!"

The London *Times* fears that "the Boer leaders will certainly countenance no negotiations while the result of their experiment in the Cape Colony remains undetermined." On the whole, continental observers find that England's chances are growing worse. Difficulty in finding men, discontent among the officers, refusal to obey orders among the Colonial and Irish troops, and above all the ease with which British troops are induced to surrender are alleged as serious drawbacks. The opinion prevails that conquest is further off than ever. The *Indépendance Belge* (Brussels) says:

"Some English papers are incorrigible. *The St. James's Ga-*

*zette* talks glibly of sending 20,000 to 40,000 additional men to South Africa, and the Government announces that 800 are ready to go! It is simply ridiculous to pretend, as the London press does, that the British are wearing out the Boers. The reverse is the case. The British troops are worn out, while the Boers easily recuperate. It may not be prudent to predict that the Boers will drive the British into the sea; but the conditions certainly have changed much since Roberts left South Africa. The Boers are reorganized, and Kitchener no more conquers them than did Buller or Methuen. Another army as big as the first is necessary in order to exterminate the Boers. Will England risk that army? No, certainly not. Not because the British people are influenced by generosity, but because they count the cost. The war was begun in order to rob the Boers of their national existence, and the English are now themselves the victims. What is needed is a speedy peace, and unless Great Britain grants the Boers honorable autonomy, the terrible prediction will be realized that South Africa will become the grave of British power."

Little account is taken on the Continent of the efforts of those Boers who endeavor to induce their countrymen to surrender. The proclamation issued by them contains the following passage: "We have done our best, and fought to get Africa under one flag, and we have lost. Let there be no mistake about this. England has spent millions, and sacrificed thousands of lives, and no reasonable being can believe for one moment that she will now give up the fruits of victory." "The thing shows on the face of it that it was penned or dictated by Kitchener," remarks the *Nieuws van den Dag* (Amsterdam); "it may not be advisable to approach the successful Boer leaders with such stuff." The *Kölnische Zeitung* (Cologne) thinks that the Boers, who were mere armed citizens, have during the war become fierce warriors, and are not likely to submit unless they are defeated. The *Vossische Zeitung* (Berlin) says:

"A kind of hopelessness has seized the British people. The countless defeats they suffer no longer rouse them to energy. They see that the war is not only not over, but that it is likely to last very long, thanks to the 'excellent strategy' of Lord Roberts. They would like to conclude peace; but whom are they to approach with a view to negotiations? What terms are to be offered? It is clear that 250,000 British troops are not enough to conquer 'a few handfuls of marauders,' as *The Times* calls them. Neither in the Transvaal nor in the Free State can British detachments leave the main body without danger of becoming gazetted as 'missing.' Kitchener has his hands full to protect the mines, and latest developments show that even in the Cape Colony the British can not assert themselves as masters."

Most continental papers still speak of the temporary conquest of South Africa as probable. The *Deutsche Tages Zeitung* (Berlin) nevertheless regards lasting British rule as altogether out of the question. In the course of a long article, the paper expresses itself in the main as follows:

Even when the Boers in the beginning were successful, we doubted that England would lose South Africa. To-day the conduct of the English has removed all doubt. The guilt is, with few exceptions, with the entire British people. Rhodes and the mine-owners no doubt did much of their dirty work for them, but the true cause of the war was British imperialism. All Africa was to be British, the Dutchman was the chief obstacle, the Dutchman had to be crushed. But the attempt has already failed. The Cape Boers will rise, even if it takes a year to rouse them, and the Republicans can easily hold out a year. When they are in need of supplies, they can help themselves to British stores.—*Translations made for* THE LITERARY DIGEST.

**A German View of the Waldersee-Chaffee Incident.**—Few German papers regarded the protest of General Chaffee against the removal of the astronomical instruments in Peking as important enough to call for comment. One of the few is the *Münchener Neuesten Nachrichten*, which says:

"As the instruments were state property, one would think that the Americans should be the last to protest, as they had confiscated 200,000 taels of the Chinese Government's money—on account of the indemnity. Moreover, it is well known that the Americans and Russians were the worst looters of public and private property. General Chaffee's letter was therefore a naive piece of impertinence, worthy of the rhodomontades of the famous Dewey, of Manila memory, and of Captain Coghlan. Chaffee, whose glory does not appear outside of the United States press, stands in no official relation to Graf Waldersee, as the Washington Government prevented that. He simply meddled with things which did not concern him."

The Germans alone, according to this paper, refrained from plundering in China.—*Translation made for* THE LITERARY DIGEST.

## CONDUCT OF THE ALLIES IN CHINA.

MUCH comment is caused abroad by the conduct of the troops in China, the most prominent charge against them being that of inhumanity. No official notice has as yet been taken of this except in Germany, where the shooting of Chinese prisoners has been mentioned in parliament. The German Minister of War declares that the allies at first endeavored to conduct the war according to European usages; but the torture and murder of prisoners on the part of the Chinese exasperated the men, and after that no quarter was given in battle. Numerous letters relating the summary shooting of Chinamen as well as the conduct of the Chinese which occasioned the shooting are published in the German papers. The German soldiers nevertheless do not defend the brutalities which have been practised. Many German papers are irritated by the alleged fact that British correspondents magnify the misdeeds of the Germans, "altho," says the *Deutsche Tages Zeitung*, "the Germans come out well even in these reports, simply because their discipline is most firmly established." The British correspondents have, however, been very liberal in their censure of all the allied troops including their own. The Japanese coolies, those employed by the Japanese army as well as those engaged by others, have been guilty of many excesses, even according to Japanese accounts. The Japanese soldiers, however, have made a very favorable impression, and the following remark of the *Yorodzu Chohou* (Tokyo) appears justified in the light of European comments:

"We are very glad that the Chinese disturbances have furnished our troops an opportunity to demonstrate to the world at large that not only can they fight as well as the European soldiers, but they are not such barbarians as our enemies like to paint. Japanese history teems with the record of noble samurai, who had not the slightest fear of death on the battle-field, but were most generous to the fallen foe. 'Crush the haughty, help the weak' has been and is the motto of a true Japanese warrior."

The Russians do not deny that their Cossacks are relentless foes; but the *St. Petersburger Zeitung* thinks the stories which the English tell of Russian barbarities should be taken with a good deal of salt. More astonishing than the accusations against the troops are the charges against the missionaries, especially as these are made by so weighty an authority as Sir Robert Hart in *The Fortnightly Review*. The Manchester *Guardian* says on this point:

"No doubt the Christian missionaries will soon be active in condemning the crimes that have been committed in the name of Christianity and civilization, but it is a little humiliating that the first protest from any religious body should have come from the Buddhists in Japan. A circular of the Buddhist Church, issued from Tokyo, says: 'Instead of holding inimical feelings against the Chinese who have perpetrated so much havoc and atrocity upon the missionaries, we should endeavor to return good for evil and to supplicate a permanent blessing upon this pitiful race.' We should have liked so Christian a sentiment to have been first expressed by a Christian church."

The most terrific arraignment of the allies that we have seen in print comes from Dr. E. J. Dillon, who accompanied the allied troops in their march to Peking, and who spent six years in Armenia investigating Turkish atrocities. He writes in *The Contemporary Review* (January) under the sarcastic title of "The Chinese Wolf and the European Lamb." All along the march to Peking, he says, it was "the same sickening story: Chinese girls and women of all ages raped first and bayoneted afterward by men whose governments were wrapping themselves up in the soft wool of Mary's little lamb." The cold-blooded massacre of three hundred coolies at the mouth of the Pei-ho River served as a typical introduction to the "orgies of bloodshed, cruelty, and lust" which attended the rescue of the legations. This peaceable community of coolies, strong in their weakness, and trusting in their character of working men who abhorred war, steered their boat landward. "In the evil hour they were espied by the Russian troops, who at that time had orders, it is said, to slay every human being who wore a pigtail. Each of the three hundred defenseless coolies at once became a target for Muscovite bullets." Fire and sword put their marks upon the entire country between the sea and Peking, declares Dr. Dillon:

"The untrampled corn was rotting in the fields, the pastures were herdless, roofless the ruins of houses, the hamlets devoid of inhabitants. In all the villages we passed the desolation was the same. Day after day, hour after hour, sometimes minute after minute, bloated corpses, pillowed on the crass ooze, drifted down the current, now getting entangled in the ropes, now caught by an obstacle near the shore. Three livid corpses were thus held fast on a little isle in midstream, and the shallows around kept me a few yards to the lee of them for not less than six hours of a scorchingly hot day. Hard by a spot named Koh So, I saw two bodies on the low-lying ledge of the shore. . . . A father and his boy of eight had been shot down in the name of civilization while holding each other's hands and praying for mercy. And there they lay, hand still holding hand, while a brown dog was slowly eating one of the arms of the father. . . . Men, women, boys, girls, and babes in arms had been shot, stabbed, and hewn to bits in this labyrinth of streets."

The culmination of the horrors was the treatment of the Chinese women. "Surely," writes Dr. Dillon, "one needs not to be puritanical or hysterical to condemn the wholesale ravishing, sometimes to death, of terrified females between the ages of six and sixty by clodhopping brutish soldiers, who misrepresent alike Christianity and civilization." He describes vividly the ravishing and bayoneting of three daughters of a Chinese of the upper class, also of the outrage of a wife and six-year-old daughter before the eyes of the husband and father. He then goes on to say:

"I knew of others whose wives and daughters hanged themselves on trees or drowned themselves in garden-wells in order to escape a much worse lot. Chinese women honestly believe that no more terrible fate could overtake them than to fall alive into the hands of Europeans and Christians. And it is to be feared that they were right. Buddhism and Confucianism have their martyrs to chastity, whose heroic feats no martyrology will ever record. Some of those obscure, but right-minded girls and women hurled themselves into the river, and, finding only three feet of water there, kept their heads under the surface until death had set his seal on the sacrifice of their life. This suicidal frenzy was catching. It sometimes spread like wildfire, and the military authorities felt bound to stop it by force. A number of soldiers, possibly with one or other of the would-be criminals among them, were sent to the rescue. And they succeeded in saving the lives of many. But they complain that some of the women were doggedly resolved to die. In the water they offered a strong and often successful resistance to the efforts of their would-be saviors. Some, having been taken out of the river safe and sound, plunged in a second time, and found a merciful end. I have spoken to some of the men who took part in the work of rescuing those faithful wives and modest daughters, and they extolled their heroism to the skies. But a large number of ill-starred women fell alive into the hands of the allied troops. I saw some of them in Peking and Tungtschau, but already dead, with frightful gashes in their breasts, or skulls smashed in, and one with a horribly mutilated body. There is a lady missionary in Peking who, in company with a female colleague, busied herself, to my knowledge, for months, in shielding Chinese women and girls from being raped by Christian and European soldiers, and the work was anything but easy, tho I have reason to believe that it has proved eminently successful. Even in the broad daylight soldiers hung about the refuge and employed various devices and tricks to get hold of the women whom they ought to have been first to protect."

Dr. Dillon declares that, as far as his observations and investigations go, "no officers or soldiers of the English or German-speaking nationalities have been guilty of these abominations against defenseless women." He also exonerates the Japanese. For all these things, he declares in conclusion, the governments of the Powers are alone to blame:

"They refuse to treat China as a civilized state, and this refusal is at the root of China's present and future calamities. No man of average honesty, who is acquainted with the masses in China, will hesitate for a second if asked to say whether China is really less civilized than each of the Powers who would fain regenerate her."

Comparing the outrages recounted in this article with those committed upon Europeans by the Boxers, the Springfield *Republican* observes:

"In view of the happenings of the past year, it almost seems a vain boast to claim for Christendom a type really nobler in its influence, in its radiating moral effect, than that which the Chinese have mothered these forty centuries. For, put to the crucial test, in a drama where the two civilizations struck fire like swords in collision, it can not be said that the younger one displayed more restraint over the brutish passions of mankind than the older one."

Some scathing comments on the general subject of European outrage in China appear in the Japanese papers, which condemn the Russian and French troops unsparingly. The Americans, English, and Germans are admitted to have behaved well. The *Maishushinsi* (Tokyo) says:

"In the matter of politics and national morality, there is no distinction between Christians and pagans. The Russians are generally supposed to be Christians and the Japanese heathens; yet in China at the present moment the Russians are committing outrages which the Japanese are even ashamed to witness. Is this the vaunted superiority of the West? O, Christianity! O Christianity! what a byword thou now art!"—*Translations made for* THE LITERARY DIGEST.

## AUSTRIA'S TROUBLES INCREASE.

AS a result of the recent Austrian elections the new Reichrath, which meets next month, will not differ materially in political complexion from the one which closed last June amid such riotous scenes—"the German deputies carrying loaded revolvers, the Czech members hammering saucepans and tea-trays, and the rabid Antisemites threatening to recruit a mob from the taverns of Vienna to 'teach those fellows manners.'" The same general proportion between parties has been preserved, with slight gains for the Poles and slight losses for the Social Democrats. The Vienna correspondent of the London *Speaker*, who is particularly well informed on conditions in the Austro-Hungarian monarchy, declares that, in returning fewer Social Democrats, the electors of the empire have "made matters worse."

"The Social Democrats, who are the only party in the polyglot chaos of Austrian politics that can be said to stand for a political principle, have lost heavily. In Bohemia, where they were strongest, they have been routed; and as the fundamental need

of Austria is the reformation of its parties along political instead of racial lines, the collapse of the Social Democrats, whatever the precise value of their opinions, is a disappointment that forebodes a tragedy. It means that the one party which included members of every nationality and creed has, for the moment at any rate, resolved itself into its primitive racial elements and forsaken its program of social, industrial, and economic reform to take sides in the German-Czech feud."

It will be remembered that, in June last, the Emperor Francis Joseph, in dissolving parliament, declared that unless a party or a combination of parties with a clear parliamentary majority and with enough cohesion to pass the budget and perform the regular functions of government displaced the "disgraceful strife of factions," in the next Reichsrath, he would suspend the constitution and substitute "personal rule." This, *The Speaker* correspondent declares, is at present impossible, in view of Hungarian restiveness. He thinks that the Emperor will instead promulgate a new constitution on the basis of universal suffrage. The present electoral system, we are told, was drawn up with a single eye to the maintenance of German ascendency. Yet the net result has been to wreck the whole parliamentary plan without solving one of the many pressing problems. Home rule, for each separate nationality, says this writer, is the solution of the problem. One thing, he concludes, is certain: Austria will survive the crisis as she has so many others in her history.

"An empire which has outlasted defeat by the Turks, by Frederick the Great, by the first Napoleon, and, latterly, by France and Italy and Prussia, is not an empire to crumble lightly away. In spite of surface appearances *l'appaisement*, not disruption, is the goal of the warring nationalities."

Continental journals, however, generally regard Austria as decadent and likely to fall to pieces. German papers see in this a danger to their fatherland. The decline of the Hapsburg dynasty as a national power of the first rank, declares P. Nathan in the *Nation* (Berlin), means the decline of Germany. "The disintegration and ruin of the older realm of necessity makes our Fatherland the arena for the international European struggle."

In addition to the language struggle between Czech and German, danger confronts the empire from the growing power and hostility of Hungary. In a recent speech M. Szell, Premier of Hungary, declared that the Triple Alliance is as valuable to Hungary as to Germany, and that, even if the *Ausgleich* were terminated, and the Austrian and Hungarian monarchies were separated, it would still be to the interest of all Hungarians to support the Dreibund. The press of Vienna regard this speech from a responsible minister as boding ill for the empire. Journals of such divergent views as the *Fremdenblatt* (semi-official and pan-German), the *Deutsche Zeitung* (Antisemite), and the *Neues Wiener Tageblatt* (organ of the moderate Germans) agree in acknowledging that Austria must now, perforce, consider the crucial question of her relations with Hungary. The *Tageblatt* declares that commercial severance and declarations of independence are being discussed by several sections of the country as if it were a matter of merely economic concern, instead of "the greatest and most perilous political problem that the monarchy has been called upon to solve since the establishment of the dual system." The London *Outlook* says:

"The question is forcing itself upon some observers whether the name Austria-Hungary will not give place to Hungary-Austria, as one of the principal Czech newspapers of Prague declares will be the fact. . . . Hungary's ministry represents accurately the ruling element in the Hungarian parliament, while the Austrian ministry has no majority behind it in the Reichsrath, and never can be sure of support in any scheme that it indorses. The question which interests the outside public is whether this jealousy of Hungary will be sufficiently potent in influence to secure the combination of the different elements in Austria itself. At present the outlook is anything but encouraging."

Still another danger is that arising from the pan-Slavic propaganda of Russia. The proposed appointment of a Russian consul-general to Prague in Bohemia has caused considerable uneasiness in the journals of Vienna, where it is claimed that the Russian Government intends to make Prague the center of Slavic propaganda. Replying to these charges, the *Novoye Vremya* (St. Petersburg), in what is credited with being an inspired article, points out that Austria has sixteen consuls in Russia, while there are only four Russian consulates in the Dual Monarchy. Besides, it continues, the matter is purely one of commerce and industry, Bohemia having of late become of great importance in Russian trade enterprises. The *Fremdenblatt* (Vienna), commenting upon this article, says: "One result of the lamentable strife of national parties in Bohemia is that the two nationalities, Czech and German, which compose the population of Prague, are in the habit of accusing each other of seeking the support of foreign powers in aid of their respective aspirations, the Germans looking to Germany and the Czechs to Russia." This journal, therefore, commends the rule of Foreign Minister Goluchowski, which does not permit any native Bohemian to serve as consul for a foreign power.

There are many reasons for believing that the Czechs will ultimately prove victorious in the language struggle, declares G. P. Gooch. We quote these reasons from an article by him in *The Westminster Review*:

"In the first place, they [Hungarians] are in a majority of about three to two, a majority, moreover, which is growing steadily greater. Secondly, they are, on the whole, a prosperous community, unlike the people of Galicia, who are fettered by their terrible poverty. Thirdly, they are making steady progress in education, Bohemia possessing, with the exception of Lower Austria (which includes Vienna), less illiteracy than any other province of the empire. Fourthly, they possess the aid of the clergy, who strongly disapprove of the alliance with Protestant Germany and sacrilegious Italy. Fifthly, the race has become almost homogeneous in feeling. The old Czechs have lost their influence, and agricultural and commercial parties which have recently been formed, professing indifference to the question of nationality, have met with scanty support. Sixthly, their German opponents are broken up into a number of parties —the Progressives, the Clericals, the Christian Socialists or anti-Semites, and the German Nationalists, led by Wolf and Schönerer, who look not to Vienna but to Berlin, and raise the cry of '*Los von Rom*' ['Away from Rome']. And, further, the average German in Bohemia shows little interest in politics. A far smaller proportion of the German electors record their votes than among the Czechs."—*Translations made for* THE LITERARY DIGEST.

---

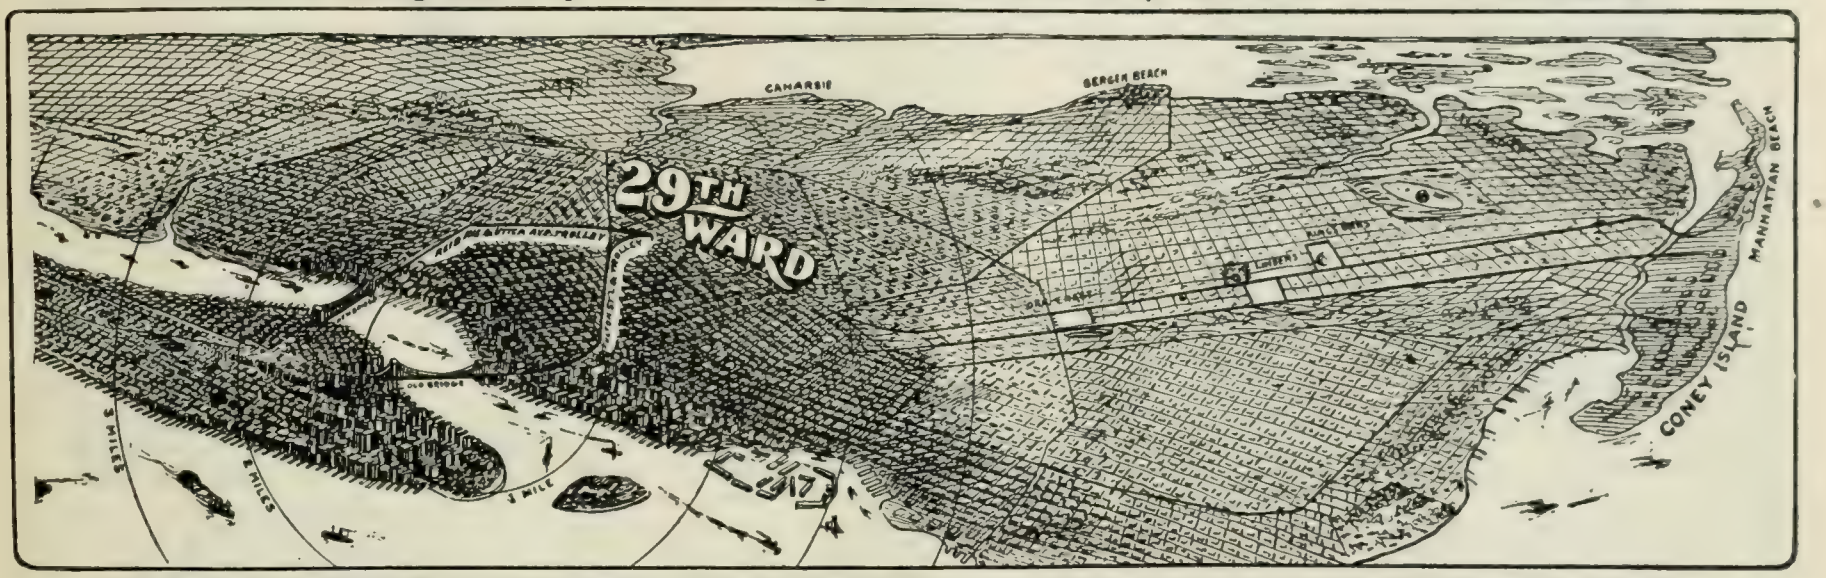
**Was the Czar Poisoned?**—According to a sensational story, credited to a Russian physician and quoted in the *Courier des Etats Unis* (New York) from *L'Echo de Paris*, no member of the court or even of the imperial family was allowed to see the Czar during his recent illness. His only attendants were the Empress and two servants. Upon his recovery, the physician who had attended him was presented with half a million rubles [about $400,000] in addition to a fine house and other gifts. This truly royal reward seems excessive for the cure of a case of typhoid, a disease which, tho serious, is usually amenable to modern therapeutics. The truth, which is openly spoken of in the court and the capital, is that the Czar was poisoned, for the third time since his accession. This time he escaped death almost by a miracle.

One of the bulletins issued during the illness gave the Czar's temperature as 35° C. [95° F.]. Such abnormally low temperatures, says *L'Echo*, never occur in typhoid, or in any disease except immediately before death. A fall of another degree would have been fatal. The most minute care is exercised in the supervision of the food destined for the imperial table. Almost all of it is brought from Belgium and Denmark in sealed vans. The kitchen servants are narrowly and skilfully watched. The poisoners are suspected, if not certainly known, and their names are mentioned in whispers.—*Translations made for* THE LITERARY DIGEST.

# $10 Buys a $400 Lot In Greater New York.

## Ministers, Doctors, Lawyers, Teachers, Clerks, Artisans, Farmers, Guardians and Merchants Can Now Make a Sure Paying Investment That Cannot Fail to Quadruple in a Short Time—Marvelous Opportunity for Those With Limited Incomes to Get a Substantial Start in Life.

### Do Not Take Our Word, Come to New York at Our Expense, Examine the Property, If Not Just as Represented We Will Refund Your Money Without a Word—If You Purchase We Give You Credit, Making the Trip Cost Nothing Whether You Buy or Not—Is This Not Fair?



Bird's Eye View of Greater New York, Showing Location of Property in the 29th Ward, Only 28 Minutes' Ride to the Great Brooklyn Bridges—5 Cent Car Fare

The largest, most reliable and the most successful Real Estate Company in the world, Wood-Harmon & Co., of Greater New York, have bought up all the available unoccupied land of the 29th ward, have subdivided it into residence and business lots, have improved the property magnificently, and now offer these lots to investors at Ten Dollars down and Six Dollars a month payments. And for the next two years there are no taxes nor assessments of any kind. This is unquestionably the chance of a life-time for men on a salary or those who have a small income and wish to invest it wisely with a view to making a large profit in the near future.

For more than a century this land was held as the private estates of rich, old residents and it is only recently that Wood-Harmon & Co. secured the entire tract, improved it, and are now able to offer the most magnificent opportunity since New York became a city.

There is no question but what every man earning a salary can, in time, be independent and beyond the reach of adversity if he will only accept this greatest of all opportunities. This is one of those rare chances from which a small beginning is absolutely sure to result in solid prosperity.

The firm who are making this liberal offer for Greater New York property have always made it their business to start the investment public in the right direction. It is a very serious business. They take the savings of ministers, doctors, lawyers, business men, clerks, artisans, farmers, guardians and mechanics and place them where they are profitably invested. The property is owned by them; it is thoroughly improved and is right in the line of the growth of Greater New York.

All streets are built to city grade, macadamized, and well finished. Granolithic or crushed granite sidewalks and grass plots with flower-beds, and also shade trees are on both sides of every street. Gas, water, and electric lights and all other improvements have been made at the expense of Wood-Harmon & Co., and purchasers are absolutely exempt from any assessment therefor. The land is rapidly rising in value and is the most solid investment that can possibly be made anywhere in America.

It is asking a great deal to have our readers trust in the judgment or have faith in the transactions or abide by the advice of a Real Estate Company. It places us all in a very responsible position; we are all morally bound by every consideration of loyalty to a trust to see that each and every reader is given at the outset exact information such as will both secure and retain confidence. And yet we realize that strangers will want perfect assurance that this firm can be trusted and that the proposition they have made is perfectly straightforward and really the opportunity of a life-time. Their business and financial standing seems almost a superfluous subject for comment, but to those who may not know the firm of Wood-Harmon & Co., 257 Broadway, New York, and wish to know the particulars regarding their responsibility it may be said that they refer to eighteen different National Banks and all the newspapers in the various cities in which they have operated. You are at perfect liberty to write to any of the banks as named below and to any of the newspapers of these cities: Importers' and Traders' National Bank, New York; Nassau National Bank, Brooklyn; State Street Trust Company, Boston; Citizens' Trust & Surety Company, Philadelphia; Citizens' National Bank of Washington City; Marine National Bank of Pittsburg: First National Bank of Harrisburg; Springfield National Bank; Mechanics' National Bank of Providence; Fidelity and Deposit Company of Baltimore; Phœnix National Bank of Hartford; Planters' National Bank of Richmond; Commercial National Bank of Columbus; Marine Bank of Buffalo, etc., etc., also Commercial Agencies (the main office of Wood-Harmon & Co. until recently was in Boston, Mass., where Bradstreet rates them higher than any other Real Estate firm in the world.)

### ALL TITLES ARE INSURED BY THE TITLE GUARANTEE AND TRUST COMPANY OF BROOKLYN AND NEW YORK.

Thus making an absolute guarantee that the title of the property is unquestioned.

Every man or woman in the United States who has ever been to New York knows the conditions of growth there. They know that the borough of New York has reached its limit of expansion and that all the surplus population is rapidly filling up Brooklyn, and even in the latter borough where the property under consideration is located, there is only one way in which it can grow, and that is right over and beyond the 29th, 30th, 31st and 32d Wards. The 29th Ward represents the finest land on the market within the limits of Greater New York.

It should be thoroughly understood that we are not indulging or recommending anything that has a tinge of speculation to it. This is solid Real Estate; it is always there, and can be seen at any time. No rise or fall of market values can affect its permanency; financial storms cannot wreck it. It is wonderfully increasing in value, based upon its commanding location, utility for residence or business purposes, and accessibility. Wood-Harmon & Co. own every foot of the land, and it is all paid for. They have a clear title, and are selling it to investors in lots desired.

Here is a splendid opportunity for men who have saved a little money to invest it in this property for the benefit of their children. Bear in mind that this is strictly an investment; it is not a speculation in any sense of the word, and it adds greatly to the reputation of Wood-Harmon & Co. that quite a number of prominent ministers and church people throughout the country have invested their own and others' savings in this very valuable property.

Some people may imagine that Ten Dollars down and Six Dollars a month for a building lot in Greater New York has somewhat of a tinge of speculation; but if you will get aboard a train and visit this property, and you find that in any way, shape or manner, or by word or deed, there has been anything misrepresented to you, and this property is not the finest investment that can be made in any part of the world Wood-Harmon & Co. will return every cent of your fare. And if you make the trip and invest in any of these 29th Ward lots, they will give you credit for the amount of your railroad fare both ways, to apply on the purchase price of any lot you may select.

If you decide to come to New York and investigate this property, first let us know what day you wish to start, and we will write you fully as to our special free round-trip offer.

A man on a salary, or with a limited income, cannot afford to speculate or take chances on losing what he invests. They need all their attention and study to their occupation, which insures a living; whatever they have left is for investment purposes. The abundance of testimony from those who have already purchased property from Wood-Harmon & Co. will bear out our assertion that the foundation of fortune, or the anchorage of surplus profit, rests in placing surplus earnings in legitimate channels, where the growth is not only steadfast and constant, but absolutely safe and sure.

## NEW YORK'S NOTED SENATOR

Hon. Peter J. McNulty, Montague St., Brooklyn, N. Y., says:—There is no question but what the property offered by Wood-Harmon & Co. in the 29th Ward represents one of the best investments a man of limited income can possibly make within the corporate limits of Greater New York. It can be said without hesitancy that Wood-Harmon & Co. are perfectly reliable, and not only enjoy the esteem of the financial interests throughout the country, but are worthy the fullest confidence of the investor, whether he resides in Greater New York or any other section of the United States.

Don't think too long; take time by the forelock and buy at least one lot. They are absolutely sure to double in value in a very short time.

Remember, this property is just as represented in every respect. If it was not, they would not invite all to come to New York and look it over for themselves, at their expense. Think of it! a fine building lot for only $400, within 28 minutes' ride of the great Brooklyn bridges, and only 5 cent fare.

These lots can now be had for only $400; $10 down, and $6 a month until paid for. No taxes of any kind for two years, and remember that the lots they sell today for $400 will sell in a few years from now for more than Two Thousand Dollars.

For maps, plats, full description of the property, and the most overwhelming evidence that this is the greatest opportunity ever put forth on the American Continent, write at once to Wood-Harmon & Co., 255-257 Broadway, Dept. 37, New York.

# Suits and Skirts for Spring.

OUR Spring Catalogue is the most attractive which we have ever issued. The styles this season have changed wonderfully, and if you wish to see the newest things you should write for this book.

The high standard of our workmanship has been maintained. Every garment is as pretty and stylish, and made with as great care and precision, as though we were just beginning to make our reputation for these virtues Prices this season are lower than ever before. Every garment *made to order*, remember we couldn't fit you with more pains in our own salesroom.

Some items from the Catalogue:

**New Suits,** For Spring, the fashionable kind--with a touch of Paris about them, - **$8 up.**

**Silk Lined Suits,** Made of excellent materials and lined throughout with taffeta, - - **$15 up.**

**Oriental Heads** 852, 853, 854, 856, life size, in colors, wt. 6 oz., express paid, each **$2.00**

Send for "Artistic Decorations," a booklet showing our entire collection. If your dealer will not supply you, remit direct to us. Reference, First National Bank, Milwaukee

**NATIONAL PAPIER MACHE' WORKS, 400 E. Water Street, Milwaukee, Wis.**

## CURRENT POETRY.

### A Ballad of Kinsmen.

By RICHARD BURTON.

Apia Bay wears a smooth, bright face
When the tropic winds are low,
But the harbor curve is a fearsome place
When the great winds rise and blow.

'Tis perilous for barks to ride
At anchor, when the surge
Comes thundering in from the sea outside
And foams on the rocky verge.

From the Western States three ships were there,
And one from the English Isle;
They came when the skies were bland and fair
And the ocean ways a smile.

But the fierce storm smote them, till they tossed
Like chips 'twixt sea and sky;
And two of the ships of the States were lost
And the other drifted nigh

The coral reefs, to death; but saw
The sturdy English ship
Out from the harbor's seething maw
Toward open water slip.

And sore they yearned to follow her
Beyond the barrier foam,
To swap their coral sepulcher
For the sea-leagues leading home;

But the ill-starred *Trenton* could not sail
Nor steam; with beams aburst,
A helpless hulk before the gale
She staggered toward the Worst.

Yet, as the English, inch by inch,
Away from the shallows drew,
The boys of the States, they did not flinch,
For they cheered the other crew.

Yea, never a soul showed the craven then,
Tho their fate was plain to see;
The doomed men waved to the luckier men
And gave them three times three.

Three times three, and the cheer rang high
Above the wind and the wave,
As the English ship strained safely by,
And the other on to her grave!

Oh, blood will tell, they were kinsmen all!
Give the gallant lads a place
On the good high-seats of the heroes' hall
To kindle our common race!

—Philadelphia *Saturday Evening Post.*

### The Pilgrim.

By VIRGINIA WOODWARD CLOUD.

Love, 'tis a strange and a perilous path—
*I have trod this way before*—
The pitiless rock and the thorn it hath,
The gloom and the closed door;
There is dawn that yearns, there is dusk that grieves—
*Ay, well doth Love know all!*
And the chill of doubt and the heart's bruised leaves,
And the soul's unanswered call.

Mayhap thou shalt thirst where no fountains are—
*Love fareth on joy and pain!*
And thy desert nights shall be void of a star—
*Love's vigils are not in vain;*
*Ay, tho more bitter each mortal breath,*
*The dream it is sweet, is sweet!*
*Tho its day be wo and its night be death,*
*Thou canst not stay Love's feet,*
*Thou canst not stay Love's feet.*

—*The Cosmopolitan* (December).

Rub it in

WITH THE

ROYAL LATHER BRUSH

and your shaving will be half done. It softens the beard, prevents irritation, MAKES SHAVING EASY. Never twists or curls, is always a Brush—never a Mop. Wide open makes a thick, creamy lather with any soap. Half open rubs it in. Finest French bristles, guaranteed not to drop out. Aluminum ferrule—untarnishable and ebonoid handle.

For sale everywhere or sent postpaid for 50 cents. Return it if not superior in every way to the best old-fashioned brush.

C. H. THOMPSON MFG CO.,
TROY, N. Y.

News from Venezuela is of a disquieting nature; the rebellion in the republic is reported to be spreading.

January 22.—Queen Victoria dies at Osborne Palace at 6.30 P.M., surrounded by her family. The news is telegraphed by the new King to the lord mayor of London, and posted on the bulletin board of the Mansion House by that official. Parliament is summoned to enable the members to take the oath of allegiance to the new King.

The Bulgarian cabinet resigns on account of internal differences.

January 23.—The new King of Great Britain and Ireland and Emperor of India goes to London from Osborne, and holds his first privy council at St. James's Palace; in his speech he assumes the name of Edward VII. and promises to be a constitutional monarch.

January 24.—The medieval ceremony of proclaiming the accession to the throne of King Edward VII. takes place in London. A great number of royalties and representatives of foreign nations are on their way to London to attend the funeral of the Queen.

President Kruger remains at Utrecht; a medical operation upon his eyes is attended with success.

January 25.—The private funeral service for the immediate family is held over the body of Queen Victoria at Osborne, and the coffin is finally sealed. A message from King Edward is received by both houses of parliament. Tributes to the Queen are paid by Arthur J. Balfour in the House of Commons; by Lord Salisbury, Lord Kimberley, and the Archbishop of Canterbury in the House of Lords.

Baron Wilhelm von Rothschild, the head of the Rothschild banking-house, dies in Frankfort.

January 26.—The preparations for Queen Victoria's funeral continue in England; the Crown Prince of Germany arrives at Osborne, whither also Lord Roberts is summoned; King Edward issues messages which are read to the army and navy of Great Britain.

The Pope issues an Encyclical condemning Socialism and commending "Christian Democracy."

Chancellor von Bülow announces in the Prussian Diet that the Government proposes to protect the interests of agriculture by raising duties.

Giuseppe Verdi, the Italian composer, dies at his home in Milan.

January 27.—Memorial services for the Queen are held in practically all the churches throughout the British empire.

Emperor William receives from King Edward the sword of a field marshal of the British army.

Great suffering from famine is reported in Shan-Se province, China.

THE HUMAN HAIR Its Care and Preservation. By J. R. STITSON, M. Sc.
A scientific study of the causes and prevention of falling hair and baldness. Cloth, 232 pages, $1.25. Booksellers or C.O.D., express prepaid. Circulars for stamp.
Maple Publishing Co., 156 Broadway, N. Y. City.

YOU would like the lamp-chimneys that do not amuse themselves by popping at inconvenient times, wouldn't you?

A chimney ought not to break any more than a tumbler. A tumbler breaks when it tumbles.

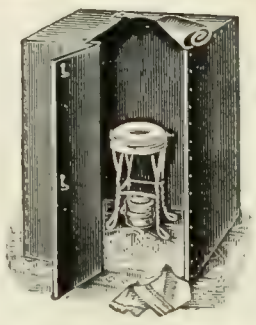
Macbeth's "pearl top" and "pearl glass"—they don't break from heat, not one in a hundred; a chimney lasts for years sometimes.

Our "Index" describes *all* lamps and their *proper* chimneys. With it you can always order the right size and shape of chimney for any lamp. We mail it FREE to any one who writes for it.

Address MACBETH, Pittsburgh, Pa.

Turkish Baths

For 3 Cents



A RACINE folding bath cabinet gives you a Turkish bath room at home. At a cost of three cents, you get all the possible benefit of any vapor or hot air bath. These baths taken regularly insure health vigor and, cleanliness. They clear the complexion; they cure colds. And no other treatment is so widely employed by the best physicians in the cure of most chronic diseases.

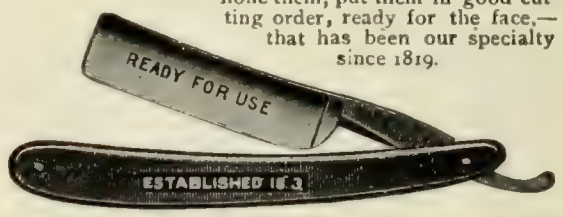
The Racine is not like the flimsy and unserviceable cabinets that are widely sold. It is a stout, double-walled room, rubber coated inside and outside, and fitted with a door. Merely tip it, and it folds into a six-inch space. The four best features in the Racine are controlled by our patents. Without them no cabinet can be satisfactory.

The Racine is guaranteed to be the best cabinet on the market. We sell on approval, to be returned at our expense if not satisfactory. Prices $5 up, freight or express prepaid. Alcohol or gas heater, vaporizer, face-steaming attachment and 35 prescriptions for medical baths included. Send today for our illustrated catalogue, and order from that.

RACINE BATH CABINET CO.
Box X, Racine, Wis.
Chicago Exhibit, 1005 Monadnock Bldg.

SHAVING WITH PLEASURE

is enjoyed only by those who possess good razors. Our Masterpiece Razor, the razor of the new century, is worth its weight in gold and fully represents what it is marked. We sell a pair of our Masterpiece Razors for $5 00. We sell Razors exclusively; we make them, we grind them, we hone them, put them in good cutting order, ready for the face,—that has been our specialty since 1819.



We use the best material money can buy. Every man in our employ is "an artist in his line." The work comes as near perfection as human ingenuity can make it.

We have no agents, we sell direct to consumer; we deliver free; we warrant every razor to be precisely what we say it is, and have but one price. Our pamphlet, "All About Good Razors," will be mailed to any address upon request.

C. KLAUBERG & BROS.,
173 William Street, - - - New York.

organization bill is adopted, and the naval appropriation bill is passed.

January 26.—*House:* A delegation from Buffalo asks government aid for the coming Pan-American Exposition; Secretary Gage submits a full statement of the indebtedness incurred by the annexation of Hawaii, requesting an appropriation of over $3,000,000.

OTHER DOMESTIC NEWS.

January 21.—Prof. Elisha Gray, an inventor of the telephone, dies at Newtonville, Mass.

January 22.—The President sends a message of condolence to the new King of England; the flag at the executive mansion and in many parts of the country is half-masted in honor of the dead Queen.

The following United States Senators are elected: Stephen B. Elkins, West Virginia; J. W. Bailey, Texas; F. M. Simmons, North Carolina; Shelby M. Cullom, Illinois; Knute Nelson and Moses E. Clapp, Minnesota; Robert J. Gamble, South Dakota; J. R. Burton, Kansas; and James H. Berry, Arkansas.

January 23.—Fire breaks out in the business district of Montreal, destroying the Board of Trade building and about $2,500,000 worth of property.

January 24.—It is announced that the Government will preserve a neutral attitude in regard to the asphalt dispute in Venezuela, leaving the rival companies to settle their differences in the courts.

January 25.—The President receives a message from King Edward VII. expressing gratitude to the American people for the sympathy manifested on the death of Queen Victoria.

January 26.—Secretary Long signs contracts for two armored cruisers, to cost upward of $7,500,000.

January 27.—The part of the Taft Philippine commission relating to the friars is made public; in it Judge Taft discusses all phases of the religious problem in the Philippines.

AMERICAN DEPENDENCIES.

January 21.—*Porto Rico:* A report on Porto Rican conditions is made to the Interior department, showing the possibilities of development of the island.

# What Shall We Eat

## To Keep Healthy and Strong?

A healthy appetite and common sense are excellent guides to follow in matters of diet, and a mixed diet of grains, fruits and meats is undoubtedly the best, in spite of the claims made by vegetarians and food cranks generally.

As compared with grains and vegetables, meat furnishes the most nutriment in a highly concentrated form and is digested and assimilated more quickly than vegetables or grains.

Dr. Julius Remusson on this subject says: Nervous persons, people run down in health and of low vitality should eat plenty of meat. If the digestion is too feeble at first it may be easily strengthened by the regular use of Stuart's Dyspepsia Tablets after each meal. Two of these excellent tablets taken after dinner will digest several thousand grains of meat, eggs or other animal food in three or four hours, while the malt diastase also contained in Stuart's Tablets cause the perfect digestion of starchy food, like potatoes, bread, etc., and no matter how weak the stomach may be, no trouble will be experienced if a regular practice is made of using Stuart's Dyspepsia Tablets because they supply the pepsin and diastase so necessary to perfect digestion, and any form of indigestion and stomach trouble except cancer of the stomach will be overcome by their daily use.

That large class of people who come under the head of nervous dyspeptics should eat plenty of meat and insure its complete digestion by the systematic use of a safe, harmless digestive medicine like Stuart's Dyspepsia Tablets composed of the natural digestive principles, peptones and diastase, which actually perform the work of digestion and give the abused stomach a chance to rest and to furnish the body and brain with the necessary nutriment. Cheap cathartic medicines masquerading under the name of dyspepsia cures are useless for relief or cure of indigestion because they have absolutely no effect upon the actual digestion of food.

Dyspepsia in all its forms is simply a failure of the stomach to digest food and the sensible way to solve the riddle and cure the indigestion is to make daily use at meal time of a safe preparation which is endorsed by the medical profession and known to contain active digestive principles, and all this can truly be said of Stuart's Dyspepsia Tablets.

All druggists throughout the United States, Canada, and Great Britain sell them at the uniform price of fifty cents for full treatment.

Rheumatism

Tartarlithine is the one perfect remedy for Rheumatism. It removes the cause of the disease—uric acid. It is pleasant to take, does not affect the heart, nor upset the stomach. It has been taken, with perfect satisfaction, by people with very delicate constitutions.

Other variations depend on those given.

Solved by M. W. H., University of Virginia; the Rev. I. W. Bieber, Bethlehem, Pa.; H. W. Barry, Boston; C. R. Oldham, Moundsville, W. Va.; M. Marble, Worcester, Mass.; W. W., Cambridge, Mass.; A Knight, Hillsboro, Tex.; the Rev. G. Dobbs, New Orleans; W. R. Coumbe, Lakeland, Fla.; P. A. Towne, West Edmeston, N. Y.; W. J. Leake, Richmond, Va.; O. C. Brett, Humboldt, Kan.; D. G. Harris, Memphis, Tenn.; Prof. J. H. Riddick, Jr., Randolph-Macon Woman's College, Lynchburg, Va.; H. A. Seade, Mahomet, Ill.; F. E. Reid, New York City; D. Schandi, Corning, Ark.; Dr. M. F. Eastwood, Claremont, Can.; G. W. and Miss W. Hill, McLeansboro, Ill.; F. F. Carroll, Aiken, S. C.; T. Hilgers, Paterson, N. J.

Comments: "Quite ingenious in conception and construction"—I. W. B.; "The second move in main variation constitutes a sort of double 'Indian,' while the Kt—K sq variation introduces the 'Bristol' theme. Tho the alternate Kt mate is a blemish, still the fine after-play far offsets this"—H. W. B.; "Don't like it much, as it's full of duals"—M. M.; "A great deal in it and all that deal is fine"—A K.; "With the exception of the Kt—K sq continuation, which is good, it doesn't strike my fancy"—G. D.; "The time-honored position of the Queen's sacrifice may be excused for the several close 'tries,' where the nicest accuracy in the defense is called for. Not brilliant, but with more finish than appears at first"—W. R. C.; "Very good"—W. J. L.; "The pretty-near keys, B—K 2 and Kt—Kt 7 make this a troublesome problem"—O. C. B.; "Have been solving problems for twenty years but this puzzled me"—D. G. H.

This composition is the first problem in the new Swiss Chess-magazine, *The Schweizerische Schachzeitung*, edited by Herren Bachmann and Pestolozzi, Zurich, and Dr. Schaud, Schaffhausen. The author is not careful to provide against duals and mate on second move, blemishes which the purist of the English school can not overlook; but there is a great deal of fine work in this problem. One of its most interesting and meritorious features is the manner in which the author replies to B—K 2. Very many solvers, some of them almost experts, sent variations beginning with 1 B—K 2, which seem to exhaust Black's defense; but not one found the *only* move.

In addition to those reported, T. H., and S. W. Shaw, Midnapore, Can., got 527 (January 5).

### "Chess-Openings."

In a lecture, recently delivered in Chicago, on Chess-openings, Mr. Pillsbury said that, in modern practice among the great masters only two openings—the Ruy Lopez and the Queen's Pawn—are considered to retain the advantage of the first move for any length of time. He believed that the Berlin defense of the Ruy Lopez was the best. Of the Petroff defense, which he brought into practise again in the St. Petersburg tournament several years ago, he does not now entertain as good an opinion as he did then. He believes if White continues with 3 P-Q 4 the advantage remains with

...attack, and for that reason he has abandoned it. He agrees entirely with the principles laid down in Lasker's "Common Sense in Chess," and says every great master must necessarily do so. Against the Evans' Gambit he recommends Lasker's defense or the refusal of the gambit. In either case the defense should obtain a better game.

He also holds that the Falkbeer Counter Gambit against the King's Gambit should yield the second player the superior, or at least equal, game. He dwelt at length on "the waiting move," claiming there should be no such thing in a correct game of Chess. Should a player at any time make an indifferent move like P R 3, simply because he knows of nothing better, there is an admission of weakness in his game. On the other hand if such a move is made with the preconceived plan of making a general advance in the pawn formation, it is then a sign of strength. He is of the opinion that between even players in serious games the attack, with accurate play, should win about two games in ten, the others resulting in draws.

### The Rice Gambit.

To test the soundness of the Rice Gambit, a game was recently played by Lasker and Rice (White) and Maroczy and Hoffer (Black).

**Gluten Grits** AND **BARLEY CRYSTALS,**

Perfect Breakfast and Dessert Health Cereals.
PANSY FLOUR for Biscuit, Cake and Pastry.
Unlike all other foods. Ask Grocers.
For book or sample, write
FARWELL & RHINES, Watertown, N. Y., U.S.A.

**van Houten's Cocoa**

Nutritive, Refreshing, Economical in use. A breakfast-cupful of this delicious Cocoa costs less than one cent.
Sold at all grocery stores—order it next time.

**PHYSICIANS AGREE**

that **Robinson's Bath Cabinet** cures the very worst cases of RHEUMATISM, NEURALGIA, COLDS, CATARRH, ASTHMA, TYPHOID and OTHER FEVERS, CONGESTIONS, KIDNEY, LIVER, SKIN and BLOOD DISEASES, OBESITY and STOMACH TROUBLES, SOOTHES THE NERVES, and PREVENTS SICKNESS. GIVES A BEAUTIFUL COMPLEXION. **A TURKISH BATH AT HOME FOR 2 CENTS.** It opens the pores, and sweats the POISONS (which cause disease) out of the blood. The best Physicians in America and Europe endorse and use the Robinson Bath Cabinet.

**Dr. Anderson, of Yale University, says:** "I am using your cabinet in the College gymnasium, and at my home. I find it very valuable in treating **Rheumatism** and many other **diseases.**"

**Dr. Brereton says:** "It has become a question with me not that the Vapor Bath **will cure,** but what it **will not cure.** Pains and aches vanish as if by magic."

Our cabinet possesses four **Essential Features,** covered by patents, necessary for the successful use of the Cabinet Bath.

**$2.00 Book Free to Patrons.** It contains full instructions for curing disease, written by prominent Physicians.

**Please send for our handsomely illustrated catalogue, and our "Special Offer"** to customers. **AGENTS WANTED**

**$75 to $200** monthly made by our representatives. We want enterprising Men and Women to represent us. Exclusive rights. Write at once for Special Agent's 1901 Proposition. Do not delay, as territory is being taken rapidly.

**$500.00 in Gold** will be given to the Agents doing the largest business this year.

**ROBINSON THERMAL BATH CO.,**
764 Jefferson St., Toledo, O.

**TOILET PAPER**

Our Family Case containing enough 3,000-sheet rolls for

**One Year's Supply**

For the average family, on receipt of

**One Dollar**

Delivered FREE at any express office in the United States.

*Sample sheets and unique booklet sent on request.*

**A. P. W. PAPER CO.**
**29 Colonie St., Albany, N. Y.**

**MODENE**

IN COMPOUNDING, an incomplete mixture was accidentally spilled on the back of the hand, and on washing afterward it was discovered that the hair was completely removed. We named the new discovery MODENE. It is absolutely harmless, but works sure results. Apply for a few minutes and the hair disappears as if by magic. **It Cannot Fail.** If the growth be light, one application will remove it; the heavy growth, such as the beard or growth on moles, may require two or more applications, and without slightest injury or unpleasant feeling when applied or ever afterward.

*Modene supersedes electrolysis.*

**Used by people of refinement, and recommended by all who have tested its merits**

Modene sent by mail, in safety mailing-cases (securely sealed), on receipt of **$1.00** per bottle. Send money by letter, with your full address written plainly. Postage-stamps taken.

**LOCAL AND GENERAL AGENTS WANTED**

MODENE MANUFACTURING CO.
Dept. 29, Cincinnati, Ohio
**Every Bottle Guaranteed**
**We Offer $1,000 for Failure or the Slightest Injury**

**OPIUM** **WHISKY** and other drug habits cured in 30 days. Sanitarium treatment. Book and particulars FREE. B. M. WOOLLEY, M.D., Atlanta, Ga.

**WANTED**—Active, educated men to represent us in Eastern, Middle and Southern States. Weekly salary or fixed guarantee. In replying give age and reference. DODD, MEAD & CO., New York City.

# The Literary Digest

VOL. XXII., No. 6 NEW YORK, FEBRUARY 9, 1901. WHOLE NUMBER, 564

Published Weekly by
FUNK & WAGNALLS COMPANY,
30 Lafayette Place, New York. 44 Fleet Street, London.
Entered at New York Post-Office as Second-Class Matter.

**TERMS OF SUBSCRIPTION.**

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

**LITERARY DIGEST EUROPEAN PARTY, 1901.**

Thousands of readers of THE LITERARY DIGEST were interested in the announcement last year of a European tour especially organized for their benefit. A party of eighty of our subscribers enjoyed that tour, and hundreds of others would have been glad to go if business engagements and family affairs could have been arranged to suit the date of sailing and the length of absence. These friends will be glad to read the announcement made on the opposite page this week of a second European Tour limited to LITERARY DIGEST readers and their friends. This party will be under the same management as the one last year, the well-known tourist agents, Henry Gaze & Sons. The time for starting is June 15. Full particulars can be obtained by sending to the address given at the foot of the opposite page.

## TOPICS OF THE DAY.

### WHAT IS TO BE DONE WITH THE PHILIPPINE FRIARS?

AS all the Filipino rebellions against Spanish rule "began as movements against the friars," and as "all the evidence derived from every source but the friars themselves shows clearly that the feeling of hatred for the friars is wellnigh universal and permeates all classes" (to quote from the recent report of the Taft commission), it is evident that the problem of the return of these friars to their great estates is, as the commission declares, "the burning political question." The friars own about 403,000 acres in the Philippines, and these property rights, says the commission, "the United States Government is bound by treaty obligations and by the law of its being to protect." Yet to return them to their parishes and people under American protection "is likely to have the same effect on them that the return of General Weyler under an American commission as governor of Cuba would have had on the people of that island," and "will lead to lawless violence and murder." What is to be done in this dilemma? The commission proposes a plan which meets wide approval and warm commendation from the press. It says:

"It would avoid some very troublesome agrarian disturbances between the friars and their quondam tenants if the insular government could buy these large haciendas of the friars, and sell them out in small holdings to the present tenants, who, forgiven for the rent due during the two years of war, would recognize the title of the Government without demur and gladly accept an opportunity, by payment of the price in small instalments, to become absolute owners of that which they and their ancestors have so long cultivated.

"With the many other calls upon the insular treasury a large financial operation like this could probably not be conducted to a successful issue without the aid of the United States Government, either by a direct loan or by a guaranty of bonds to be issued for the purpose. The bonds or loans could be met gradually from the revenues of the islands, while the proceeds of the land, which would sell readily, could be used to constitute a school fund. This object, if declared, would make the plan most popular, because the desire for education by the Filipinos of all tribes is very strong, and gives encouraging promise of the future mental development of a now uneducated and ignorant people."

The New York *Times* (Ind.), while not objecting strongly to this plan, says that "there is not now any definite authority in any branch of our Government to engage the national credit for such a purpose," and that even if there were, "it would be regarded by a considerable part of the people of the United States as a contribution to the Catholic Church, and would be resented." Dr. Leonard Bacon, too, noting that "Archbishop Chapelle is understood to have named $20,000,000 as a price at which the several orders might be willing to commute their claims," remarks similarly in an open letter that "there is not a leading politician of any party who would dare to lift a hand either to infringe these titles or to indemnify the Roman missionary orders with enormous cash endowments out of the national treasury."

Most of the American press, however, seem to regard the plan as perfectly practicable and wholly commendable. The Washington *Star* (Ind.) declares that "there should be no hesitation on the part of the United States in assailing the problem of the friars with courage and determination," and the New York *Press* (Rep.) says, in an editorial that represents well the opinion of many other expansionist papers:

"There never has been peace since the Spanish religious orders obtained political and territorial domination, and there never will be if they regain it. In proposing a way to substitute a peasant proprietorship for the monastic feudalism under which the more civilized of the agricultural population have so largely lived, the commission has designated a solution of approved value for what most authority has conceded to be the chief problem of government in the archipelago.

"It was the problem of Bourbon France, which was solved in blood. It was the problem of medieval England, which the Tudors solved in plunder. It is the problem of modern Ireland, which has not yet been solved at all. It is the problem of the passage of the land of a country into the hands of those who exact the performance of the duties of the tillers of the soil without themselves performing the duties of the owners. Even the rough redress of the English Reformation did good to the nation involved, tho in both cases injustice was done to the class most interested. Fortunately, the United States can do good to both nation and class, to the Filipino and the friar. It has simply to work out on a small scale in Luzon the scheme of expropriation which on a large one Gladstone proposed for Ireland—the only unexceptionable scheme he did propose—in order to set one firm foundation of government in this much-vexed possession. The peasant proprietary class which it thus creates will be the bulwark of civilization in the archipelago, just as the same class of emancipated serfs is the bulwark of the existing order and the single formidable obstacle to anarchy in France. As to the orders themselves, they will of a surety rejoice to receive compen-

sation for the property from which they have been expelled and which any native government, following the Gallic example noted and the more recent and apposite one of Mexico, would retain in permanent confiscation.

## CUBA'S FUTURE RELATIONS TO THE UNITED STATES.

ALMOST in a day, last week, the rather academic newspaper discussion of the provisions of the new Cuban constitution gave way to animated questionings as to whether it would be safe for the United States and safe for Cuba to let the latter start out alone upon the perilous seas of national sovereignty. The cleavage of opinion on this question does not seem to follow party lines very sharply. The Washington *Times* (Dem.) says:

"In two vital respects the proposed constitution is impossible. It provides for universal suffrage, which would at once reduce the country to the political level of Haiti. This Government can not afford to have a fresh island home of anarchy within ninety miles of our shores. A state such as Cuba would become in six months under the majority rule of its half wild and wholly illiterate black population could not perform its international obligations nor guarantee the lives and property of foreigners resident within its jurisdiction. Indeed, so great and many are the dangers to be apprehended from the liability of Cuba to have differences with European nations that, even were the local government based on the most carefully restricted suffrage, it would still be the duty of the United States to insist upon control of the island's foreign relations."

Other papers see the germ of future trouble in the so-called "Cuban bonds," issued by Spain to help pay for the quelling of the insurrection. These bonds amount to $455,000,000 and are held in France and other European countries, and "it would be most unpleasant for the United States," observes the Hartford *Courant* (Rep.), "if some foreign power should make a threatening demand upon Cuba in behalf of the holders of what are known in Europe as Cuban bonds." Altho the Cubans may not recognize it, the same paper goes on, it is none the less a fact that this debt "casts a deep shadow over their future." Such considerations as these lead the New York *Times* (Ind.) to say:

"Civil war in Cuba or war with a European power other than Spain would be no less intolerable to us than the conflict we intervened to suppress No government with a sense of responsibility to the people it represents could be so reckless of future perils and trouble, so indifferent to the counsels of common prudence, as to let the forts and the forces of Cuba, the independent power to make treaties and conclude agreements with foreign countries, and the responsibility of internal tranquillity pass wholly out of its control until its own interests had been recognized and adequately protected."

The Washington correspondent of the New York *Tribune* (Rep.) quotes one of the Republican members of the Senate committee on relations with Cuba as saying that the following four propositions are "of paramount importance to this country as well as to Cuba," and that they ought to be inserted in the Cuban constitution. They are:

"First—A permanent naval base for the United States.

"Second—The right permanently to maintain military garrisons in the island.

"Third—Control by the United States of all the public debts and credits of Cuba.

"Fourth—The right of this country to control all foreign treaties made by Cuba."

"It would have simplified matters amazingly," says the Philadelphia *Evening Bulletin* (Rep.), "if Congress had not been carried away by a wave of emotionalism on April 18, 1898, when it passed the mischievous resolution binding this country to give the Cubans an independence for which they have shown no signs of fitness."

It must be said, however, that there is no serious suggestion in the newspapers that the United States should demand by force any share in the Cuban government that the Cubans themselves are unwilling to grant. In addition to the Teller resolution of three years ago declaring "that the United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control over said island, except for the pacification thereof, and asserts its determination, when that is accomplished, to leave the government and control of the island to its people," the Supreme Court has just decided in the Neely case that Cuba is a foreign country, and "as such," says the Baltimore *Sun* (Ind.), "it is under no obligations to consult the United States in framing its constitution." And as to the danger of having "at our door" a small nation unable to withstand European aggression, it is remarked that we already have and have had for years "at our door" all the Central and South American republics, none of which could withstand European aggression, and Canada, the British West Indies, and British, Dutch, and French Guiana already under European rule, and that nothing untoward has happened or seems likely to happen. In Europe itself, where jealousies and rivalries are thickest, Denmark, the Netherlands, Belgium, Switzerland, Portugal, Greece, and the Balkan states continue to exist because no one great power could annex one of these countries without risking war with another great power, and the United States, it is remarked, presents a similar standing argument that would prevent aggressions upon Cuba.

It is argued, too, that it is not only honesty but also the best policy to make Cuba completely independent. The New York *Press* (Rep.) refers to the Teller resolution quoted above and says:

"We run fearful risks in evading that promise. It must become plain that by the appearance of withholding complete independence we play into the hands of the agitator and the exploiter. For let the Cuban peasant class—who suffer not merely devastation but depopulation, all but actual destruction for their liberty—once believe that we intend to withhold it, as we should do by the foreshadowed provision for a virtual protectorate, and we shall have on our hands in a greater or less degree the task which 200,000 Spanish soldiers could not accomplish in the West Indies—the sort of task with which 60,000 American soldiers are wrestling just now in the East Indies."

Sentiment in the constitutional convention in Havana is reported to be overwhelmingly in favor of complete independence; but the Havana *Nacion*, the organ of General Collazo, in an editorial that is also indorsed by *La Lucha*, another Havana paper of considerable influence, makes this proposition:

"The important question of the future is the relations which Cuba is to hold with the United States. Not only should Cuba pay back with generosity favors received, but the economical situation for us depends upon the attitude of the United States, and the political question thus resolves itself into an economical question. The convention, in our judgment, would do well to adopt the following as the basis of those relations:

"That the republic of Cuba will respect and guarantee lives, property, and acquired rights in the same form as the United States guaranteed these in the Treaty of Paris.

"That the republic will guarantee rights acquired during the American intervention by law, decree, judgment, or other act of the military government.

"That the republic, for a period of two years after the establishment of independence, will conduct foreign affairs through the United States; will make no treaty with any other nation prejudicial to the United States, and will accept no compromise which might give rise to the occupation of the island or to intervention in its customs.

"That the United States, for a period of two years after the establishment of independence, may occupy forts in Cuba, provided the Cuban flag flies with the American.

"That Cuba will lease to the United States two coaling-sta-

tions, and will give no commercial advantages to any other nation which are not given to the United States; and

"That none of these concessions or promises is to be taken to imply any cessation of the sovereignty of Cuba or any lessening of her complete independence."

The proposition finds favor in some quarters that the United States give Cuba complete independence, and later, if the lawlessness of the Cubans endangers American life and property, that the United States demand that the Cuban government maintain order in the island or allow our Government, by its own forces, to do so.

## TEXAS AS AN OIL STATE.

TEXAS, the sixth State in the Union in population, fourth in order of growth in the last decade, producer of a third of the great American cotton crop, and of 100,000,000 bushels of grain every year, her vast plains the pasture of millions of dollars worth of cattle and sheep, now promises to become equally famous as an oil State. The big gusher at Beaumont, which began spouting crude oil 200 feet into the air on January 10, at the rate of 25,000 barrels a day, seems to indicate that there is a pond, or a lake, or a river, or something full of oil about a quarter of a mile below the surface. Analysis of the oil is said to show that it can not be refined into illuminating oil, but will make good fuel—the one thing which Texas needs, as the Austin *Statesman* observes, to make it a manufacturing State. Ex-Mayor Samuel M. Jones, of Toledo, is quoted as saying:

"I think it is the greatest oil-well ever discovered in the United States. It is fortunate for the oil trade that it is not illuminating oil. If it were, it would paralyze the entire industry. Its advent, however, means that liquid fuel is to be the fuel of the twentieth century. Smoke, cinders, ashes, and soot will disappear along with war and other evidences of barbarism. The new oil-well means a cleaner as well as a better civilization, and Texas is to have a big share in the glory of bringing it about. . . . The discovery of this enormous well so near the sea coast indicates to my mind that we are just entering the real era of liquid fuel, and that the next few years you will see the locomotives passing through Corsicana using oil for fuel, and the ocean steamers will be using it, too. I believe this is the real beginning of the era of liquid fuel in the United States."

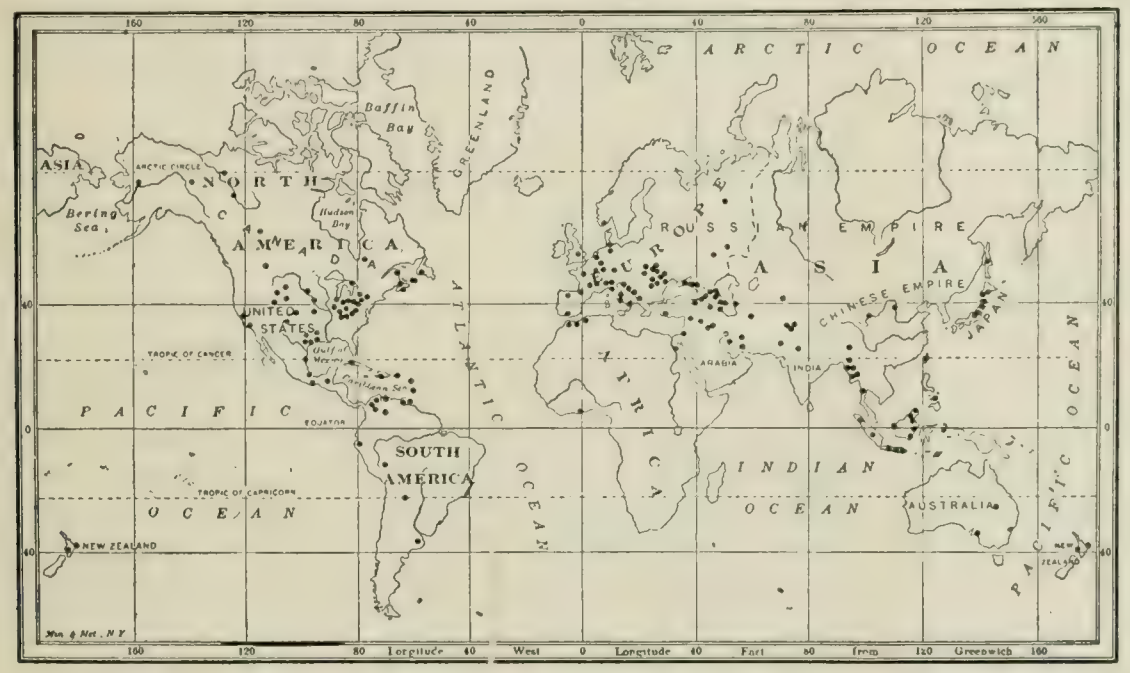
There is a great rush of prospectors and capitalists to Texas, of course, and all that part of the State is being perforated in a quest for oil. The Beaumont gusher was partly controlled on January 16, and on the 19th the flow was stopped. Mr. John H. Galey, principal owner of the new well, has ordered tanks to the capacity of 250,000 barrels to be sent on passenger schedule from Pittsburg.

*Mining and Metallurgy* (New York), to which credit is due for the use of the accompanying illustrations, publishes in its issue for February 1 an interesting article by Dr. David T. Day, in which he remarks upon the wide distribution of petroleum shown by the map, and observes that:

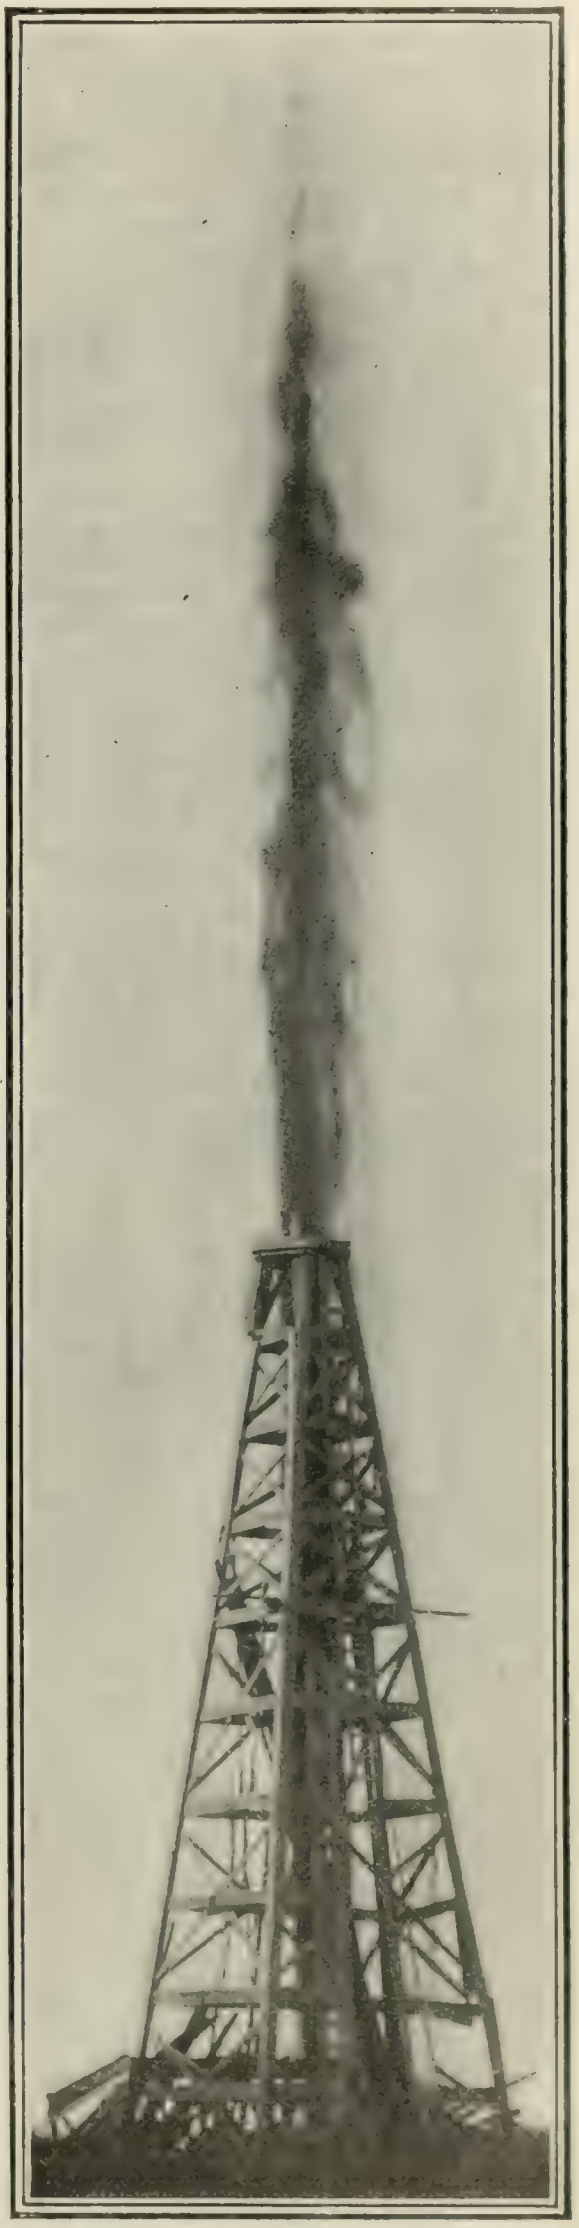
"While petroleum is scattered over a great area, the principal deposits so far discovered follow the fortieth parallel of north latitude through the oil regions of Ohio, West Virginia, and Pennsylvania.

"Eastward we find them again in Galicia, and the same line not only runs almost directly through Baku, in the great Russian field, but the Japanese deposits are on nearly the same parallel.

"This signifies simply that the fortieth is the parallel of greatest general industrial activity. Possibly it is also promising for future oil developments. By no means has advantage yet been taken of all the oil of this fortieth parallel. The probability is that the deposits of Wyoming will prove very valuable when the Western increase of population justifies their utilization."



MAP OF THE WORLD SHOWING PETROLEUM DEPOSITS.
Compiled by Boverton Redwood.



THE "GUSHER" AT BEAUMONT.
Spouting 25,000 barrels of oil a day.

Russia, Dr. Day notes, "from her deposits on the Caspian Sea, produces a little more oil than does the United States, the aggregate being over 6,000,000 barrels"; but, he adds, that "to be sure, it is not such good oil as ours for burning. We can turn seventy-five per cent. of our crude oil into illuminating oil, while twenty-six per cent. is considered a good yield from Russian oil."

## A NEGRO'S ARRAIGNMENT OF HIS RACE.

WILLIAM HANNIBAL THOMAS, a colored man of character and culture, has written a book in which he takes one of the most pessimistic views of the negro ever put in print. His book is entitled "The American Negro," and it presents a gloomy picture throughout. He announces in the outset that he has "never regarded the political rights of the freedman as essential to his well-being," tho he has no sympathy with the forcible methods which are employed to prevent the exercise of those rights. He says:

"In preparing this work, I have not sought to indicate any preconceived notions or prejudices of my own regarding its subject-matter, nor in arriving at my conclusions have I trusted to imperfect recollections or superficial observations. The sources from which my material has been drawn are carefully written notes representing studies of the negro question in all its known phases, and reaching over a period of more than thirty years. I have had an extensive experience in teaching the negro, one that brought me into contact with all grades of students, and covered every variety of instruction, and in which I learned that in memorizing and imitating the freedman is unique, but that otherwise his intellectual powers are unawakened. In addition, a judicial experience of more than three years of daily official contact with civil and criminal litigation gave me an insight into negro peculiarities such as could have been obtained in no other way, and I early discovered the absolute untrustworthiness of self-interested negro statement.

"I have been a student of political history and a participant in civic functions for more than three decades, having cast my first vote for Abraham Lincoln in 1864. During that time I have beheld the transition of the negro from chattelism to freedom, to enfranchisement, to legislative power, to dominating insolence, to riotous infamy; and through it all I have beheld his accredited leaders impervious to every thought or care for race, government, civilization, or posterity. From my youth I have had an intimate knowledge of negro religionists, and have learned to know by personal experience the shallowness of their pretensions, the depravity of their morals, the ignorance of their ministers, the bigotry of their leaders, and the levity of their faith."

Of the colored man's mental make-up he says:

"The negro has all the physical endowments of intellect, but he has a mind that never thinks in complex terms, and as it is wholly engrossed with units of phenomena, the states of consciousness aroused by visual or textual impressions rarely suggest sequences. The consequence is that the freedman exhibits great mental density, and gives conclusive evidence that he has neither clear nor distinct perceptions of specific facts, inasmuch as in every attempt at primary reasoning he falls into confusion and error. There is also reason to believe that the negro neither associates correlated facts nor deduces logical sequences from obvious causes. He is largely devoid of imagination in all that relates to purely intellectual exercises, tho he has fairly vivid conceptions of such physical objects as appeal to the passions or appetite. . . . . .

"Not only do negroes lack ability to acquire clear and concise knowledge of ideas and things, but in that which they appear to understand there is forever wanting judgment in its use. For example, words are, as we know, the vehicles of thought, thought the vestige of ideas. Vague speech, therefore, indicates misty, incoherent conception, just as clear-cut expressions show that the speaker has in his mind clearly defined mental images. Negroes have a very meager conception of the import of words, and are influenced more by sound than sense in their use. For illustration, we may take the word virtue, whose exact and complete significance no negro comprehends—who fails, therefore, to graft its import into the fiber of his being. With him it is a vocal sound, and not a significant symbol representing actual, visible, living qualities. The same is true of words like truth, honor, and integrity. These are meaningless expressions; and because the negro can not connect words with ideas, and ideas with realities, he lies with avidious readiness, and in all moods and degrees of enormity, without undergoing the slightest remorse, and often without any apparent sense of prevarication. He lies to please, to evade, to conceal, to excuse, to assert, to command. He lies to be heard, and he will not be silent, tho he has no truth to utter. He lies not to be outdone in speech and glibness—to gratify his vanity, to satisfy his ambition and win applause from credulous and illiterate hearers. But the main cause of negro-lying conversation is a fluent use of words, uttered without any regard to truth or facts. . . . . .

"Again, negroes are wanting in the elements of solid affection and genuine sympathy for one another; for, tho their speech is brimful of tender sentiment and vocal rectitude, yet so enveloped are they in a nimbus of charlatanism that the one is evanescent and the other is without guiding force. It would therefore appear that the freed people have no conception of the requirements of life or the amenities of society,—at least they always cast aside the substantial for that which is showy and flimsy. In speech they are silly and vaunting; in their homes, untidy and negligent; in their associations, coarse and vulgar. Their demeanor to inferiors is pompous and arrogant, while their conduct toward superiors is servile and craven."

It is generally supposed that the negro has a talent for music; but Mr. Thomas does not grant even that much. He says:

"There are some genuine musicians among the negro people with voices of marvelous power and charming sweetness, and to that fact is doubtless due the popular notion that the freedman belongs to a musically endowed race. He is, no doubt, greatly susceptible to musical impressions, and owing to his imitative ability and vocal powers he does succeed fairly well in simple melody. But beyond that he must be regarded as a doubtful exponent of rhythmic cadences and harmonic scores. There is no question but that negroes may learn to sing or that they do sing with great zeal and feeling, just as they learn to declaim well. They are not, however, creators and interpreters of music in any high artistic sense; that is, they have yet to show such inherent musical aptitude as is found in the German and Italian people. We should state in this connection, that the current music known and sung as 'plantation melodies' bears but slight resemblance to that which the freedman actually sings in his church and home. The deep pathos of chords and weird melody of expression is wanting in these transposed songs, which in many other respects are foreign to the life and habits of the freed people."

Nor has the negro any deep religious feeling, according to Mr. Thomas:

"Under existing conditions, the negro priesthood is largely recruited from a pretentious class who enter the ministry for social recognition, for official preferment, for idle maintenance and unearned support, and who, by deliberately shunning contact with intelligence, rarely become conscious of their own shortcomings. They are filled with conceit, and prate with glib assurance and authority about the most abtruse subjects, under the vain impression that they possess an amazing fecundity of learning—altho the paucity of their knowledge is transparent to others. As passed masters in the art of dissimulation they evince wonderful skill, and in the acquisition of Scriptural phraseology, they can read off Biblical texts with such deftness as to deceive even the 'elect' with their show of sanctity—which only proves that speech and action are distinct things. No people can speak more knowingly of Christian obligations, and none are less observant of their duties. . . . . .

"That negro religion is worthless as a fact in race regeneration is a justified conclusion in face of the fact that the most heinous crimes are committed by those who take an interest in the churches. It may be said that these negro culprits are 'sinners fallen from grace,' but may it not be fairly inferred that the 'saints' of the race are wanting as examples of wholesome living? Can it be truthfully denied that the great majority of the professedly religious negroes are visibly seamed and seared with carnal vices, or that falsehood, hypocrisy, pilfering, and

drunkenness are but minor vibrations in an ascending gamut of 'saintly turpitude'?

"All who know the negro recognize, however, that the chief and overpowering element in his make-up is an imperious sexual impulse, which, aroused at the slightest incentive, sweeps aside all restraints in the pursuit of physical gratification. We may say now that this element of negro character constitutes the main incitements to the degeneracy of the race, and is the chief hindrance to its social uplifting."

After all this unflinching arraignment, some of it too plain-spoken for republication, the best that the author is able to say of the future of his race is this:

"We have never doubted that the negro could find his place in the American commonwealth, if he would. The freedman, with his generations of indulgence in childish folly, ought to put away forever 'childish things,' through a realization that 'character is destiny,' and so get in touch with the best sentiment of his environment. He has now reached a point where a choice of two courses awaits him, and where the selection of either will inexorably fix his status in the republic. One is to assimilate fully and thoroughly with his environment; the other is to remain as now, in complete subordination to it, until exterminated."

The Richmond *Times* says of Mr. Thomas's book:

"We have never seen a stronger argument from any source for the repeal of the Fifteenth Amendment. It was this stupid blunder that got the negro into trouble and caused the 'outrages and miseries of reconstruction,' and, as the author of this book says, the negro was not directly responsible. . . . The only way to build up a respectable Republican Party in the South is to eliminate, for a time at least, the negro vote. This, in our opinion, would be the greatest possible boon to the black man. His right to vote has done him no good, but only harm, and he would have been far better off all these years without it."

## MR. ROOSEVELT AS A HUMOROUS TOPIC.

PERHAPS it would be unfair to publish the good-natured jibes and caricatures of the Colorado trip of the Vice-President elect without also noticing the comments of those who see no humor in it. The Chicago *Journal*, for example, gravely reproves the levity of the irreverent cartoonists and paragraphers. It says:

"The contemptible efforts of certain disreputable newspapers to find material for ridicule in Theodore Roosevelt's hunting expedition have not induced any healthy, sane American to sneer in sympathy with them. And now that Mr. Roosevelt's companions have punctured all the wild yarns these yellow sheets

THE SNAKE INDIANS ARE IN REVOLT—WHY NOT SEND FOR TEDDY?
—*The Cleveland Plain Dealer.*

have manufactured about his exploits, it is to be hoped, for the sake of public decency, that the malicious representation of one of the nation's greatest and most admirable characters as a kind of Nathaniel Winkle Munchausen will cease.

"It is not to be expected that anemic, town-bred, stage-door-haunting, dissipated youths can sympathize with a real man of Theodore Roosevelt's sort. But, fortunately for the country, such persons are few and uninfluential, no matter how much noise inherited millions enable them to make. Live vigorous Americans with red blood coursing through their veins know how to appreciate him, and their sneers are not for Theodore Roosevelt's healthy and unperverted tastes."

## MRS. NATION IN PROSE AND POETRY.

THE three neighboring States of Nebraska, Colorado, and Kansas now rival each other in prominence in the public prints, the first with Mr. Bryan's entrance into the journalistic arena, heralded with a blare of newspaper trumpets from sea to sea; the second with Mr. Roosevelt's carnage of wild beasts,

MRS. NATION OF KANSAS IS EXPECTED TO MOVE EASTWARD.
—*The Detroit Journal.*

his shots echoing around the world in telegraphic despatches; the third with Mrs. Nation's saloon-smashing crusade, making Kansas reverberate with the crash of glass, and inspiring imitation even in Boston, 1,500 miles away. Mrs. Nation's crusade, while it is admittedly a wholesome and salutary comment on the failure of the Kansas authorities to enforce the law, is so novel and, indeed, striking, that most of the newspaper writers feel impelled to add a few picturesque remarks in lighter vein, some of which we quote below.

IT seems to be Mrs. Nation's ambition to make a national wreckered.—*The Chicago Tribune.*

KANSAS should either license saloons or license some one to demolish them.—*The Houston Post.*

THE rumor that Mrs. Nation is on the pay-roll of the glass trust is denied.—*The Minneapolis Times.*

IT is now up to Mr. Markham to write a poem about "The Woman with the Ax."—*The Buffalo Express.*

HER platform is "Free and unlimited carnage without the aid or consent of any other Nation."—*The Chicago Tribune.*

THE herculean task of smashing the trusts might with great propriety be referred to Mrs. Nation.—*The St. Louis Globe-Democrat.*

IF Hoyt were writing a Kansas play one of the characters would certainly be Carrie Consternation.—*The Philadelphia Ledger.*

IT is presumed that some poor man in Kansas will be known to fame hereafter as "Mrs. Nation's husband."—*The Baltimore American.*

MRS. NATION evidently does not share the popular superstition regarding the ill-luck that follows the breaking of a mirror.—*The Peoria Herald-Transcript.*

MRS. NATION has declined to act in "Ten Nights in a Barroom," but she might possibly consent to be the star for one night in ten barrooms.—*The Chicago Record.*

THE Kansas saloonkeeper who has his fortune told in these troublous times will doubtless be informed that he must beware of a tall, dark woman with a brick in one hand.—*The Denver Republican.*

### MRS. NATION AT THE BAR.

Dame Nation of red Kansas
  By all her ribbons swore
That her bewhiskered neighbors
  Should quench their thirst no more!
She smashed a glass and chewed it,
  And spat the pieces out,

And tore out bunches of her hair
And flung them forth upon the air,
  And fiercely danced about.
. . . . . .

The bourbon and the lager
  Are pouring out amain
From "Frank's Buffet" and "George's Place,"
  To irrigate the plain;
And many a costly mirror
  Is cracked in forty ways,
And all her actions are designed
  To frighten and amaze.
. . . . . .

The sheriff hurries forward
  And bids her cease a space:
She pulls his ears and tweaks his nose
  And roughly slaps his face!
She rips the bar to pieces
  And knocks out all the bungs,
And, round about, five hundred men
  Stand with protruding tongues.

She grasps the tall cop's whiskers
  Within her goodly clutch,
And pulls them from his system
  And whoops to beat the Dutch!
Her hands are full of splinters,
  She feels them not nor cares.
But keeps right on proceeding
  To regulate affairs.

And when her work is ended
  The men who stand around
And, sighing, see her eat the hoops
  By which the casks were bound,
Speed off in all directions
  And thank their lucky stars
That they may still get thirsty
  And drink at other bars.

Ah, may her muscle ever
  Bulge till her fight is won,
For oh, I wot she'll need a lot
  Before the job is done!
Hurrah for Mrs. Nation—
  Ten thousand times hurrah
For her who in her good right hand
Can swing the fearsome brickbat and
Herself become the law!

S. E. KISER, in Chicago *Times-Herald*.

**Good Roads as a Bad Investment.**—Many people think that the expenditure of large sums by the state governments or the federal Government in improving country roads will raise the value of the adjacent farms enough to warrant the outlay. Massachusetts, in fact, spends considerable money in this way every year, and Governor Odell recommended in his inaugural address that New York State should begin a similar policy. *Engineering News* (New York), however, holds an opposite view, and thinks that the good-road advocates are doing actual harm by advocating an unsound business policy. It says:

"Now where transportation over common roads is carried on *as a business*, the direct return from the improvement of the road can be computed. There are thousands of such roads, where products of mines, mills, or forests are hauled to a shipping point, or where market-gardeners and milkmen carry their products to towns and cities. Roads of this class, if only sufficient traffic is 'in sight,' can very generally be improved so that the reduced cost of transportation shall well repay the cost of the improvement.

"But on roads in the farming districts, remote from towns and cities—on country roads proper—there is very little of transportation *as a business*. The farmer carries most of his products to market at times when he and his men and horses would otherwise be idle. He would obtain benefit from good roads; but it is incorrect to measure it in the same way that we measure the benefit to the teamster who, as a result of improved roads, can do his work with fewer horses and wagons, and who can thus afford to work at lower prices so that the final benefit accrues to the public. It ought to be plain enough that no such benefit accrues in the case of the farmer. He will get the current price for his grain, whether he hauls it to market over a bad road or a good one; and as we have already seen, his total outlay for horses and laborers is fixed by his farm conditions, and not by the state of the highway to market.

"The farmer understands this perfectly well. He is not for a minute deceived by the theorists who tell him that by taxing himself to pay for good roads he can put dollars in his pocket. He regards good roads as he does a covered carriage or a fine house or any other pleasant and desirable thing—as something very good to have when and where it can be afforded."

---

## DID THE CHINESE CRISIS BEGIN IN PITTSBURG?

AMERICAN industrial and commercial supremacy was assured in March, 1897, by the centralization, at Pittsburg, of mines, foundries, and railroads, which made possible the reduction of the price of steel rails to $18 a ton. So declares Brooks Adams, in *The Atlantic Monthly*. "At one bound," he writes, "America bestrode the world." The British mineral production declined, and "the world knew that the giant had arrived." Europe, says Mr. Adams, realized instinctively that she was doomed, not only to buy her raw material abroad, but to pay the cost of transport. She nerved herself for resistance, and this resistance took the form of a new transportation system which would open up the East. Within a year from the "triumph of Carnegie," already referred to, the rival nations had "emptied themselves upon the shore of the Yellow Sea." In November, 1897, Germany seized Kiao-chau, a month later the Russians occupied Port Arthur, and the following April the English appropriated Wei-hai-Wei. Inland, about equally distant from these three points, lies Tszechau, which, as Mr. Adams points out, is the center of the richest coal and iron deposits in existence.

"Thus it has come to pass that the problem now being attacked by all the statesmen, soldiers, scientific men, and engineers of the two Eastern continents is whether Russia, Germany, France, England, and Japan, combined or separately, can ever bring these resources on the market in competition with the United States."

The Siberian railroad, says Mr. Adams, is far from being a purely Russian venture. Russia's part has been in the administration. The road has really been the result of the effort made by Europe to extend its base over Asia, and was made possible only by the support of the Western nations. "As long as the United States acted as a useful appendage to Europe, absorbing at once her surplus manufactures and population, and repaying her with silver and gold, Europe looked on the development of Eastern Asia with indifference; but no sooner had the shadow of American competition fallen across the Atlantic than penetrating the recesses of Asia was recognized as essential to safety." In 1890 the Bank of England showed signs of weakness, and the next year "an imperial rescript ordered the construction of the Siberian road to begin on the Pacific coast." The Siberian road, however, says Mr. Adams, is generally admitted by Europeans to be practically useless as a channel for international traffic. Europe's economic position is now practically hopeless, he declares, unless she resorts to war. He says on this point:

"Tho now the position of Europe is untenable, her energy is not exhausted, and therefore she will presumably seek means of defense. If she can not expand, she will doubtless consolidate, and try to compensate for inferior resources by superior administration. Should all else fail, she will, unless the precedents of history are to be reversed, resort to war. Probably without exception sinking communities have fought for life. Upon the same principle, the present economic situation logically points toward a collision. After finishing her internal lines of communication, America has extended them across the sea to her rival's ports, the more effectually to deluge them with her wares. Furthermore, the United States bars all avenues of escape. She has long held South America closed; she is now closing China; and while thus caging Europeans within their narrow peninsula,

she is slowly suffocating them with her surplus. Any animal cornered and threatened will strike at the foe; much more, proud, energetic, and powerful nations."

Concentration may possibly save Europe:

"Disarmament, more or less complete; the absorption of small states, like Holland, Belgium, Denmark, and the like; the redistribution of the Austrian empire; the adoption of an international railroad system, with uniform coinage and banking; and, above all, the massing of industries upon the American model, may enable Europe to force down prices indefinitely, and possibly turn the balance of trade."

The Leipsic *Tageblatt* admits that Germany's purpose in seizing Kiao-Chau was to secure coal deposits, and says: "The acquisition of this section in China was one of the most fortunate actions of our imperial Government."

## RADICAL PAPERS ON QUEEN VICTORIA.

THE pæan of praise which has gone up from the press of the world in honor of England's late Queen finds no echo in the radical papers of this country. On the contrary, there is a tendency in this section of the press to heap upon the memory of the Queen much the same kind of condemnation that is habitually devoted to the tangible evils of modern society. *Freiheit*, an "international organ of Anarchist-communism," published and edited by John Most in New York, has the following to say of the Victorian era (we translate freely):

"The story of England's empire of oppression during Victoria's reign is, from A to Z, one of infamy, and only infamy, throughout the whole world. At home capital has increased its power and tyranny alongside of million-headed pauperism. Abroad, India, once a paradise, has been transformed into a country cursed with the plague, cholera, and famine; and when its masses dared to rebel they were submitted to the most outrageous cruelties and were blown from the mouths of cannons. Not less than forty wars have been waged by England, nominally for frivolous causes, in reality for robbery and murder. The crowning infamy is this war in South Africa. . . . . .

"Consciously or unconsciously, Queen Victoria gave her sanction to all these monstrous crimes, committed in the name of 'government' by an aristocratic and capitalistic land which has sent its sea-robbers around the world."

The Haverhill *Social Democrat* entitles its article on Victoria: "The Queen is Dead. Down with the King!" "Against the Queen as a woman we have nothing to say," it declares; "but under all circumstances we hate the *Queen!*" All kings and queens are bad, it says, since they are an anachronism in our age and an insult to the principles of democracy and self-government. It continues:

"If a historian, honest and human-hearted, were to summarize the deeds of England during Victoria's reign, the following result would be read:

"*Starvation, cruelty, and murder in Ireland, pillage and famine in India, and greedy, avaricious wars against weak and helpless nations.* . . . . . .

"Let us hope that before long Socialism will usher in a rational society where there will be no kings and queens, no rich and poor, but happy freemen!"

*The Public* (Chicago), which is probably the most influential of the Single-Tax papers, comments in much more moderate tone. "It is only human," it says, "after a queen has reigned so long in an era so marvelous, to ascribe to her personally an excess of credit for the general progress in the tide of which she has lived so conspicuously." Even tho her influence was "always conservative, and at times reactionary," adds *The Public*, yet there is ample reason to believe that it was exerted in good conscience. "Upon her bier," it concludes, "democrats not less than aristocrats may be permitted to place a tribute of respect to the memory of the sovereign who was a British statesman, this statesman who was a good woman."

In some of the Irish-American and Roman Catholic papers are to be found sentiments not far different from the most radical of those quoted. Says the *Catholic Union and Times* (Buffalo):

"Her reign, so far as Ireland is concerned, is one of the worst that unfortunate island has ever known. True, there was not the same brutal savagery visited upon the people there as in the horrible days of Elizabeth; nor yet was the demon of devastation and blazing faggot and cold-blooded murder let loose as in cursed Cromwell's time. Nevertheless, we hold that Victoria's was the worst of England's reigns as regards Ireland; for during the threescore years and three of that sovereign's rule between five and six millions of the people have been driven in exile to the four winds; their substance has been devoured by rapacious landlords; their homes razed and their possessions plundered; the land terrorized by bristling bayonets; prisons crowded with the flower of Ireland's youth for the crime of loving their native land; and the gibbet crimsoned with the patriot blood of Ireland's best and bravest.

"What did Victoria do to stop or mitigate those savage occurrences? What did she do to help the poor people when starving—when they were flung in hundreds of thousands into coffinless graves? Nothing!—nothing! Oh, yes, she sent them her—sympathy! Great-souled Victoria! Heroically charitable Regina!"

## LETTERS AND ART.

### AN ATTACK UPON "UNCLE TOM'S CABIN."

THE Southern people have for the most part always claimed that Mrs. Harriet Beecher Stowe's "Uncle Tom's Cabin" is an egregious misrepresentation of Southern life before the war and of the institution of slavery as it existed in that region. It is not often, however, that Southern men of literary reputation have taken up the quarrel; and accordingly Mr. F. Hopkinson Smith's recent indictment of Mrs. Stowe's famous book appears to have struck many Northern people as something novel, and has called forth very wide comment. Mr. Smith's views were first given in a lecture in Boston before the Newton Club. Later on, in an interview in the New York *Herald*, called forth by the speech, Mr. Smith said:

"'Uncle Tom's Cabin' did as much as any one thing to precipitate the Civil War. It was a vicious, appalling, criminal mistake. It gave a distorted view of the South. It made Northern people believe that Southerners were cruel to the slave. The very reason why a compromise between the North and South was impossible was because books of that sort were written. The Northerner believed that slavery was causing the negro terrible suffering. The Southerner believed that the Northerner was coming down to take his property away from him. That situation brought about war. . . . . .

"The Southern man felt that the North had no right to take away his slave without paying for him. His right of property was just as sacred in his negro as in his mule. I don't believe in slavery. From the sentimental standpoint I don't think one man ought to be another man's property. But think how many millions of dollars the Government would have saved had the Southerners been paid for their slaves—and how many lives! . . . . . .

"Mrs. Stowe went down into the South, stayed there a few months, and came back to write an utterly false view of the Southern situation. She went to find material to justify the Northern position, and of course she found it. The other side of the question—the happy, caré-free, contented lives of the majority of the negroes—she quite ignored. Mind you, I have nothing against Mrs. Stowe. She was the dearest, sweetest old lady in the world. I remember meeting her. It was just before her mind began to fail, but she was still a charming old woman. But if she did not see the other side, she could not have opened her eyes, for it was there to see.

"We had no one to reply to that book. There were no means of getting our reply published in the North, if anything more were essayed than a newspaper despatch from Richmond, which every one believed untrue. But Mrs. Stowe's book was an interesting romance. It was read all over the country, and is so read to-day. The presses are continually turning out thousands of copies of it, and it has been played as a drama all through the United States and is constantly being played. People go to see those dramatic versions—the negro lashed, hunted by dogs—and they see cruelty to the slave all through it. They don't know anything of the affection that existed between the Southern masters and their slaves."

One of the most interesting replies to Mr. Smith comes from Colonel Henry Watterson, of Louisville, Kentucky. He says (we quote from the Atlanta *News*, January 22):

"Mr. F. Hopkinson Smith says that 'Uncle Tom's Cabin' did a great deal to precipitate the war. 'Uncle Tom's Cabin' did undoubtedly make a great impression upon the susceptibilities of the people of the United States—and nowhere more than in the Southern States—who instantly recognized its fidelity to truth. But to say that it cut any figure in the final crisis is wholly a misconception. Nothing could have delayed the ultimate trial of arms more than four years. If Judge Douglas had been elected President in 1860 the war between the sections would have been postponed from 1861 to 1865. Mrs. Stowe's novel was merely a spoke in an inexorable wheel, which for the time being represented perpetual motion.

"But so far from being a cruel attack upon the people of the South, it was a most kindly representation. Mrs. Stowe begins with the sunny side of slavery in Kentucky and indicates its possibilities by traversing the career of Uncle Tom to a Louisiana plantation. But you will observe that the villain of the book, Legree, is a Yankee, and that leads me to say—what, indeed, Abraham Lincoln preceded me in saying—that the Yankees brought the negro to America in their ships and sold them to the Southerners.

"'Uncle Tom's Cabin' is one of the great books of the world. I am willing to bet the author of 'Colonel Carter of Cartersville' a cigar that he never read 'Uncle Tom's Cabin,' and leave the decision of the bet to him. It is this dreadful sensitivity of provincialism, this astounding ignorance of the world at large, that has kept the South in leading-strings for a hundred years.

"The leaders of the South, not to mention a certain George Washington, but particularly to mention one Thomas Jefferson, knew slavery to be abhorrent to manhood, womanhood, and all the graces of human life. The South is well rid of it. Mr. Smith is wholly mistaken in supposing that the negro is worse off in freedom than in slavery. In short and in fine, while I am not surprised at Mr. Hopkinson Smith's verdict about a book of which he can not know a great deal—even if he had read it—he falls into the prevailing error of the educated Southerner, in supposing that attacks upon the institution of African slavery are attacks upon the people of the South. Mr. Hopkinson Smith is a great painter; I am afraid I must say a great romanticist. 'Colonel Carter of Cartersville' shocked my sensibilities as a Southern man, and particularly as a Virginia product, very much more than did Mrs. Stowe's 'Uncle Tom's Cabin.' There never was yet a literary man who was not a hopeless politician. 'Uncle Tom's Cabin' was a great book, and Mrs. Harriet Beecher Stowe was a great woman."

### WHAT QUEEN VICTORIA DID FOR ENGLISH MUSIC.

THE musical world, especially English music, probably owes far more to the late Queen than is generally acknowledged. It is, however, comparatively well known that she was herself an accomplished amateur; and her appreciation of high musical attainment is evidenced by the many titles she conferred upon musicians, among whom may be mentioned Smart, Goss, Costa, Elvey, Bennett, Ouseley, Benedict, and Sullivan. *The American Art Journal* (January 26) says:

"For Mendelssohn the Queen had a warm admiration, and an account of an afternoon visit of the composer to the sovereign is thus related by his friend and biographer—Lampadius:

"'Her Majesty received the distinguished German in her own sitting-room, Prince Albert being the only one present besides herself. As Mendelssohn entered, the Queen asked his pardon for the somewhat disorderly appearance of the apartment, and began to rearrange the articles with her own hands, in which Mendelssohn gallantly offered his assistance. Some parrots, whose cages hung in the room, she herself carried into the next apartment, in which Mendelssohn helped her also. She then requested her guest to play something; and afterward she sang some songs of his which she had sung at a court concert soon after the attack upon her person. She was not wholly satisfied, however, with her own performance, and said pleasantly to Mendelssohn: "I can do better; ask Lablache if I can not; but I am afraid of you."'

"Lampadius had this anecdote from Mendelssohn's own lips, and writes that the composer frequently spoke of the graciousness of the Queen. The occurrence was to her honor as much as to that of her guest. The year of that occurrence, 1842, Mendelssohn completed his Scotch Symphony and dedicated it to Queen Victoria. The Queen and Prince Consort subscribed one twelfth of the amount for the bronze statue of Mendelssohn erected on the terrace of Crystal Palace at Sydenham, in 1860, by the Philharmonic and the Sacred Harmonic societies of London.

"At the time of the commencement of the Queen's reign music was at a low ebb in England, and musicians were wellnigh socially ostracized. How this condition of things changed under her example is shown by the social distinction conferred upon the

musicians before mentioned. Music was also little cultivated by the masses, and it is only since then that England's magnificent choral societies have grown up to become a pride throughout the land, and classical music become a household word. By fostering the art in her own household, she gave a splendid impetus to music that has encouraged many to adopt it as a profession who would otherwise have been debarred through social prejudices, thus bringing the influence of brighter minds and more cultivated tastes within the ranks of the profession."

---

## THE GREATEST OF ITALIAN COMPOSERS.

THE death of Giuseppe Verdi, following so closely that of Sir Arthur Sullivan, removes another eminent figure in the musical world. His long and remarkable career is thus sketched by Mr. Henry T. Finck in the New York *Evening Post* (January 28):

"It was near Busseto (Parma), in the village of Roncole, that Verdi was born. His father was a poor innkeeper, and there was nothing in Verdi's early life to inspire a love of music. He took no interest in the ordinary amusements of childhood, and the only time when his enthusiasm was aroused was when a perambulating organ-grinder came along. Then he could not be kept at home, but followed him from place to place. When he was seven years old, he managed to get a wretched spinet, or primitive sort of piano, and took great delight in picking out chords. At the age of ten he replaced his teacher as organist at the village church at an annual salary of a little over $7, to which he was able to add about $12 from the receipts for playing at weddings and funerals. He had opportunity to hear some orchestral music at Busseto, and at the age of sixteen he was sent to Milan to study music seriously. Strange to say, the director of the Milan Conservatory refused him admission, on the ground that he had not sufficient musical talent! So he put himself under the care of the composer Lavigna, who for two years taught him the art of composition.

"The means for his studies had been provided by some art-patrons at Busseto, with the proviso that Verdi should afterward become the organist of that town. Verdi had higher ambitions, and he was, therefore, not at all displeased when a rival with a 'pull' secured that place. He got something much better—the charming daughter of his rich patron Barezzi. After his marriage Verdi moved again to Milan, where, on November 17, 1839, his first opera was produced. It had considerable success, but the next one, 'Un Giorno di Regno,' was a failure. In 1842 he wrote an opera—'Nabuacco'—which made him famous. During the following ten years he wrote a dozen operas, of which one, 'Ernani,' still is heard occasionally. 'Rigoletto' was produced in 1851, and in 1853 were first heard 'Il Trovatore' and 'La Traviata.' These three operas made Verdi for several decades the most popular of all opera composers. For at least twenty years 'Trovatore' had the place in popular favor that is now held by 'Faust,' 'Carmen,' and 'Lohengrin.' The fact is the more remarkable when it is borne in mind that the libretto of this opera is stupid and almost unintelligible; so that the popularity of the work is striking proof of Verdi's gift of melody. There is, too, a genuine dramatic vein in 'Trovatore,' whereby it differs from most preceding Italian operas. 'Traviata' is less original, and at first it was a dead failure. Patti had much to do with its vogue. . . . . .

"All this time Verdi's fame was growing, and one result of this was that in 1871 he received a commission from the Khedive of Egypt to write a work for the opera-house in Cairo, for which he was to receive $20,000. Luckily, he agreed to accept an Egyptian subject, and his treatment of it showed that he had the gift of local color in a high degree. While no less melodious than 'Trovatore,' 'Aïda' is conceived on a much more elevated plane. The orchestra has more to say, and in its pomp and processions the opera suggests the most imposing works of the French school.

"Another long interval passed during which Verdi rested. Apart from the Mazoni Requiem (1873) no work of his appeared till 1887, when 'Otello' was produced. During the sixteen years intervening between 'Aïda' and 'Otello' Verdi's mind had again undergone a change. His melodic vein had become less rich, but, on the other hand, his taste and sense of form had made great progress. When 'Otello' appeared it was said that it showed the influence of Wagner. Verdi had a very high opinion of Wagner—much higher than he had of himself—but he was too original a composer to plagiarize or copy any one else. Neither in 'Otello' nor in his later works is there any borrowing of melodies, or harmonies, or orchestral colors from Wagner, except in the sense in which all modern musicians, including even Rubinstein and Brahms, felt the influence of Wagner's genius. Where Verdi was unmistakably Wagnerized was in his views regarding the relations between the libretto and the music. 'Aïda' had opened his eyes as to the value of a good libretto. As luck would have it, he found in the poet and composer Boïto an ally who was able to write for him librettos that, like Wagner's, had a poetic and dramatic value of their own; and in setting them to music Verdi did penance for the trivialities and vulgarities of his earlier melodic style by adapting the vocal parts most conscientiously to the structure and spirit of the text-words.

THE LATE GIUSEPPE VERDI.
From a photograph taken at Montecatini in the latter part of 1899.

"It can not be denied that his melodic fountain flowed less freely at this time; nevertheless, considering his advanced age, one must marvel at the many beauties of his 'Otello' and 'Falstaff.' The last named appeared in 1893, and provided another surprise for his admirers, inasmuch as it was Verdi's first comic opera. He had spent his life writing about thirty tragic operas, when, at the age of eighty, he appeared as a comic composer, and, what is more, with perfect success. If he could have had such a refined style at the time when he had the wealth of ideas he lavished on 'Trovatore,' he would have been one of the immortals in music. As it is, it is doubtful if any of his works, except 'Aïda,' will survive to the middle of this century. The life of an opera is seldom more than a decade. Centenarians can be counted on the fingers of one hand.

"Verdi accumulated a large fortune from the profits of his operas, but he gave away a large part of it to indigent musicians and others. He built, at a cost of hundreds of thousands, a hospital in Milan, with rooms for several hundred aged artists, who are there cared for at his expense."

---

**Japanese Spelling-Reform.**—The Japanese official organ recently published the recommendation of the bureau of education to write Japanese words in Roman characters and thereby effect a radical reform in Japanese orthography. The *Hatschi*

*Shimbun* observes, in explanation (as quoted in the New York *Staats-Zeitung*), that Roman characters are to be used henceforth in all grades of schools. If this be true, the picturesque but difficult Chinese characters will gradually disappear and Japan will soon have abolished the last outward token of the Chinese origin of her culture.

The change will be very welcome to Europeans and probably also to Japanese school-children, and it will multiply and strengthen the bonds by which the progressive Japanese are already connected with European culture.—*Translation made for* THE LITERARY DIGEST.

## THE HIAWATHA DRAMA—A FESTIVAL OF THE OJIBWAY INDIANS.

IT is not known by everybody that the aboriginal legends embodied in Longfellow's most characteristically American poem "Hiawatha" are almost wholly genuine. In a recent article Mr. Henry Harrison Lewis states that "the Indian names and words employed are identical with those used to-day among the Ojibways," and that "the geographical locations are correct." In *Everybody's Magazine* (January) he writes:

"It is interesting to note that the story of Hiawatha, the description of his childhood, his memorable fight with Mudjekeewis, his wooing of beautiful Minnehaha, the arrow-maker's daughter, and the thrilling misadventures of that picturesque knave, Pau-Puk-Keewis, practically as Longfellow wrote them, have been handed down among the Ojibways from time immemorial. The manner of their passing to the poet is worth the telling. When Luke Schoolcraft, the explorer and ethnologist, went to live among the Ojibways at Garden River, their traditional camping-ground near the extreme northwestern corner of Lake Huron, he quickly recognized them as the most intelligent and refined Indians whom he had met. He married into the tribe, and in time became acquainted with the legends and folk-lore contained in the Hiawatha stories. The tribe was ruled in those days by Buk-wij-ji-ni-ni, the son of the renowned chieftain Shing-wauk. It was from the former that Schoolcraft learned the legends, and, altho it has been stated that Longfellow personally visited Buk-wij-ji-ni-ni, there is good authority for thinking that Schoolcraft related the stories to the poet."

This old chief, shortly before he passed away in 1898, sent two of his head-men, Kabaoosa and Wabonosa, to carry his last greeting to Longfellow, whom he supposed still alive. They were received in the old Longfellow home in Boston very cordially by Miss Alice M. Longfellow, and by her sisters, Mrs. Richard Henry Dana and Mrs. J. G. Thorp. When the Indian ambassadors left they carried with them the promise that the poet's daughters would visit the "Islands of the Blessed" the following summer. Their coming was celebrated by a unique entertainment consisting of a series of native tableaux representing scenes from the Wah-ne-bo-jo legend on which the "Hiawatha" stories are founded. The site for the giving of the drama was an island located a few miles from Sault Ste. Marie, near the little Canadian town of Desbarates (pronounced Deb-ba-rah). The writer says:

"The island itself is picturesque and rocky, two acres or more in extent, and indented with several little harbors. Rising from the water on the west is a miniature precipice fifty feet high, on whose brink the lodge is built. The stones of the building are covered with moss, and the timber used is cedar with the bark upon it. The interior is finished with silver birch-bark taken from very large trees and placed on the walls in panels. Let into the bark are pictures of Craigie House, Cambridge, the residence of the poet. Burned into the walls over the windows are selections from Longfellow's works. To the left of the door, which is the main entrance, is the following familiar quotation:

> Beautiful is the sun, O Strangers,
> When you come so far to see us;
> All our town in peace awaits you,
> All our doors stand open for you.
> You shall enter all our wigwams,
> For the heart's right hand we give you.

"When all were gathered on the stage, facing one another with glowering looks, a loud voice, that of Gitche Manito, the Mighty, suddenly called them in the Ojibway tongue to cease their warring. On the word the braves cast off their deerskin garments, dropped their weapons, and dashed into the lake, where they speedily cleansed themselves from their hideous war-paint and returned to shore. At a motion from one of the chiefs, the Indians sat down in a large circle and, one after another, took a puff from the peace-pipe, each passing it gravely to his neighbor until all had drawn the smoke significant of acquiescence to the sacred bond. This was the end of the first act.

"The second act was heralded by a group of squaws and bucks escorting a little Indian child to the stage. This was Hiawatha in his eighth year. He was come to practise under the tuition of his grandmother, Nokomis, with the bow and arrow,

> Tipped with flint, and winged with feathers,

made by Iagoo, 'the traveler and the talker.' Standing with old Nokomis in the middle of the stage, the lad first put his arrow to bow. Nokomis instructed him in the art of shooting, and the warriors grouped about applauded when Hiawatha hit the mark. . . . . .

"The fourth scene in this remarkable drama of nature depicted that part of the poem so familiar to the majority of readers, the wedding-feast. Lovely Minnehaha having been wooed and won, the celebration, as dear to the hearts of the aborigines of those days as to the belles of to-day, must follow. The first dance was novel and thoroughly characteristic. A picturesque old squaw stood guard with a tomahawk over a bevy of Indian maidens in the center of the stage. On the outer edge of the platform lurked a number of ambitious young warriors, who sought to steal them from her. In spite of her vigilance and ready blows, they were taken away one after another, all to the tune of Indian war drum and chant."

After the performance of various other dances—the Deer Dance, the Snake Dance, and the Gambling Dance—and a scene showing the coming of the missionary, came the most striking act of the play, the departure of Hiawatha:

"Presently Hiawatha stepped forth from his associates and announced that the time had arrived when he must leave them. He spoke to them of the long, long journey before him, and of his absence about to begin. Then, paddle in hand, he strode down to his canoe and pushed away from shore along the pathway of the setting sun. The tribe began a dirge-like chant in response to Hiawatha's farewell, which the latter repeated from time to time as his canoe slipped farther over the sun-tipped waves. Finally Hiawatha waved a last adieu, and then, raising his paddle above his head, vanished into the shadows of a little island. The scene was most dramatic, and was a fitting climax to an extraordinary performance."

On the day following, Miss Longfellow and the other descendants of the poet were formally adopted as members of the Ojibway nation. Each novice was given an honored name, danced with the head-man, and was then introduced as a full-fledged Ojibway to each member of the tribe. Miss Longfellow was given the name "O-dah-ne-waus-e-no-qua," signifying "Leading Light," or the first flash of lightning preceding a storm.

---

## MOST POPULAR BOOKS OF THE MONTH.

THE following are the most widely read new-books according to *The Bookman* (February):

1. "Eben Holden." By Irving Bacheller.
2. "Alice of Old Vincennes." By Maurice Thompson.
3. "Eleanor." By Mrs. Humphry Ward.
4. "In the Palace of the King." By F. Marion Crawford.
5. "Wanted—A Matchmaker." By Paul Leicester Ford.
6. "Stringtown on the Pike." By John Uri Lloyd.

Other widely read books are:

*Fiction.*

"The Master Christian." By Marie Corelli.
"The Cardinal's Snuff-Box." By H. Harland.
"The Sky-Pilot." By Ralph Connor.

"The Redemption of David Corson." By C. F. Goss
"The Mantle of Elijah." By I. Zangwill.
"The Reign of Law." By James Lane Allen.
"David Harum." By E. N. Wescott.
"To Have and to Hold." By Mary Johnston.
"Janice Meredith." By P. L. Ford.
"Uncanonized." By Margaret H. Potter.
"Tommy and Grizel." By J. M. Barrie.
"When Knighthood Was in Flower." By E. Caskoden.
"Richard Carvel." By Winston Churchill.
"Richard Yea-and-Nay." By Maurice Hewlett.

*Miscellaneous:*

"Huxley's Life and Letters."
"Cromwell." By John Morley.
"Napoleon." By Lord Rosebery.
"Rulers of the South." By F. Marion Crawford.
"William Shakespeare." By H. Wright Mabie.
"The Great Boer War." By A. Conan Doyle.
"Life and Letters of Phillips Brooks." By A. V. G. Allen.
"Wild Animals I Have Known." By E. Seton-Thompson.
"An Englishwoman's Love-Letters."
"L'Aiglon." By Edmond Rostand.
"Herod." By Stephen Phillips.

In England the following are reported as the most widely read books:

"The Master Christian." By Marie Corelli.
"Quisanté." By Anthony Hope.
"Isle of Unrest." By H. S. Merriman.
"The Mantle of Elijah." By I. Zangwill.
"The Hosts of the Lord." By F. A. Steel.
"Heart's Highway." By Mary E. Wilkins.
"Eleanor." By Mrs. H. Ward.
"The Stickit Minister's Wooing." By S. R. Crockett.
"Boy." By Marie Corelli.
"The Infidel." By Miss Braddon.
"Master of Craft." By W. W. Jacobs.

## BLISS CARMAN AND THE TEA-TABLE SCHOOL OF POETRY.

MR. BLISS CARMAN, who for some years has been known to the public as the leading Canadian poet, has for the most part sung of nature, the sea, and the open sky. In the recently published "Last Songs of Vagabondia," which include also poems by the late Richard Hovey, Mr. Carman adopts what one of his critics terms "the method of the tea-table school of poetry." This critic (in the New York *Sun*, December 22) thus facetiously describes Mr. Carmen's new poetical manner:

"He sings a somewhat astonishing song about an altogether astonishing young woman in a poster. Her hair was a raven glory and her chin was small and pointed, and she was depicted, in the poster, as reading a book of which Mr. Carman could not see the title:

With her head in the golden lilies,
  She reads and is never done.
Why her girlish face so still is
  I know not under the sun.

"His Mysteriarch of Fate he calls her, and he tells us that her mouth was small and childly, and that as she sat up there in her poster he walked about his chambers looking at her. As he let his fancy have full play, it seemed to him that he could remember her when she was alive and wandering in the ilex-groves of ancient Greece, and before she had gotten herself all out of drawing and become that modern monstrosity, a poster girl:

I remember the woods we strayed in,
  And the mountain paths we trod,
When she was a Doric maiden,
  And I was a young Greek god.

"After this we are not a bit surprised when in the next poem Mr. Carman tells us that he once tracked a ghostly whisper up the great stairs of time. Following presumably in the footsteps of the ghostly whisper—he passed through a number of open doors until he came to the place where Beauty's self is at home. And here, down the echoing stairway of being, he heard a thing that must have produced in him a queer sensation:

The tawny velvet accent
  Of Lilith as she came
Into the great blue garden
  And breathed her lover's name.

"All this has the true tea-and-muffin flavor, as also has the description of Berris Yare, a young woman who had eyes of the the Mush-hound—whatever that may be—and crispy dark hair."

A few words of admiration follow for the skill with which Mr. Carman finds a rime for the name of Ibsen. The same critic then continues his good-natured raillery thus:

"After a triumph such as that we can almost forgive Mr. Carman for his song of spring, wherein he tells us that he feels all broken up and thawed, and needs rest and a general mental and spiritual toning up. We can even look with a not unfriendly eye upon such an outburst of somewhat too premeditated humor as:

I am too winter-killed to live,
Cold-sour through and through,
O Heavenly Barber, come and give
  My soul a dry shampoo!

"There's hope for better things of the poet who can thus frankly make confession:

I'm sick of all this puling trash
  And namby-pamby rot—
A Pegasus you have to thrash
  To make him even trot.

. . . . .

I'm sick of all this poppycock
  In bilious green and blue;
I'm tired to death of taking stock
  Of everything that's "new."

. . . . .

I want to find a warm beechwood,
  And lie down and keep still;
And swear a little; and feel good;
  Then loaf up on the hill,
And let the spring houseclean my br
  Where all this stuff is crammed,
And let my heart grow sweet again;
  And let the Age be damned.

## NOTES.

MR. STEPHEN PHILLIPS'S poetical drama "Herod" will shortly be translated into French, German, Italian, Russian, and Swedish.

THE *Nuova Antologia* informs us that a museum of Nietzsche's works will be established at Weimar under the care of his sister, Mrs. Foerster, and his two executors, Doctors Hoegel and von den Hollen.

A NUMBER of Sidney Lanier's poems have been set to music by Miss Harriet B. Ware, and are soon to be published, among them being "Rose Morals," "The Voice of the Future," and "Love." Probably nothing would have been more gratifying to Lanier, who was himself an accomplished musician, than to have his noble verse wedded to music.

IN his recent review of Mr. Stedman's "Anthology," William D. Howells criticises the editor for the failure to include Edgar Fawcett, author of "Songs of Doubt and Dream." We are informed that Mr. Stedman was very desirous to have Mr. Fawcett represented, but the latter positively forbade it. In his introduction Mr. Stedman says that "one American poet, now living abroad, has been omitted at his own request." The poet is Mr. Fawcett.

JUSTIFIABLE PRIDE.

CHICAGO MILLIONAIRE (showing his library to distinguished novelist): "See them books?"
DISTINGUISHED NOVELIST: "Yes."
C. M.: "All bound in calf, ain't they?"
D. N.: "So they are."
C. M. (proudly): "Well, sir, I killed all them calves myself!"

*Punch, London.*

## SCIENCE AND INVENTION.

### A NOTED INVENTOR DEAD.

PROF. ELISHA GRAY, widely known as one of the inventors of the telephone, dropped dead at his home in Newtonville, Mass., on the morning of January 21. Neuralgia of the heart is assigned as the cause of death. Professor Gray was one of the best known of the electrical inventors of the day, ranking

with such men as Sir William Thomson (Lord Kelvin), Professor Helmholtz, and Werner von Siemens. The following particulars of his life are from a sketch in *The Evening Post* (New York). He was born at Barnesville, Ohio, on August 2, 1835, and for many years was a carpenter's apprentice. After five years at Oberlin College, spent mostly in the study of physical science, he became interested in his thirtieth year in electrical mechanism. His first invention was an automatic telegraphic relay, which he followed soon after with the telegraphic switch and annunciator for hotels, the private telegraph line printer, and the telegraphic repeater. Says the writer of the notice in *The Post*:

"By this time Professor Gray had organized the Western Electric Company, and had a manufactory of electrical apparatus at work in Cleveland. During the years 1873–74–75 his attention was much absorbed in developing a system of so-called electro-harmonic telegraphy for transmitting sounds over the wires of the telegraph. The basis of this system was the discovery of the law of vibration by which a sound produced in the presence of a magnet will cause a magnet of similar adjustment to respond to its tone. . . . . .

"On February 14, 1876, Professor Gray filed a caveat at Washington with the expectation of perfecting the 'art of transmitting vocal sounds telegraphically.' Contemporaneous workers in the same line were Professor Dolbear and Prof. A. Graham Bell, the latter of whom, tho probably anticipated by Gray's caveat, was granted a broad patent for speaking-telephones on March 8, 1876. . . . . .

"It has required almost constant litigation for the past twenty-five years to decide who was entitled to the credit of the invention, and, altho it was awarded to Professor Bell, there are dissenters from this opinion. Professor Gray himself was unable to put in any claim for legal rights to the invention on account of the fact that he had long ago disposed of his rights."

In the litigation referred to, a confession of a patent examiner played a dramatic part. According to this, Gray's caveat had been tampered with in the Patent Office and revealed to the Bell people. Professor Gray himself believed to his death that he was the original inventor of telephony, and his later days were embittered by the thought that he had reaped little pecuniary benefit from his work, while others had made large fortunes. The story is told in various ways and the press, in now reviving it, comment upon it variously. Says *The Times* (Hartford):

"Among electricians generally, we believe, there has never been any disposition to deny to Professor Bell the merit of having conceived the speaking-telephone and having invented a method of producing it. Whether, in the intense desire to gain what were believed to be their rights, the attorneys for the Bell patent subsidized a corrupt examiner who had them in his power is a question upon which no further light can ever be thrown. The real gist of [the examiner's] story, we believe, was that for the money which was paid to him he allowed Bell's attorneys to see Gray's papers and so amend their own application as to appropriate what belonged to Gray. It has even been affirmed that it was not until Gray's caveat was seen by the Bell people that they obtained the central idea of their invention; but this belief, as we have said, is not generally held in the electrical world."

The Boston *Journal* says of Professor Gray:

"He benefited the whole human race, made twenty millionaires—and took boarders to get bread and tools for his workshop!

"Time and again he has made a fortune of $50,000 on an invention, packed his family off to Europe, and been penniless again in short order. And time and again he has been watched while busy in his shop by vulture-eyed capitalists, and his inventions gobbled up for a song. But he kept at his inventions to the hour of his death."

According to the Boston *Transcript*, Professor Gray's habits in this regard were well known. It says:

"'The time to deal with Gray is when he is dreadfully hard up,' said the president of one of the telegraph companies. 'It is never good business to make him an offer when he has money. He has now on the string an invention which is going to revolutionize telegraphy. He wants a big price for his idea, which is in practical working order. His figures are away up. The thing to do is to wait until his bills get away up. He will then sell for a song.'

"The professor spent a year in improving a bicycle lamp. The improvement was quickly gobbled up by a man who had money and paid cash—the smallest possible fraction of its actual worth. This trait, possibly more than his greatness, made him one of the most sought-after men in Chicago. His neighbors were most solicitous about him. Men of money had been keeping tabs on his habits for a quarter of a century. He said that he had more friends after a long season of confinement and study than at other times."

Among other inventions of Professor Gray's, besides those already mentioned, are the well-known telautograph, by which handwriting is electrically transmitted to a distance, and a perfected method of submarine fog-signals on which he was working at the time of his death.

---

**The Bright Side of Mud.**—Under this heading, an editorial writer in *The Lancet* (London, December 29) affirms the belief that there is a consolation even for the mud-besprinkled. This solace is found in a comparison between the hygienic effects of mud and of dust. He adds:

"Of course mud is, roughly speaking, wet dust, and dust is dry mud; but the evil effects of dust far transcend those of mud.

In the dissemination of disease, mud remains comparatively innocent; but for the behavior of dust in this respect no words can be too strong. Widely disseminated and inevitably inhaled, dust particles carry and deposit enormous quantities of disease. Its local and comparatively trifling damages, conjunctivitis, pharyngitis, and rhinitis, pale before its evil powers in carrying more formidable disorders. It has recently been shown how summer diarrhea is wont to prevail most where there is most dust, and that it may contain the dried sputum of phthisical patients is only too familiar to us all. We have mentioned only two of the graver diseases in the distribution and implantation of which ordinary dust plays a leading part. There are still other complaints in which the inhalation of ordinary dust is baneful, not to mention the special diseases caused entirely by special forms of dust, and we would have it borne in mind that mud has no similar evil influence. Mud is largely water. Paradoxical as it may sound, mud is clean, at least as compared with dust. Moreover, the ultimate fate of mud is in the drain-pipe of the street; but dust too often ends in the windpipe of a man, if not in the alveoli even of his lungs. In future, then, let us not revile the passing hansom, nor as we wipe from our collar the mud of London's winter streets too fully condemn it; but rather gratefully reflect that a passing inconvenience, a mere temporary disfigurement, is a small price paid for freedom from the evil possibilities of the dust of an apparently brighter day."

## EMBALMED FOOD.

THIS popular name for foods that have been preserved with artificial chemical compounds is a good one. In the first place, the ideas that it suggests are unpleasant, as should be the case with processes injurious to health; and, secondly, it naturally does not apply to such antiseptics as occur in nature, for instance, salt, sugar, and vinegar. Salt fish, fruit jam, and pickles are all preserved with these natural antiseptics; but they are not harmful and should not be classed with foods that are kept from deterioration by the addition of salicylic acid and such chemical compounds. A short article in *Cosmos* (Paris, January 12) states briefly the case against these antiseptics and gives us the reasons why they were condemned by the recent Hygienic Congress at Paris. Says the writer, whose name is not given:

"To preserve food substances by retarding putrefaction, it is necessary to protect them mechanically from germs and ferments, at the same time leaving untouched all their useful qualities—a condition not always realizable. It is no longer the same thing when we add to them antiseptic substances, for then we modify their principal properties. Living matter, when rendered non-putrefiable and thus more stable, is at the same time less easily assimilable. The instability of organic matter being the essential condition of nutritive exchanges, foods containing antiseptics are products whose nutritive value has been decreased, and their continued use may be injurious to the consumer.

"The antiseptic substances usually added to foods as preservatives are borax, salicylic acid, and formol; and no one can deny that the prolonged use of such substances may seriously injure the health, especially in certain preexisting pathologic conditions, in the case, for instance, of persons with weak kidneys.

"Nevertheless, measures taken in regard to the addition of these substances to foods seldom if ever lead to effective suppression. This is because the courts look at the matter from a special point of view whose inexactness it is important to realize. Efforts to abolish the use of these substances usually fail because the question has been put definitely somewhat as follows: Has any food substance containing this or that antiseptic caused immediate injury to the health of the consumer? Put in these terms, the question must necessarily be answered in the negative, the quantity of antiseptic or preservative substance added to the food never being in sufficient quantity to determine *ipso facto* symptoms of poisoning, however slight. The answer, however, would be quite different were it asked whether the long-continued and regular ingestion of a food containing an antiseptic substance might injure the health of one who used such food daily. This point of view is, nevertheless, the only one from which the value of a food can logically be judged.

"To take a striking example: A dose of 30 to 50 centigrams [½ to ¾ grain] of neutral acetate of lead ["sugar of lead"] taken once, may produce useful medicinal effects, when the same quantity, divided into doses of several milligrams each, and taken daily in food, will infallibly produce serious symptoms of lead-poisoning. Drinking-water containing by accident a few milligrams of lead to the quart will not harm the person who drinks it; but the effect will not be the same if he uses such water daily. On this account, at the Congress of Hygiene held during the recent World's Fair, the medical delegates passed a resolution to the effect that the addition of antiseptic substances to foods should be totally forbidden and considered as an adulteration injurious to health."—*Translation made for* THE LITERARY DIGEST.

## LONG-DISTANCE TELEPHONY SOLVED?

THE report that a small fortune—some say half a million dollars—has been paid to Professor Pupin, of Columbia University, for his long-distance telephonic patents has revived a discussion of his discoveries, which were described in these pages some time ago. Says *The Scientific American* regarding them:

PROFESSOR M. I. PUPIN.

"The history of this investigation, which has involved five years of painstaking experiment, would make interesting reading. It is the weakening of the electrical current in an ordinary wire conductor that limits the distance over which such a wire can transmit a message. The loss of energy is due to the imperfect conductivity of the wire, and it is regulated by the inductance and capacity of the circuit. If a conductor has a high inductance, a given quantity of energy will be transmitted with less loss than over a conductor with a smaller amount of inductance—a fact that was well known to the English mathematical physicist Oliver Heaviside. It was known that the introduction into the circuit of inductance coils should theoretically give improved results; but, altho such coils had been used, for want of an underlying mathematical theory to govern the experiments they ended in failure.

"Dr. Pupin set out to develop such a mathematical theory, and its main features were shown in a series of experiments in the vibrations of flexible cords, the same elements being present in the transmission of wave-motion along a cord as in the transmission of electrical waves."

Dr. Pupin, we are told, constructed three separate experimental cables before he brought results into agreement with his theory. The first cable was 235 miles, the second 500 miles, and the third and successful cable 250 miles in length. The writer continues:

"It was found that if the coils are properly placed, two and one-half per cent. of the current generated at the transmitting end reaches the receiving end of the cable; but if the coils are cut out, and the cable is used in the ordinary way, then only one two-hundred-and-fifty-thousandth part of the current sent in at the transmitting end reaches the receiving end. The insertion of the coils enables the cable to transmit six thousand times as much current."

The distance over which the present system of telephony will

be fully available by Dr. Pupin's system is, according to him, 3,000 miles.

*The Tribune* (New York) has this to say on the subject:

"When the American Bell Telephone Company pays nearly half a million dollars for an invention, as it is said to have done for Professor Pupin's, it is a safe inference that it has a high opinion of the serviceability of the idea. That corporation is certainly in a position to judge of the value of the property which it has acquired; and those who have followed the Columbia professor's researches for the last few years have all along been confident that if he should attain the practical results which he sought he would wonderfully extend the possibilities of telephony. . . . . .

"Whether this invention will ever be applied to a transatlantic cable for telephonic service only is a question not easily answered. It must be remembered that the portion of the day devoted to business in New York and London overlaps by only an hour or two. It is 4 P.M. in the British capital when it is 11 A.M. here. Whether it would pay to lay a cable, equipped à la Pupin, just for one or two hours' business, is doubtful. But if a telegraph cable were constructed on the new principle, and some of the machines which transmit hundreds of words a minute over a land line were attached, its possibilities would be enormously greater than those of any existing cable. Then, by a proper combination of interests, the cable could also be used for a short period every day for telephony.

"The first application of the system, however, will probably be to land lines. It ought to be an easy matter to extend these across the continent, and from Quebec to Buenos Ayres, or from Cape of Good Hope to Cairo. Great economies in the use of metal will be secured on circuits of a few hundred miles, too. So that the Bell Company ought to get its money back in a short time."

Professor Pupin's success seems a vindication of the method of invention by thorough previous investigation as opposed to that of blind trial and error, which is so often employed. It will also give a distinct impulse to the study of applied mathematics. When a study can result in the acquisition of half a million at a strike, it is certainly worth pursuing!

## PROTECTION AGAINST LIGHTNING.

A SUMMARY of the latest discoveries and expert opinions regarding protection from lightning, especially by means of rods, is published in *Science and Industry* (January). The contributor, who signs himself "Constructor," tells us at the outset that many popular theories of immunity from lightning have melted away in the light of investigation, backed by statistics. Old ladies, he says, can no longer feel secure when ensconced in a feather-bed; nor can glass an eighth of an inch in thickness be regarded as good insulation against a current that has cleaved its way through a thousand feet of air. Even the time-honored statement that lightning never strikes twice in the same place can not be considered as true, for the only thing that would prevent it from doing so is the fact that there is seldom much left of an object once struck. He goes on to say:

"The cause of lightning is generally said to be a discharge of electricity from the clouds to the earth, and its action, which has been compared with that of an avalanche, seems to be a sudden discharge of an accumulation of energy; it might be considered analogous to a cloudburst by regarding the difference in pressure as the force of gravity, the cloud as the reservoir, and the current, or lightning stroke, as the water. . . . In the United States during four years beginning with 1890, 784 lives were lost, or an average of 196 per year, which is practically one person in every 400,000. This loss of life mostly occurs between April and September, but principally during the summer months. The property lost from fire caused by lightning, as gleaned from the insurance companies, fire departments, and newspapers, is hardly less surprising, for the total loss in this country during eight years previous to 1892 amounted to over $12,000,000. . . . . .

"In view of recently ascertained facts, there is no doubt that, when struck, buildings properly protected with lightning-conductors suffer very little damage in comparison with those not so protected. That the placing of numerous lightning-rods on any building will prevent it from being struck, can hardly be conceded; but they certainly provide an easy path to the ground for the energy generated and tend to dissipate it in such a way that serious damage seldom results, where the lightning protection has been intelligently installed."

Information regarding the construction and erection of rods and the means of saving a person struck by lightning has been gathered by Alexander McAdie and issued by the United States Weather Bureau. According to this, all barns and exposed buildings should have lightning-rods. Ordinary dwelling-houses in city blocks have not the need for rods that scattered houses in the country, and especially those on hillsides, have. Any part of a building, if the flash be of a certain character, may be struck, whether there is a rod on the building or not. While the great majority of flashes in our latitudes are not so intense but that a good lightning-rod well earthed makes the most natural path for the flash, we have many instances (not to be confounded with cases of defective rods) where edifices seemingly well protected have been struck below the rods.

One of the most startling results of recent investigations is the fact that a building may be damaged by lightning *without having been struck at all.* The Hôtel de Ville of Brussels was pronounced to be better protected against lightning than any other building in the world, yet it was damaged by fire caused by a small induced spark near escaping gas. The building probably did not receive even a side flash. Says the writer in closing:

"It is not judicious to stand under trees during thunder-storms, nor in the doorway of barns, or close to cattle, or near chimneys and fireplaces. On the other hand, there is not much sense in going to bed or trying to insulate oneself in feather-beds; neither are small articles of steel so much to be feared, for they do not have the power to determine the path of discharge or to *attract* lightning, as is popularly supposed.

"Many people suffer greatly and somewhat unnecessarily, we think, from *alarm* during the prevalence of thunder-storms. Many flashes are of less intensity than we imagine, and the human body could withstand these without permanent serious effects. Voltaire's caustic witticism that 'there are some great lords which it does not do to approach too closely, and lightning is one of these,' needs a little revision in these days of high-potential oscillatory currents. Indeed, the other saying, 'Heaven has more thunders to alarm than thunderbolts to punish,' has much more point to it, as it is nearer the truth. *One who lives to see the lightning flash* need not concern himself much about the possibility of personal injury from that flash.

"Finally, if you should be in the vicinity of a person who has just been struck by lightning, no matter whether or not the person appears to be dead, go to work at once to restore consciousness. There are many cases on record proving the wisdom of this course; and there is reason for believing that lightning often brings about suspended animation rather than somatic death. Try to stimulate the respiration and circulation. Do not cease in the effort to restore animation in less than an hour's time."

**The Odor of Paris.**—Paris, it appears, has a peculiar smell of its own. A writer in the *Revue Générale des Sciences* tells us that this odor is well known to all Parisians, and is perceived particularly at certain points in the city and especially in the evening. It is an odor "of heated organic matter," and is totally distinct from other odors of the same class that can be traced to cooking, varnish-making, etc. The writer goes on to say:

"To what shall we attribute this odor? The problem is less simple than it appears. The government inspectors, as related in a recent report, after making all needed improvements in estab-

lishments that were obviously unsanitary, still found that this peculiar smell remained. Two hypotheses could be made: either the odor was due to mixture of various others, or to some industry that had not been suspected."

After investigation, the "Parisian" odor was traced to the manufacture of superphosphates, altho this had not been suspected. The fact was found to be that these substances, like musk, when in great quantity do not affect the organs of smell, which seem, so to speak, to be anesthetized. The odor is sensible only at a distance, after dilution. This explains the curious fact that the inspectors did not report the factories before. The cause having been found, remedies have been devised, and we are assured by the writer that the "odor of Paris" will soon be a thing of the past.—*Translation made for* THE LITERARY DIGEST.

## MORE NEWS FROM MARS?

MR. NIKOLA TESLA is not the only man who has had a message (?) from Mars recently. After the receipt of his wireless communication, noted in a recent number of THE LITERARY DIGEST, comes the turn of the astronomers. One of them, Mr. Douglas, who has been watching the planet from Percival Lowell's observatory in Flagstaff, Arizona, saw a row of luminous points suddenly flash out on the dark part of its surface. The signal (if signal it be) was repeated more than once. The sensational journals have made the most of their opportunity; but the Flagstaff astronomers themselves are of the opinion that the light came from lofty clouds on which the sun was shining. Flammarion, the French astronomer, thinks the occurrence worthy of an explanation in the Paris *Temps*, which runs as follows, according to a translation in the San Francisco *Call* (January 19):

"These luminous projections are nothing new. The same announcement has been made nearly every two years for the last fifteen years, and each time the false interpretations made of them have been refuted. But the public memory is short, and then not everybody reads astronomical works even of the most popular kind. What, then, are these luminous projections?

"The planet Mars, like the terrestrial globe, is lit by the sun, which naturally illuminates only one half at a time. The line of separation of the hemisphere thus lit up from the hemisphere in darkness (the line termed the 'terminator') forms the limit of the phase, as one can see with the naked eye in the case of the moon. Well, it is there, always there, that we observe these luminous points—that is to say, on the meridian of the rising or the setting of the sun, and to explain these irregularities, these white prominences, two simple and natural hypotheses presented themselves.

"Very high mountains might throw their summits into the dark hemisphere, as we see constantly on the moon, and as happens on the earth in the case of isolated mountains. Clouds still higher than the mountains and more isolated might offer the same aspect. . . . . .

"The various countries of Mars pass under our eyes, moving from right to left and from the day toward the night. Of the globe of Mars to which I have referred the cloudy belt extends from the three hundred and fifteenth to the three hundred and fiftieth meridian; that is to say, nearly three hours of rotation. There is, therefore, nothing surprising in the fact that on December 8 last, the date of the despatch, an observer may have seen for more than an hour the clouds lit up by the setting sun.

"If our neighbors in the sky were making signals to us we would ask why they chose the hour of the setting sun and a meridian so oblique to our view. Would it not be suggested by nature herself to choose daylight and solar reflectors? If we desired to reply to them we ought, on the contrary, to choose the middle of the night, as Mars gravitates round the sun in an orbit outside that of the earth, and when the two planets are closest together it presents to us its hemisphere lit up by the sun, while our planet presents its hemisphere in darkness.

"No, there is nothing intentional in this—nothing human. But we have quite another impression if we regard the globe of Mars and especially if we examine with care all the details of the Martian maps. The geographical network of the canals is so regular, so remarkably designed—for these immense straight lines start visibly from regions where water is concentrated and finish at fixed points of distribution—that the more we examine them the less we find them natural and the less we can resist the idea that these lines represent a hydrographic system, judiciously conceived for the fertilization of a globe very advanced in its evolution and on which water has become a rare and precious vital element."

**A New Estimate of the Earth's Age.**—A simple and ingenious method of estimating the earth's age from the amount of lime contained in the ocean has been devised by a Dutch professor. His reasoning is thus given in *La Nature* (December 28): "Prof. Eugene Dubois, of Amsterdam, asserts that the ocean, which gets its carbonate of lime from the rivers, now contains as much of this substance as it can dissolve, and that the streams are carrying an excess down to it. A considerable quantity of this carbonate is often found in matter held in suspension in great rivers, and it is evident that in these cases the water must be saturated. The quantity of carbonate in the rivers is determined by the rocks of the drainage-area. The author gives reasons for believing that not more than a thirtieth of the carbonate discharged by the rivers into the ocean is formed by silicates. His calculations, based on the quantity annually carried to the ocean, show that the minimum of carbonate existing on the earth would require about 45,000,000 years to be deposited thus, and in reality the time has probably been much longer. He estimates that the actual transfer of carbonate of lime on the earth's surface represents an annual fraction of $\frac{1}{27700000}$ of the total. The final result of his investigation is that the time elapsed since the formation of the solid crust and the appearance of life on the globe may exceed a billion years."—*Translation made for* THE LITERARY DIGEST.

**Laboratory Milk.**—"My experience," says Dr. Louis Fischer, in a paper published in *The Medical Record* (December 8), "has been that children fed on laboratory milk have been backward in their development after its use for a long time. . . . Children using the milk always looked pale and anemic; their flesh was flabby. Such cases were among the wealthy, in which the best possible hygienic conditions prevailed. I have never had an opportunity to study its effect on infants reared in tenement-houses, with the poorest hygienic surroundings. The percentage method of feeding has always appeared plausible to me, but the theory can not be put into practise. We know, as Jacobi so well says, that mother's milk changes at almost each nursing, and we know by chemical analysis that mother's milk is different in composition several times during the day. It will be necessary then, if we do intend to imitate nature, to change the formula of an infant several times a day. It is a fact well known to chemists that once an emulsion of milk is broken up by centrifuging or other mechanical process, as in separating the top milk from the skim milk, we can not have again as homogeneous an emulsion as prior to this breaking up; and, moreover, that we increase our trouble when we in addition seek to improve the quality of the milk by subjecting it to the process of sterilization."

## SCIENCE BREVITIES.

M. BERTHELOT, the French chemist, declares against steam, which, he says, is already growing obsolete. Electricity, he thinks, will always cost too much to become the motor force of common industrial life. The future motor-power will be petroleum and gas. The steam-engine will be relegated to museums, where other anthropological curiosities are collected, from the Stone Age down.

DETERIORATION OF RAILS IN TUNNELS.—"Engineers have long noted the abnormal deterioration of rails in certain special cases. Mr. T. Andrews, an English engineer, has recently directed attention to their rapid decay in tunnels. The moist vapors attack the surface of the rail, while the ballast has a marked chemical action on its base, since the ballast has a continual tendency to absorb water-vapor. The author has seen rails that lost an average of nearly 4 per cent. of their weight yearly, and analysis showed an excess of sulfur in them. He has also proved that, in the case of rails that lie north and south, the influence of magnetism augments the corrosion."

# THE RELIGIOUS WORLD.

## RELIGIOUS CHARACTER OF KING EDWARD VII.

SOME novel light is thrown on the personal character of the new King of England, especially upon his moral and ethical traits, by Mr. Arnold White, the English writer. In *Harper's Weekly* (February 2) he says:

"People whose point of contact with the King when he was Prince of Wales was restricted to the Terrace at Homburg or at crowded receptions in London have sometimes drawn a contrast between him and Prince Albert, his father. The truth of the matter is that a strong affinity exists between the subject of this paper and men of serious and even Puritanic type. With his father, Prince Albert, he has far more in common than is generally supposed. The late Prince Consort virtually invented exhibitions. As Prince of Wales, the King developed the idea, and by so doing has contributed enormously to the enjoyment and instruction of large masses of his fellow countrymen, and indeed of the civilized world. As executive president of various British commissions he has carried out his father's wishes in a manner that would have delighted that great and good man had he survived to watch his son's success in combining affability with business sense and shrewdness.

"It should never have been forgotten, when listening to stories of Prince Albert Edward of Wales, that when anything was said to his discredit, he alone, of all Englishmen, was unable to reply. Since he arrived at man's estate he has been the target of slander and of reckless and malignant aspersion by people of whom the Psalmist wrote, 'The poison of asps is under their tongues.' I have very strong reason to believe that the malignant stories circulated about the Prince of Wales are absolutely false. In the Tranby Croft baccarat case, which attracted so much attention a few years ago, the Prince was severely blamed in some quarters for carrying with him cards and markers. It is, I believe, a fact that they were the gifts of the Princess of Wales. Many people object to card-playing, but others do not, and, after all, how many people in the Prince of Wales's place would have made as many friends and as few enemies as the King has done?"

Catholicity is a marked trait of King Edward's character, says Mr. White:

"The King profoundly believes that while it is not to be expected that every one in the world should believe the same thing, every one should believe something, and should act up to his religious belief. His catholicity is well illustrated by the following extract from a letter of Archbishop Magee, written in December, 1873. He is speaking of a visit to Sandringham [the country seat of King Edward] from Saturday to Monday. 'Just returned from church, where I preached for twenty-six minutes (Romans, viii. 28). The church is a very small country one, close to the grounds. The house, as I saw it by daylight, is a handsome country house of red stone with white facings, standing well and looking quietly, comfortable, and suitable. I find the company pleasant and civil, but we are a curious mixture. Two Jews, Sir A. Rothschild and his daughter; an ex-Jew, Disraeli; a Roman Catholic, Colonel Higgins; an Italian duchess, who is an English woman, and her daughter brought up as a Roman Catholic and now turning Protestant; a set of young lords, and a bishop. The Jewess came to church; so did the half-Protestant young lady. Dizzy [Disraeli] did the same, and was profuse in his praises of my sermon. We are all to lunch together in a few minutes, the children [of the present King] dining with us. They seem, the two I saw in church, nice, clever-looking little bodies, and very like their mother.' The daughter of Sir Anthony Rothschild referred to is the present Lady Battersea, better known as Mrs. Cyril Flower. . . . . .

"Those who read the King's character only by the glittering light of fashionable society fall into error. During the whole of his lifetime he has lived under the shadow of the greatest responsibility that can fall to the lot of any man—to be King of England. A better King than Edward VII. will be it is possible to conceive, because he is not perfect, and does not pretend to be. He loves England, hates humbug, enjoys sport, the play, music, and a good dinner, and is thought none the less of by his countrymen on that account. The common-sense distinctive of Queen Victoria descends to her eldest son, and if his ideals are sometimes considered to fall short of the standard set up for other people by the *unco guid*, it is not that the King does not believe them, but that he does not talk about them. It is impossible in the nature of things that Edward's reign will be a long one. It is satisfactory to know, however, that the scepter so worthily held by a good woman has passed into the hands of an English gentleman."

## A BUDDHIST CIRCULAR ON THE CHINESE EMERGENCY.

SCARCELY any religious document published in the past hundred years is of more unique interest than the recent "circular in connection with the Chinese emergency, for all the ecclesiastics in the world," signed by the head prelates of six of the great Buddhist sects. "We, the Buddhists of great Japan," it begins, "beg to inform our revered ecclesiastical brethren in the world that the disturbances in China having now reached their climax, her national prestige is at stake. . . . There is hardly any prospect for the restoration of the empire to its former condition, and four hundred millions of souls are virtually at a loss to know what course to take. Under these circumstances, the social distress as well as moral corruption has now reached a pitch too serious to be described in detail. How and when is such a disorganization to be remedied? How is it possible for us who have pledged ourselves to undertake the work of salvation to remain silent with folded hands?"

"With these views on the situation," the writers continue, "we, the followers of Buddha, out of friendly feeling toward China as a neighbor, in discharge of a duty obligatory upon us as preachers of religion, . . . have thought it expedient to submit our sentiments to the consideration of ecclesiastics throughout the world, inasmuch as we are perfectly confident that the benevolent and generous ecclesiastics of the world, pardoning our audacity and removing the barriers now existing in respect of differences of religion, will accede to and sympathize with our proposals for the sake of the welfare of the Chinese people and of the tranquillity of the world at large." With fine Oriental subtlety, the writers go on to pay the Christian churches some very flowery compliments on their spirit of self-denial in China and on their success in missionary work. They continue:

"The brilliant success thus secured by the missionaries in China, the world can not for a moment doubt. Nor is it an exaggeration to say that the zeal and sincerity displayed toward the Chinese are really extraordinary, and the latter, recognizing the immense benefits thus administered by them, ought to show feelings of extreme gratitude and at the same time readiness to do everything in return for their benefaction. The Chinese, however, contrary to expectation, have not only failed to appreciate the favors bestowed upon them by the foreign missionaries, but have destroyed church buildings, persecuted ministers, and taken the lives and properties of Christians, with little or no thought of consequences; in short, their violence and cruelty have known no bounds. And yet, if we carefully consider the character of the Chinese, we may convince ourselves that they were not originally hostile to foreigners or to foreign religions; they were, on the contrary, signalized from the olden time as a people remarkable for a tolerance which absolutely deterred them from rising in arms in religious collision—a statement for which history furnishes ample evidence. In spite of these plausible qualities they are now found to be as a nation imbued with a violent anti-religious spirit, and, as such, not only have they failed to take cognizance of the merits achieved by the extraordinary love and sincerity of the missionaries from the West, but have even been led to assert that the source of their ever-increasing intolerance against religion lies in the works of these missionaries.

"Surely there must be substantial reasons for such an anom-

aly. Whenever we reflect upon these circumstances, we can not but express our profound regret for the deeds of the missionaries in China. In investigating the cause of the anti-religious spirit of the Chinese, we find that apprehension and terror entertained toward the foreign missionaries were virtually the origin of their implacable hostility. They have perceived that these missionaries have secured for themselves an immunity calculated to subvert their established customs and manners; they have also recognized in their attitude a tendency to ignore the statutes of the country and a desire to accomplish the most selfish ends by the oppression of the Chinese Government and people. They have, moreover, supposed that the foreign evangelists in China have arrogated to themselves the power of protecting the followers of their creed in utter disregard of the latter's criminality under the laws of the state, whereas non-believers, tho legally innocent, were frequently entrapped into a crime. Under these circumstances they were led to the conclusion that the foreign missionaries in China have been exerting their energies for the accomplishment of a certain obnoxious ambition by stirring up the unprincipled rabble of the country, and with this object in view made their chapels and cathedrals a sort of asylum for criminals. The Chinese began to entertain the idea that the missionaries were intimately connected with the foreign policy of their own countries, and that having made themselves instrumental in carrying out the intrigues of their own governments, they must have labored for some sinister design such as the extension of territory, along with the development of commerce. They saw with gross apprehension that in respect of foreign machinations the missionaries were the first to come, followed by consuls, with generals at their back; and they have feared that behind a man who had come with a Bible in his hand stood a warrior armed with a spear and a sword. They have apprehended that the result of all these intrusions would be claims for compensation, plunder of territory, and what not, the final settlement of the affair being only reserved for the country with every indication for its entire subversion. With such apprehension and terror it is quite natural that they should entertain a strong prejudice against foreign religions. It seems to us that this motive or spirit has virtually led the Chinese to the organization of the Boxers' society, and this feeling having strengthened itself within the bosom of the Celestials, eventually brought about those disturbances which have been going on since last spring when incidents occurred involving the political authority of the central Government in dispute. The violence and cruelty perpetrated by the Chinese really deserve to be deprecated with the utmost indignation, but when we turn our thoughts deep into their heart, we are almost unable to avoid a feeling of quasi-sympathy. . . . . .

"Can it be presumed, however, that the missionaries themselves are entirely free from responsibility on this point in spite of their having excited the Chinese to entertain erroneous views in connection with their conduct? As for ourselves, we are inclined to believe that the errors of judgment into which the Chinese have fallen are, in many respects, attributable to the conduct of the missionaries in China, and that the justice of this assertion may be firmly established by taking into consideration the statements of the officials directly concerned in the foreign policy of their own countries, the public reports of the foreign ministers accredited to the court of China, the information given by the most trustworthy journals in the world, together with the existing annals of the Chinese empire and its actual condition. In short, the proceedings of the missionaries were far from being compatible with the principle of universal benevolence to which they ought to have adhered; and that they have alienated themselves from the true spirit of their churches at home by stepping beyond the legitimate sphere of religion can in no way be denied. Such, of course, was not the intention they may have originally entertained, and might simply be regarded as the result of a bungling into which they have accidentally fallen. Still there can be no manner of doubt that in their dealings with the Chinese they have, in fact, advanced beyond the reasonable limits of operation. To this is to be attributed the cause of suspicion as well as apprehension on the part of the Chinese; in this is to be found an element of provocation for the recent insurrection in China. If that be the case, then it follows that the missionaries are to be held largely, if not entirely, responsible for the present disturbances in the Middle Kingdom. As a matter of fact, the propagators of religion ought to seek for peace and inspire men with the principles of humanity; but the missionaries in China have constantly assumed an obnoxious attitude, and have thus brought upon the religious world a great disgrace and chagrin.

"Such being the case, we, the Buddhists of Japan, can not but express our desire that all the ecclesiastics in the world would, in conjunction with us, recognize the above fact—a fact which clearly shows that the missionaries in China have proceeded far beyond the fundamental principles of religion—and devote their energies to formulating a plan by which the suspicion as well as the apprehension harbored by the Chinese against the foreign missionaries may speedily be removed. Unless such a course be taken, how is it possible for them to uphold the gospel of humanity and love—to illumine the darkness with the light of peace and welfare! Unless such a scheme be adopted, the four hundred millions of souls are certain to degenerate into a state of overwhelming distress and affliction, and the East Asian firmament is permanently to be darkened with clouds of disaster and insurrection. We, as disciples of Buddha, can hardly restrain our fear and lamentation at such a prospect when we think of the Great Truth shining above and of four hundred million souls groping below."

Two proposals are made by the writers in order to insure relief from this impending calamity. The first is, "that the ecclesiastical authorities in the world should exercise their influence in restraining the missionaries in China from proceedings which are likely to create suspicion on the part of the Chinese as to the existence of their secret connection with the foreign policy of their own countries." The second proposition which they submit "to their venerable brethren" is that these venerable brethren withhold "the missionaries in China from all forms of procedure which might possibly be regarded as disturbing the social institutions of China"—a "legitimate course to be pursued by the propagators of religion who have embraced the doctrine of universal affection or benevolence."

*The Independent* gives the following summary of the official reply adopted by the Conference of the Foreign Protestant Missionary Societies of the United States and Canada:

"The answer adopted is rather more in the controversial style of the old apologetics. It lacks the flavor of Oriental compliment. It accepts the compliments given to missionary work in China, and gives none in response. After an introduction, it regrets that the writers of the circular 'failed to note the marked difference between the methods used by the American Protestant missionaries' and some others', meaning the Catholics, and it bluntly adds: 'When criticisms are made of the nature of some of those contained in the address, it would be far more just to specify the sect of the missionaries who are charged with these faults or indiscretions.'

"The writers of the Buddhist circular made no distinction between sects or religions, and we are not sure that they were called upon to do so. The fault charged was a real one, and should be acknowledged; and it is our part to distribute the blame.

"The reply admirably clears American missionaries of the charge of secretly or otherwise meddling with the administration of our Government. That fault belongs to France and Germany, and not at all to us. The reply proceeds: 'American missionaries have not, as you affirm, "arrogated to themselves the power of protecting the followers of their creed in utter disregard of their criminality."' We believe this is fully true; but it is also the fact that this is charged, whether falsely or truly, on certain other missionaries, and the Buddhist circular presumably had them in mind.

"There follows a justification of the conduct of the American missionaries, perhaps more than there was any need of. We are told, with some heat, of their self-sacrifice, that they are not self-seekers. We are told with admirable force that the uprising in China was not due to them, but that it attacked them because they were foreigners. The testimony of diplomats is given to their excellence. It is demanded of the writers of the circular whether in Japan the missionaries have been 'instigators of riots and disturbers of the general peace of the empire.' We do not

clearly see that this defense of the missionaries was really needed, for, as we read the circular, it is not an arraignment of all missionaries, but only of some. The reply then proceeds to give a strong argument for the collection of moderate indemnities for losses suffered. The argument is probably sound, but yet we wish that we could believe it right and wise to suffer, asking nothing again.

"In conclusion, the reply condemns justly the atrocities committed by soldiers of the allied armies. It sticks in a needless pin by suggesting that 'the Boxer Society is said to have been originally a Buddhist organization.' The authors of the circular are asked to study the history of the last hundred years in China, when they 'will discover how uncharitable is your "belief" that "the errors of judgment into which the Chinese have fallen are in many respects attributable to the conduct of the missionaries." With a few words as to the superiority of the Christian religion over all others the reply ends. It is the blunt Western style of the reply that we criticize, rather than its truth. We think it might have been somewhat more charitable in its interpretation and certainly more deferential in its tone. We fear that it will not answer its purpose in its effect on the Japanese who may read it—nevertheless its defense is just and its assertions of policy and purpose true."

## CONFUCIANISM AND CHRISTIANITY AGAIN.

MINISTER WU'S speech on Confucianism, of which we lately gave a summary with some religious comment, still continues to attract attention. Minister Wu has lately further elucidated his position in a lecture on "Confucius and Mencius" delivered before the Society of Ethical Culture in Philadelphia. He said in part (New York *Times*, January 28):

"Dr. [Wayland] Hoyt and some other clergymen, from their addresses, seemed to think that I charged all missionaries with crying out for vengeance. Let me read the exact words I used: 'Love your enemy, is Christ's command, but at this moment some Christian missionaries are crying out for vengeance and bloodshed.' Note that I used the word 'some.'

"I am inclined to think that the reason why some clergymen—and I am glad to say that there are not many—took offense at what I said in my address on 'Confucianism' is that I took the liberty of instituting a comparison between Confucianism and Christianity, which they supposed was done to the disparagement of the latter. There was certainly no intention on my part to make an attack upon Christianity. Surely, it is no discredit to say that Christianity is too high and elevated for frail humanity, and that all Christians are not acting up to its tenets, just as it is no disgrace to acknowledge that the Confucianists in China do not live up to the teachings of Confucius. It seems strange that some clergymen should resent any attempt to compare Christianity with other systems of belief, while they themselves do not scruple to attack other religions. In other words, they do just what they do not want others to do. Since my address on 'Confucius' was delivered I have seen Confucianism condemned right and left. It has been called a failure. It has been dubbed 'effete,' 'vague,' 'unworthy of attention,' 'rotten to the core,' 'tottering to its fall,' and the like. I do not, however, quarrel with those who apply such opprobrious epithets to our creed. If Confucianism were as bad as its detractors try to make it out to be, it is strange that after twenty-four centuries it should be able to count millions and millions of people as its adherents. The noble and sublime teachings of Christianity need not fear criticism, much less friendly comparison.

"I believe that all religions teach men to be good. If every man would really try to act up to the doctrines enjoined by his religion the world would be far better. It would be well if priests and clergymen of every faith and creed would do their best to promote this desirable end. Thus these words of Confucius will be fulfilled, 'Let us all live in peace as brothers.'"

Prof. Felix Adler, leader of the Society of Ethical Culture in New York, in an address at Carnegie Hall last Sunday, dealt with some of the ethical questions raised by Mr. Wu's speech. Referring to Mr. Wu as "that strong, upright man who represents the most populous nation upon earth," he pointed out (we quote from *The Tribune*, February 4) that "through the whole Sermon on the Mount there runs a single purpose—the teaching of the worth of man. . . . 'If thine enemy smite thee on the right cheek, turn to him the other also.' . . . What does this mean? The meaning is not that we should patiently bear injury at the hands of another, or that if a man strikes you you should give him an opportunity to strike you again, but is simply that the only way to resist attempted indignity effectually is to refuse to acknowledge it, even by resistance. In this Jesus is teaching the basis of true self-esteem."

In connection with Mr. Wu's speech, much has been said as to the moral status of the Chinese people as compared with the European races after nineteen centuries of Christian ascendency. Dr. E. J. Dillon's article in *The Contemporary Review* (January), which we have already referred to in another department (see THE LITERARY DIGEST, February 2, page 140) and one on "Punishment and Revenge in China" in *Scribner's Magazine* (February), detailing the unspeakable and in most cases wholly unprovoked atrocities of the troops of the Christian powers in China, atrocities in which the pagan Japanese troops took no part, have attracted wide notice, and one writer has remarked that after these terrible revelations of European "heathenishness," missionaries can hardly continue to say much about the great need of evangelizing Asiatics. Of Dr. Dillon's article the New York *Evening Post* (January 17) says:

"His reports are too horrible, in their darkest features, to be reprinted. We limit ourselves to one or two of his less lurid pictures. Having one day to step over eight human bodies lying in an alley in Tungschau, Dr. Dillon asked a non-commissioned officer why the eight Chinamen had been killed: 'Eight?' he answered; 'there are seven more down there. What they did? All they could. They actually did nothing. Ask what they would have done, and I shall answer, "Arson." They were suspected of an intention to set fire to houses here.'

"This was but an example of the way in which thousands of men, women, and children, throughout three Chinese provinces, were butchered on suspicion, or out of mere whim. The rivers were choked with corpses. The dead lay in heaps in the burned towns. Neither age nor sex was spared. Dr. Dillon's pages show that all the wholesale murders and tortures of history—the massacre of the innocents by Herod, the Dragonades, the slaughter of the Waldenses, even the glutting of Turkish fury in Bulgaria and Armenia—must yield in completeness of horror to the work of the soldiers of Christian nations, who had gone to China for the sake of rebuking heathen cruelties! . . . Writing of what he saw in Peking, Sir Robert Hart says that 'even some missionaries took such a leading part in "spoiling the Egyptians" for the greater glory of God that a bystander was heard to say, "For a century to come Chinese converts will consider looting and vengeance Christian virtues!"'"

"What is the moral of all this?" asks *The Evening Post*. One moral, it replies, is that war is hell, and that men that engage in it tend to revert to the nature of devils, whatever may be their religion. "Enough is known," it adds, "to make it certain that Christendom has bettered the instructions of the Boxers, and has no right hereafter to cast a stone at the Chinese, or any other dwellers in the habitations of cruelty."

The comment of many pronounced Christians has been almost as strong an indictment of the deeds of Christian nations in China as that of Mr. Wu and the other critics quoted. In an address delivered in St. Paul's Church, New Haven, Bishop Potter said (we quote from *The Churchman*, February 2):

"If I were to take a brief in any court in Christendom for one side or the other, I should take the brief for China; and there can be no doubt as to which side was responsible for the beginning of causes in the recent troubles. . . . Professing Christian engineers, bankers, merchants, and men who had commercial interests at stake in China, are responsible for what has happened. Not all of them have been of one nation—not all English-speaking men. . . . Nothing could have been more brutal

than the policies of Christian nations dealing with these pagan people. We have trampled under foot everything that the Chinese deem most sacred."

*The Churchman* thus comments upon this

"So vile is the behavior of the representatives of Christian nations that we can not befoul these columns by repeating or describing or even naming them. We care not, then, how this infernal state of things began. We care not one straw who is responsible for the beginning of the trouble. Those white-skinned demons ought to be recalled from a land which they have defiled with more than blood. The behavior of the Christian powers in China is the blackest blot that has been cast upon the Christian name in many a generation. And unless we are prepared to renounce, denounce, and punish these white men's crimes, in the name of decency and truth let us stop prating of 'the white man's burden,' which we are manifestly not worthy to bear."

## TWO NOTABLE ENGLISH CHURCHMEN.

THE past fortnight has witnessed the death of two clergymen of the Church of England who had attained to international note—Dr. Mandell Creighton, Bishop of London, the most important diocese in England, and the Rev. Hugh Reginald Haweis, incumbent of St. James's, Marylebone, and one of the most unique personalities in the English church.

Dr. Creighton, who was born in 1843 and educated at Merton College, Oxford, first became widely known as one of the most promising of the new school of English historians. He founded *The English Historical Review* and was for many years its editor. He edited the well-known series of "Epoch of English History," and was author of "The Tudors and the Reformation," "Elizabeth," and of "The History of the Papacy during the Reformation" in six volumes, besides the popular "Primer of Roman History," and other excellent manuals. In 1891 he was made bishop of the small but ancient see of Peterborough, and in 1897 was translated to the bishopric of London, the ordinary of which has powers in some respects greater than those of the Archbishop of Canterbury, and possesses an annual income of $50,000.

The London *Guardian* (Church of England, January 16) says of him:

"By the death of the Bishop of London the Church of England has suffered perhaps the greatest loss that it has experienced since Bishop Lightfoot was taken from us in the completeness of his powers. . . . Bishop Creighton's influence can hardly yet be fairly estimated; perhaps it never will be. For he had the double misfortune of entering on his greatest office at a time of singular difficulty, and of being removed from it by death too soon to allow his mode of dealing with the difficulty to have its full scope and influence. The standing problem of the English church, the problem of harmonizing within her limits the divergent schools of thought and practise, is presented in its acutest form in the diocese of London, and Bishop Creighton had but four years in which to deal with it. Time alone can show whether, as we believe, the general lines of his policy were wisely planned; that they were, on the whole, firmly and courageously followed out, in spite of popular clamor, is evident to all who will study the church history of the last three years. The chief result of his action—the Fulham Conference—is a witness to his tact and perseverance, and to the strong desire for unity which inspired him."

The New York *Times* gives the following sketch of the Rev. H. R. Haweis:

"To a very large number of Londoners the death of the Rev. Hugh Reginald Haweis will seem like the loss of a personal friend. He possessed, more perhaps than any other of the well-known English preachers, the art of endearing himself to his audiences, of making them hang on every word he uttered. The broadest of broad churchmen, he occasionally gave vent to opinions which shocked other ecclesiastics, but in so great personal esteem was he held that he escaped censure for utterances for which another man would have been brought sharply to book.

"Mr. Haweis was born in 1838. He was educated at Cambridge, but before he took orders he had seen active service as a volunteer in Garibaldi's army. In the final campaign which brought about the liberation of Italy he displayed great heroism, and at the siege of Capua exposed himself so carelessly that he nearly lost his life. On returning to England Mr. Haweis was ordained, and went at once to work in London. Soon afterward he married Miss Mary Eliza Joy, daughter of the late S. M. Joy, the artist. Mrs. Haweis has herself made a name as an artist and writer on art. In 1866 Mr. Haweis became incumbent of St. James's, Marylebone, which position he held till his death. The story of his activities in connection with his pastorate can hardly be told in any detail. He made St. James's one of the most popular churches in London; he started the famous 'evenings for the people'; he formed a choir unsurpassed in the United Kingdom, and made his church a power in the agitation for various social reforms.

"But Mr. Haweis was a good deal more than an able and popular clergyman. He was a musician, an author, a lecturer, and editor. His book, 'Music and Morals,' has run through many editions. He lectured all over England, and in various parts of America. He came to this country as the delegate from the Anglican Church to the Parliament of Religions at Chicago, and was Lowell lecturer at Boston in 1885. Ten years later he went on a preaching and lecturing tour round the world. . . . .

"The story of the resignation by Mr. Haweis of the chaplaincy of the Twentieth Middlesex Rifles was a famous one in its day, but it is now old enough to bear repetition. An afternoon parade service had been arranged, and the streets were lined with people. At the last moment the commander declared that, the weather being showery, he had decided that the troops should not turn out. Mr. Haweis thereupon got into his pulpit and resigned the chaplaincy, telling his astonished congregation that he considered it no honor to belong to a corps which could not go out without umbrellas."

## RAILWAY CHURCHES: A NEW FORM OF EVANGELISM.

CHURCHES on wheels are the latest form of pioneer evangelism in the great West. Of these "chapel cars" a writer in the Chicago *Tribune* (January 6) says:

"They are made after the pattern of an ordinary railroad-car, only on a larger scale, and are provided with sufficient space to seat one hundred people comfortably, and to give room for the church organ and pulpit, besides providing for living quarters for the missionary and his family. They travel from town to town, staying five or six weeks in each place. It is rare that they are not the forerunners of a permanent church home and the basis of the religious and social sentiment of the places visited by them. There are now eight of the railroad chapel cars traveling in the Western States and in the pineries and woods of northern Wisconsin and Minnesota. They are all made of the best material and workmanship. They are eighty feet long from end to end, having a seventy-foot body. This space is divided into a fifty-foot chapel, with seats provided for one hundred people. At one end twenty feet of the length of the car is set apart for the use of the evangelist and his family. They are never allowed to get out of repair, but are sent to the shop to receive a coat of paint and varnish whenever needed. They are fitted with six-wheel trucks and air-brakes. The cost of the cars is $7,000 each. The railroad companies have become interested in the movement, and the cars are hauled from place to place free of charge. The first car that was built was given the name of 'Evangel.' Other names that have been provided are 'Glad Tidings,' 'Messenger of Peace,' or they have been named in the order of their erection, as chapel car No. 3.

"The work was first started nine years ago. No record has been kept of the number of miles that have been traveled by these cars, but some of the statistics of the results of the work done are obtainable. Through the work of the chapel cars 70 churches have been organized, 54 meeting-houses have been secured, 55 pastors have been provided with permanent locations, 135 Sunday-schools have been organized, and 965 baptisms—immersions after the manner of the Baptist faith—have been administered. No less than 7,500 persons have professed conversion as a result of the meetings that have been held in connection with the cars.

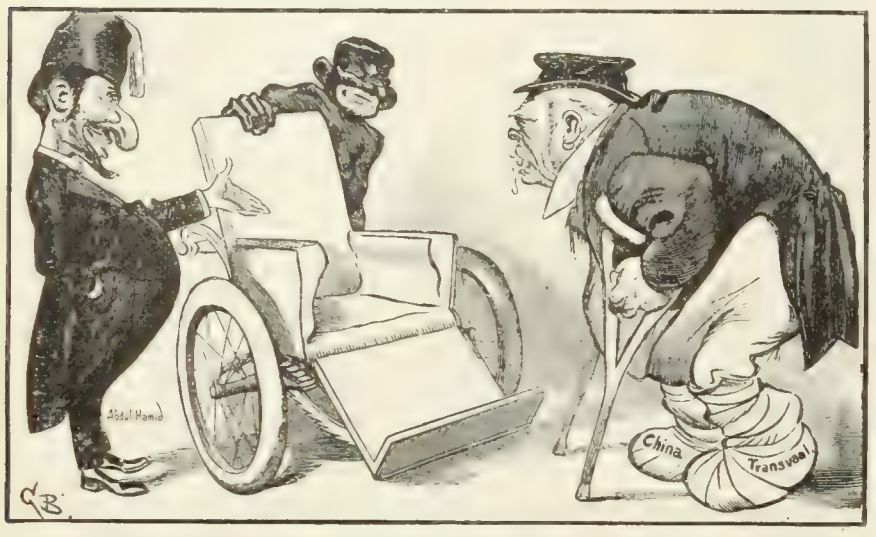
"The mining-camps of Colorado, the logging-camps of Wisconsin and Minnesota, and the frontier towns of nearly all of the Western States have received visits from the chapel car. They usually occur before any effort has been made looking toward the organization of a church. The visit of the car frequently creates as much interest as the coming of a circus. . . .

"Besides doing pioneer work some of the cars do considerable special work among the employees in the railroad yards through which they pass. At division points, terminals, and in the shops of the railroads a great work has been done in this way, aided and sanctioned by the officials of the railroad."

# FOREIGN TOPICS.

## HAS ENGLAND'S DECLINE BEGUN?

"THE close of the nineteenth century reveals, not the further ascent of British policy, but a diminution of its power." This is the thesis of a closely written analysis of Great Britain's international position by Emil Reich, of London. The close of the century just passed he points to as one of the most momentous epochs in English history: *it strikes the hour of decline.* England's power, says Mr. Reich (in *The International Monthly*), does not date back much further than the time of



ABDUL HAMID: "My dear friend, for a long time I was the sick man. But I can now do without my invalid chair. I will present it to you."
—*Kladderadatsch, Berlin.*

the union of England and Scotland (1707), "the year when Great Britain, from having been only a physical island, became a political island." Freed from internal attack by the Scotch, the Welsh, and the Irish, England could begin her great career of foreign military and colonial enterprise.

"From 1688 to 1815, through a succession of six gigantic wars, England wrought her way to maritime supremacy and to the foundation of a colonial empire scattered all over the globe." By keeping her great continental opponent, France, entangled with other nations, she won her most brilliant victories. In the nineteenth century, on the other hand, there have been no international wars. "As if by concerted measures, the powers carefully avoided and still avoid to widen the sphere of war, or to increase the number of the combatant parties. They localized wars. This policy of localization has succeeded with the Germans, who adroitly isolated France in 1870-71 to perfection; in Austria it has wrought havoc and ruin." Since 1870, Mr. Reich continues, England's grandeur, "the work rather of the genius of circumstances than of that of her great personalities," has been seriously questioned by two persons, "masters rather than the make of circumstances"—Bismarck and De Lesseps:

"Bismarck founded both the German empire and the German aspiration for a 'world empire.' At one stroke, all the possibilities of eighteenth-century diplomacy vanished and the secular fight between England and France was inevitably transformed to a long rivalry between England and Germany. For now the Germans, electrified by their great victories, discharged their fresh energy into commercial and industrial channels, and, guided by the statesmanship of the Iron Chancellor, seriously commenced the building up of colonies."

While Bismarck "completely displaced the highroads of international politics," De Lesseps "deflected the highroads of international trade." The work of the latter, Mr. Reich holds, can be compared only with the discovery of America. "De Lesseps, by completing the Suez Canal, restored the ancient trade route to Asia, and, as it were, rediscovered Egypt, Mesopotamia, India."

Because "the temper of the English is too much given to pooh-poohing," and because they have for nearly four generations undergone no national humiliation or civil war, "they think that, in them, history has retained a force superior to that of other nations," and they "did not take the rising rivalry of the German *au serieux.*" Because they "know nothing of geopolitics," they at first blindly combated De Lesseps's plans. Beaconsfield, however, whom Mr. Reich calls the "last really great English statesman," reasserted British influence in time, and "to secure *the* road to India, secured a firm hold on Egypt."

The work of Bismarck and that of De Lesseps, continues the same writer, should have caused the entire policy of England to undergo a radical change. Germany had acquired vast territories in Africa and other parts of the world. She was too feeble to risk a direct attack on England, so she proceeded in an indirect way, as she had done with France:

"Chatham used to say, he would conquer Canada in Germany. The hint was and is not at all too subtle for Germany. If Canada could be conquered in Germany, why not China in South Africa? Egypt could not be touched, on account of the French; nor Asia Minor, on account of the more than secular and needful friendship between Prussia and Russia. South Africa, on the other hand, was a good point of attack. There, strange to say, Bismarck's and De Lesseps's *radii vectores* met as in the point of an arrow. The reasons are simple. Before the opening of the Suez Canal, the great Eastern trade-route went round the Cape, and was, on account of its length and costliness, practically in the hands of the British. The Dutch colonists at the Cape—the majority of the population—naturally profited by that circumstance very considerably, and in their loyalty to England that material profit entered for no small share. Since 1869 (opening of the Suez Canal), however, the Cape has lost most of the advantages accruing to her from her former position as the center of the Eastern route. The loyalty of the Dutch lost its probably strongest motive. Unrest and discontent set in. Such simmering unrest only needs small kindling to break out into flames. The kindling was found."

To students of history, declares Mr. Reich, the Boer war has, since January, 1900, been classified amongst those unending, hopeless wars which border-nations proper, such as the ancient Phœnicians, the Greeks, the Scotch, the Hungarians, and others, will wage for centuries, if necessary, and which can end only in extermination, profitable compromise, or complete victory of the border nations. It has, so far, never ended in complete victory of the imperial nation over a still extant border nation proper.

Europe generally profits by England's unyielding attitude to the Boers. This attitude prolongs the war indefinitely, and thus keeps England's power paralyzed in South Africa:

"The South African war Europeanizes the position of England. Hitherto England has been rather a country near Europe, than a European country, in that England alone, of all European countries, was practically free from the very danger that makes and unmakes over two thirds of all the policy, sacrifices, apprehensions, and expenses of continental Europe, that is, from likely invasion. The Boer war has changed all that. England can henceforth no longer carry on one great war at a time; she must needs carry on at least two. She is now in the position of her former great rival, of France in the seventeenth and eighteenth centuries. . . . The history of England owes its great ascent in the last century to her having then become an island proper, a political island. Lord Salisbury and Mr. Chamberlain have successfully made of England a peninsula. One side is now open to attack."

Why should even a long war in South Africa render England so much more vulnerable? And why should Germany, England's neighbor in Africa, be hostile to her? The hostility between England and Germany, declares Mr. Reich, in answering these questions, is one of "fatal, geopolitical necessity." It is not personal, subjective, dynastic, or racial. Yet it must be.

Germany, with her rapidly increasing population, must expand outside of Europe.

"The best portions of the globe are already in firm hands. Germany can acquire some of them only by sheer force. Of great colonial powers, however, there are only three: England, France, and Holland; and, since any attack on Holland would be considered a *casus belli* by England, practically only two. It is evident that Germany will long avoid having another war with France, in that such a war, if provoked by Germany, would inevitably involve the latter in a war with Russia, France's ally for such an eventuality. England remains. Now, England has, by her geographical configuration and quite apart from her superior fleet, an immense advantage over Germany. The German merchantmen are bound to run the gantlet in the English Channel, just as were, in former centuries, the Dutch merchantmen. England can, therefore, in case of hostilities, inflict exceedingly grave damage on German trade, both in European and other waters. Transmarine commerce, however, is indispensable to Germany as a great power, and the Germans have long proved their peculiar aptitude for it. Germany, then, must either abandon her ambitions or fight England. The former being impossible, the latter becomes a necessity."

The Germans, we are told, now have two serious advantages over the English in the splendid system of technical education in Germany, and in England's position in South Africa, which offers an easy mark for the incitement of rebellion. To these two advantages will soon be added a third, Mr. Reich believes, namely, "the indispensable naval alliance between Italy and Germany":

"The Suez Canal, the influence of which on English politics we have seen in Egypt and in South Africa, will work no less remarkable changes in Italy too. By her position in the center of the Mediterranean, the classical peninsula is bound to become the center of all the Eastern trade. So far she is pro-English for reasons of fear. Her coasts being more exposed to England's naval power than the coasts of any other country, she must keep friends with the English and must for a time continue to be under the virtual patronage of England. The process of immense coast fortifications in Italy is, however, nearing its completion. As soon as that is done, Italy wants only a strong naval ally to assert her natural claims on paramount importance in the Mediterranean. The ally will be none but Germany."

---

## RELIGIOUS ORDERS IN EUROPE.

THE ease with which the Roman Catholic Church has learned to use modern constitutional means for the extension of its political influence is regarded as a source of danger by certain classes in all governments. On the other hand, the Vatican is solicitous to prevent the formation of Roman Catholic organizations which threaten to follow political aims different from those which are thought in Rome to be the most salutary. The St. Petersburg *Zeitung* comments as follows upon the new apostolic constitution regarding religious societies:

The constitution does not affect the stricter orders, such as the Benedictines, Capuchins, Jesuits, etc., but the great majority of lay orders, and these contain the most members. The founding of such orders is prohibited in future unless the consent of the episcopate has been obtained, and the orders are placed under the strict surveillance of the bishops, who are enjoined to discourage the formation of new societies. Altho there is no official declaration to that effect, France chiefly, it is supposed, is aimed at. The Pope does not want a conflict with France, and as these congregations have begun to form a church within the church, with strong anti-Republican tendencies, the object is to keep them in better discipline, especially as both in Italy and France the number of religious societies has unnecessarily increased.

But this has not prevented the Republican majority in France from proceeding with the legislation against the religious orders, limiting their right to acquire property. In the *Revue des Revues*, Maurice Doumolin computes the value of the property which is held by the "dead hand" as nearly as great as when the first republic confiscated it. The *Voce della Verità* (Rome) declares that the republic is exceeding its authority. It says:

"In this the Pope is only defending the rights of the church, tho he is quite willing to prevent undue political agitation on the part of the congregations. No people have a national right to interfere with the orders. These belong to the Pope alone, and must be ruled by the Pope. The political authorities may only complain to the Pope if they are dissatisfied with the attitude of congregations of a religious kind. The French Government will probably discover that it has gone beyond its strength, and that it would be wiser to leave the management of the societies entirely to the Pope."

The *Osservatore Cattolico* threatens that the Pope will place the protectorate of the Catholic missions in the hands of the German Emperor unless the French Government is more pliable. But the German papers doubt this. The international protectorate exercised by France is merely nominal to-day, and Germany is not likely to make sacrifices for it. The *Temps* (Paris) argues in the main as follows.

The Pope is anxious to prevent conflicts which could hurt the interests of the church, hence he chides the reactionaries in France for their attitude, which has forced the Radicals to oppose them. Many of the religious orders care little for religious interests; their aim is chiefly to overthrow the republic, and they have to thank themselves for the enmity they have aroused. But the Republican government has gone beyond the mark. Besides the orders which oppose the republic, there are many which have advanced French interests in every part of the world. French interests and the influence of the French language must necessarily suffer if the orders from which the missionaries are drawn are subject to interference. No doubt the state has a right to superintend the religious orders; but it must not seriously interfere with their property. That would be an approach to religious persecution.

An agitation has begun in Germany for the removal of restrictions imposed upon religious societies, and Dr. Lieber, the leader of the Centrists, has already prepared a bill in the Reichstag which proposes to abolish state rights in the matter and to place jurisdiction entirely in the hands of the federal authorities. The general opinion is that this is another attempt to enable the Jesuits to reestablish themselves in Germany. The *Germania* (Berlin), the most prominent mouthpiece of the Catholics, remarks that Dr. Lieber's demand for greater freedom of religion has nothing to do with dogmatic tolerance, but that all political restrictions must be removed. It says:

"All citizens must be allowed full freedom in the exercise of their religious convictions, even to the combining into societies. In the same way such societies must be permitted to exercise freely and openly their cult, without the slightest let or hindrance. If this principle of tolerance were admitted to the fullest extent, certain consequences would result."

This, thinks the *Norddeutsche Allgemeine Zeitung*, shows that the abolition of the Jesuit laws really is aimed at. The *Tageblatt* (Berlin) says:

"No guarantee for the individual exercises of religious freedom is aimed at, for this freedom is not curtailed in any way or attacked by any one. Dr. Lieber's bill is intended to remove every vestige of government supervision from religious corporations, societies, and orders. All the restrictions which were thought necessary in Prussia in 1875 are to be taken away by abolishing all state rights."

The *Hamburger Nachrichten* thinks the spectacle of Roman Catholics as champions of freedom in religious matters rather amusing. There is, however, little likelihood that the state governments will renounce their rights.

The *Rossya* (St. Petersburg) points out that the Roman Catholic Church is successfully extending its influence in the Balkan peninsula, especially in Bulgaria. There is no need for a national agitation to excite the Austrian Slavs against the Germans, the Poles against the Russians, the Irish against the Eng-

lish; but the church has discovered that it may at times be profitable to become very radical. The paper says further:

"Until now the healthy mind of the Slav has rejected Catholicism on account of its despotic character, and its opposition to personal freedom. But the serpent has changed its skin. The modern Catholic priest is no Torquemada. He advocates humanity, fraternity, and national liberation; sometimes he is even a Socialist. And when the old enemy comes under this new guise, when he appears as the advocate of progress, the Bulgarian may be tempted to make a truce with him, a truce which will gradually place him in Catholic power and under Catholic supervision."—*Translations made for* THE LITERARY DIGEST.

## RUSSIAN CRITICISM OF FRENCH ARMY REFORMS.

FRENCH "nationalists" and their Russian sympathizers continue their relentless assaults upon General André, the Minister of War in the Waldeck-Rousseau cabinet. At this moment, the particular subject of criticism is his proposal to limit the military service to two years. The Russian press severely criticizes this, claiming, by virtue of the alliance, that it has the right to express Russian public opinion on a question so vital to the military strength of France and consequently also of Russia. The supporters of Waldeck-Rousseau and André resent the "interference" of Russian journalists with the internal politics of France, and even call upon the Government to ask Russia for explanations. In Russia, they argue, the press is not free; hence what it says must be acceptable or agreeable to the authorities, and that means that the Russian Government is hostile to the present French ministry. Even M. J. Cornély, the leader writer of *Le Figaro*, says in this connection:

"In the past the French did not much like to be threatened by foreigners. We must believe, then, that our fathers, too, were false Frenchmen, since to-day it is the authentic Frenchmen, the true-blue Frenchmen, who have transformed M. Loubet [the President of the Republic] into Russia's resident-general in France."

General Komaroff, the editor of the St. Petersburg *Sviet*, has published scathing editorials against General André. In one of them, referring to the present agitation, he says:

"The cause of all this is the hostility of Russian opinion against General André, who visibly tends toward the disorganization of the French army, the sister of our own. If André's method of acting has excited sympathy in England and Germany—that is, in the enemy's camp—where they have organized a Dreyfusard campaign for the sole purpose of disrupting France, we, on the other hand, can not view without bitterness a Dreyfusard government which, in the person of its war minister, is undermining the foundations of the best army in Europe, with which, owing to the alliance and general friendship, our own army is so closely bound together. . . . The Dreyfusard press, in attacking Russia for telling the truth, declares itself the open enemy of France. It is bribed with British gold, which is lavishly spent whenever there is a chance to strike a blow at the Russo-French alliance."

The editor of the *Novoye Vremya* returns to the subject and writes as follows, after disclaiming any purpose to weaken the alliance:

"Russia has sustained the invasion of Napoleon and of Europe generally; she has fought at Crimea a European coalition and has remained whole. Should a government appear in France strong enough to dissolve the alliance, it is not at all certain who would lose more, Russia or France. No doubt France will always get allies; but Russia is not isolated either, and she knows perfectly well whence hands would be stretched out to her in the supposed contingency. . . . . .

"The French republic is strong not because she is ruled by this or that ministry, but because the national soul makes itself silently felt and saves France from the extreme parties which, together with the Jews, would plunge her into a chasm. Similarly, the French army owes its might not to ministers of war, who come and go, but to the spirit it has inherited and perpetuated. . . . The attacks of the Dreyfusards only amuse us, for we are certain that they are written, not by French hands, but by hands of filthy Jews who never held bayonets, but only contracts to furnish the French army with rotten supplies."

The controversy grows in rancor and bitterness. In the Paris *Temps* Camille Pelletan, a leading deputy, assails the nationalists thus for inviting and egging on the attacks of the Russian press upon André:

"They can not, if they have not lost their reason, believe that any government will sacrifice an understanding with a first-class power like France because a certain measure for army reorganization may not seem wise or fortunate to it. And if they are assigning to their country, in the alliance, the most humiliating rôle, it is solely in the interest of party and in order to force upon us, in the name of the foreigner, their own pretensions, already condemned by the chamber as well as by universal suffrage. It is stupefying to think that so shameful a device is resorted to by people who profess to represent those still wearing French uniforms!"

Jaurés, in *La Petite République*, asks whether, if France at the time the alliance was formed had had five or seven years' service, Russia would have had to be consulted about reducing it to three, as she is now to be consulted about making it two instead of three years. Is France to try to obtain permission for every improvement, or to read her ally's mind and do nothing Russia would disapprove?

This sensational controversy is attracting attention in other European countries, and the inaction of the Russian Government is deemed significant. A warning to the St. Petersburg anti-André papers is believed to be imminent, if, indeed, it has not already been given, unless it be true that their utterances are "inspired."—*Translations made for* THE LITERARY DIGEST.

## MORE EUROPEAN VIEWS OF AMERICAN COMPETITION.

ONE finds in foreign periodicals evidences of a pretty general belief that the degree of prosperity which the industrial world has enjoyed for some years will for a time give way to stagnation, but that the United States will suffer least, and her enormous natural advantages will enable her to produce so cheaply that she will beat her competitors even in times of depression. M. Leroy-Beaulieu's idea that Europe will be driven to form a commercial union to meet this American competition is not new, but it has generally been dismissed as impracticable since the nations of Europe are not likely to come to such an agreement. There is nothing left for them, then, but to meet American competition singly. "The United States will take the lion's share of the world's business," thinks the London *Times;* "we will have to struggle for the rest against the other countries." "We are on the eve of the greatest triangular duel yet seen in international trade," says the London *Daily Telegraph.* "The United States and Germany will make us hustle—and it is doubtful whether we can support our corner of the fight." In the British empire, a protective tariff system seems to be gaining in favor, tho it is still, of course, very far from commanding a majority. A writer in the London *Daily Mail* thinks that all the British empire needs in order to meet American competition is to form an imperial customs union. He says:

"Of all the nations of Europe, none need be alarmed at this [competition] so little as Great Britain, and this for one reason—namely, that there is a Greater Britain, an empire of colonies which together represent all the advantages possessed by the United States in a fourfold manner, and enable the mother country to look with equanimity into the future as long as the

sentiment of loyalty to the home of their fathers inspires the living generation of Britons abroad."

The Montreal *Herald* fears that this would benefit England but little. It says:

"What, then, will be expected of Canada? To supply ore for British smelters? That would interfere with one phase of British industry. To supply pig-iron for British steel-works? That is just what the much-dreaded American competition threatens to do. To make steel billets and steel plates as cheaply as the Americans? That is what they talk of doing at Sydney, but what comfort is there in it for those in Great Britain who will lose the employment in any event? . . . It may be possible to demonstrate that an imperial customs union would in some way protect British industries from this competition, but those who would prove it certainly have a hard task before them."

Americans with boundless natural resources at their disposal and with a great stock of national energy will develop the idea of "imperialism" to an alarming extent, thinks the *Frankfurter Zeitung*. It says:

"The United States has become a world power and will stay one. Her wealth must naturally enable her to exercise special influence over the money market. The power of the President will be greater than that of a monarch in constitutional countries, and the increase of the American army is an important step. Other increases must logically follow, and the United States will gradually lose sight altogether of the Constitution of Washington and Jefferson."

The Germans, however, are disposed to do more than talk. Poor as is their country in natural resources, they are inclined to do without American trade rather than lose to the United States what is gained in selling industrial products to others. A fierce fight will be made by the Agrarians for the protection of German agriculture, and as the German industries are also beginning to clamor for protection, they have some chance of success. The *Deutsche Tages-Zeitung* (Berlin) suggests as high a tariff as that with which we have protected ourselves. The *Neues Journal* (Vienna) considers that the struggle between America and Europe will "constitute the leading characteristic of the twentieth century." The *Tageblatt* (Vienna) urges Austrian statesmen to abandon "the quack medicines of the Agrarians" and "look out for America." The London *Economist*, however, thinks that the United States is not so near the mastery of the world's markets as American papers like to suggest. It argues in the main as follows:

No one will deny that the financial, industrial, and commercial condition of the United States is very prosperous. This prosperity is, however, partly due to the increased international demand for cotton, iron, and steel, and all industrial nations have profited by this. It is said occasionally that the trade of Great Britain is declining. It certainly does not increase fast enough to suit our high expectations; but it has grown much faster actually and comparatively than that of the United States, even during the last three years. Last year United States exports increased 18.6 per cent. British exports increased 26.5 per cent. Protection is in the way of genuine American advance, for only the high prices which the American people are compelled to pay enable American manufacturers to compete abroad.

The *Neue Pester Journal* says that the future belongs to the Yankees. The time will come, it thinks, when there will be only two dominating world powers: one in Europe, either Great Britain or Russia, and the other in America, the Yankees:

"If, then, a final test of predominance between the two remaining world powers should become necessary, the speculator might safely wager one hundred to one that the Yankees would be victorious. The latter are a tough and irresistible race; they live in work and through work, heaping treasures and avoiding pleasures, uniting in themselves the excellences of the peoples from the amalgamation of whom they have sprung. When the observer reflects that the Yankees, as a nation, are, in spite of their independence of one hundred years and more, still in their early youth, not to say infancy, he finds it impossible to conceive the degree of development still awaiting the North American Union."

"Nothing worse than jealousy will result from this industrial expansion," says *The Japan Advertiser* (Yokohama). "The friction is perfectly legitimate and can have no other than a commercial outcome."—*Translations made for* THE LITERARY DIGEST.

## AUSTRALIA AS A NEW NATIONAL FORCE.

UNITED AUSTRALIA having assumed its place as a distinct national unit, Australian papers are emphasizing the fact that they are in no sense, political or other, the inferiors of the people of Great Britain, but independent, coequal subjects of the British crown. This claim is recognized even by such chauvinistic English journals as *The St. James's Gazette*, which says: "There is no 'dependence' of the Australian commonwealth on this country as a social organism or on our parliament. . . . Only an idiot in these days would affect any superiority over an Australian kinsman, because he was born in England. . . . The Australians are in every respect our political equals." *The Saturday Review* points out that the federation is, in large measure, due to considerations of defense:

"The United States, by the acquisition of the Philippines, have secured a status in the far East; and Japan has earned the right to take a part on the stage of international drama. Of these two events the latter is the more significant; for in Japan we have the future rival of Australia for the supremacy of the Pacific. . . . As a last resort Australia must be prepared to back her industrial position by military strength; for among nations as among individuals 'respect is given where respect is claimed.'"

The international position of Australia is discussed in much the same vein by the *Journal des Débats* (Paris) which says in substance:

Australia and New Zealand work admirably hand-in-hand in thwarting the designs of France and other powers interested in Oceanica, which is shown by the demand for a settlement of the questions regarding the New Hebrides, and the New Zealand demand for the annexation of the Cook and the Fiji Islands. Australia and New Zealand may have their little differences; but they will show a united front to outsiders. It is not difficult to see that the Australians have great ambitions. Weak in numbers, and failing to increase rapidly, they will hold to Britain for support, and the other powers will have to reckon with that very soon. Great Britain may be importuned to exert herself on behalf of purely Australasian interests, and that may be troublesome to the mother-country as well as to others.

The *Rotterdamsche Courant* points out that the British Government and press have shown great tact and perspicacity in granting to the Australians that amount of independence which could not be kept from them.

In a "character sketch" of the new commonwealth (in the English *Review of Reviews*), W. T. Stead declares that, while Australian journalism has as yet done nothing very remarkable, it has always been "eminently respectable." The leading papers of Melbourne and Sydney, he declares, are modeled on the London *Times*, and maintain all its good qualities and defects. There are two really characteristic Australian publications, the Sidney *Bulletin* (a weekly) and *The Australasian Review of Reviews* (a monthly).

Mr. Stead has some doubt whether or not the new commonwealth will soon learn to conduct itself "soberly, quietly, and modestly before all men." The training of the Australians has not been severe enough, he thinks:

"They are full of the lust and pride of youth. They have never seen a foreign foe upon their shore. With the exception of the few who have volunteered in Britain's wars in Africa, none of them have ever heard a shot fired in anger. They have not been disciplined by adversity; they have not been cast in an iron mold of Calvinistic theology, like the New Englanders. Beyond the temporary stringency occasioned by the financial crash and intermittent expense caused by alternating droughts and floods, which destroy millions of their live-stock, their lives have been laid in pleasant places. It remains to be seen how far a community which is born with a golden spoon in its mouth and which has been reared upon whipped cream and syllabub, can rise superior to the temptations which assault most prosperous states."—*Translations made for* THE LITERARY DIGEST.

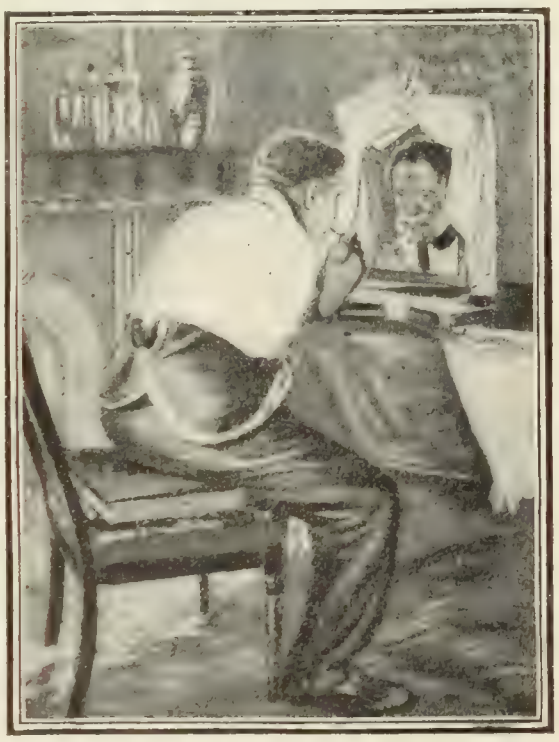
## MISCELLANEOUS.

### HANDICAPPED GENIUSES.

THERE are many people who would seem to have been condemned by nature to lives of inaction, but who, by sheer force of will and perseverance, have attained striking success in fields of activity which ought apparently to be entirely closed to them. A writer in *Lectures pour Tous* (Paris, November) refers to a number of historic cases such as the stammering Demosthenes and the blind sculptor Govelli; and then, coming down to our own day, furnishes descriptions of a number of equally remarkable, if less famous, illustrations. He writes as follows:

THE "LIVING TRUNK" ENGAGED IN HIS FAVORITE PASTIME OF BUILDING DOLL HOUSES.

"A similar example [to that of Govelli] in our own day was afforded by the blind sculptor Vidal. He became especially celebrated through his masterpiece called 'The Roaring Lion,' the studies for which he made by entering the cage of a lion and freely handling and fingering the animal. Among living examples, Théophile Debucquoy, professor of music in an institution for the blind at Lille, and an accomplished pianist, not only became blind at the age of three, but lost the use of his right hand four years later. His devotion to the piano, notwithstanding this second infirmity, is an instance of the singular perversity which so many of these unfortunate persons exhibit in chosing the very professions for which they seem least adapted. A blind but otherwise whole man might become a pianist with comparative ease; he prefers to be a sculptor. Painting pictures is the last thing a man without arms would be likely to attempt, one would think; it is the one thing that he insists upon doing. Such an artist is Charles Félu, of Belgium, whose paintings are highly praised. He was born without arms and remembers that in his infancy his mother taught him to pick flowers with his toes. When he grew up, in the attempt to earn a living he first tried literature, but soon abandoned it for art. Holding his brush with the toes of his right foot, he made many copies of works of the great Flemish masters. Many of his pictures are owned in America. The Queen Regent of Spain has made him an officer of the Order of Isabella, and the King of Portugal has decorated him with the Order of Christ. It is needless to add that at table he 'handles' knife, fork, and spoon as well as anybody.



MR. JOHN CHAMBERS SHAVING HIMSELF WITH HIS LEFT FOOT.

"But what shall we think of a man who shaves himself with his foot, and the left foot at that? The armless Englishman, John Chambers, does this and he also jumps on a moving tramcar, reads newspapers, writes letters, and puts on his shoes without assistance. When he buys a ticket at a railway station, he takes off one shoe and sock, inserts his toes in his waistcoat pocket and counts out the money as well as any one. He is skilful in the use of hammer, saw, and other tools, and plays well on the cornet.

MISS TUNISON, WHO PAINTS, SEWS, AND THREADS NEEDLES WITH HER MOUTH.

"The case of Miss Fannie Tunison, of Long Island, is familiar to many readers. Completely paralyzed, with the exception of her head, she sews, embroiders, and paints, holding her implements with lips, tongue, and teeth. She even threads her own needle. Her little paintings are excellent, and the sale of them is her sole means of livelihood. Indeed, she is the main support of her family.

"None of the above-mentioned persons, it should be noted, is a museum 'freak' or is exhibited on the stage. Among those who exhibit themselves for money, however, there are some very curious specimens. One is the armless archer, Warcineh Boseth, an American Indian who recently appeared in London. Once he won first prize in a pigeon shoot at New Orleans. But the most terrible case of all is that of the Frenchman Mabieux, better known as *l'Homme Tronc*, the trunk man or living trunk. He came into the world without arms or legs. Last year he reported for service to a military examining board, but was excused without any very vigorous examination. Like Miss Tunison, he makes his mouth do duty for his missing limbs. His favorite amusement is making toy houses and furniture. He came to Paris during the Exposition, and his parents seem to derive a proud satisfaction as well as a considerable profit from exhibiting him."—*Translations made for* THE LITERARY DIGEST.

## CORRESPONDENTS' CORNER

### Negro Labor in the South.

*Editor of* THE LITERARY DIGEST: On page 764 of THE DIGEST for December 22, Mr. Cuyler Smith, speaking of "Trion factory in North Georgia established by the Allgood family," says "practically *all* the operatives are white, the blacks acting as servants in operatives' household or draymen at the mill." There is only *one* negro employed by Trion factory, and that one is a barber.

MRS. J. B. S. HOLMES.

ATLANTA, GA.

### The Missing Meteors.

*Editor of* THE LITERARY DIGEST.—In your issue of December 8, you quote from the Baltimore *American* to the effect that there were no meteors in 1866 because they were not mentioned in the American papers. That may prove only that these papers omitted to chronicle the event. The London papers were full of it, and hundreds and thousands of people from their different coigns of vantage in England watched a most brilliant display of Leonids on the morning of November 14 from 1 A.M. till daylight. There is not the slightest shadow of doubt on that subject. Primrose Hill was crowded with observers that night. The London papers faithfully reported the display and it was remarked on in the different London pulpits the next Sunday.

WILLIAM POTTS GEORGE.

KANSAS CITY, MO.

## CURRENT POETRY.

THERE are two versions of the following poem by Alfred Austin, the poet-laureate of England, differing considerable in many lines. One version appeared in the New York *Independent*; the other in the London *Standard*. We give the latter version, assuming that it had the poet's final revision.

### The Passing of The Century.

I.

How shall we comfort the Dying Year?
Beg him to linger, or bid him go?
The light in his eyes burns dim and low,
His hands are clammy, his pulse beats slow,
He wanders and mumbles, but doth not hear.
The lanes are sodden, the leaf-drifts sere,
And the wrack is weaving his shroud of white.
Do you not see he is weary quite
Of the languor of living, and longs for night?
Lo! He is gone! Now lower him down
In the snug-warm earth, 'neath the clods of brown,
And the buds of the Winter aconite.

II.

How shall we part with the bygone Year?
Cover with cypress, or wreathe with bay?
He will not heed what you do or say,
He is deaf to to-morrow as yesterday.
Why do you linger about his bier?
He has gone to the Ghostland, he is not here.
We may go on our way, we can live and laugh,
Round the banqueting blaze can feast and quaff.
The purple catafalque, stately staff,
The dirges of sorrow, the songs of praise,
And the costliest monument man can raise,
Are but for the Spirit's cenotaph.

III.

Dust unto dust, He is dead, tho he
Was the last of the centuried years that flow,
We know not wherefore, we never shall know,
With the tide unebbing of Time, and go
To the phantom shore of Eternity.
Shadows to shadows, they flit and flee
Across the face of the flaming sun,
The vague generations, one by one,
That never are ended, never begun.
Where is the dome or the vault so vast,
As to coffin the bones of the perished Past,
Save the limitless tomb of Oblivion?

IV.

What tale would he tell, could the dead but speak?
"I was born as I died, amid wrath and smoke,
When the war-wains rolled, and the cannons spoke,
When the vulture's cry and the raven's croak
Flapped hungrily over the dying shriek,
And nothing was seen but a blood-red streak
Betwixt lowering sky and leaden main;
When slanted and slashed the rifle s rain
Upon furrows whose harvest were sheaves of slain;
When the levin's glare by the thunder's crash
Was bellowed, and ever 'twixt flash and flash
The howl of the unspent hurricane."

V.

But the dead discourse with the dead. So ask
How best now to welcome the new-born Year.
She is coming, is coming, and lo! is here,
With forehead and footstep that know not fear.
She will shrink from no pleasure, evade no task,
But there never was worn or veil or mask
Like her frank fair face and her candid soul.
Do you fathom her thoughts, can you guess her goal,
Her waywardness chasten, her fate control?
She will wend with her doom, and that doom be ours;
So greet her with carol and snow-white flowers,
And crown her with Hope's own aureole.

VI.

Yet mind her dawn of the dark, for she,
She too must pass 'neath the lych-gate porch;

**THE PRESS CO., Meriden, Conn.**

And give to her keeping the vestal Torch,
That may ofttime smoulder, and sometimes scorch,
But rebrightens and burns eternally;
The beacon on land and the star at sea,
When the night is murk, and the mist is dense,
To guide us Whither, remind us Whence,
The Soul's own lamp through the shades of sense.
She must tread the Unknown the dead year trod;
Tho rugged the road, yet the goal is God,
And the will of all-wise Omnipotence.

### Love.

By CHARLES HENRY WEBB.

Love is a day
With no thought of a morrow;
Love is a joy
With no thought of sorrow.

Love is to give
With no thought of receiving;
Love is to trust—
Without quite believing.

— In *Harper's Bazar.*

## MORE OR LESS PUNGENT.

**Lively for the Conductor.**—The horse-car conductor was hardly in the best of humor. Some one had managed to give him a bad shilling, and he had just discovered it; that was why he started the car before three women and a child had got much beyond the step. One of the women was exceedingly irate at such treatment. The conductor saw that as he started to collect the fares, but he was irate, too.

"Look here, ma'am," said he, as she tendered her fare, "this child that is with you will have to be paid for as well."

"I haven't any intention of paying its fare," snapped the woman.

"Then I shall put the child out," answered the conductor, reaching for the bell-strap.

"You won't dare to do it," flashed the woman.

Ting! The conductor brought the car to a stop, picked up the child, and deposited it outside, and rang to go ahead.

"Well, ma'am," said he grimly, "you'll find your child on the pavement."

"My child?" snapped she. "It isn't mine."

"Whose is it, then?" gasped the conductor.

"I haven't the slightest idea," she coolly answered.

Then the child's mother, who had been engaged in an exciting discussion with her friend over the merits of a new dress, awoke to the fact that her child was missing, and the fireworks that played about the unfortunate conductor's head reminded him of a 5th of November display.—*Tit-Bits.*

**American and English Humor.**—Mr. Nat Goodwin, while in England last summer, had an opportunity of explaining to an Englishman what was meant by "the American type of humor." This occurred at a large dinner-party; the man next to Mr. Goodwin, much interested in stage affairs, had entered into a spirited conversation with the actor. Part of this, according to *The Saturday Evening Post* (Philadelphia) ran as follows:

"'I can't for the life of me see,' remarked the Englishman during the course of conversation, 'what people mean by American humor. To me, all humor is alike whether it be of American or English origin. Perhaps you can explain to me just what distinguishes American humor from any other sort?'

"'Well,' replied Mr. Goodwin, 'I think the American type of humor is rather more subtle. It doesn't always fully impress itself upon you at once. The more you think about it, the funnier it seems. I can perhaps best illustrate my meaning with a little story.

"'A man was walking along the street, one day, when he passed another man, who was carrying a letter in his hand.

"'Pardon me,' said the man with the letter; 'do you know where the post-office is?'

"'Yes,' said the other man and passed on. On second thought he decided that he had been rude,

and went back to where the man with the letter was still standing.

"'Do you wish to know where the post office is?' he asked. 'No,' said the other man.

"The Englishman's gaze was vacant. 'Just turn it over in your mind for a few minutes and tell me what you think of it,' said Mr. Goodwin.

"Ten minutes later the Englishman clutched at Mr. Goodwin's elbow. 'You won't be offended, will you, old chap?' he murmured. 'But really, I think they were both blawsted rude!"

## Current Events.

### Foreign.

CHINA.

January 28.—A report is spread to the effect that negotiations are on foot between China and Russia with a view to cession of the three eastern provinces.

January 30.—Missionaries at Peking again request the British and American ministers to see that adequate protection is assured to them in the negotiations with the Chinese authorities.

February 1.—Secretary Hay, in reporting upon the Chinese situation to the Cabinet at Washington, intimates that the plenipotentiaries of the Powers are not making very rapid progress toward a settlement, and that many disturbing questions have arisen in consequence.

February 2.—M de Giers, the Russian minister at Peking, states that his country will not consent to the execution of Prince Tuan; Chinese residents of Peking present to General Chaffee tokens of their gratitude for the conduct of the American troops.

SOUTH AFRICA.

January 30.—General De Wet is reported to have entered Cape Colony with a strong force, and a general movement of the British forces against him is planned.

January 31.—General Kitchener reports active operations against the roving Boer commandos in the transvaal and Cape Colony; General De Wet is reported to have shot two burghers who came to his camp as peace commissioners; the Boers inflict damage to the extent of £300,000 on mines in the Rand.

February 1.—The Boer General Pretorius surrenders to the British.

February 2.—An organized attack by British columns is made against the Boer commandos still in the field in the Eastern Transvaal.

February 3.—General Kitchener reports the capture by the Boers of a British post at Modderfontein, in the Transvaal the prisoners being afterward released.

OTHER FOREIGN NEWS.

January 28.—King Edward proclaims Saturday, the day of the Queen's funeral, a day of general mourning; the Crown Prince of Germany is invested with the Order of the Garter by King Edward at Osborne; it is officially denied that Lord Salisbury will resign the Premiership.

January 29.—King Edward is greeted with great popular enthusiasm upon his return to London; a rehearsal of the Queen's funeral procession is held in London and details perfected; elaborate preparations are made for the entertainment of royal personages in London.

The Rev. H. R. Haweis, well known as preacher and author, dies in London.

Count Tolstoy is reported seriously ill at St. Petersburg.

January 30.—King Edward receives the King of Portugal in London, approves the final arrangements for the funeral of his mother, and returns to Osborne.

January 31.—Preparations for Saturday's pageant continue actively in London; many royalties arrive; 33,000 soldiers will march in the procession; King Edward decides to open Parliament in person on February 14.

February 1.—The body of Queen Victoria is removed from Osborne to Portsmouth, the progress of the royal coffin across the Solent being the occasion of a great military and naval display.

Fighting is reported in Abyssinia, where 7,000 men are said to have been slain in battle.

February 2.—The body of the Queen is conveyed by train to London, thence across the metropolis and by train to Windsor; the procession through London is a solemn and im-

pressive pageant, and the final ceremony of the day takes place in St. George's Chapel, Windsor; memorial services in honor of the Queen are held all over the world.

February 3.—Private memorial services in honor of the Queen are held at Windsor and attended by King Edward, Queen Alexandra, and the Kaiser.

Anti-clerical demonstrations take place at Valencia, in Spain, where the Jesuit college is stoned by a mob.

### Domestic.

CONGRESS.

January 28.—*Senate:* A petition is presented from leaders of the federal party in the Philippines, praying for the establishment of civil government, Senator Towne makes his only political speech, on behalf of Philippine independence, and his successor, Moses E. Clapp, is sworn in.

January 30.—*Senate:* Debate on the shipping subsidy bill is continued.

*House:* The agricultural appropriation bill is passed.

January 31.—*Senate:* The conference report on army reorganization bill is adopted, and now goes to the President for his signature.

*House:* The fortifications appropriation bill is passed; Mr. Lanham, of Texas, speaks on the future of the Democratic Party.

OTHER DOMESTIC NEWS.

January 28.—Mrs. Nation, the temperance reformer, interviews the governor of Kansas at Topeka, asking his aid in her crusade against the saloons.

The United States Supreme Court renders an opinion in favor of the State of Missouri in the Chicago drainage canal case.

January 30.—The State Department makes public a list of the members of The Hague court of arbitration, which is organized and ready to consider any international dispute.

Secretary Long, in a letter to the chairman of the House committee on naval affairs, deprecates the proposed investigation of charges of hazing at Annapolis naval academy.

January 31.—Secretary Gage makes an argument for retirement of the greenbacks before the House committee on banking and currency.

February 1.—The Cabinet discusses the situation in China and the Cuban constitution.

February 2.—The President, members of the Cabinet, the diplomatic corps and a great number of officials attend services in memory of Queen Victoria in St. John's Church, Washington; memorial services in honor of the Queen are held in all the principal American cities.

The army reorganization bill becomes law, by the President's signature, and the War Department takes steps to put its provisions into effect.

February 3.—"Crazy Snake" and seventeen other Creek Indians are placed in jail in Muskegee, I. T., and will be tried for treason.

AMERICAN DEPENDENCIES.

January 29.—*Cuba:* The Cuban constitutional convention continues in session at Havana, and several new clauses are added to the draft of the constitution.

*Philippines:* The religious question in the Philippines threatens to be brought to a crisis by the expected action of many natives leaving the Roman Catholic Church if the friars are restored.

The cession of the Sibutu and Cagayan Islands, in the Philippine group, is gazetted in Madrid, and their purchase recommended to Congress by President McKinley.

January 31.—The act organizing municipal government in the Philippines is passed by the commission.

February 2.—Five American soldiers are killed and several wounded as the result of an ambush by Filipinos.

February 3.—The "evangelical movement" in the Philippines is inaugurated by Buencamino at a meeting in the Rizal Theater, Manila.

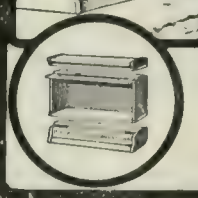
**An Ideal Book Case for the Home**

Handsome, convenient. A system of units, fitted with dust-proof, cushion-closing, self-retiring doors; greatest device ever put on a book case. Furnished in grades and prices to suit all tastes and requirements. Carried in stock by dealers in principal cities. Send for list and illustrated booklet 100-K.

"G-W" pays the freight



New York Chicago **The Globe-Wernicke Co.** Boston London

Cincinnati

*Also Elastic Cabinets and Card Indexes*

## WOULD YOU LIKE TO SPEAK French, German, or Spanish!

**Your Lessons Corrected Free of Charge.**

YOU may acquire absolute mastery of any or all these languages in a novel practical way and from a teacher that will not weary.

The International College of Languages of New York City has brought into use the Languagephone

### A HOME LANGUAGE TEACHER

By means of this wonderful instrument and with specially prepared records and listening devices, you may have your teacher at command in your home or office, at any hour, get familiar with perfect pronunciation, and have your lesson repeated at will until you learn it perfectly.

The system of lessons is the work of **Dr. Richard S. Rosenthal,** the foremost teacher of languages of the age. His system has the endorsement of nearly a million pupils and teachers in all parts of the world. **His living voice** and the records of the most cultivated French, Spanish, and German professors are brought to you at any place and any time.

By our listening device you can study in private, without annoyance to others.

**Persons possessing a Graphophone or Phonograph can, by the use of our special listening device, employ their own machine, as no horn should ever be used with our records.**

**We will take great pleasure in furnishing complete details, sample lessons, etc, on receipt of 2-cent stamp. Address**

**THE INTERNATIONAL COLLEGE OF LANGUAGES,** Park Row Building, New York City, N. Y.

## THE TYPEWRITER EXCHANGE,

**A GOOD TYPEWRITER IN YOUR OFFICE will demonstrate its advantages.**

Send for samples of writing, with prices, etc. Largest and most complete stock of second-hand Typewriters of any house in the trade. Machines shipped, privilege of inspection. **Title to every machine guaranteed**

**EIGHT STORES**

1½ Barclay Street, New York.
88 Bromfield Street, Boston.
124 LaSalle St., Chicago, Ill.
432 Diamond St., Pittsburgh, Pa.
8 W. Baltimore St., Baltimore, Md

### "The American Chess-World."

We have received the first number of this new magazine devoted entirely to the interests of Chess. The publishers in the prospectus say: "We believe that American Chessists will liberally support a Chess-magazine which is moderate in price and not too pretentious in its make-up"; and they promise to guarantee subscribers against loss in the event of the publication being discontinued. We hope that this new magazine will be a success financially and Chessically. There are thousands of persons in the United States interested in Chess, and we ought to have a first-class publication, such as we find in England, Germany, and other countries. *The A. C. W.* is published by C. H. Pratt & Co., 262 East 122d Street, New York City; yearly subscription $1.

# The Literary Digest

VOL. XXII., NO. 7 NEW YORK, FEBRUARY 16, 1901. WHOLE NUMBER, 565

Published Weekly by
FUNK & WAGNALLS COMPANY,
30 Lafayette Place, New York. 44 Fleet Street, London.
Entered at New York Post-Office as Second-Class Matter.

**TERMS OF SUBSCRIPTION.**

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

## TOPICS OF THE DAY.

### CUBAN INDEPENDENCE.

IF some of the American newspapers have their way, Cuba will not be released from our military rule until the Cubans, in their constitution, give the United States some voice in regulating or supervising Cuban affairs. The Cleveland *Leader* (Rep.), for example, calls the Cubans "ungrateful, treacherous, irresponsible, savage, ignorant, and as yet unworthy," and goes on as follows:

"We hold that at this juncture the best thing to be done, regardless of ill-considered pledges and emotional resolutions, is that which will safeguard the Cubans against themselves and protect the interests of this country. The United States will be held responsible for the peace, the debts, and the integrity of Cuba. The people of Cuba are not fitted for self-government. They are revengeful and illiterate. The strong hand of this Government should be upon them until they are prepared as a people to take their place among the nations of the world. If they are not held in restraint and wisely directed, it is almost certain that the United States will be compelled, before many years, to send another army into Cuba and to take Havana at the point of the bayonet after a long and perhaps a bloody siege.

"Cuba free, Cuba out of the control of America, would mean endless trouble, constant irritation, perpetual expense, and war eventually. Now is the time to face the matter with courage and determination. Give to Cuba a government of its own, but let that government be kept in firm and watchful check by the United States. Teach the Cubans to walk; if they can learn, all the better for them; if they can not learn, then Cuba should become the territory of this republic.

"Not another American life, not another American dollar, should be poured into the rat-hole of Cuban independence, so called."

The Philadelphia *Press* (Rep.), whose editor is a member of the President's cabinet, also declares that "we can not afford to purchase present ease at the cost of future risk and peril. We intervened in Cuba in 1898 because we asserted the right and the duty to stop misrule and wrong in this adjacent territory. The right that commanded our interference then warrants our watchful care now." And the Chicago *Inter Ocean* (Rep.) says: "We have spent American blood and American money once to save Cuba. Will the indecision of our statesmen go so far as to force us to spend them both again?" The Boston *Transcript* (Rep.) believes that "some degree of oversight by us should be established by friendly agreement," while the Rochester *Post-Express* (Rep.) goes so far as to say that the Teller resolution promising independence to Cuba is "a stumbling-block in the way of national ambition and sound policy," and that "it is clear to any student of history that the West Indies ought to belong to the great republic which dominates the Western world." The Chicago *Record* (Ind.) says similarly that "the United States must be preeminent in the Caribbean, and it is not unreasonable that the Cubans in their constitution should give this nation the right to supervise international bargains affecting that preeminence." The St. Louis *Globe-Democrat* (Rep.) agrees that "the geographical situation of the island even more than the feeling of gratitude which it should have for the United States demands that Cuba should hold a different attitude toward this country than it does toward the rest of the world." Indeed, state papers from John Quincy Adams's day to the present time, notes the New York *Tribune* (Rep.), have declared our interest in the island, and "if any policy be established by precedent and practise, then this one is, that the United States shall exercise a virtual protectorate over the island of Cuba, at least to the extent of determining its form of government and its relationship to the powers of Europe. For the maintenance of that policy the United States more than once declared its readiness to go to war, if need be, with the most powerful nations of the world. And now, having sealed that policy with a costly foreign war, it is not to be believed that it will lightly abandon it."

But these sentiments are not allowed to go unanswered. This "conspiracy for the retention of Cuba, in which the representatives and advisers of the Administration are now engaged," declares the Philadelphia *Times* (Dem.), "is the most infamous of all that have been hatched out of our new imperialism. It sets at naught the principles of liberty, the solemn engagements of the nation, the essential demands of right and honor, with a cynical reliance upon superior power that is the very essence of despotism." "It would be an ignoble end of all our high-sounding protestations of disinterestedness," says the Baltimore *Sun* (Ind.), "if we were to compel the Cubans to grant us concessions by threatening them with the military occupation of the island." The Louisville *Courier-Journal* (Dem.) adds that "all the promptings of equity and good conscience require the amplest fulfilment of the nation's pledge, and to rely upon future diplomacy and the natural promptings of gratitude to effect by treaty what can not justly be done by dictation. The eyes of the world are upon us, and our national good faith forbids the idea of any deflection from the path of duty." If the Cubans are treated unjustly, thinks the Boston *Herald* (Ind.), "we shall have another dependency filled with discontent and the spirit of revolt."

Many Republican papers join the Independent and Democratic papers quoted above in demanding that we shall "let this people go." The Baltimore *American* (Rep.), for example, believes that insistence upon a protectorate "will be suicidal, impeaching this nation before the world and necessitating a deliberate disregard of a solemn promise, to which we voluntarily pledged our

faith. There is but one rule by which our relations to Cuba may be regulated. That is embodied in the concurrent resolution adopted in April, 1898, declaring that Cuba is, and of right ought to be, free and independent." The Chicago *Evening Post* (Rep.), too, says that "incorporation may be 'manifest destiny,' but it does not necessarily involve betrayal, broken pledges, dishonor, and hostilities," and it adds that "of all the excuses for breaking faith with Cuba the 'geographical' one is the flimsiest. It deceives no one. Let the advocates of 'criminal aggression' come out into the open." "Let us pursue the straight and narrow path of common honesty," suggests the Chicago *Times-Herald* (Rep.), "and there will be no cause for new alarms." The Buffalo *Express* (Rep.) believes that "that pledge by Congress, which imperialists at Washington so regret, was the only thing which saved us from a Cuban insurrection of the same nature as the Philippine war," and it predicts that "its violation would probably bring on a Cuban war now, and members of the Cabinet should be able to appreciate the fact that the Philippine war is not so popular with the American people that they are willing to have their Government engage in a similar enterprise for the conquest of Cuba." The Kansas City *Journal* (Rep.) says that "Cuba may ask for a protectorate that is not merely implied by neighborly considerations, but she will never have one forced upon her by the United States." The Philadelphia *North American* (Rep.) expresses itself as follows:

"The Supreme Court has declared that Cuba is a foreign country. Congress has no right to legislate for foreign countries, no right to dictate to their people what form of government they shall adopt, and therefore can neither ratify, reject, nor amend the Cuban constitution. The only question to be considered is: 'Does the constitution provide for a stable government?'

"If it does, that ends American occupation and military control of Cuban affairs under the express term of the pledge given by Congress and confirmed by the Supreme Court."

As to the sentiment in Cuba itself on this question, A. G. Robinson, the Havana correspondent of the New York *Evening Post* (Ind.), says:

"In spite of all the talk which has been made about *Cuba Libre*, Cuba free and independent, Cuba a distinct national entity in absolute control of its own affairs, there is no question that few Cubans have at all expected to see a day of unabridged Cuban sovereignty, and it is also very doubtful if more than a small minority really desire that day. I think it beyond question that the force of the absolute independence movement has been greatly overestimated in the United States. But there is no question that there is such a movement, and that it has a certain number of forceful leaders. It is equally certain that their failure to obtain that which they desire, whatever may be their motives, would be disastrous to Cuban interests in many ways if the obstruction were to come from the American authorities."

## THE NEW ARMY'S CHIEF OFFICERS.

PRESIDENT McKINLEY'S choice of general officers of the reorganized army is along the lines predicted in most quarters, and meets with wide approval. In the Democratic and Independent papers the opinion is freely expressed that the President's appointment of General Miles as lieutenant-general was far from being a cordial one; but he is commended by the same papers for rising above "merely personal preference or sentiment." Whatever may have been the President's likes or dislikes, comments the Boston *Herald* (Ind.), he is "not a vindictive or an actively resentful man, and he probably did not feel that, as regards public affairs, the objections to General Miles as the head of the army were sufficient to justify the slight upon him that his supersedure by another officer would have been." The Atlanta *Constitution* (Dem.) thinks that "the President has done a sensible thing in appointing Nelson A. Miles," and adds: "If he would only send General Miles to the Philippines now, it would give a worthy officer a chance to show the mettle of which he is made." *The Army and Navy Register* (Washington, D. C.), too, is of the opinion that General Miles "is entitled by all the considerations of service, professional fitness, personal character, and military tradition to continue in the grade of lieutenant-general." On the other hand, the St. Louis *Globe-Democrat* (Rep.) declares that "it will puzzle the military histo-

UNCLE SAM: "It looks to me like a foolish piece of business."
—*The St. Paul Pioneer Press.*

CUBA (to Uncle Sam): "Say, Uncle, I've decided not to annex you."
—*The Chicago Record.*

UNCLE SAM AND CUBA IN CARICATURE.

rian to tell what General Miles ever did to entitle him to the rank of lieutenant-general in the United States army"; and the Nashville *American* (Dem.) is only willing to concede that he is a good soldier and an efficient commander "of a small force." The New York *Mail and Express* (Rep.) says:

"The nomination of General Miles for lieutenant-general comes as a matter of course. It will be generally recognized as an act of justice, and it should silence certain indiscreet partizans of the general who have accused the President of a disposition to shelve him in order to advance another officer to the head of the army.

"Most gratifying of all, however, are the appointments of major-generals. The officers thus promoted—Young, Chaffee, and MacArthur—are among the ablest and most deserving men in the entire army. They represent the highest type of American soldiery, and their advance to the rank of major-general is the just reward of gallant and successful service in many arduous campaigns. No less commendable are the President's selections of brigadier-generals. The officers thus promoted are all conspicuously worthy, but among them Leonard Wood, Lloyd Wheaton, Theodore Schwan, and William A. Kobbe are preeminently deserving, and their advancement will be regarded with unstinted approval."

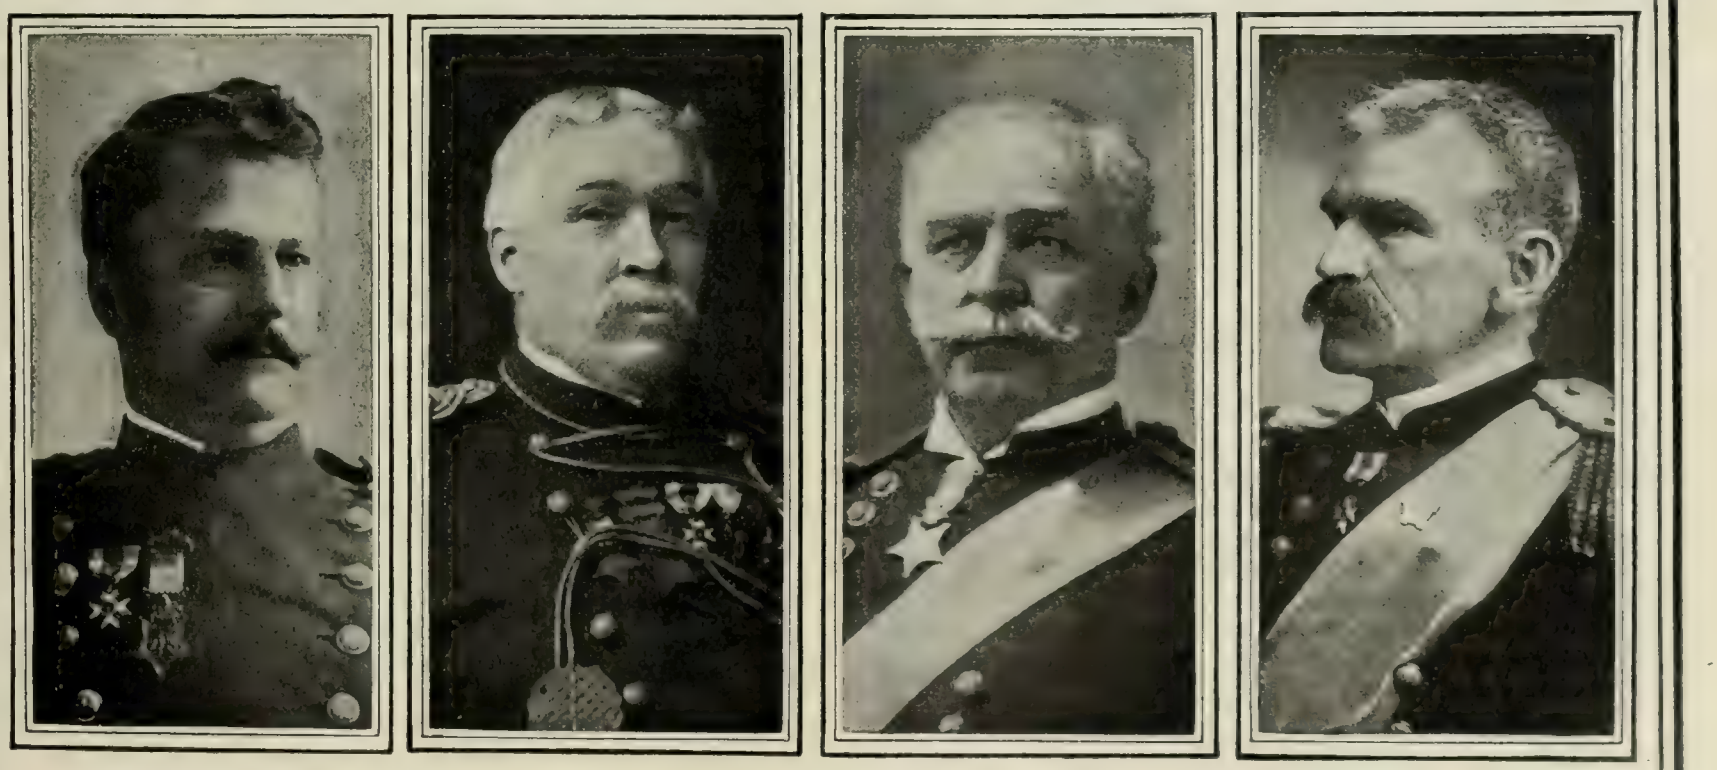
"The appointments of general officers," declares *The Army and Navy Journal*, "will, we fear, occasion some heart-burnings, tho all of those selected are good men and true. We gave no credence to the report concerning General Miles, and he appears, where we expected to find him, at the head of the list. It is the misfortune of General Miles to hold the most difficult position in the army, and the one that has brought most, if not all, of his predecessors into trouble. . . . So General Miles not only has his promotion, but the experience of illustrious predecessors, to console him for the criticism to which his high position exposes him." "General Miles will be eligible for retirement by the President, as having served thirty years," remarks the New York *Sun*, "on August 8, 1903. General Brooke would succeed him. After them would come Young, Chaffee, and MacArthur, and then Wood. He will be senior general in the army on MacArthur's retirement in 1909, and may then, at the age of forty-nine, succeed to the command and hold it until 1924." The names of the different generals, with the dates of their retirement, are thus given in *The Sun*:

Lieutenant-General Miles, August 8, 1903.
Major-General Brooke, July 21, 1902.
Major-General Otis, March 25, 1902.
Major-General Young, January 9, 1904.
Major-General Chaffee, April 14, 1906
Major-General MacArthur, June 2, 1909.
Brigadier-General Wade, April 14, 1907.
Brigadier-General Merriam, November 13, 1901.
Brigadier-General Ludlow, November 27, 1907.
Brigadier-General Bates, August 26, 1906.
Brigadier-General Wheaton, July 15, 1902.
Brigadier-General Davis, February 27, 1903.
Brigadier-General Schwan, January 9, 1905.
Brigadier-General Sumner, February 6, 1906.
Brigadier-General Wood, October 9, 1924.
Brigadier-General Hall, November 15, 1901.
Brigadier-General Hughes, April 11, 1903.
Brigadier-General Randall, October 8, 1904.
Brigadier-General Kobbe, May 10, 1904.
Brigadier-General Grant, May 30, 1914.
Brigadier-General Bell, January 9, 1920.

"It is worthy of note," observes the Chicago *Evening Post*, "that not one of the four officers now ranking all others in the service is a graduate of West Point. This is not necessarily a reflection on that military training school; but it is a recognition of long and brilliant service and of the practical training that comes with actual service."

## TWO MORE TREMENDOUS COMBINATIONS.

THE acquisition of the control of the Southern Pacific Railroad system by the management of the Union Pacific about two weeks ago, and the federation of practically all the big iron and steel companies in America last week, have set the newspapers to asking where the consolidation movement will end. The New York *Journal of Commerce* called the combination of the two Pacific railroads "probably the largest transaction of its kind in the history of the world"; "but," says the Springfield *Republican*, "it appears a small affair compared with the iron and steel consolidation." The latter transaction is even exciting alarm abroad; a cable despatch reports the London *Chronicle* as declaring that "it is little less than a menace to the



MAJ.-GEN. ARTHUR MACARTHUR. MAJ.-GEN. SAMUEL B. M. YOUNG. LIEUT.-GEN. NELSON A. MILES. MAJ.-GEN. ADNA R. CHAFFEE.

THE NEW GENERALS.

commerce of the civilized world, and before it all previous trusts fade into insignificance. It sets the seal to the triumph of the millionaire." According to *The Journal of Commerce*, the iron and steel federation includes twenty-four companies, with a total capitalization (preferred and common stock and bonds) of $1,414,696,000. So the long-expected "billion dollar trust" seems to have arrived. President E. H. Gary, of the Federal Steel Company, in a statement which he gave out on Friday of last week, said that "it is not intended . . . to create any monopoly or trust," but he admitted that "it is probable there will be such ownership or control as to secure perfect and permanent harmony in the larger lines of this industry."

The most important step in attaining the consolidation of the iron and steel companies is said to have been the purchase of Mr. Andrew Carnegie's share in the Carnegie company. Mr.

THE LADIES: "How sweet the dear, good men are, not to fight. Think how dreadful the consequence might have been to one or both of us."
—*The Minneapolis Journal.*

Carnegie owned $86,000,000 of the $160,000,000 of the company's stock, and J. Pierpont Morgan, or a syndicate represented by him, is said to have bought Mr. Carnegie's shares for about $140,000,000. (The price and other details of the transaction are not made known authoritatively.) The Carnegie Company, the largest producer of iron and steel in America, has always remained independent, and with this great concern in the hands of those represented by J. Pierpont Morgan (who is looked upon as the leading spirit in the present movements toward consolidation), the federation of the iron and steel concerns is practically accomplished. *The Journal of Commerce*, in the midst of all the furor over the new combination, makes the following cautionary remarks:

"The consolidation movement in the iron and steel trade has resulted in an enormous increase in the productive capacity of the industry. In many departments the capacity is far ahead of the consumptive demand. It appears, therefore, that unless there shall be some phenomenal and lasting increase in the use of iron and steel there will not be opportunity for profitable employment for all the capital invested, while the chances for earning dividends on heavily watered common stock are none too bright. The present condition of iron and steel markets abroad does not offer much encouragement. It is to be remembered also that there is a large number of companies outside of the new 'community' just being established. The change in the control of the Carnegie Company should undoubtedly relieve the situation a great deal; but those who argue that, by a few brushes of the pen, order and equilibrium are to be forever established in the iron and steel industry, will probably have much to learn."

The newspapers, however, see immense possibilities in the new consolidation. As Mr. Morgan has been a prime mover in the recent consolidations in coal and in steel, the two products that are of supreme importance to the modern manufacturing era, and in the recent consolidations of railroads, the highways of commerce, some of the papers are already beginning to wonder what he will do next. The Boston *Herald* thinks that "he has proved himself to be not only the most powerful, but also the most skilful, financier that this country has ever produced. One might go farther than this and say that, in both mental and material resourcefulness, the world had never seen in business matters the equal of Mr. Morgan." It adds, "the history of man's industry from the earliest recorded times would be searched in vain to find a parallel to the aggregations which he has formed within the last few years." This movement toward centralization, if continued at its present rate, the same paper goes on, "would, before the present generation has passed away, bring practically all producing and transportation agencies under the control of certain united dominating forces. Whether these changes are to lead to that state socialism which has been predicted, time alone will determine. If a limited financial group shall come to represent the capitalistic end of industry in this country, the perils of socialism, even if this is brought about by a somewhat rude, because forcible, taking of the instruments of industry, may be looked upon by even intelligent people as possibly the lesser of two evils."

As regards the new steel "trust," the Baltimore *Sun* remarks that "of course this amalgamation is purely philanthropic. No effort will be made to raise prices or to do anything harmful to public interests. The 'alliance' will never use its gigantic power as a giant, but will work for the good of mankind. Still it is to be feared that the people who use steel products will not be entirely happy. The performances of such combinations have rarely squared with their professions." The Philadelphia *Evening Telegraph* says similarly that "if the great steel combine results in a bettering and cheapening of the product in which it is to deal, as has undeniably been the case with the Standard Oil Company, it will still be energetically denounced by the theorist, but condoned by the practical man, and patronized by all classes. If, on the contrary, a grasping and unrelenting monopoly is the outcome, there will be given an enormous impulse to the growing antagonism to the concentration of capital and industrial enterprise, which may lead to one of the greatest social and political upheavals that has been witnessed in modern history." The New York *Evening Post*, however, thinks that "for the present it may be said that as long as the raw materials of industry are not monopolized, there can be no monopoly of long duration in the finished products," and that "if the raw materials of iron and steel are ever brought under monopoly control, society will find a way, under the law of eminent domain, or otherwise, to protect itself."

Mr. Carnegie (whose remark, "the man that dies rich, dies disgraced," has been made the subject of much good-natured jest) is now said to enjoy an income of more than a million dollars a month from his various investments, and will devote his remaining years to the problem of disposing wisely of his vast fortune. The New York *Journal* reports Mr. Carnegie as saying of his recent transaction: "I sold in pursuance of a policy determined upon long ago, not to spend my old age in business, struggling after more dollars. I believe in developing a dignified and unselfish life after sixty." Mr. Carnegie was sixty-three last November. He says in his essay on "The Gospel of Wealth":

"The gospel of wealth but echoes Christ's words. It calls upon the millionaire to sell all that he hath and give it in the highest and best form to the poor by administering his estate himself for the good of his fellows, before he is called upon to lie down and rest upon the bosom of Mother Earth. So doing, he will approach his end no longer the ignoble hoarder of useless

millions; poor, very poor indeed, in money, but rich, very rich, twenty time a millionaire still, in the affection, gratitude, and admiration of his fellow men, and—sweeter far—soothed and sustained by the still, small voice within, which, whispering, tells him that, because he has lived, perhaps one small part of the great world has been bettered just a little. This much is sure: against such riches as these no bar will be found at the gates of Paradise."

## THE WEDDING IN HOLLAND.

THE world's attention is again drawn to the interesting little country of Holland by the marriage of Queen Wilhelmina to Duke Henry of Mechlenburg-Schwerin. The wedding itself seems to be devoid of any great political significance, and most of the American editors turn their comment from the rulers to a consideration of their realm. The Brooklyn *Eagle*, for instance, delivers this incontrovertible (and unparsable) remark: "Thus does romance and reality continue its unceasing round." The New York *Mail and Express* says:

"Territorially the state of Holland, whose royal nuptials draw to it to-day the kindly attention of the world, is an inconsiderable factor, its area being about equal to that of Massachusetts and Connecticut; but it is the seat of a people who have deserved well of civilization, who have a proud history, and who, in this era of vast empires, are still a factor to be reckoned with. As the home of political liberty when it had no other abiding place in the Old World; as the asylum of enlightened exiles; as the stubborn warden of its own independence against giant coalitions; as the European cockpit, in which, or near which, nearly every epoch-making collision of the nations has been decided; as a pioneer in commerce and colonization, and as, we may add, the founder of our own world metropolis, the great little state has had an honorably disproportionate share in the past of mankind.

"Because the kingdom of the Netherlands has been lately in that path in which, as has been said, a country happily has no history, and has appeared prominently only as the theater of the great tribunal for peace among the nations, its present importance is apt to be overlooked. On land or sea it is probably still able to take the measure in hostile operations of any state of its size and of many of much greater pretensions. In wealth and industry it has continued its ancient reputation, and altho it has a population of but 5,000,000, it is still one of the great commercial states of the world, its combined exports and imports in 1899 being more than $1,300,000,000, or about half those of the German empire, with a population of 60,000,000, and more than twice those of Austria-Hungary, with a population of about 50,000,000.

"No nation of the world has been more fortunate in its colonial administration in this generation, and the prince of the petty German duchy who this day became Wilhelmina's husband will be associated in rule over an over-sea empire with a population of 35,000,000 and an area nearly four times that of France's European possessions. The Queen has behind her a spirited, homogeneous, enterprising, and contented people, who have not said their last word in European history."

**"Expansion from Within."**—At a time when the United States is winning recognition as a world power, and is extending its boundaries over remote territory, the Boston *Globe* makes a plea for "expansion from within." It points out that there are no less than 600,000,000 acres of vacant land in this country. Of this, 374,000,000 acres are suitable for grazing and farming, over 96,000,000 acres are woodland, 76,000,000 acres contain forests of commercial value, and about an equal area is at present desert land. The arable portion alone would furnish homes and farms for 10,000,000 people, and the timber from woodland and forest would suffice to build comfortable homes not only for all our present population, but for many generations to come. The most serious difficulty in developing these immense natural resources is the lack of water for irrigation, and *The Globe* maintains that if the facilities for irrigation are supplied by government aid, private enterprise will do all the rest of the work required to bring the now unused land into cultivation. The Minneapolis *Tribune* suggests that the national Government should also take measures to preserve the natural forests and to reforest denuded lands. "To this end," it says, "the Government should cooperate with the States—as in the proposed establishment of a Minnesota national park—and by donating lands to States for forestry purposes." It adds:

"The expansion of this country from within is bound to come, whether our expansion abroad is much or little. The pressure of population will in time seize upon all lands of whatever character, and extensive and valuable forest areas, unless protected in some way by the cooperation of the state and national governments, will be denuded of timber and left barren and worthless. What is wanted for the future is a broader and more intelligent and comprehensive land policy than that which has prevailed in the past."

## GROWING POPULARITY OF DIRECT LEGISLATION.

THAT the decadence of the Populist Party in the West has not been necessarily accompanied by a corresponding decline in the popularity of Populist doctrines is shown by the recent action of the two houses of the Oregon legislature, which, tho both Republican, have passed a resolution submitting to the people of that State an amendment to its constitution which provides for the system known as the initiative and referendum, or direct legislation. Under this system, when a certain number of citizens demand the enactment of a law, it shall be submitted in proper shape to the voters, and all important bills passed by the legislature must, in order to become effective, be approved by popular vote. In the opinion of the Washington *Post*, there is no conclusive proof that the amendment will be adopted in Oregon, and that paper thinks that the action of the legislature "simply shows there was a more or less strong demand for its submission." The sentiment in favor of direct legislation seems, however, to be strong in Oregon, and it is generally believed that the measure will win popular approval. As *The Direct Legislation Record* (Newark, N. J.) points out, both South Dakota and Utah have already adopted constitutional amendments in favor of direct legislation, tho the experiment has not yet been given a fair trial in either of these States. Some of the leading cities in the country, including Seattle and San Francisco, have also recently made provision in their charters for an appeal to the people. "Direct legislation has come up spontaneously all over the country," declares the same paper, "without any unified organization or great blowing of trumpets. It is coming through the wide and earnest educational work of its advocates and through their active lobbying."

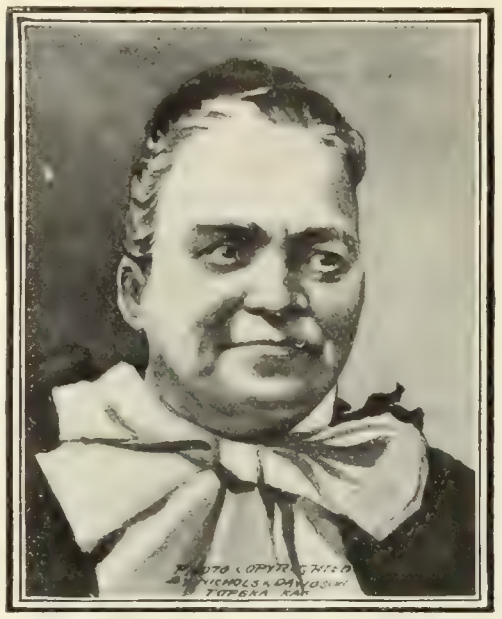
In Wisconsin, too, a most radical bill is before the legislature, which abolishes political conventions and caucuses and provides for all nominations by direct vote of the people (except for judicial, school, town, and village offices). The new governor of Wisconsin, R. M. La Follette, is an ardent advocate of this measure. Says *The Madison State Journal* (Rep.):

"As the principles in the bill were approved by the Republican Party of the State in its platform, and as there are but twenty-one Democrats in both branches of the legislature of one hundred and thirty-three members, the passage of the bill (subject, of course, to amendment) is assured. . . . . .

"Wisconsin is profoundly interested in this bill. It will bring about such a sweeping change of system, and is such a blow at the all-powerful political delegate, that the experiment must attract national attention."

In many quarters, the tendency toward direct legislation is viewed with some apprehension. The Cleveland *Leader* sees in the Oregon experiment a "radical departure from the funda-

mental principles of representative government and the introduction of a system hitherto considered unwise and dangerous by nearly all American statesmen." "It is one thing," it says, "to have the government of a country or state in a federal republic conducted by men chosen to serve the people as they see fit, and quite another matter to have great public questions submitted to the whole mass of voters for their direct decision." At the same time, it admits that in some cases the popular decision may prove wiser and better than the course of self-seeking politicians, adding that the experiment in Oregon will be "of utmost interest to all intelligent Americans," and will go far toward determining the fate of similar measures in other States. The Kansas City *Star*



AN AUTHENTIC PORTRAIT OF MRS. NATION.

thinks that the fatal objection to direct legislation in the past, in Switzerland as in this country, has been "lack of interest." The Chicago *Chronicle* goes so far as to say that to apply this principle on a broad scale would be to "paralyze all government." "It would be government without energy and without authority," it says, "which would resolve itself into a mob speedily and would be followed by a government much stronger than any that we have known thus far."

On the other hand, it is interesting to note that the arguments for direct legislation have found favor with many of the leaders of the world's thought. In his lately published book on direct legislation, entitled "By the People," Mr. Eltweed Pomeroy gives a large number of these opinions, quoting the words

SOME OF THE CURRENT "PORTRAITS" OF MRS. NATION.

of eminent statesmen, professors, authors, and social reformers to sustain his conclusions. Even such conservative statesmen as Lord Salisbury, the Earl of Rosebery, and the Rt. Hon. Arthur J. Balfour have put themselves on record as in sympathy with the direct appeal to the people. Ex-Governor Rogers of Washington, ex-Governor Leedy of Kansas, Governor Smith of Montana, Governor Lee of South Dakota, are direct legislationists, and the whole Democratic Party was pledged to this principle "wherever practical" in its 1900 platform. William Dean Howells, Samuel Gompers, Dr. Lyman Abbott, John G. Woolley, Dr. J. W. C. Lorimer, Prof. Richard T. Ely, and Prof. John R. Commons are all advocates of direct legislation. No less an authority than Prof. W. E. H. Lecky declares that "the experience of Switzerland and America shows that, when the referendum takes root in a country, it takes political questions, to an immense degree, out of the hands of wire-pullers, and makes it possible to decide them mainly, tho perhaps not wholly, on their merits, without producing a change of government or of party predominance."

## CHILD LABOR IN THE SOUTH.

DISAPPOINTMENT is expressed in many quarters at the recent defeat in the Georgia legislature of a bill prohibiting the employment of children under the age of twelve years in textile-mills. "There are still two dark stains upon the fair fame of Georgia," declares the Philadelphia *Inquirer;* "her system of convict labor and the employment of immature youth." "Child labor must go," adds the Columbia (S. C.) *State*, "and that the system, as a system, will soon be abolished there is every reason to believe." It continues:

"The mill-managers in the abundance of their wisdom realize their duty to their operatives and to mankind. They are ready, we believe, to ameliorate abhorrent conditions and to supply the facilities for the educational training of their employees' children, to the end that succeeding generations may furnish a more intelligent and, therefore, more desirable class of operatives. The wisdom of dollars and cents demands it no less than the promptings of conscience. These men of great ideas and abundant achievements must realize the obligation to furnish education for the young and information and culture for their elders. There must be in the mill-villages not only schools and churches but libraries, reading-rooms, lyceums, and theaters. A life of incessant toil makes a poor workman. Diversion is requisite to efficiency."

*The Farmer's Review*, a radical paper published at Bonham, Texas, finds in the action of the Georgia legislature proof that "the Southern bourbons are as much under capitalist influence as the Republicans are, led by Mark Hanna." "There is no difference between them," it says, "except that the Democrats are worse in their actions. There are child-labor laws in most of the Republican States, while the Democrats of Georgia refuse to place a child-labor law upon the statute book. No State deserves to be called civilized that does not possess a sufficient amount of virtue to protect helpless children against the brutality of capitalism."

Altho the advocates of the bill restricting child labor have been defeated, it is expected that a part, at least, of what they sought to accomplish may be obtained by voluntary action on the part of the employers. The leading textile manufacturers of Georgia have entered into an agreement by which they refuse to employ any child under twelve who has a father able to support him, or to employ children under twelve at night. Says the Raleigh (N. C.) *News and Observer:*

"It is gratifying to see that mill-owners, church leaders, educators, and the press are agreed that child labor shall end in the factories. There may be here and there disagreement as to the manner of putting a stop to it, but an effective method will be found to do it. The demand of lazy fathers, who put their babies in the mills to support them in idleness, in favor of employing young children in the mills, will not be heeded. The children must be saved from the dwarfing process of early confinement in the factories! It will not do to wait another year for this reform that is demanded in the name of humanity."

In Alabama a bill for the prevention of child labor is pending in the legislature, and has the support of most of the newspapers in that State. A bill has also been introduced in the South Carolina Senate making it a misdemeanor for a cotton-mill to employ children under twelve years of age. The governor of South Carolina devoted a part of his recent message to this question. "Unless something is done," he said, "to protect the tender children of vampire parents, who spend their time in idleness and live off the labor of their little ones, who are required to labor in the mills from year to year without the advantages of school, the situation for the future becomes alarming." "This utterance will be especially commended," declares the Newark *News*, "when it is considered that South Carolina is the second State in the Union in the number of spindles operated in the cotton industry." The Boston *Transcript* believes that such legislation as is proposed is an indication of a change of opinion the significance of which should not be lost sight of in the North. "As the South prospers," it continues, "we may expect to see Southern parents lose some of their eagerness to place in factories children that should be in school. . . . With the intelligence and self-protection of Southern labor becoming something like equal to those of the organized labor of Massachusetts, the conditions will be evener in the competition between New England and Southern manufacturers."

"BY the way," asked the stranger, "are women permitted to practise at the bar in this country?" "Permitted!" snorted the other man, who happened to be a retired saloonkeeper from Kansas, "you can't keep 'em from doing it when they take a notion, begosh!"—*The Chicago Tribune.*

## LETTERS AND ART.

### THE GREATEST OF ENGLISH CARTOONISTS.

THE withdrawal of Sir John Tenniel from the staff of *Punch*, in which his first drawing appeared in 1850, is received as an event of interest by the artistic world. Tenniel, who was born in 1820, a year after the late Queen's birth, was, in his early career on *Punch*, thrown into contact with Thackeray, Dickens, Douglas Jerrold, and many of the chief writers and artists of the day. In *The Critic* (February), Mr. R. R. Wilson gives a commentary on some of his most notable achievements:

"Disraeli's lean figure and strange, swarthy visage early became a rich source of inspiration for Tenniel, and so they remained till the end. In an early cartoon the Conservative leader is shown dressing for a bal-masque in the humble garb of a member of the heavenly host. 'The question is,' he murmurs to his mirror, 'is man an ape or an angel? Now, I am on the side of the angels.' It is a matter of costume, and Dizzy would be an angel. This was in 1864. Ten years later he appears triumphant in the inimitable 'Paradise and the Peri,' and before another twelvemonth is ended we have him as the Sphinx in 'Mose in Egitto,' an amazingly clever handling of a commonplace incident—the purchase of a majority of Suez Canal stock by the British Government. Again he is seen dancing the *pas-de-deux* with Salisbury for a partner, or trying to replace the Turkish Humpty-Dumpty on his wall; and one may take final leave of him in the 'Sunset' of May, 1880, where he stands, a lonely and dramatic figure, watching across the sea the last gleam of his setting sun as it drops into the horizon.

"Party politics never evolved a more moving drama than that in which Disraeli and Gladstone were the chief players. Its several acts supplied Tenniel with some of his rarest opportunities, and he rarely failed to make the most of them. It was for Gladstone that Tenniel long reserved his kindliest, if most incisive touch; and it is in the long gallery of drawings having to do with that extraordinary man that he has reached his highest level. One can not soon forget such a drawing as the strong and intensely earnest 'Ajax Defying the Lightning' of July, 1871; which celebrates the Liberal leader's heroic and successful struggle to put an end to the purchase of commissions in the British army. . . . . .

"'The Irish question, commemorated in the scathing 'Open Door' of March, 1883, was not the only troublesome legacy passed on by Disraeli to Gladstone when the two exchanged places in 1880. Another involved the occupation of Egypt and the pacification of the Egyptian Sudan, then overrun by Arab hordes. To accomplish the latter, 'Chinese' Gordon was, in the opening days of 1884, despatched to Khartum. He went on a bootless and perilous mission, and when the Gladstone ministry apparently abandoned him to his fate in besieged Khartum, popular wrath found expression in what is, perhaps, the most impelling achievement of Tenniel's long career—his famous 'Mirage.' . . . From time to time Tenniel touched upon various issues in the States, treating them with much the same dignity and force which characterize his work as a whole. The cartoons devoted to the slavery question are perhaps the most impressive of this series. . . .

SIR JOHN TENNIEL AND SOME OF HIS FAMOUS CARTOONS.

"Work such as Tenniel has been doing through a period of more than two-score years carries with it its own reward, but it is a pleasure also to know that, in 1893, it brought the honor of knighthood to one who had been long an honored figure in English journalism. Nor does his fame rest alone upon his drawings for *Punch*. His water-color paintings have gained him a reputation amply sufficient to have handed him down to posterity as one of the leading British artists of his period."

---

**Edward VII. and the Drama.**—The cultivated musical tastes of the late Queen and Prince Consort, and the social distinctions conferred by the former upon musicians, as we have already pointed out, have had a wide and beneficent influence upon the musical profession throughout the whole English-speaking race. In a somewhat similar way the present King of England, through his vast social prestige as Prince of Wales, has contributed much to the popularity of the drama and to the increased respect in which the dramatic profession is held in our day. An article in the London *Chronicle*, printed just before the King ascended to the throne, thus speaks of him and his tastes in the drama:

"The Prince of Wales, as everybody knows, is an ardent play-

goer, and most catholic in his theatrical tastes. Last year, according to *The Stage*, he paid forty-six visits to London theaters, the bulk of them being in the first seven months of the year. Covent Garden, with its opera, is an easy first, of course, the Prince attending fourteen representations. The Haymarket comes next, with three visits to the ordinary performances—in fact, the Prince seldom misses a play at the Haymarket. The same may be said of the St. James's and Her Majesty's. Only two plays were seen twice by the Prince—'San Toy' and 'Miss Hobbs.' A couple of visits to the Hippodrome and one to the Alhambra were the total of his patronage of the variety houses.

"The Prince, unless he is unutterably 'bored' by a performance, has a happy knack of expressing his views of the play. A well-known London manager once remarked that so much did he value, from a commercial point of view, His Royal Highness' opinion of the merits of a piece, that he would gladly, if such a thing were possible, retain his services at a very high fee for the purpose of reading the plays submitted. When the Prince is particularly pleased with what he has seen, he generally sends for the manager and expresses his approval. If he is only moderately pleased he sends a polite message to the manager through the acting manager during the descent to his carriage. If he is disappointed he makes no remarks at all, and he has been known to leave a theater before the end of the performance. By the way, it is an accepted rule that no notice be given to the press of the prospective visit to a theater of a member of the royal family, but an announcement that a royal personage has visited a particular theater is a permissible form of advertisement."

## IS EMERSON A POET?

IT seems rather late in the day to ask this question, yet a well-known critic, Mr. John Y. W. Macalister, editor of the London *Library* and one of the leading librarians of England, not long ago asked the question and then answered it in the negative. His statement, made in *Literature* some months ago, that "Emerson never wrote a line of poetry in his life," forms the text of an article in *The National Review* (London, December, 1900) by Mr. Coulson Kernahan, an English critic and novelist. Mr. Kernahan somewhat paradoxically says: "Those who assert that Emerson was not a poet are not wrong. Those, on the other hand, who assert that he *was* a poet, are right." The Emerson, he explains, who wrote,

> Still on the seeds of all He made
> The rose of beauty burns;
> Through times that wear, and forms that fade,
> Immortal youth returns,

was a poet, tho "only half a poet, inasmuch as his mind—like flint without tinder—could kindle only the celestial fire in sparks." The Emerson who penned and in cold blood published such verse as this from "Alfonso of Castile,"

> Hear you, then, celestial fellows!
> Fits not to be over-zealous;
> Stands not to work on the clean jump,
> Nor wine nor brains perpetual pump,

was not only no poet, "but would have suffered rejection at the hands of a self-respecting greengrocer, who, for advertising purposes, required the assistance of a 'poet' to sing the superiority of his spinach." Mr. Kernahan continues:

"But for the publication of such unutterable doggerel as has been quoted, and by a writer who held that 'a man is relieved and gay when he has put his heart into his work, and done his best, but what he has said or done otherwise shall give him no peace,' we must look for some other explanation than is afforded by Emerson's want of a musical ear. The explanation is to be found in his theory that 'it is not meter, but a meter-making argument that makes a poem'—a theory which betrayed him into carelessness in regard to form and into indifference to detail which he could ill afford to indulge. He held that if the inward thought with which the poet's brain is pregnant be a thought of pure and perfect poetry, equally pure and perfect will be the outward form in which it bodies itself forth, when the time comes for this thought to be brought to birth. The poet, he says—

> Shall not his brain encumber
> With the coil of rhythm and number,
> But leaving rude and pale forethought,
> He shall aye climb
> For his rime,

and—

> 'mount to Paradise
> By the stairway of surprise.'

"To make matters worse, Emerson never had in him, as he well knew, the makings of an artist. 'Expect nothing more of my power of construction,' he writes, 'no ship-building, smack, nor skiff even; only boards and logs tied together. Here I sit and read and write with very little system, and as far as regards composition with the most fragmentary result; paragraphs incompressible, each sentence an infinitely repellent particle.' And, in reply to Carlyle, who had been urging him to give to the world something which should be distinctively Emersonian, he says: 'Alas, my friend, I can do no such gay things as you say. I do not belong to the poets, but only to a low department of literature—the reporters, suburban men.' . . . . . .

"For the right understanding of Emerson's poems, it is necessary to know something of his theory of the derivation of poetry.

"He holds that craftsmanship is nothing; vision everything. Let the divine vision be withheld, and to the very master-craftsman of poetic art Emerson would deny the high title of poet. Would we write a poem, we must—Emerson would tell us—prepare ourselves to report rather than to create. He holds that the poem already *is*, that it exists pure and simple in the mind of God, and that all we must do (I borrow a word from the schools) is to 'intend' our mood toward the Eternal Mind, and then wait for the divine thought to think in us. Sooner or later—unless we be utterly unworthy of the vision—we shall be conscious of our approach to a higher region of thought. Within us, our own diffused thought—suddenly become luminous—is gathering and culminating to a focal point of flame. There is light within us, and without. The light within us is but a spark in darkness; the light without—whether far off or near we know not—is supernal and supreme. Yet slowly, surely, as our inner light spires upward toward it, the splendor from above—a ladder of light let down from heaven—draws nearer and yet more near, until at last the two meet, and, to the creature, the revelation from the Creator has come. Our ability to remember and to record the vision is in proportion to our gifts as poets. To some of us it may be that not more than a verse or a line remains after the vision has passed, but that which we have so seen, Emerson believes, is of God and from God, and should be accounted of more worth than all the stored wisdom of the ages."

Mr. Stedman has said of Emerson's faultier work: "Not seldom a lyrical phrase is more taking for its halt, like the poet's own speech, by the half-stammer and halt that was wont to precede the rarest or weightiest word of all." Mr. Kernahan recognizes the truth of this criticism, but he believes also that many of Emerson's crudities and asperities "are the result of a certain wilfulness." As the mouthpiece of God's thought, he "had something of Wordsworth's lordly scorn for the man who can not forget 'copy' even in his secret communings with nature." The writer concludes:

"If Mr. Macalister had said that Emerson has left no perfect poem behind him, the statement might have passed unchallenged, tho Matthew Arnold was of a different opinion in regard to 'Concord Fight,' in which are to be found the two famous lines:

> Here once the embattled farmers stood
> And fired the shot heard round the world.

Nor should I have differed from Mr. Macalister had he quoted that letter of Milton's to Master Samuel Hartlib (the letter by which Matthew Arnold set such store), and had pointed out that Milton's first requirements in regard to poetry—that it should be 'simple, sensuous, and passionate'—are fulfilled by none of Emerson's work. Simple he certainly is not. It would be difficult to instance a more subtle and less simple poem than the four

verses entitled 'Brahma' which Mr. Andrew Lang has parodied so inimitably that it is difficult to dissociate poem from parody:

If the red slayer thinks he slays,
Or if the slain thinks he is slain,
They know not well the subtle ways
I keep and pass and turn again.

. . . "One wonders more than ever at Mr. Macalister's pronouncement that 'Emerson never wrote a line of poetry in his life.' To me it seems singularly unfelicitous. Had he said that it was only single lines of poetry which Emerson ever wrote, one would not have protested. . . . . .

"He was never more than a note-book draughtsman. His etchings and jottings are admirable beyond all words of praise, but the painting of a finished picture was beyond him. Poetry, that daughter of the gods, sat with him, walked with him, worked with him. It was only when he sought to transfer her living image to canvas that she eluded him and was gone. Yet, even as she fled, she not seldom mocked him by touching brush and easel with sacred fire."

## HAS ENGLAND A NEW SIR WALTER SCOTT?

THE new school of historical romance, sometimes dubbed the "Dime-Novel School," has at last apparently brought forth a writer who can command the praise of critics of acknowledged competence. In *The Fortnightly Review*, Mr. Frederic Harrison, widely accepted as perhaps the greatest living master of English prose and one of the ablest of critics, pays unwonted tribute to Mr. Maurice Hewlett's new novel, "The Life and Death of Richard Yea-and-Nay." He calls this story of Richard the Lion-Hearted "an elaborate, full, coherent romance, true to historic realism, ample in incident and plot, correct in pictorial tone—a truly romantic epic, wrought out from end to end by living men and women, playing their parts in due relation and sequence"; and he even boldly compares the novel with "Ivanhoe," with results not uncomplimentary to Mr. Hewlett. He writes:

MAURICE HEWLETT.
Courtesy of the Macmillan Co., New York.

"It is a true historical romance picturing a wonderful epoch—that of the third Crusade—not in its armor, robes, properties, and scenic *tableaux*, but with sufficient archeologic realism, and above all with insight into the heart of its men, if not altogether of its women. It gives us not only medieval pageantry—tho as a pageant it is effective—not only the outward manners of the age—life-like as these are—but the true nature of such men as Richard and John, their fierce parents, Burgundy and Austria, and many feudal barons; and it pictures them more accurately to the record, I hold, than is usual with romancers, and perhaps with historians. There is much to be said against portraying historical characters in fiction, at least when well-known personages are the central figures. It is hardly ever successful, and the greatest masters of historical fiction keep the great men for incidental and rare appearance—*nec deus intersit nisi dignus vindice nodus, etc., etc.* [the demigod may not appear unless the deed is worthy of such a champion]; but in principle there is no absolute canon of art against treating a real person as the central hero of an historical romance. Mr. Hewlett has shown us that this can be done. His Cœur-de-Lion is in the main the true Richard of documents, the crusader-king of history: seen, it is true, in the glow of romance; deepened, colored, poetized, but in essence the Achilles of the twelfth-century Palestiniad:

*Impiger, iracundus, inexorabilis, acer*
*Iura neget sibi nata, nihil non arroget armis.*

[Lazy, wrathful, inexorable, bitter,
He will rather deny himself natural rights than usurp by force of arms,]

And yet this 'splendid savage' has qualities of heroism, magnanimity, and capacity for love and for remorse which make him interesting—at moments even lovable—not so much as he seems to Abbot Milo, his almoner, or to Mr. Hewlett, his biographer, but yet of all characters in history the one best fitted to fill the title rôle of a romance of war, adventure, chivalry, and love.

"Mr. Hewlett has not shrunk from the perilous task of taking a famous character of history for his principal figure, making him indeed the sole hero of his plot and producing him on every scene. Nor has he shrunk from the yet more Quixotic venture of choosing as his hero the man whom the Wizard of the North twice brought into the field. But if he has not bent the now rather rusty bow of Ulysses, he has hit the mark with a bow of his own. . . . . .

"Mr. Hewlett has invented a form of singular terseness, raciness, and color crowded with images, sarcasms, and cryptograms. If his Richard were to be written in the flowing vein of the 'Talisman' it would fill six volumes; if told in the mode of 'Clarissa Harlow,' it would need sixteen. Mr. Hewlett's modest four hundred pages contain the matter of a dozen romances of the day. They will be read and reread by men who care for the higher literature. But as yet they may be found, it is to be feared, too 'deep,' too baffling for the easy-going millions. I make bold to say that Maurice Hewlett's prose—*at its best*—is hardly matched by any of recent time. Take the death-scene of Henry II., Plantagenet, whom our Abbot paints too darkly as a man, and without due regard to his great services to English monarchy. With more truth Mrs. J. R. Green has told the story in the fine close of her 'Life' of the King. But hear the Abbot (Chapter xii.): 'How They Bayed the old Lion'—'A slow-eating fever bit him to the bones, charred and shriveled him up'—'he took to his bed, turned his face to the tent-wall, and refused alike housel and meat.' He called for Hugh, Bishop of Durham, to read to him the signatures of the enemies who had forced him to ignominous terms. At the name of Richard, his eldest son, the king 'grunted "Traitor from the womb."' Hugh dares read no more; the King snatches the parchment:

"'He pored over it, with dim eyes almost out of his keeping, searching for the names at the top. So he found what he had dreaded—"John Count of Mortain." Shaking fearfully, he began to point at the wall as if he saw the man before him. "Jesu! Count by me, King by me, and Judas by me? Now, God, let me serve Thee as Thou deservest. Thou hast taken away all my sons. Now then the devil have my soul, for Thou shalt never have it." The death-rattle was heard in his throat, and Hugh sprang forward to help him; he was still stiffly upright, still looking (tho with filmy eyes) at the wall, still trying to shape in words his wicked vaunts. No words came from him; his jaw dropped before his strong old body. They brought him the Sacrament; his soul rejected it—too clean food. Hugh and others about him, all in a sweat, got him down at last. They anointed him and said a few prayers, for they were in a desperate hurry when it came to the end. It was near midnight when he died, and at that hour, they terribly report, the wind sprang up and howled about the turrets of Chinon, as if all hell were out hunting for that which he had promised them. But, if the truth must be told, he had never kept his promises, and there is no reason to suppose that he kept this one either.' . . . . . .

"One can not shirk the question (about which too much is being said)—how does this Richard look beside him of the 'Talisman'? No doubt, the task on which Mr. Hewlett has ventured is far the more perilous; for, whereas Scott makes his Richard in the 'Talisman' quite subordinate, and in 'Ivanhoe' produces him merely in a sudden glimpse, according to the master's rule as to historical personages, and perhaps according to the true rule, Mr. Hewlett takes a prominent historical personage as his central hero, and undertakes to paint the inmost nature of a man of whom we have abundant records by contemporaries. In spite of this difficulty, it is plain that Mr. Hewlett's portrait is far closer to that left us by John of Peterborough, Ralph de Diceto, Roger of Hoveden, William of Newburgh, Richard of Devizes, and the so-called Vinsauf, and the rest. Mr. Hewlett gives us some flavor of the real Richard, some authentic glimpse of the true twelfth century, with all its poetry, passion, madness, and blood."

## ENGLISH VERSUS FRENCH AS A WORLD-LANGUAGE.

THE German Emperor, speaking recently of the relative importance of the classical and the modern languages, advised more extensive instruction in French and English. Inasmuch as French alone has been obligatory in former days at the *gymnasia*, some French papers have seen in this advice a thrust at France. The *Journal des Débats* (Paris) nevertheless says that the Emperor merely gives to English that increased importance which naturally belongs to it. This is also the opinion of the *Gaulois* (Paris), from which we take the following:

"At one time French was predominant as the language of diplomacy, of literature, of society. Perhaps it still holds its own in these respects. It is still the best medium for lively, graceful conversation, still the best means to express clearly all international agreements. But that only proves the value of French as an international means of communication in the aristocratic world. As long as the study of languages was the privilege of exclusive circles, nothing could disturb the supremacy of French. To-day the French language only shares in the depreciation of every thing aristocratic. The business man rules the world and the business man cares but little about the beauty of a language. It is the young merchant who tours the world nowadays, instead of the young gentlemen who used to frequent courts and universities; and the merchant prefers the language of the people to whom he would sell his goods. We are not the most prominent nation in trade and colonization, hence the study of our language is less important than that of others. The crisis of the French language is not due to our social or literary decadence, but to economic inferiority.

"At present the business impulse is undoubtedly strongest in Germany. But the German has encountered the Englishman everywhere as a competitor. Germany finds England as England found Holland. The English learned the secret of trade from the Dutch, the Germans have learned it from the English. In this kind of struggle the nations at first combat each other, but they soon come to terms, especially if they are similar in race and language. The period of violent competition and enmity between Germany and England has been but short, nor has it been very critical. Its most prominent feature is the English regulation to stamp German manufactures as 'made in Germany,' a measure which has not hurt the Germans, and is not nearly so full of animosity as Cromwell's Navigation Act. To-day the English and Germans have settled down to friendly competition. That, then, is the reason why the young men of the German middle classes, who are not intended to become cavaliers, nor men of the world, but business men and industrials, are advised by their Emperor to learn English rather than French."—*Translations made for* THE LITERARY DIGEST.

## THE EDITOR AND THE BLUE PENCIL.

ONE of the most amusing literary incidents of the season is to be found in the complications arising from the publication of Mr. John D. Barry's novelette, "The Congressman's Wife," in *The Smart Set*, a publication prepared with great care for the exclusive tastes of our American aristocracy. Mr. Barry's story, it appears, took the handsome prize of $2,000, offered by the publishers of this periodical. Shortly before its publication in the January issue, Mr. Barry made a public protest on account of "the appalling number of verbal changes, all unnecessary, many trifling or silly, several ludicrous, two containing errors of speech." His protest runs in part:

"The quality of the editing may be judged from this change. Where one of the characters, a young graduate of Harvard, a Northerner, had remarked, 'Well, I guess it's all over,' the editor made him say 'It looks like it's all over.' When I objected to this phrase and to other phrases, Mr. Grissom declared that he had 'merely edited the manuscript according to the elegancies of *The Smart Set*.' I then tried to withdraw the story, but Mr. Grissom refused to give it up."

The news of this summary and elegant method of "improving" literary manuscripts has provoked a sympathetic response in many hearts throughout the country, and it appears that Mr. Barry is not alone in his chagrin. An anxious inquirer writes to the New York *Times* to ask if there "is an author at present writing for publication who can write one thousand words so well that an editor can not improve it?" He says:

"I happened into a magazine office the other day, where a youngster not out of his twenties was busily engaged with his blue pencil on a manuscript, which developments proved to have been a story by one of the best-known English story-writers. In response to an inquiry the young man exultantly replied that he had 'greatly improved' the story. These are two instances of as many hundred thousand, I fancy, and the work goes on. What right have editors thus to use the work of skilled laborers? Isn't it fair to suppose that the author knows how to say what he wants to say? Or is he to sacrifice his own ideas to the ideas of the editor? In other words, are we to have a magazine literature characterized by the individualities and methods of the author or of the editor? Certainly the editor has the whip-hand of the author and can make him appear to the reader as he pleases, but is it fair to the author? Writers often do not know what liberties are taken with their work until it appears, and oftener they submit because they need the money the article will fetch, and opposition to the editor means a difficult market. This conforming to the ideas of editors has resulted in establishing styles of writing, not according to the authors, as in the days of Addison, but according to the magazines in which the writings appear and Addison and Steele and Sterne and the rest of them have disappeared, to give place to the '*Century* style,' the '*Harper* style,' the '*McClure* style,' the '*Munsey* style,' the '*Cosmopolitan* style,' and so on through the list. . . . Isn't it about time we should have a literary reformation? Isn't it about time that the author, not the editor, be allowed to make the literature of the age?"

## NOTES.

WORKMEN are now actively engaged in restoring the Parthenon at Athens. One end is nearly completed and work is proceeding on the other portions. The London *Sphere* says: "The restoration work is not being carried out with old fragments of marble which have been dug from the surrounding earth, but with newly quarried marble, the glaring freshness of which is reported to contrast violently with the mellowed stones of the ancient temple of Athena. It is surprising that the news of the work now in hand, which aims at nothing less than the complete restoration of the Parthenon, should have only reached us after the completion of one end of the building. There are several foreign schools at Athens which might well have interested themselves in the defense of this most perfect specimen of Greek architecture to the extent of appealing to a country which has always been particularly interested in the historical monuments of Greece."

OF "Ralph Connor," whose stories entitled "Black Rock" and "The Sky Pilot" have found so many readers during the past year, the New York *Evangelist* says: "Certain it is that Ralph Connor shares with Ian Maclaren the art of writing genuine religious stores which have about them the breeziness of the world of nature and a close grip on human nature. Like John Watson, Rev. C. W. Gordon—for this is Ralph Connor's real name—is a minister. He is now pastor of St. Stephen's Church in Winnipeg, Canada. He comes of sterling Scottish stock and was born in 1860 in the heart of a Canadian forest, where he acquired his passionate fondness for the woods and the open air. He was educated at Toronto University and took a course in theology at Knox College, after which he spent a year in Edinburgh and on the Continent. His first regular ministerial work was at Banff, in the heart of the Rockies, where for two years he ministered to a little Presbyterian church.

THE amount of literature already devoted to Tolstoy is very large. A Russian journal, quoted in the *Etats-Unis*, says that a writer in commemoration of the approaching jubilee of Tolstoy's half century of work has compiled a list of translations and criticisms that have appeared in some forty languages and dialects. The first non-Russians to notice him were the Greeks (1870). Then follow Slovaks, Servians, French (1877); Hungarians, English, Danes, Czechs, Germans (1882), and many others, including the Croats, Little-Russians, Finns, and the writers of several Slavic dialects. American versions appear in 1886, Dutch and Italian in 1887, Spanish in 1889, Turkish and Syrian in 1894, Wendish in 1895, Chinese, Japanese, Yiddish and old Hebrew still later. In the number of publications, German takes the first place with 218. The French publications number 159, the British 75, the Spanish 38, the American 32. There have been four publications in Swiss-German, Yiddish, and Japanese, two in Chinese, 34 in Swedish, 27 in Danish, 6 in Norwegian, 18 in Greek, 11 in Italian, 26 in Finnish, 66 in Bulgarian, 69 in Servian, 141 in Bohemian or Czech, and 82 in Slovak!

## SCIENCE AND INVENTION.

### DRUNKENNESS AND THE WEATHER.

IT seems scarcely possible that the weather can drive men systematically to drink, yet that it does so is the conclusion reached by Edwin G. Dexter after a careful investigation of the subject. Mr. Dexter, who has previously made other careful studies of the influence of meteorological conditions on human conduct, describes this one in the *Annals of the American Academy of Political and Social Science* (Philadelphia, November, 1900). He says:

"At first thought there would seem to be very little connection between the prevalence of intoxication and the weather. Most of us can probably not recall a time when it has driven us to drink. Yet the influence of different weather states upon conduct has been proven so great by the other studies alluded to as to warrant some little expectation of positive results, even at the outset of this. With a great many people the occasional debauch is not a matter of mere caprice. It is not even by them a thing to be desired. The pleasures connected with it in no way compensate for the attendant hardships and miseries, both of body and mind. They struggle against it with an intensity unknown to those whose bodies have not been weakened by indulgence, and when the fight is finally lost it is because the allurements of the glass are stronger at the moment than at any previous time during the struggle, or the ability to withstand them less. The weather could not, with any degree of probability, influence the former. It is not beyond the bounds of reason to suppose that it might the latter, through affecting the vitality of the body together with its accompanying mental states; and it is for the purpose of throwing light upon this possibility, with its important bearing upon the drink problem, that the present study was undertaken.

"Its exact method is as follows: From the records of the New York City police were copied the number of arrests for drunkenness within the city limits (present borough of Manhattan), for each day of the three years 1893-94-95: 63,117 in all. Of this number 44,495 were of males—for the sexes were tabulated separately—and are the only ones here considered. At the New York station of the United States weather bureau were then copied the mean temperature, barometer, and humidity, the total movement of the wind, the character of the day, and the precipitation for each of the 1,095 days of those three years. Next, by a somewhat laborious process of tabulation, the exact number of arrests for drunkenness for days falling under each one of the fifty or more definite meteorological conditions . . . . was ascertained. This being done, the average number of such arrests for days falling under each one of those conditions was compared with the normal daily number for the three years."

Taking up first the occurrence of drunkenness in the different months of the year, the writer finds that it is forty-seven per cent. less in July than in December. He says:

"These differences are too great to be ascribed to mere accident, tho exactly what their causes may be is somewhat uncertain; in fact, an analysis of the conditions indicates the possibility of at least three. The first is the effect which certain holidays might have upon the occurrence of drunkenness. Undoubtedly some days of the year are made the occasion of a drunken debauch by persons so inclined, and Christmas is one of them. This would tend to increase the number of arrests for December. But the Fourth of July is perhaps just as much of a favorite for such diversion, a fact which would swell the numbers for July. This month, however, fails to show any such effect. In fact, a careful inspection of the daily record of arrests for drunkenness, altho showing a slight increase for the festivals mentioned, proves it to be too small to account for the monthly showing. The excesses for the cold months are due to a large daily occurrence, pretty evenly distributed, and the deficiencies for the warm ones to the reverse conditions. . . . . .

"Another social condition which may affect the results is the exit from the city for the summer of many who are brought with some regularity during the other months before the bar of the police court. Undoubtedly Coney Island—which was not within the city limits when the data for this study were taken—and many of the other shore-resorts form something of a safety-valve for the New York police during their season: but my study of assault and battery would lead me to believe that the influence of this exodus can not be great.

"We are dealing only with those who get publicly drunk, and those are the ones who occasionally vary the monotony of a plain drunk with a fight. We could, then, with reason infer that if the public drunkards were gone in any considerable numbers, the public brawlers would be also. Yet this is precisely the reverse of what our study of assault has shown."

The third hypothesis is that of the direct influence of the peculiar meteorological conditions, and it seems to Mr. Dexter to be the most plausible. Taking up special weather conditions, he shows that drunkenness is increased by low temperature, to some extent by high barometer, by high humidity, and also by high wind. In all these cases Mr. Dexter explains his results by the supposition that these weather conditions exhaust the vitality and cause craving for a stimulant. He concludes as follows:

"In conclusion, I would say that I recognize the limitations of this method of study. By its very nature, each meteorological condition is treated as if the others were not at the same time potent. This fact would introduce no error unless two or more tended to vary simultaneously. In that case the effects of one might be imputed to another. If all tended to vary without fixed relation to one another the showing for each would be valid and a careful study of weather fluctuations seems to show that this is largely the case. We recognize, too, that a study of drunkenness does not have quite the bearing upon the liquor question that one based upon the consumption of stimulants, as influenced by weather conditions, would have. We have argued that the latter affect to a recognizable degree the vitality of the body, and that deficiencies are compensated for by the use of alcohol in some of its forms. But in studying drunkenness we are missing entirely all those whose 'bracers' did not lead on to a debauch. Where the feeling of depleted vitality led one man to the police court it probably led a hundred others to the sideboard or to the saloon for a drink, but of these we know nothing. It may be possible at some future time to base a study similar to this upon the daily output of some large city saloons, with striking results.

"Certain it is that the great drink problem can not be solved without having more scientific light thrown upon the psychophysiology of the mass. As long as people demand stimulants, it will be obtainable. Lessen the demand, and the attendant suffering will keep pace with its decrease. We can not hope to alter prevailing meteorological conditions, were we convinced of their direct bearing upon the problem; but we can lessen their influence by shielding the unfortunate from their rigors, and by increasing in every possible way the normal vitality of the class which most needs it."

---

**South-Polar Expeditions.**—The results of the Belgian South Polar expedition of 1898 and 1899, which were published late last year, will be a source of inspiration to similar projects for the next few years. In a recent number of the *Bulletin de la Société Géographique* (Brussels), the interest of these results is strengthened by individual reports of scientific observation, contributed by members of the expedition. Among the facts established by the Belgian expedition, not the least interesting is the discovery that there is no submarine continuation of the Andes to antarctic lands, after they bend to the southeast in Terra del Fuego, the measurements effected by the *Belgica* south of Staten Island showing that the bed of the ocean sinks abruptly to a depth of 13,000 feet. It was also ascertained through numerous soundings, made during the year in which the ship drifted in the ice, that from the seventy-fifth to the one hundred and third degree of west longitude and between the seventieth and the seventy-first degrees of latitude the expedition moved over a submarine reef of enormous extent, the average depth of which, 1,600 feet, continued until the reef sank suddenly toward the north to a depth of almost 5,000 feet, while toward the south its depth decreased steadily everywhere. This fact and measurements of this submarine plateau seem to contribute much new

strength to the hypothesis of the existence of a great Antarctic continent, a view, moreover, that to-day predominates generally, since all observations, including those by Borchgrevink, particularly the meteorological, are in perfect consonance with it. Along the Belgica Straits, which separate the Palmer archipelago from the mainland of Graham's Land, signs of a general subsidence of the country were everywhere perceptible. Priority in the discovery of these straits does not belong to the Belgian expedition by any means: it has been ascertained that they were sighted in 1874 by a German, Captain Dallman, who, having reached their southwestern entrance, called them the Bismarck Straits. Consequently, and also because the Belgian expedition designated other regions anew, the nomenclature of this field must be revised and the old names restored. The Belgians, however, can claim that the survey of the Bismarck (Belgica) Straits was exclusively their work. Arctovski, the meteorologist of the Belgian expedition, now proposes in *Ciel et Terre* a combination of methods for the investigation, in 1902, of atmospheric circulation in the antarctic regions south of Terra del Fuego, and solicits the cooperation of Chile, France, and Russia.

Of the south-polar expeditions that are announced for 1901 only the German and the British are assured. Their plans promise very prolific work in submarine, meteorological, and territorial discovery.—*Translation made for* THE LITERARY DIGEST.

## A NEW KIND OF BREAD.

A SOCIETY has just been formed in Paris to promote the establishment in all the large French towns, of combination milling-and baking-houses, worked by machinery known as the "Schweitzer system." This has for its object the making of 100 kilograms (220 pounds) of nutritious and digestible white bread from 100 kilograms of grain at the lowest cost of production. The United States consul at Roubaix, as quoted in *Popular Science*, says that the model establishment, which is at La Villette, Paris, opened its doors to the public on June 15, 1899. Says this paper:

"At a meeting of the society in December last, a report was made concerning the success of the effort to supply good bread at a low price to the Parisian public. In the bakery at La Villette, and the branch houses, sales are rising daily. Official analyses by the National Agronomical Institute and by the Municipal Laboratory of Paris demonstrate that the Schweitzer bread contains more nutritive nitrogenous properties than ordinary baker's bread, and more than double the phosphates in the latter.

"The bread known as *pain de ménage* is sold to the working classes at about 1¼ pence [2½ cents] per pound, considerably less than the usual price. The Villette establishment is a building of iron and stone, about 515 feet long, situated on a canal, and constructed at a cost of about 40,000 pounds sterling [$200,000]. The wheat arrives in a boat, which is moored in a canal, elevators hoist it into bins, whence it is carried by an immense elevator to the top of the mill, and turned into the different cleaning and separating machines. After all foreign substances have been removed and the grains of wheat have undergone a thorough brushing and washing, they are clean and shining; but the grooves of the wheat sometimes retain a little dust.

"This is completely eliminated by a Schweitzer appliance, which, seizing each grain lengthwise, splits it exactly in the groove. The wheat thus cleansed passes into the mill, composed of flat circular steel grinders, grooved in such a manner that they accomplish the decortication of the kernel and its granulation into meal at the same time. These grinders are movable, but do not touch, so that instead of crushing the wheat and producing a flour in which the starch only is retained, the outer and harder portion of the wheat, containing gluten and other nutritive properties, is retained in the flour. The bran alone is expelled. Attached to the mill are the works for kneading the meal, water, and yeast into bread.

"All this is done mechanically, the works being separated into three stories. Special yeast is prepared in the upper story in rooms heated in winter and cooled in summer. The yeast, flour, and the salted water are carried down by machinery into kneaders, in the form of half-cylindrical tubs, rotating on two pivots placed in the axis of the kneading-troughs, so that the tubs may be placed at a lower or higher angle, in order to accelerate or retard the kneading. The wheat, salted water, and yeast automatically enter one end of the tub, and dough, in an endless skein of pale yellow, issues from the opposite end. This dough finally falls on tables on the ground floor, where it is weighed and made into bread of every shape and dimension. In connection with this model establishment is a laboratory for the chemical examinations of the samples of wheat submitted for purchase. These are, upon arrival, ground and passed through a sieve by a small hand-bolting mill, which determines immediately the nutritive volume of the grain in gluten and nitrogenous matter."

## WHEN NATURE'S STORES GIVE OUT.

WE are treating nature's storehouse as if it were exhaustless, but we know very well that it is not. Even the food that we eat, tho it grows up afresh for us every year, is not really renewed, for each fresh growth uses up a little more of the nitrogen in the soil. At some time or other this problem will become a pressing one. A writer in *Engineering News* (January 31) believes that its solution offers the greatest task that the engineer has to perform in the century that is just opening. The distinctive work of the nineteenth century has been the harnessing of nature's great powers for man's use; that of the twentieth will be the replenishing of the "world's failing stocks in nature's storehouse." Says the writer just referred to:

"When future generations look back upon the nineteenth century, whose work we now regard with such pride, it is quite possible that their chief sensation will be wonder at the profligate waste that characterized the people who first made large use of the earth's stored-up riches.

"We shall not be far from the truth if we say that, until the nineteenth century, mankind was content to live off the annual produce of the earth. A trifling use was made, indeed, of the fuels and metals and minerals stored beneath the soil; but it was a mere nothing compared with the drafts which the closing years of the nineteenth century have made. A moment's thought will show the truth of this statement. Take our most used mineral, coal. When the nineteenth century began, the railways and steamships, which now make such enormous drafts on the world's coal seams, were undreamed of. The stationary steam-engine had had its beginning, but its use was still so limited that it cut no figure at all in the world's coal consumption. The principal use of coal was for household fires and for the crude metallurgy of the day, and this only in countries like England, where the removal of the forest growth had caused a scarcity of wood and of its product, charcoal.

"With no railways, no steamships, no factories and mills, the consumption of metals was almost as trifling as that of coal. Not until the nineteenth century, and indeed not until the last two thirds of that century, did mankind begin to make any appreciable drafts upon the treasures laid up in nature's storehouses.

"For the last fifty or seventy-five years, however, the use of these stored materials has been prodigious. Each year sees an increase in the consumption of all the things which the earth yields; and we are accustomed to point to this growth as evidence of the world's advancement in civilization. Is it not time to ask ourselves whither all this is tending? A man cast on a desert island who should fail to take account of his supplies and then plan to husband those in which scarcity threatened, would justly suffer for his improvidence. Is it not time that mankind took account of its rapidly diminishing stores of natural wealth in order that means may be provided for husbanding such as seem likely to be first exhausted?

"Something in this direction has indeed already been done with respect to certain commodities in which scarcity is already impending. Investigations have been made of timber consumption, of the stocks of unmined coal, of the prospect that the supply of gold will be equal to the demands of commerce, of the growing scarcity in many species of food-fishes which once swarmed in rivers and seas. There is great need, however, for

more investigations of this class, and for the dissemination of more accurate information upon these subjects."

Beginning a partial enumeration of the things in nature that are being used up, the writer mentions food as the most important. This depends on soil-fertility, and this in turn on the available quantities of certain necessary mineral elements—nitrogen, potash, and phosphorus. Nitrogen we may yet be able to get from the atmosphere; but the others are found in deposits that will one day be exhausted. So it is also with fuel; coal deposits are still huge, but certainly not inexhaustible. We replace coal for the production of power by the use of water or wind, but nothing else will serve when heat is desired. The same is true of petroleum, of the metals, and of the various valuable mineral deposits. What shall be done about it? The first thing, the writer thinks, is to economize; and economy must be enforced if necessary. He says:

"In the last analysis, legally as well as morally, public necessity has always a higher claim than any right of private property. It is entirely within the abilities of civilized governments to provide for such manifest necessities of the future as the conservation and perpetuation of the timber supply, the economical use and prevention of waste of the earth stores of petroleum, phosphorus, coal, and any other products in which present consumption threatens to bring the world to an early famine. No rights of private ownership to use or waste at will are paramount to the public necessity."

## MOVEMENTS OF THE EYE IN READING.

READING, one of the commonest occupations of our life, is, as every one knows, curiously, and often disastrously, fatiguing. Eye specialists have long urged that the reading in schools is the real cause of the recent marked increase of short-sightedness (myopia). Again, careful tests have shown that some persons can read even four times as fast as others who possess apparently an equal amount of intelligence. Here, then, are problems of practical importance. Can printing be done in such a manner as to lessen fatigué, to prevent the increase of short-sightedness, to increase the reader's speed and facilitate his interpretation of the matter before him? Such problems are now being investigated by experts in laboratories of experimental psychology. In a recent number of *The American Journal of Psychology*, Dr. E. B. Huey contributes an unusually interesting article from the Clark University laboratory, which may clear up some of the mechanical details of this problem.

The cornea of the left eye was rendered insensitive to pain by the use of holococain, and a very light plaster-of-Paris shell, with a hole drilled through its center, was attached directly to the eyeball, being held in place by suction. This shell was connected with a system of light aluminum levers in such a way that the movements of the eyeball were traced in an enlarged form upon a moving sheet of smoked paper. By ingenious electrical devices, the traveling point of the lever recorded not only the movements of the eyeball, but also the speed with which these movements took place, and the time occupied by the eye in each movement could be correctly determined down to a thousandth of a second. This is what the tracings of the lever showed according to the account just mentioned:

"The eye moves over the matter line by line in all cases or in very nearly all. The movement along the line is in no single case continuous, but by quick jerks of varying length. . . . The return sweep of the eye is almost invariably unbroken until near the end, when an occasional halt is made apparently to enable the eye to get its bearings in a new line. [These halts] are more numerous in the long line passages than in the shorter ones."

In reading a *Cosmopolitan* article, the average number of movements to each line is slightly over three, and the ordinary newspaper line gives nearly the same result. A line of but 21 millimeters [less than an inch] length may be read without any lateral movement whatsoever. The eye seldom moves along the whole extent of the line. It starts from a point somewhat to the right of the left margin, and then moves, by a series of jerks, to a point to the left of the right margin. This indentation is usually greater at the right.

Another interesting feature is that of the speed with which the eye jumps forward along one line, and sweeps back to start the next. Dr. Huey found that all the jumping movements, altho they varied considerably in length, occupy, curiously enough, about the same time, approximately forty-four thousandths of a second. The return sweep of the eye, altho it traveled three or four times as far as it did in making the short jumps, occupies only fifty-five thousandths of a second.

How long, now, does the eye remain still between each of the forward jumps? Careful measurements are given to show that the pause generally occupies about one hundred and eighty-five thousandths, *i.e.*, about two tenths, of a second. "Skimming" decreases this time. "The passages read at maximum speed show a decrease in the length of the reading pause, and, as the speed of movement is not increased, it would seem that increase in speed in reading is brought about solely, or at least mainly, by decreasing the number and duration of the reading pauses."

The author concludes that the ordinary newspaper line possesses the length which is most favorable to the reader's eyes. We understand that, as a result of these investigations, the final reports of the present national census are to be printed in two narrow columns instead of in one wide one as formerly.

## SUBMARINE RIVERS.

THAT many rivers flow beneath the earth's surface is a well-known fact; that others flow beneath the waters of the sea is not so widely understood. The latter phenomenon is dependent on the former, the submarine fresh-water streams being in all cases the mouths of subterranean rivers. They may keep on their courses for some distance, however, beneath the heavier salt water, and may even cut channels in the sea-bottom before they are dissipated. The subject is treated in *La Nature* (January 5) by a contributor signing himself "R. S.," who writes as follows:

"Only a few months ago Mr. H. Benest, a talented English geographer, published in the bulletin of the London Geographical Society an interesting study of the subject indicated by our title; that is to say, on streams of fresh water flowing beneath the surface of the sea. This truly curious phenomenon has also recently been studied by the Geographic Institute of Brussels. . . . . .

"It is a curious fact that disasters to ocean telegraph-cables first called attention to this subject. On several occasions, about 1895, a new and well-made cable between Cape Verde and Brazil broke. Soundings were made to discover whether these breakings were due to the state of the sea-bottom, and it was found that the place in question was near the submarine mouth of a subterranean river; the alluvial material transported by this fresh-water stream encountered the cable and finally succeeded in breaking it. The fact is, that a river that flows into the lagoons of Yof, on the coast of Senegal, is finally lost in the sand. It undoubtedly has taken its invisible course to the sea, and it is this river that has been discovered in the deep hollow of more than 1,300 meters [4,270 feet] that is traversed by the Brazilian cable. Also, while the cable was being repaired, at a point 24 kilometers [15 miles] from the shore, the repair-ship was surrounded one day by orange-skins, calabashes, and bits of cloth which could not have come from the mouth of the Senegal River, 140 kilometers [90 miles] distant.

"As an explanation of this curious phenomenon and of others like it, we may suppose that the ancient surface-channels by which fresh-water streams have reached the sea have sometimes become buried in sand and débris, through which the water now

flows. When the continued passage of the water has had sufficient effect in undermining the sea-bottom, a movement of the earth is produced, and if a cable is laid at such a point it may be broken by the sudden tension to which it is subjected. This has been shown in the case of the river Rovuma on the east coast of Africa. Also to the north of Arica, Peru, is a river that disappears suddenly into the sand and flows invisibly toward the sea, when it forms a submarine stream.

"We might also cite the characteristic example noticed 18 kilometers [10 miles] west of the Peruvian port of Talara; in this case, as in others, it was seen that the bottom of the sea was a real river-bed, with a considerable lowering of level. Some distance in the interior there is a chain of lakes whose outlet is lost in a rocky chasm and the water thus swallowed up is doubtless that which appears again off the coast of Talara.

"Captain Lugar has discovered, 600 meters [1,000 feet] southwest of the island of Saba, in the Antilles, the emergence of a strong sheet of fresh water that spreads out in concentric circles. Even in France we have a typical case in the lake of Osseğore, to the north of Cape Breton, whose outlet flows to the sea under the sands of the coast and probably in the deep channel cut long ago in the sea-bottom by the ancient mouth of the Adour. Examples could be multiplied in the seas of Europe; these are, notably, the streams of fresh water seen rising from the muddy depths between Barton and Messle, or from the estuary of the Thumber in Great Britain, or yet again the fissures in the sea-bottom that give forth a mass of fresh water off St. Margaret's in the County of Kent. . . . . .

"It is evident that these peculiar cases may be quite easily explained by means of the innumerable fissures that cover the surface of our planet, of which M. Martel has made so interesting a study; but the phenomenon is little known in this odd form of a spring of fresh water rising in the midst of the sea."—*Translation made for* THE LITERARY DIGEST.

**Substitute for Coal.**—It is reported that a workman named Montag, in the Hemshof dye and soda factory, near Mannheim, Germany, has invented a substitute for coal which costs about 25 cents per 220 pounds to manufacture. The process is described by A. L. Frankenthal, United States consul at Berne, in *The Advance Sheets of Consular Reports*, issued by the Government (January 29), as follows:

"Peat is the basis, with addition of certain chemicals which, up to the present, are the secret of the inventor. Parties who have seen the product burn say that it gives a great heat, burns with a bright flame, and leaves no slag and only a small quantity of white ash. Certain Mannheim capitalists have tried to obtain the secret from the inventor by offering him a position as director in a company to be established, giving him a salary of $4,000 and two per cent. of the net profits; but he has refused this offer, because he wants to control the sale of the invention himself. Capitalists now claim that Montag asks too high a price. Mr. Gehrig, the secretary of the Mannheim Chamber of Commerce, has, it is said, undertaken to procure the necessary means to commence the manufacture of the article in partnership with the inventor. They have bought 25 acres of peat land and have bonded 125 more in the vicinity of Hockenheim, where they will erect the necessary buildings, large enough to keep several hundred men at work. It is figured that the daily output will be 60 tons. It is said that the peat is thoroughly dried, ground by a machine, mixed with the chemicals, and pressed into brick shape."

---

**Lack of Progress in Wireless Telegraphy.**—Despite the numerous reports of startling disclosures about to be made of developments in wireless telegraphy, *The Electrical World and Engineer* finds that there has been very little of actual achievement as yet. It proceeds to ridicule some of the newspaper stories, and then comments as follows:

"Meanwhile, in those corners of the world in which the wireless telegraph is really needed things appear to remain *in statu quo*. In pursuing our inquiries, we found that a number of wireless telegraph sets had been sent to the seat of war in South Africa, and had been successfully used in communicating between war-ships sufficiently far removed from the firing line. Meanwhile the search for De Wet goes merrily on, and the only Boers found are discovered after the manner of carpet-tacks on one's bedroom floor. It is all very interesting and instructive, of course, to learn that the wireless telegraph is at the front, but what is it doing there? Also in the Chinese campaign, we found that what little communication was established at all was due to the dexterity of the wideawake little Japanese in running telegraph wires. In the practical work of a campaign, the new method seems as yet to have found no place. We learn that our army authorities are doing some capital experimental work, but in spite of the work done nothing published here or elsewhere seems to indicate very startling success in the line of military communications. For special commercial purposes between fixed and not too distant bases the outlook seems rather better, but of definite achievements we hear but little. An exception to the rule should be made in the case of Professor Fessenden's work for the Weather Bureau, which promises to result in the first real practical application of wireless telegraphy in this country to useful purposes."

---

**Telephoning without Conducting-Wires.**—In a recent test of wireless telephony across the Mississippi River, at St. Paul, reported in *The Evening Post* (New York, January 8), evidence was given of the utility of the method which may result in the adoption of the plan when the mechanism has been perfected. The report runs as follows:

"The distance across the river at that point is one thousand feet, and, in spite of a strong wind and extremely cold weather, conversation was carried on with little difficulty. The name wireless telephony is something of a misnomer, as wires have to be used. One hundred and fifty feet were stretched parallel to the river on each side, and the transmitters and receivers were attached to each set, the voice vibrations being carried across the river from one and registered on the other. For a time the experiment worked well, but before long the moisture in the breath got into the diaphragms, freezing them to such an extent that they had to be thawed out, and then did not do as good work. . . . The first trial was with five volts of battery, and the sound of the voice could be heard, altho words could not be distinguished. Later, without any change in apparatus or current, the words could be distinguished as easily as in a direct telephone, and afterward the sounds were muffled and could not be distinguished. Other batteries were then attached, five at a time, finally cutting in with twenty volts on one side of the river and five on the other. The operator at the five-volt end could not only understand what was being said to him, but could hear others talking on the bank of the river near the transmitter."

---

## SCIENCE BREVITIES.

A FRENCH investigator has come to the conclusion that the brains of military and naval men give out most quickly, says *The Medical Record* (December 15). "He states that out of every 100,000 men of the army or naval profession 199 are hopeless lunatics. Of the so-called liberal professions, artists are the first to succumb to the brain strain, next the lawyers, followed at some distance by doctors, clergy, literary men, and civil servants. Striking an average of this group, 177 go mad to each 100,000. Domestic servants and laborers are not far behind; the professional men supply 155 out of each 100,000 as candidates for the lunatic asylum. Next, but with a long interval, come the mechanics, of whom only 66 in each 100,000 lose their wits. Wonderful to relate, commercial men retain their sanity the best of the whole group, as they send only 42 out of 100,000 to the madhouse."

"THE English victims of arsenic poison in beer," says *Popular Science*, "now number more than sixty dead and more than one thousand ill. The area affected is confined within a hundred-mile radius from Manchester, but the panic among beer-drinkers has spread almost throughout the whole country. It has been completely established that the cause of the poisoning is arsenic in the sulfuric acid used in the manufacture of glucose which the English brewers employ in place of malt and hops in making cheap beer. The poison has thus far been traced to only one establishment, which supplied glucose sugar to several breweries in the Midlands and the north. . . . An analysis shows that some beers sold in saloons contain arsenic sufficient easily to kill any persistent drinker, as much as one sixth of a grain being found in a pint. The fact that arsenic is a cumulative poison makes it more dangerous."

# THE RELIGIOUS WORLD.

## A JEWISH PLEA FOR THE ABANDONMENT OF JUDAISM.

A CERTAIN amount of animosity toward the Jews is encountered among all Aryan races. In the *Preussische Jahrbücher* (Berlin), a Jew, Benedictus Levita, discusses this ancient prejudice, and comes forward with an unprecedented proposal. Altho he has in mind mainly conditions in Germany, his remarks will be found applicable to most countries. We summarize his article as follows:

Political equality is granted to the Jew in theory, but in practise it is not fully given. Social equality is often denied, and it must be admitted that only a fraction of the Jews are ripe for a perfect union with the rest of the people. Not at all fit for such a union are the mass of orthodox Jews. In physique, language, mode of life, and way of thinking, they are sharply distinct from the Christians and from the rest of the Jews; and they have no wish to coalesce with their neighbors. Not quite fit are those who, tho not orthodox, value their Judaism, but ignore the race problem, and deny the existence of a Jewish question. Fully fit for union are those who see nothing but a useless load in their Judaism.

Our cause has retrogressed of late. We are no longer permitted to become army officers in Prussia. A few of the smaller states deny government positions to Jews altogether. This sort of thing embitters, but it is a situation that can not last. More important is the social boycott. Very many clubs and associations nowadays refuse us membership. Among the upper classes good manners forbid such rough denials, but even here we do not get beyond commonplace civilities. In such circles marriage with Jews is counted impossible; even wealth can not overcome the obstacles to it. But all this feeling changes when the Jew is baptized. The state drops its objections, and society willingly opens its doors to the convert. Now, as the baptism is generally sought for reasons other than those due to religious conviction, one would say that the Jew, in order to become an equal, must show himself to be a rascal without character; and this explanation is preposterous.

The fact is that the German is much more religious than freethinkers are willing to admit. You can not imagine him without his Sunday, his Christmas, his Easter, his Pentecost. However much the services of the church may be despised, they are always made use of at marriage, birth, and death; they are not gladly missed by any one in the education of his children. It must be admitted, too, that with the Jew religion is national. The compact of God with Israel, the exodus from Egypt, the revelations, the ceremonies, all are national. The obsolete religious practises, with their somber character, do not fit in with the happy gaiety of the Christian Germans, their beautiful music, their happy christenings, their Christmas and Easter. I may be told that the Christian Negro, Indian, or Chinaman is not received by his white brothers in America; but we are not Negroes, Indians, or Chinamen. *It is our religion alone that keeps us apart from the rest of the German people.*

But we reject reform upon a Christian basis. It may be said that we are no longer Jews, yet we can not become Christians. We can not believe in the divinity of Christ. But do the progressive German Protestants, with their higher criticism, believe in it? No; yet they hold fast to the old forms. The same ministers who teach from the pulpit an undogmatic Christianity are compelled to pray to the Holy Trinity before the altar and confess their faith in the "Son of God." This cast-iron "I believe" is still there, and we can not, will not, pronounce the formula, for we can not believe. A mere formula, a piece of paper, divides us from our most enlightened Christian German brothers.

But what shall we do? Are we to found a new Jewish-Christian sect in which Christ is recognized as man only? That would only separate us again, and we are tired, so very tired, of separation. Back into Jewdom we will not go; into the German nation we can not go. The terrible cry of our forefathers is still fulfilled in us: "His blood be upon us and our children."

Our children! Why should we transmit the curse to them? Why should they suffer for a cause which is no longer anything to us? I have it! If we find in Christianity the true religion with the exception of a single doctrine that has lost its force, then we must not educate our children as Jews. The piece of paper which hinders us does not exist for our children. Let them take part in the great spiritual battle which is being fought out in the ranks of Christianity. Ours was the prophet who destroyed the law and taught eternal love. Let the wandering Jew die. *Let our children become Christians.*

The editor of the *Jahrbücher*, Professor Delbrück, takes much pride in publishing the foregoing, altho he denies that the writer's view of modern German Protestantism is correct. On the other hand, the antisemitic *Deutsche Tages Zeitung* says that the *national* traits preserved by a distinctly national religion form in Germany the real barrier to the admission of the Jew as a perfect political and social equal.—*Translations made for* THE LITERARY DIGEST.

## WILL THE FOND DU LAC CONSECRATION CAUSE A SCHISM IN THE EPISCOPAL CHURCH?

EVER since the consecration of the Rt. Rev. Reginald Heber Weller as coadjutor-bishop of Fond du Lac (see THE LITERARY DIGEST, December 1), the Protestant Episcopal Church press have been alternately simmering and effervescing with excitement over this ceremony and its alleged illegality. It is doubtful if any American denominational quarrel in many years, if ever, has developed such animosity or led to more marked expressions of antipathy and distrust between members of the same church. Indeed, so far has this quarrel proceeded that it has culminated, upon one side, in rumors of the prosecution of eight prelates of the church, and within the past week in an implied threat, on the other side, of a secession involving a large number of Western dioceses.

All the Episcopal journals have taken some part in this discussion, but after the opening hostilities the New York *Churchman*, the leading conservative paper of the church, withdrew the fire of its heavy guns from the offending prelates, and left the battle to be fought out by two journals, *The Church Standard*, of Philadelphia, representing in this case the Protestant party of the church, and *The Living Church* (Milwaukee), representing the Catholic or High-Church party. The quarrel, like the first great schism in Christendom, is thus largely a matter of dispute between the East and the West. A perusal of the columns of these two journals during the past month or so makes lively reading. In its opening article (December 8) upon what it says is "fast coming to be called 'The Fond du Lac circus,'" *The Church Standard* says that it "can recall nothing in recent years which has caused a more painful feeling of humiliation and indignation" than this ecclesiastical function. It refers to the "cool assumption of a half-dozen men"—the bishops of Chicago, Milwaukee, Indiana, etc.—in setting out to "change the ordinal of the church and to import into it a ceremonial borrowed from her bitterest enemy"—the Roman Church. "The entire absence of a decent respect for the opinions . . . of their fellow churchmen was unmannerly and—worse." It speaks of "the senselessness of the proceeding"; and, again referring to the eight bishops, it remarks, "Whom the gods would destroy they first make idiotic; and if any of the gentlemen who engaged in that remarkable performance had thought it worth while to consider consequences," he might have foreseen that trouble would come as the result. It further alludes to the ceremony as an "exhibition of ungoverned self-will." The "performers at Fond du Lac," it says, "were bishops, and they have pretty badly discredited their own order. . . . At Fond du Lac there were eight bishops, and there are at least three more who may be numbered with them as leaders in the *anomia* of childish (or senile) self-will." In the following issue the same journal refers

to "the Roman Catholic costumes" (the miter and cope) of "this spectacular function," and adds: "*They were distinctly prelatical insignia*, and their purpose was to magnify a particular order of ministers by arraying the bodies of its representatives in gorgeous apparel." Their further purpose, it adds, as part of "a faction demonstration," was "distinctly and purposely schismatic." "If the gentlemen of Fond du Lac imagine that they can hide the mixed motives of prelatical pretension and schismatical self-assertion behind the vestment question . . . they are likely to be speedily undeceived." We quote further:

"It is idle to say that those costumes have any sanction of law in the American Protestant Episcopal Church. The fact of the matter—and a very curious fact it is—is this, that, in the Protestant Episcopal Church, *there is no law of vestments for the officiating minister*. So far as the *law* goes, therefore, every man is at liberty to do that which seems right in his own eyes; and consequently, so far as the use of those Roman Catholic vestments is concerned, the bishops in the Fond du Lac function were guilty of no breach of any written law. They had just as much right to wear Roman Catholic vestments as eight other bishops would have to consecrate a bishop in cutaway coats and red ties, or even in their shirt-sleeves. Just as much right—*not a bit more;* if the one would be an outrage on ecclesiastical decency, so was the other; and in making the consecration of a bishop for the whole church the occasion of a defiant partizan demonstration, the Fond du Lac bishops violated every canon of ecclesiastical comity and good taste which would be violated by a disorderly partizan demonstration of a contrary kind, such as the other side has never yet been tempted to make.

"It is now, we trust, sufficiently evident that one may admit the use of Roman Catholic vestments at the Fond du Lac function to have involved no technical violation of written law, without acquitting the parties of a far more serious moral offense against the church than any merely technical violation of a rubric. But there were violations of the rubric, plain and clear. The bishops who were present may say that the service appointed by the church for the consecration of a bishop was 'used'; and that we suppose to be true *in a sense*. But in any straightforward canonical sense it is not true; and the converse proposition is ridiculously untrue; for THE HYBRID SERVICE USED AT THE CONSECRATION OF MR. WELLER WAS NOT THE SERVICE APPOINTED BY THE PROTESTANT EPISCOPAL CHURCH FOR THE CONSECRATION OF A BISHOP. . . . .

"Even that, however, is not by any means the worst part of the business; for every bishop who participated in the performance at Fond du Lac had solemnly sworn at his own consecration that he would conform to 'the worship of the Protestant Episcopal Church,' *not* as he or any combination of episcopal partizans might see fit to mutilate it by excisions or interpolations, material or ceremonial, but as the church itself has appointed and directed it to be used. Can any one pretend that those gentlemen conformed to the worship of the Protestant Episcopal Church in a service which was simply *not* the service appointed in the Book of Common Prayer for that occasion? And if not, what becomes of the sanctity of episcopal oaths of conformity? Are they to be understood hereafter to count for a good deal less than the bare word of a simple gentleman? If we are reminded that there may be a difference of opinion regarding the effect of the Fond du Lac interpolations we reply that a simple gentleman does not permit himself to behave in any manner which shall bring his word of honor into question; and that bishops will do well to guard their oaths at least as sacredly."

But it is idle, the writer says, "to fight the devil with fire. The devil always has a good deal more of that sort of ammunition than his opponents ever have, and he doesn't burn his fingers, as they always do, in using it." Therefore it would be "the worst thing in the world just now" to get "violently angry," and to give these "Fond du Lac radicals" the "faintest plausible pretext to raise the coward cry of Persecution!"

Shortly after the consecration, Bishop Clark, of Rhode Island, who as senior bishop in the American church is the presiding bishop of the General Convention, published the following protest:

"As the recent consecration of the bishop coadjutor of Fond du Lac was held under the authority of the commission signed and sealed by me as presiding bishop of the church, I feel myself called upon to disclaim any responsibility for the violation of the rubrics on that occasion and the introduction of vestments having no authority of use in the church."

Curiously enough, on the letter-head of this protest is an imprint of the Episcopal miter, which is used as part of the official seal of all the Protestant Episcopal dioceses in the church. *The Living Church*, calling attention to this fact, also reproduces the title design from the cover of *The Church Standard*, containing "the Roman Catholic" miter and crosier, a proceeding so displeasing to the latter paper as to cause it at once to have this embarrassing title design coyprighted to avoid further offenses of this kind. "Just a little funny, you know," a writer in *The Living Church* remarks, "this denouncing of the miter on the inside and parading it on the cover as a distinctive mark of episcopacy! You know we had to look for bishops in cope and miter only in stained-glass windows. The miter has for the most part been used to ornament furniture, plate, china, and even pipes. So the placing of it where it rightly belongs is something of a shock. What a shock, and oh, how funny!" Another writer in the same paper, under the caption "Miter Done Worse" makes the following apostrophe:

"O all ye bishops of the American church, who have worn miters on your rings, slippers, stoles, seals, rochets, carpet-bags, and letter-heads, step up and be counted!

"O all ye bishops of the American church, who have worn copes and miters on your visits to England, laying your 'magpies' aside, stand up and be counted!"

Alluding to the present garment ordinarily worn by Anglican bishops, said to be derived from a court dress of the time of Charles II., and known vulgarly as the "magpie" and by the Indians as "heap big sleeves," another writer in the same journal asks why, instead of the ancient episcopal garments used in Christendom for a thousand years, an American bishop should in preference "appear with the dress prescribed by the court chamberlain"? *The Living Church* points out that miters were worn by Bishop Seabury, the first American bishop, and by Bishop Clagett who followed him, and were acknowledged as a legal and permissible vestment by a special resolution of the House of Bishops in 1886. It further prints pictures of the Archbishop of Canterbury, the Bishop of Lincoln, and numerous other English, Scotch, colonial, and American bishops in miter and cope, together with sixteen English bishops and high ecclesiastics in cope who took part in the Queen's jubilee in 1887.

Turning to the more serious phases of the controversy, *The Living Church* denies the right of Bishop Clark to any jurisdiction in the recent service, terming this claim on his part "an impertinence equal to the similar pretense of the Bishop of Rome." It says:

"We beg to place on record the fact, which is beyond question, that the bishop of Rhode Island has not any greater jurisdiction in the State of Wisconsin than any other foreign bishop. We call the attention of the House of Bishops to this decided usurpation and exhibition of papalism on the part of one of their own members. It is an offense of the first magnitude. If every one of the petty and trivial charges preferred against the bishops at Fond du Lac—'Roman Catholic vestments' and all—were true they would pale into insignificance beside this distinct claim to a universal presidency over 'THE CHURCH' on the part of the bishop of Rhode Island. . . . It must be remembered that there has been a distinct, uncanonical, and unwarranted invasion of the jurisdiction of the bishop of Fond du Lac by another bishop. We have herein shown what rights and prerogatives have been claimed by other bishops at other consecration ceremonies—and we could easily multiply the instances threefold, and only regret that we lack space to do so. Now there never has been a ripple of complaint when bishops of large and influential dioceses, or of 'moderate' views, have interpolated rites in the consecration functions. Bishop Potter could confer a Hobart hood, Bishop Dudley could confer a ring on Bishop Burton, in one of the 'lowest' parishes in this country, surrounded by the 'Lowest'-Church bishops; Bishop Doane could bestow pectoral cross and

episcopal ring, Bishop Sessums could wear a biretta at his consecration, and scores of bishops appear with their hoods; Bishop Kendrick could retire to an ante-room for his vesting accompanied by one of the Rev. (but thoroughly respected) editorial writers of *The Church Standard*, and all those many other interpolations we have cited and many more which our notes show, could be made, without comment from the press or criticism from the presiding bishop; indeed Bishop Clark himself could and did take the 'chief parts' at the consecration of Bishop Potter when, as we showed last week, there were distinct interpolations in the form itself, a printed 'Order of Service,' and vestments (hoods) worn which are of recent introduction into this church."

All this "malignant denunciation of godly bishops" and "vulgar attempts at an irreverent wit" on the part of "our two Eastern contemporaries," in which there have been "insults heaped on insults," says *The Living Church*, "indicate very strongly a systematic attempt back of all these to sow discord between East and West; and in a later issue (February 2) it says that "certain parties," the editor of *The Church Standard* apparently being the chief offender, because of personal animosity to Bishop McClaren, of Chicago, shown upon previous occasions, have, "under color of an attack on certain unimportant details of the consecration service," made "a direct and malignant personal attack on the bishops in question and on churchmen and churchmanship of the Central West in general." It concludes:

"Shall we drift apart? We certainly shall, if rights admitted in New York and Pennsylvania are denied in Wisconsin. We certainly shall, if personal abuse is to supersede calm argument and dignified consideration. We certainly shall, if presiding bishops may make interpolations in New York and condemn their brethren for similar interpolations in Wisconsin. We certainly shall, if missionary appropriations for dioceses are to be made contingent upon abject submission to Eastern ecclesiastics. We certainly shall, if narrowness and lack of sympathy or appreciation, with wilful ignorance of conditions in other localities, are to be the conspicuous traits of those who guide the thought of the church. We certainly shall, if yellow journalism, with repeated misinterpretation of facts, gross exaggeration, and refusal to correct with their own mistakes, are sanctioned by the public of this church.

"Yes, we can very easily grow apart. The misunderstandings between the East and the West of Europe which culminated in a great schism which a thousand years have been too short to terminate, can easily produce a like result in America, and Rome and Constantinople are nearer (geographically) to each other than are New York and Chicago."

The New York *Evening Post* (January 26), commenting on the fact that Dr. John Fulton, editor of *The Church Standard*, lately took the significant step of procuring and printing a legal opinion from ex-Justice Charles E. Andrews, of Syracuse, who gave it as his opinion that "the procedure at Fond du Lac violated the law of the church," says:

"Churchmen are asking themselves, What is the meaning of so unusual a step as the obtaining of the opinion of so eminent a jurist, unless for the purpose of a formal presentation of charges against the offending prelates of the next General Convention? It is not likely, they say, that so elaborate a preparation of the case could have been made merely to strengthen an editorial discussion in the columns of *The Standard*. Dr. Fulton is a canonist of ability, and, they declare, if he has so far committed himself as to take legal advice on the matter, it can not but be for some serious step of which this means is adopted of giving notice on the other side."

The bishops who would be involved in this legal and ecclesiastical prosecution include some of the most prominent prelates of the Protestant Episcopal Church. The best known is the Rt. Rev. William E. McClaren, bishop of Chicago, a member of the committee on canons, and one of the leading members of the House of Bishops. The bishops of Milwaukee, Indiana, Nebraska, Fond du Lac, Marquette, and two coadjutor bishops are also involved.

## IS MR. ALLEN'S "REIGN OF LAW" AN INFIDEL WORK?

MR. JAMES LANE ALLEN'S latest novel has created a somewhat extraordinary amount of controversy in the religious world. One distinguished Unitarian divine—Dr. Chadwick—has said that the book has done more for the liberal cause than all the sermons preached in liberal pulpits during the past year. On the other hand, President McGarvey, of the College of the Bible, University of Kentucky, has written a lengthy criticism of the work; and various other Kentucky ministers have followed him, either supporting or challenging his statements. The whole controversy is reprinted in pamphlet form by Mr. Allen's publishers. Dr. McGarvey condemns "The Reign of Law" as essentially an infidel work. He says:

MR. JAMES LANE ALLEN.
Courtesy of The Macmillan Company.

"The chief purpose of the book is to degrade Christianity to the level of the great heathen religions of Asia. On pages 293 and 294 the author teaches 'that Buddha's faith and Brahma's were no more direct from God than Buddhistic or Brahman temples were from God; that the Koran is no more inspired than Moorish architecture is inspired; that the ancient religion of the Jewish race stands on the same footing as the other great religions of the globe—as to being supernatural; that the second religion of the Hebrews, starting out of them, but rejected by them, the Christian religion, the greatest of all to us, takes its place with the others as a perfectly natural expression of the same human desire and effort to find God and to worship Him through all the best known in ourselves and in the universe outside of us.'

"If these statements about the Hebrew religion and the Christian religion are true, then our Bible is false from beginning to end. If there was nothing supernatural in either, it follows not only that the most important records of the Old Testament are false, but that Jesus is not the Son of God, He was not born of a Virgin, He wrought no miracles, He was not raised from the dead, and there is no hope of salvation in His name. Mr. Allen makes no attempt to prove these assertions, either by argument or by historical evidence. He simply asserts them; and he evidently hopes that somebody will believe them because James Lane Allen asserts them, tho they are contradicted by the testimony of apostles and prophets, and by the judgment of the wisest men who have lived since Christ disappeared from this earth. He has no need to offer the Scotchman's prayer, 'Lord, give us a good conceit of ourselves.' . . . . . .

"What is meant by 'The Reign of Law'? Literally there is no such thing. It is not in the nature of law to reign. To reign is an act which can be literally affirmed only of persons. A man may reign, a God may reign, a devil may reign; but a law can not reign. If law could reign, we should have no gambling in Lexington, and no open saloons on Sunday. There would be no false swearing in courts of justice, and no dishonesty in politics. It is men who reign in these matters—the judges, the grand jury, the sheriff, and the police. They may reign according to law. Law can not reign even over those who are appointed to execute the law. Law is nothing more than the expressed will of the lawgiver, and if the law is complied with, it is not because the law reigns, but because they reign whose duty it is to enforce the law. The title of this book then contains in itself a false assumption. . . . I will take a step further and say that this boasted uniformity of the laws of nature, even apart from miraculous interferences, is very far from being what unbelievers commonly affirm. It is a law of nature, for instance, that water runs down hill; but it ran up hill at a terrific rate in Galveston the other

day. It is a law of nature that gravitation draws everything toward the earth; but it causes water to stand in perpendicular columns in our pumps, and it sends the balloon, which has to be held down with strong ropes, up above the clouds when its ropes are cut. It is a law of nature that what we call cold contracts all substances affected by it; but it causes water at the freezing point to expand. It is a law of nature that heat softens and expands objects that are heated; but it causes clay to harden and contract. Many such illustrations might be given; and if our knowledge of nature were complete we might find that there is no law of the material universe that does not sometimes reverse its action. Why, then, should it be thought a strange thing if the God who made all these laws has sometimes for special reason reversed the action of some of them, or stretched out His hand to do something without the use of any natural force? The prejudice against miracles is nothing but a prejudice—it has no reason to sustain it; and but for this prejudice such books as the 'Reign of Law' and such lectures as those of the recent unlamented Ingersoll would never be written."

Mr. Allen, in replying to this, goes at some length into a number of personal and local matters connected with the University of Kentucky, and then says:

"The main part of the president's address is devoted to what he calls the infidelity of the book, and to me as being the real infidel. If a man wished to make an attack upon the president, here would be his chance; if he desired to employ coarse ridicule, the weapons are placed in his hands; if he chose publicly to humiliate the president, as a thinker and a scholar, before his students and his church, the opportunity is complete. I do not mean that this would be done by still further correcting the president in his statements, assumptions, and reasoning. As, for instance, his denunciation of a writer for being an infidel merely because he chose to make an imaginative study of a boy who thirty years ago passed under the influences that destroyed the faith of so many. As, for instance, when he neglects to read the plain words of the boy: 'I believe in the God of all men'—meaning thereby the Creator of the Universe, the Father of Mankind—and enters into a demonstration that it is impossible for any one to believe in all the GODS of Mankind. As, for instance, when he neglects to notice the boy's statement: 'His (that is, God's) reign is the reign of law,' and enters into the discussion that law itself can not reign; reaching the conclusion, however, that God reigns through law—a position identical with that of the boy at the outset. It is not for careless words and reasoning that one could, if he chose, take his revenge upon the president; but it is for all that he has to say in defense of religion and of Christian miracles—his life-long study—in the light of modern learning.

"But let the president beware! He must have in his classes many quick-witted boys of common sense and the rudiments of a public-school education. Any such lad will be able to tell him that all his cited illustrations of how natural laws reverse their action only prove that such laws do not reverse their action. Why does not the president then look at once into some elementary treatises on physics and chemistry? Or why does he not call confidentially upon his professor of natural science and talk with him half an hour for the common credit of the faculty and the good name of the institution? I have but to add, if the president will kindly hear me, that as for my own belief or beliefs respecting all these matters—that is a personal question in no wise to be intruded upon by public attention. Still I wish to say that in the main I believe what David believed, without David's too frequent dogmatism; but dogmatically sure I am of this: that such theology as the president has shown in his address, coupled with such ignorance of the intellectual condition of his age, helps to drive young men out of the church. In all probability it would have helped to make David an infidel. It would certainly make me one."

The Rev. E. L. Powell, of Louisville, Kentucky, believes that Mr. Allen's portrayal of the religious conflict in David's mind is little better than a caricature. He says:

"Not only was there not sufficient reason in the divisions of the churches to overthrow the faith of David, but he does not make a respectable fight for his faith. He finds sectarian narrowness and bigotry in the churches. Let it be granted. But was that sufficient reason for rejecting the Christian revelation? As well might it be rejected because there is hypocrisy in the churches. He is bitterly grieved when his pastor does not have any sympathy with him in his doubts; but a brave man is not overthrown by the lack of sympathy. And, by the way, that interview in its tone and spirit is worthy only of medieval barbarism. See pages 90–91. It is utterly unjust as representing the pastor of any church claiming to preach the gospel of sympathy and love. It is nothing more or less than cheap caricature, and unaccountable in the light of Mr. Allen's well-known elevation of style and thought. And having failed to make any fight for his faith, we next behold David 'lying down in the grass under the wide-open sky' with his Darwin before him. 'That day the lad changed his teachers.' Was there ever a more contemptible overthrow? It is like a soldier taking to the woods when he has received only a scratch before opportunity has been given to have the spirit of battle aroused in him, or ever he has struck one decent blow for the cause he has espoused."

In reply to the assertion that Mr. Allen misrepresents the spirit of religious bodies three decades ago, the Rev. David Utter, of Denver, writes:

"I know that in the decade following the Civil War the theological conditions were much as Mr. Allen describes them, even in far-away Kentucky and Indiana. And we boy-preachers in the Christian Church [the Disciples of Christ, sometimes wrongly called Campbellites] in that day did read the 'new thought' in secret. When we were convinced of its truth we didn't try to defend it in public; that would have been useless; we didn't try to reconcile it with the 'primitive gospel' we were preaching; we simply went back to the farms and gave up preaching; or we took to teaching, or went to college elsewhere. . . . In 1869, I went to that same university [the University of Kentucky]. . . . Leaving there I preached for the Christian Church (Disciples) for two years, at the end of which time I was very much in the state of mind in which 'David' is described as being when he went back from Lexington to the hemp-fields. I talked with President McGarvey, and the spirit of the conversation is very well given in Mr. Allen's hero's conversation with his pastor. I asked if I would be allowed to read all books on science that I wished to read. I was told that there were books that no Christian student should read. I do not think Darwin was mentioned, but I knew of him and wished to read 'The Origin of Species.' My talk with the president and further talk with some students who were known to me convinced me that the liberty I sought could not be found there, and I went straight from there to Boston and the next year entered Harvard Divinity School."

## THE PAPAL HIERARCHY.

THE Vatican authorities publish each year a book called "La Gerarchia Cattolica," which gives officially the status of the hierarchy of the Roman Catholic Church. The issue for the present year has just made its appearance, and from it we extract the following details:

At the head of the Roman Catholic hierarchy stands, of course, Pope Leo XIII., elected on February 2, 1878, and crowned on March 3 of the same year as the two hundred and sixty-third occupant of the throne of St. Peter. In addition to being the Pope, Leo XIII. has the following official titles: "Vicar of Jesus Christ, Successor of the Prince of Apostles [Peter], Supreme Pontifex of the Universal Church, Patriarch of the Church of the Occident, Primate of Italy, Archbishop and Metropolitan of the Roman Church Province, Sovereign of the Secular Possessions of the Roman Church."

The College of Cardinals consists now of 59 members, there being 11 vacancies, so that the total membership is 70. One of these vacancies has recently been filled by the selection of Dr. Simar, the archbishop of Cologne. Seven cardinals died during the past twelve months. There are three grades in the college, the highest, that of cardinal bishops, having a membership of 6, all of whom are Italians; the second grade, cardinal priests, has a membership of 48; while of cardinal deacons there are only 5. In Rome itself 24 cardinals permanently reside, and of these 22 are Italians. The other 25 cardinals reside abroad as

archbishops in their native lands, or as bishops or patriarchs. In regard to nationality, 33 cardinals are Italians, 7 are French, 5 are Austrians, 5 are Spanish, 2 are Germans, 1 each a Pole, a Portugese, an Australian, a Canadian, an American, an Englishman, an Irishman, and a Belgian. Ten of the cardinals are members of religious orders, viz.: 2 Jesuits, 2 Benedictines, 2 Oratorians, 1 Franciscan, 1 Dominican, 1 Capuchin, and 1 a Carmelite. During the pontificate of Leo XIII. from 1878 to 1900, 132 cardinals have died. There are in all 14 patriarchates, 170 archbishops of the Latin rite, and 694 bishops; 54 archbishops and bishops of the Oriental rite, 368 titular archbishops and bishops, and 8 without any diocese. The entire Roman Catholic hierarchy consists of 1,322 prelates of episcopal rank.—*Translation made for* THE LITERARY DIGEST.

## EGYPTIAN PARALLELS TO CHRIST IN AN EARLY GREEK PAPYRUS.

THE many curious resemblances to the story of Jesus found in legendary documents of non-Christian religions have been pointed out upon numberless occasions by scholars, and of recent days particularly by Dr. Paul Carus, in an interesting series of articles in *The Open Court*. One of the latest parallelisms discovered is in a set of tales called "The Priests of Memphis," from a papyrus belonging to the British Museum. The date of the manuscript is placed at about 67 A.D., altho the actual composition of the tales may have been considerably earlier. The London *Jewish Chronicle* (January 11) gives the following account of these Egyptian stories. It says:

"They relate to the circumstances surrounding the miraculous birth of a child. His mother has a dream. She is told to eat the fruit of a melon vine, and she will be granted her desire of a male child. At the same time the father is told in a dream that the child will work wonders, and that he is to be given the name of Se Osiris. The child is born, and this is how he is described:

"'It came to pass that the child Se Osiris was one year old; it being that people might have said he was two years old. He being two years old, they might have said he was three years. He grew big, he grew strong, he was sent to school, and he rivaled the scribe that they had caused to give him instruction. The child, Se Osiris, became that he began to say magic with the scribes of the House of Life in the Temple of Ptah in Memphis, and all the world wondered at him.'

"This account presents a striking resemblance—too striking, indeed, to be accidental, considering that the story is about synchronous with the introduction of Christianity—with the accounts given of the birth of Jesus in the New Testament. According to Matt. i. 20, 21, an angel appeared to Joseph in a dream foretelling the birth and future greatness of Jesus. Luke tells (ii. 40) how rapidly the child grew in wisdom and strength, and also (11. 46, 47) how amazed the doctors of the Temple were at the questions he put to them. There is likewise, in this collection of Mr. Griffith, a story which presents a curious parallel to that of Lazarus and Dives in the New Testament. A poor man is carried out to burial with small ceremony; a rich man with great pomp and wailing. But afterward, in the lower world, the rich man is found in prison, clad in vile clothes, while the poor man occupies a seat of honor near the throne of Osiris.

The *Jewish Chronicle's* comment is that "such resemblances point to a common store of ideas and legends of which writers belonging to the first two centuries would avail themselves, the authors of the New Testament included." The only Christian comment we have yet seen on this discovery is from the London *Tablet* (Rom. Cath.), which remarks that this is only another example of the singular facility with which Christian history and doctrines were incorporated at an early date into pagan legends.

**The Coming Monistic "Church Universal."**—The recent marked growth in the Western world of spiritual monism, or the system of thought which resolves the universe of mind and matter into one divine substance, leads an English writer, Mr. Ernest Harrwitz, to predict that the time is not far distant when the great religions of the East and West will unite upon this philosophy as an adequate spiritual basis for a universal church. He holds that in the union of Vedântic and Christian forces there is a possibility of a tremendous revival of spiritual religion, far mightier than the forces set in operation by Luther and Calvin. In *The Theosophical Review* (London, November) he says:

"The monistic revival of the twentieth century will achieve no less, I believe, than the spiritualization of scientific research and the rationalization of religious fervor. Then science and religion will cease their conflict, and will peacefully flourish, side by side, like two fruitful branches grown from the same tree of divine knowledge. A great outpouring of spirit will pass over the earth, and the time will be ripe for the church universal, when the Christian and the Indian churches may meet as friends on the common ground of the Vedânta. The day will likewise come when another divine institution, the Mohammedan Brotherhood, will be incorporated into the Monistic Church, for Islam, too, has realized the 'One without a second,' thanks to the illumination of the 'God-intoxicated' Sûfîs. Sâdi and Hâfiz have done for Mohammedanism what Eckart and Tauler did for Christianity, and the Vedânta for the religions of India. May the time soon draw nigh when we shall be ready to institute the church universal!"

The London *Light* (Spiritualistic), commenting on this, says:

"Certainly, Vedânta teaching has significantly interested England and America for some years, suggesting to many the need and the possibility of at least a bridge between spiritual Christianity and Vedântic philosophy; or even between Vedântic philosophers and really modern scientists. We believe in the probability of this. The tendency everywhere is toward spiritual Monism. What we have to do first is to rid ourselves of the old missionary egotism or bigotry. There are many roads to God, and our true work is, not to condemn any, but to find out the one secret of them all."

## RELIGIOUS NOTES.

REPEATED statements are made in public journals as to the wholesale conversions of French clergy to Protestantism, particularly under the auspices of a certain Abbé Bourrier, who keeps a home for *Prêtres Evadès* in Paris. It is said, for instance, that seven hundred priests were converted to Protestantism in a year. From other sources, one hears much of a "Catholic revival" in France, including not only the literary leaders but the young men of France of all walks of life. The London *Church Review*, a pronounced Anglican paper, quotes the letter of the French correspondent of *The Pilot*, who says that upon investigation the seven hundred priests shrink to a dozen or so who have chiefly seceded on account of breaches of discipline.

A ROMAN Catholic paper relates that a convent school when visited was found to be filled with little girls of ages ranging from six to sixteen, with fresh sweet voices, in childish accents singing:

Of our passions we are weary—
Weary of the yoke of sin.

A convict prison chapel, when visited, was found, with a select and exclusive congregation of forgers, burglars, wife-beaters, etc., in stentorian tones giving tongue to,

Dear angel, ever at my side,
How loving thou must be,
To leave thy home in heaven to guide
A little child like me.

"Father Faber of course wrote 'A guilty wretch like me,'" says *Catholic Book Notes*, "but that would have been appropriate under the circumstances, which would never do, so the corrupt rendering was preferred."

AT a recent great Eucharistic Congress in Goa, Ceylon, there were present nearly the whole Roman Catholic hierarchy of India, including the Patriarch of Goa, the archbishops of Bombay and Verapoly, eleven bishops, and three Syrian bishops of the Malabar rite. The ceremonies relating to the body of St. Francis Xavier, which had not been exposed since 1890, were interesting, the devotion to the saint's body bearing some resemblances to that shown by the primitive Christians to St. Paul (Acts xix. 12). Says the London *Tablet* (Roman Catholic, January 12): "On Friday, the 6th of December, all the prelates repaired, about 10 A.M., to the sacristy of Bom Jesu, to which, by the direction of the patriarch, the coffin in which the precious relics rest had previously been brought. The coffin was still locked and sealed; after the arrival of the governor the document drawn up in 1890, at the last exposition, was read, and the highest representatives of the ecclesiastical and secular authority together opened the coffin. To judge from the description which I had read and heard about the condition of the body at the time of the last exhibition in 1890, no great change has since taken place. This opinion was confirmed by one of the bishops who saw it then, tho another prelate thought to notice a change. For more than an hour the bishops, the canons of the chapter, and the secretaries were allowed to remain near the relics of the saint, now praying, now applying objects of devotion to the body. Then the open coffin was carried on the shoulders of six bishops—the Archbishops of Bombay and Verapoly, the Bishops of Mangalore, Trichinopoly, Galle, and Jaffna—to the church. There it was enclosed in the shrine which had been placed in front of the sanctuary, and exhibited to the veneration of the faithful."

# FOREIGN TOPICS.

## POSITION OF THE PRINCE CONSORT OF HOLLAND.

AMID the congratulatory comment of most of the European papers on the occasion of Queen Wilhelmina's marriage, February 7, comes a note of warning from the Manchester *Guardian*. Holland, it remarks, "should not forget the fate of small rich countries which have great and powerful neighbors—to whom they are related by marriage." So far, however, the only solicitude which the marriage has brought to the surface in Holland has been that caused by the constitutional difficulties in determining the status of the young Duke of Mecklenburg, who has captured the hand and heart of the only queen now reigning over a civilized country. The Dutch parliament finally passed the bill granting citizenship to him and regulating his legal rights and privileges. He will not exercise any royal powers, and even the possible ending of the marriage relation by divorce is very carefully provided for. The *Allgemeine Zeitung* (Munich) explains the provisions of the law and the difficulties of the case as follows:

QUEEN AND PRINCE-CONSORT OF HOLLAND.

"The husband of the Queen is given equal position with all royal Dutch princes, both as regards privileges and duties. But the law is not regardless of the possible ending to the marriage, either by the death of the Queen or by divorce. Should the Queen die, then the Prince Consort retains all the rights of a Dutch prince until he may choose to remarry. If he marries again, or if divorce takes place, Prince Henry ceases to be a member of the Dutch dynasty. The children which may result from the marriage, nevertheless, will retain their claim to the throne of Holland. The Prince-Consort receives no annual appanage as husband of the Queen. Should he become a widower, he will receive $62,500 a year; but this appanage will cease as soon as he remarries.

"There was, indeed, an intention to make the Prince-Consort independent of his wife from a financial point of view. But there were constitutional difficulties, as the constitution contains no proviso for such grants except to the Queen-Dowager and the heir to the throne. A change in the constitution was not thought advisable, not only because months might pass ere it was accepted, and the marriage of the Queen would have to be deferred, but because an alteration in the terms of the constitution would necessarily create much political excitement in the country."

Speaking of the motto of the house of Orange—"Je maintiendrai" ("I will maintain")—a Paris paper (the *Gaulois*) wonders whether it refers to the young Queen's provision for her husband or to the promise made by the Dutch nation that it it will support him!—*Translations made for* THE LITERARY DIGEST.

## EUROPEAN COMMENT ON VICTORIA'S DEATH.

THE comment on Queen Victoria's death that appears in the press of continental Europe is in close agreement with that of the British papers (already quoted in our columns) on two points, namely, the high personal character of the woman, and the fact that her passing marks the termination of a distinct epoch in Great Britain's history. The Queen—*die Grossmutter von Europa*, as the Germans called her—had come to be regarded by many in Europe as the strongest pillar of international peace, and her death is looked upon as a serious misfortune for the civilized world. "Among the nations friendly to Great Britain," says the *Figaro* (Paris), "there is none which associates itself more sincerely than France with the grief of the British people. We bow respectfully before the bier of the most illustrious sovereign of the nineteenth century." The *Temps* (Paris) believes that Victoria was the "ideal of the constitutional sovereign," and says that she "restored to the crown its prestige and moral authority without seeking to extend its prerogative. . . . She was the first servant of the state, a sort of permanent colleague of ephemeral ministers. . . . Her death will be the signal for grave changes. It is the end of an era." "As the incarnation of the intelligence of Great Britain," says the *Siècle* (Paris), "she was really great." M. Hanotaux, French ex-Minister of War, writing in the *Journal* (Paris), says that the principles that governed her were "impartiality and moderation at home, prudence and humanity abroad," and expresses a wish that these may be "adopted as a guide by her successors and people, for they would constitute her most enduring monument." "While always wishing for the greatness of her country," says Baron de Courcel, ex-Ambassador to London (in the *Echo de Paris*), "she remained, as far as possible, faithful to the cause of peace and was especially friendly to France." The *Matin* (Paris) severely criticizes British policy during the reign of Victoria, concluding its indictment by saying: "For two years past the marvelous edifice of Britain's greatness has appeared to be shaken to its foundations. Now the keystone has fallen." In the *Soir* (Paris), M. Laurencen, Radical, similarly observes: "The last unseen tableau of this long reign leaves us cold, very cold, and even disrespectful. Too many memories press down sympathy. In the oppression of Ireland, the massacres of workmen, the opium war, the blowing of Hindus from cannon, and the bombardment of Alexandria, the late Queen did not show the slightest pity or sympathy for the victims. Moreover, she never really loved us. Her governments deceived, robbed, and hustled us. Why, then, regret her?" The French Nationalist press regards Victoria's death as retribution for the misery caused by the Boer war. Says the *Patrie* (Paris): "Victoria's end is justice striking for the crimes

committed in her name, and retribution for fifty years of infamies in Ireland. No woman ever broke so many hearts, no mother, perhaps since the world began, ever received the curses of so many other mothers." The *Intransigéant* (Paris), Rochefort's paper, declares that "Victoria's death is sad principally because of the worse conditions to follow"; and the *Liberté* (Paris) calls upon England to "honor her memory by making peace with the Boers."

The comment of the German press is rather upon the future possibilities of international politics than upon the death of the Queen. "An unusually fruitful life has come to an end," declares the *Vossische Zeitung* (Berlin); but it considers as unfortunate the Queen's wish to be styled Empress, a title which "cost so much blood in India, and brought about British imperialism, which cost so much blood in other parts of the world." The *Tageblatt* (Berlin) remarks that the many threads of relationship that stretched between Great Britain and Germany have "proved to be one of the most enduring bonds between the two countries." This journal, in speaking of the political significance of the Queen's death at the present moment, says: "A large part of the world, which condemns the war in South Africa as undertaken by Messrs. Chamberlain and Rhodes . . . for their self-enrichment, and the destruction of a little, freedom-loving, heroic people, will see in her death at such a moment a large measure of divine justice." The Agrarian journals generally see in the Queen's death the beginning of England's decline. The leading Agrarian organ, the *Deutsche Tages Zeitung* (Berlin), declares that the Queen saw that this decline had begun, and it was this knowledge that gave her death-stroke. A number of German journals, notably the *Kölnische Zeitung*, publish detailed and appreciative surveys of the Queen's life and work.

The Dutch press printed the notice of Victoria's death with mourning borders. After the usual personal tribute, the *Handelsblad* (Amsterdam) concludes: "The end of her pacific reign was obscured by the shadow of war and insurrection, and, alas! finishes with an unjust war against a little people, which is all the more humiliating as England has not conquered the valiant Boers."

The Russian press generally expresses perfunctory sympathy, but touches the political chord. The *Journal de St. Petersbourg* (published in French) declares that "the private virtues of the sovereign, not less than her political perspicacity, were the object of universal respect." The Russian journals, however, can not forget the Boer war, and the *Rossya* (St. Petersburg) says: "England's prestige is largely due to the Queen. To spare Queen Victoria, much has been forgiven her ministers. With her will depart Britannia's good genius."

The tone of opinion in Austria is, in general, one of respectful sympathy. The *Neue Freie Presse* (Vienna) points out that the largest contributions to England's national greatness were made by women: "Elizabeth created the nation's power, Victoria preserved and widely extended it." The *Allgemeine Zeitung* (Vienna) reviews the progress made during her reign, and says: "One need only contrast England, which, in every department of human activity, marches at the head of civilization, with the Continent—with its militarism, its dissatisfied working classes, its parliaments diminishing in authority, its animosity between races and classes, its indebtedness and impaired national well-being—in order to envy the unique greatness and prosperity of Queen Victoria's realm."

The Italian papers are very sympathetic. The *Italia* (Milan) declares that her "constant, scrupulous respect for the constitution during her sixty-four years' reign has made the country sixty-four times richer, wiser, and more liberal." The *Osservatore Romano* (Rome), the organ of the Vatican, points out that, during her reign, the number of British Catholics has increased from 200,000 to more than 10,000,000. "This," it declares, "is the flower which Catholics wear in memory of Queen Victoria." The *Voce della Verità* avoids reference to the personal character of the Queen, and severely criticizes the British Government. Noteworthy among the other expressions which come from all over the world, even from the journals of Constantinople, are the words of the *Glas Tzrnogorza* (Cettigne), official organ of the Montenegrin Government: "Our people all weep over her bier."—*Translations made for* THE LITERARY DIGEST.

ENGLAND AND AMERICA AS CONQUERORS.

UNCLE SAM: "See how he works!" JOHN BULL: "Ouch!"
UNCLE SAM: "Oh, you're fast, are you? Permit me to help myself to the Nicaragua Canal Treaty." —*Amsterdammer.*

## A MUSSULMAN'S VIEW OF THE TRANSVAAL WAR.

A RATHER unexpected champion of England in South Africa has appeared in the person of Ismail Kemal Bey, until recently governor-general of Tripoli, and a prominent member of the Young Turkish Party, the organization that aims at reforms in the empire of the Sultan. He contributes to *The Fortnightly Review* a digest of a recently issued pamphlet which he wrote to arouse the interest of Mussulmans all over the world in the South African struggle. "because on its outcome hangs the fate of the Mussulman world. If we value our future," he continues, "we must hope for the success of the English, who for more than three centuries have pursued the noble and humanitarian task of the gradual regeneration of the Orient." The future of Europe, Asia, and Africa, he explains, and particularly the future of the Mussulman peoples, is bound up in the relations of England and Russia, "who meet along all the frontiers of the world, and one of whom must very soon become supreme." Russia is the bugbear of the Mohammedans, and, in this respect, England and Turkey find common ground. We quote further:

"We have not only the same interests, we have also a common enemy who threatens us to the same degree, and this is the principal and decisive point. Every blow at England's prestige is a loss for us, while the disappearance of our authority in the

Orient would bring about the decline of the British empire. Whoever should wish to effectively attack England would be obliged to begin by passing over the corpse of Turkey. The day that the Muscovite flag floated over the walls of Constantinople would be doubly fatal, because it would mark at the same time the fall of the Ottoman empire, the decline of England, and the cessation of the grand task which England has undertaken in civilizing an entire world, and delivering it from the yoke of barbarity and superstition."

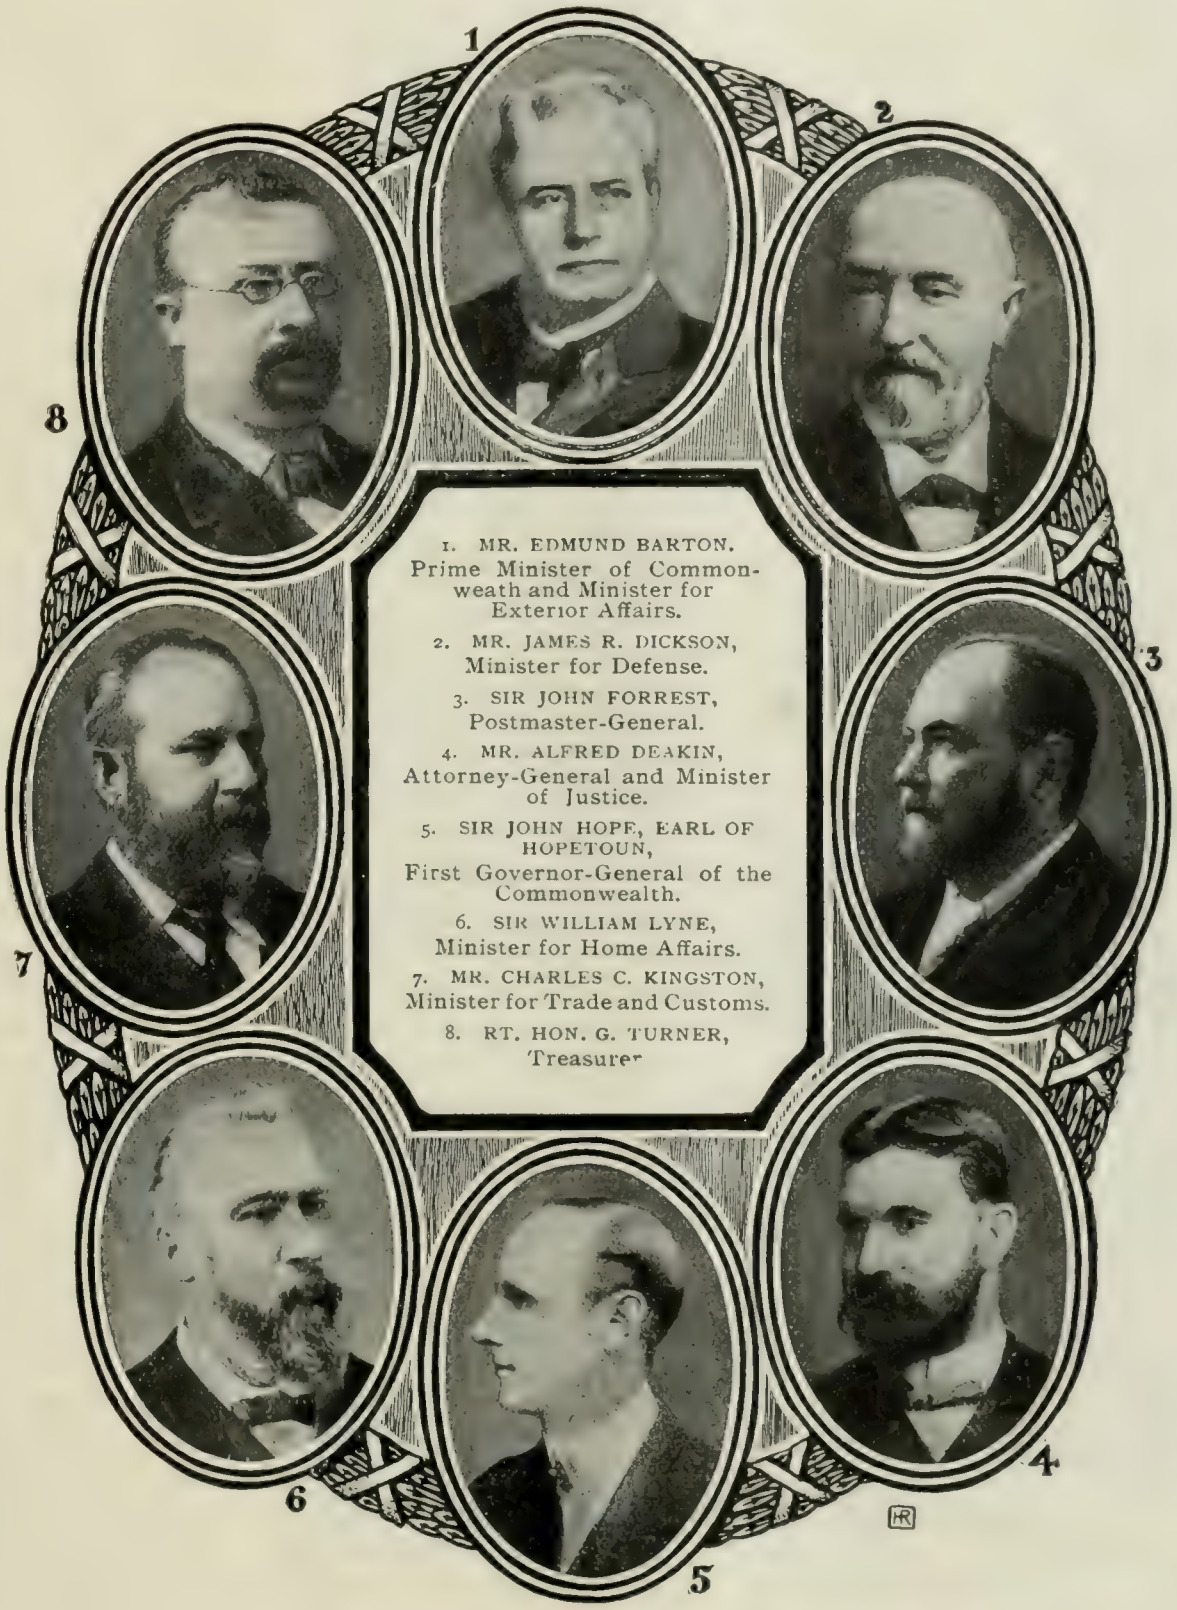
England, he declares, must fortify Herat, the key to India, and Turkey must render impregnable Constantinople, the key to the whole world. "To make strong the two states that hold these keys is at once to place the English possessions for all time beyond the reach of attacks upon land and sea."

The Transvaal war has attracted the "burning interest" of all Eastern peoples, Mussulmans in particular. The latter consider the English race, "on account of its religious beliefs, political doctrines, commercial aptitudes, and still more by its geographical position and its colonial possessions, as a sort of motive power and inspiring authority created by God for the revival of Oriental civilization and the regeneration of the Mohammedan world." Ismail Bey declares that England has always been the friend of Mussulman peoples, and refers to Lord Chatham's famous remark: "The Englishman who does not recognize the importance to England of the political existence of the Ottoman empire is a lunatic." The particular interest of Mussulmans in the Transvaal war arises from the fact that the Dutch, and the Cape Boers especially, have always been oppressors of Mohammedans. Here is the indictment he draws up against the Boers:

"They believed that it was permitted to shed blood and to confiscate the property of whosoever was not a follower of their religion, whether he were a native or a foreigner, Malay, pagan, or Mussulman; to take the children of their victims and make them their slaves was, in their way of thinking, a pious act. During one hundred and fifty years of such misdeeds, all the tribes of this part of South Africa and more than a million of its inhabitants had been destroyed. As for the Mussulman Malays, who in their own home had possessed servants and been accustomed to live well, they were reduced to slavery, and those who had not disappeared under this tyrannical treatment, preserved barely the name of their origin and their religion."

A rapid survey of the history of Boer-British relations during the past century brings this writer to the conclusion that England's triumph in South Africa "would facilitate the progress of civilization among the colored inhabitants and guarantee the present and future interest of the world in general and particularly of the Mussulman world." Upon the result of this contest, he declares in conclusion, hangs the fate of the entire East:

"I repeat earnestly that the true friends of civilization ought to wish for the success of the gigantic effort of England in Asia and on the other continents, and that oppressed peoples, especially the Mussulmans, in their desire to arrive at their full moral and political development, should place in her all their hopes of preservation."



THE NEW FEDERAL CABINET OF AUSTRALIA.

---

**King Victor Emanuel III.**—A correspondent from Rome, according to the *Courrier des États-Unis* (New York), says that the Italians are struck by the contrast which the character of the present king forms to that of his predecessor. It may be said without exaggeration that Victor Emanuel III. is the antipode of his father. Humbert, tho an excellent man, had not an attractive personality. His irregular features possessed a sort of vulgarity which one was astonished to find in the representative of one of the most ancient of royal houses; he was cold and indifferent, almost hostile, to letters and art, and particularly so to music. He said himself that he liked better to look at a sewing-machine than at a work of Benvenuto Cellini.

The features of Victor Emanuel III. are delicate and aristocratic; he is not only a distinguished numismatist, but is fond of all the arts, and follows with interest the literary movement of Italy. Fond of elegance himself, he attaches particular importance to the appearance of his troops, and in this respect nothing escapes him. He paid a visit recently to the barracks of the cuirassiers who form his body-guard, and discoursed at length

upon their rich uniform. Altho the cuirass has become a perfectly useless ornament, he wishes to preserve it on account of its picturesqueness. Victor Emanuel III. likes to come in contact with his soldiers. Like Peter the Great, he calls them "comrades" and, like the great Frederick, he tastes of their soup. It is said that he tries to imitate the Emperor of Germany, and this report displeases him very much. He is up every morning at six o'clock, and immediately plans out his course of action for the day. No one comprehends better than he that punctuality is the politeness of kings, and punctuality in Italy is a rare thing, for Italians as a rule have no idea of time. With them, to dine at noon means to eat anywhere between twelve and three o'clock. Victor Emanuel III. openly manifests the intention of exercising his authority as much as the constitution permits, which is not a great deal. The Socialists alone believe him capable of a *coup-d'état*.

It is said that the King purposes to make a truly royal gift to the City of Rome. To honor the memory of his father, Victor Emanuel III. has decided to purchase the Borghesa Villa, that glorious monument of Italian art, and to present it to the Roman people.—*Translation made for* THE LITERARY DIGEST.

## THE "FRENCH SHORE" QUESTION IN NEWFOUNDLAND.

THE *modus vivendi* which has existed between the English and French occupants of the "French Shore" of Newfoundland for the past ten years came to an end on January 1, and the knotty problem of French fishing rights in Canada again presses for settlement. The original ten years' agreement really

THE BENEVOLENT CODFISH.

NEWFOUNDLAND TALKING COD (addressing the two fisher-girls France and England): "Look here, my dears, do discuss me in a friendly way. It would give me *such* pleasure to be the means of bringing you both together!" —*Punch.*

terminated one year ago; but the Newfoundlanders, not wishing to embarrass the British Foreign Office, then in the first throes of the South African war, consented to a provisional extension of one year. Now they demand permanent settlement, and are claiming the right to be consulted in the selection of the new governor, on the ground that the fisheries dispute necessitates the appointment of a man of "exceptional qualifications."

The facts in the dispute are as follows: The Treaty of Utrecht, in 1713, gave the island of Newfoundland absolutely to Great Britain; but, at the same time, conceded to French fishermen, on a certain defined portion of the Newfoundland coast, the right to catch fish and dry them on the land without being subject to local restrictions. They were forbidden to erect fortifications or any other buildings, except for the purposes of drying their fish or for repairing their vessels. They were also precluded from wintering on the island. The British colonists were pledged not to molest the French fishermen "during their fishing" or to injure their property during their absence. These rights were reaffirmed by other treaties, in 1783, 1814, and 1815. It is admitted that the value of this fishing concession has decreased to a large extent. Last year there were only about five hundred Frenchmen employed in all capacities on the shore. The main element of profit appears to arise from the lobster-canning industry. The Newfoundlanders maintain that lobsters are not fish and that the Treaty of Utrecht did not contemplate the erection of factories to can them. The French rejoin that what drying is to a cod canning is to a lobster, and hold that the treaty meant to give French fishermen the right to "treat their take," whatever it was, so that it would keep till it went to market. It is also generally admitted, even in the French journals, that while (to quote the *Temps*) the French rights "are incontestable and uncontested," the present status of affairs is anomalous and unfair to the Newfoundlanders.

The English papers generally advocate buying out the French rights as cheaply as possible. Says the London *Times:* "Give France a *quid pro quo.* The issues are not important enough to justify a quarrel between two great nations." The *Temps* holds that France must have compensation for the surrender of her treaty rights, and remarks: "Newfoundland, instead of being a stumbling-block in the relations of two great nations, should serve as a corner-stone for the edifice of a cordial understanding." The *Journal des Débats* thinks that the question is a very thorny one and doubts whether it can be settled by barter. Of the suggestion that the British province of Gambia, on the west coast of Africa, be taken in exchange, the *Temps* says: "No one in France dreams of Gambia, the trade of which is already in our hands. On the whole west coast of Africa, indeed, we are beating the English on their own ground. Why should we pay for what we already have?" The *Figaro* and *Éclair* talk in the same strain. The latter journal suggests the cession of the Loz Islands, which are opposite the capital of French Guinea, and which, "while they are of no special utility to England, would be of great service to France."

Mr. Chamberlain has asked the Newfoundland Government to renew the *modus vivendi* for another year, and the Canadian journals, on the whole, regard this as the best plan.

The Philadelphia *Press* points out that the United States has an interest in the settlement of the dispute, as the islands of St. Pierre and Miquelon, which are also involved in the "French Shore" question, have become "regular smugglers' retreats, and worry exceedingly both the Canadian and American revenue service." *The Press* concludes:

"Friction occurs every year. Americans are denied bait by officious French naval men, and all concerned save the French agree with the report of the royal commission in the spring of 1899 that the French treaty rights should be extinguished, as they are of the slightest value, really a source of expense to France, and are only retained by France for purely political reasons."—*Translations made for* THE LITERARY DIGEST.

---

THE monthly statistics of accidents in France caused by the horse, the bicycle, the automobile, and the railroad, for October, have just been published. Here is the résumé: Accidents caused by the horse 967, of which 82 were fatal; bicycle 119, with 6 fatal; automobile 38, with 2 fatal; the railroads 145, with 8 fatal.—*Courrier des États-Unis.*

"The Laws of Scientific Hand Reading."—W. G. Benham. (G. P. Putnam's Sons.)

Poems.—Valentine Brown. (Published by the Author.)

## CURRENT POETRY.

WE give herewith a few verses of Andrew Lang's version of Pope Leo XIII.'s "Carmen Seculare," his ode to the twentieth century:

O blinded Pride on chaos hurled!
O Night proclaimed where Light should be!
Obey thou Him, who rules the World,
Man, and be free!

He only is the Truth, the Life;
He only points the heavenward Way;
He only frees the Soul from strife,
If men obey.

Jesus, the Judge of years to be,
Direct the tides, the tempest still;
And make rebellious peoples free
To work Thy will.

Sow Thou the seeds of happy Peace,
All Evil drive from us afar;
And bid the rage and tumult cease
Of hateful War.

The minds of Kings and Peoples mold,
Thy Word may all obey with awe;
Be there one Shepherd and one Fold,
One Faith, one Law.

### A War Poem.

By WILLIAM WATSON.

I hear a voice of murderous wrath:
We have not burned enough, or slain;
Too little havoc marks our path;
Wherefore so gentle, so humane?

From countless rooftrees be there rolled
The smoke of expiatory fires!
More incense yet an hundredfold
The unsated God of War requires.

### A USEFUL BOOK.

One of the best helps to aiding and confirming the memory is a book entitled "Memory Training," by William L. Evans, M.A. (Glasg.) The Rev. Wm. M. Taylor, late Pastor of the Broadway Tabernacle, New York, said of it:—

"I have been much interested in the philosophical presentation of the subject, as well as the practical suggestions. I can conceive of no course of training that could be more useful, especially to young men, than that which is outlined in this most instructive book."

"Memory Training" is published by A. S. Barnes & Co., 156 Fifth Ave., New York, who will send a copy to any address, postpaid, on receipt of price, $1.25.

The Electrolite

The grandest achievement of the period in home lighting.

A light like day—rich and easy to the eyes.

Turns up or down and on or off.

As handy as city gas—more so because portable.

Acetylene is harnessed at last with perfect and complete results.

The power of 36 candles, and white, not yellow.

Safest form of lighting known and more perfect than electricity.

Actually a triumph of the century.

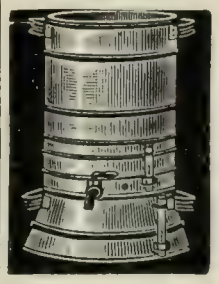
NO LIGHT OF ANY KIND AT ANY COST HAS EVER "HELD A CANDLE TO IT."

*Costs but a trifle more than previous imperfect experiments, but it solves the problem fully, delightfully and without a single drawback.*

IT IS CHEAPER THAN KEROSENE. PAYS FOR ITSELF IN A VERY SHORT TIME.

FOR GETTING IT EXHIBITED IN YOUR TOWN, NOT TAKING ANY ORDERS YOU CAN GET ONE FREE

They sell at dealers for Ten Dollars. We prefer to have you order through your dealer, who will order one for you through his jobber. If not we will send you one prepaid by express on receipt of price. We protect you with the guarantee of money refunded in full if not found all we claim for it. (If interested in getting one free at little or no trouble, write us at once.) Address EDWARD MILLER & CO., Box 32, Meriden, Conn.



THE SANITARY STILL

on your kitchen stove furnishes plenty of distilled aerated water at trifling cost. Simple as a tea kettle. MRS. JOHN A. LOGAN writes: "I take great pleasure in saying that I have used the Sanitary Still and find that it does all that is claimed for it by its promoters, removing all impurities from water, rendering it clear and healthful." The Sanitary Still used in the WHITE HOUSE. Highest award at Paris Exposition. DURABILITY UNEXCELLED. AVOID CHEAP AND FLIMSY STILLS

# Suits and Skirts for Spring.

NEW, exclusive fashsons for the coming season suits and skirts which you will not find elsewhere. We are just about to show our new styles, and by the time a letter can reach us our Spring Catalogue and Samples will be ready.

A broad field for your selection your choice of suits at $8, your choice of suits at $40, and at all prices in between. That sounds well, but here's the point of it: Every garment in the array is cut as fashionably, tailored as well, made of as good materials as if you searched New York for it, and paid more money.

Made to order — of course you object to "ready-made" clothing —from the design and sample you choose.

Suggestions for the Spring Wardrobe:

**New Suits,** For Spring, the fashionable kind with a touch of Paris about them, - - - - - - - - - - **$8 up.**

**Silk Lined Suits,** Made of excellent materials and lined throughout with taffeta, - - **$15 up.**

**New Skirts,** Pleasing in appearance—comfortable because they are light weight, - - - - - - **$4 up.**

**Rainy-Day Skirts,** Every woman should have one —made of plaid back or plain materials, **$5 up.**

**Wash Skirts,** You'll need one surely when the warm weather comes, - - - - - - - - - - - **$3 up.**

**Wash Dresses,** Cool and pleasant for Summer days, **$4 up.**

***We pay express charges everywhere.***

Our Catalogue of new Spring styles and the latest samples will be sent *free* the next mail after your request. If a garment ordered from us should not satisfy you, let us have it back. *We will refund your money.* Our aim is your satisfaction.

**THE NATIONAL CLOAK COMPANY,**
**119 and 121 West 23d St., New York.**

# Robinson's Bath Cabinet.

**Cures disease without medicine.**

A positive cure for Rheumatism, Blood, Liver, Kidney and Skin diseases No disease can resist the power of heat.

**A Turkish Bath at Home for Two Cents.**

**Thirty Days' Trial Free.**

If not found as represented money refunded.
$2.00 Book Free to Patrons. Contains full instructions for curing disease, written by prominent Physicians.
*Please send for our Book and Special Offer.*

**AGENTS WANTED.**

$75.00 to $200 monthly can be made.
Write us at once for special agent's 1901 proposition.
Exclusive rights given. Do not delay.

**$500.00 in Gold will be Given to the Agents Doing the Best Work this Year.**

**ROBINSON THERMAL BATH COMPANY,**
764 Jefferson St, TOLEDO, O.

Blind from the first, blind to the end,
Blind to all signs that ask men's gaze
In vain by lips of foe or friend
The world cries shame upon your ways.

Fulfil your mission; spoil and burn;
Fling forth the helpless—babe as well;
And let the children's children learn
To hate you with the hate of hell.

From whatsoever taint remains
Of lingering justice in our heart,
Purge us—erase the poor last strains
Of pity—such your noble part.

So shall the God of War not lack
His tribute; and the long-foiled light
Be for the hundredth time thrust back
Into the night, into the night.

---

## A Challenge.

By GEORGE S. HELLMAN.

Think you to shatter these high rocks, O Sea,
That thus you strike in wrath?
The firm crag rising o'er you fearlessly
A truer splendor hath.

Think you to shatter man's high hopes, O Fate,
That thus you deal forth pain?
Know that alone the dauntless are the great.
Strike, if you will, again!

—In February *Cosmopolitan.*

## PERSONALS.

**President Loubet and the Schoolmaster.**—At a private dinner given some time ago by President Loubet, some one, in conversation, spoke of Parisian fondness for investing their president with royal dignities, and of the absurdity of this sort of thing in a republic. Apropos of this remark, a writer in the *Staats-Zeitung* gives the following as coming from the President himself:

"I will tell you a story which illustrates the value of forms and etiquette. During my last trip through the southern provinces, I heard of a village school all the graduates of which who had applied for admission to higher schools had passed their examination with honors. Out of curiosity I visited this school. I was supposed to be traveling incognito, but in the little mountain village I was greeted with flags and the Marseillaise, and the people all turned out in their best clothes.

"The gray-haired master stood in the doorway of the school at the head of his eighty-six pupils, drawn up in martial array. I took off my hat, but the schoolmaster only touched his big green velvet cap with his finger. Throughout the visit the cap remained on his head, tho I held my hat in my hand. The old man presented his best pupils in a singular manner, pulling one after another out of the ranks by the ear and bidding them make their bows to the President.

"While conducting us into the room and back to our carriage, he walked in front of us and showed us his back. My companion was boiling over with indignation, and I must confess that I was surprised by the schoolmaster's rudeness. I asked him why he did not uncover to the first magistrate of the republic.

"'Monsieur le Président,' he replied, 'pray do

# Pears'

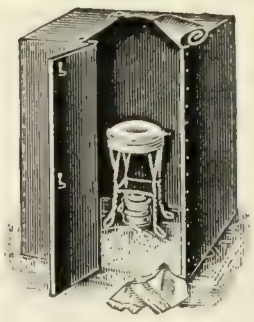
What a luxury Pears' soap is!

It is the cheapest and best toilet soap in all the world.

All sorts of people use it, all sorts of stores sell it, especially druggists.

# Turkish Baths

**For 3 Cents**



A RACINE folding bath cabinet gives you a Turkish bathroom at home. At a cost of three cents, you get all the possible benefit of any vapor or hot air bath. These baths taken regularly insure health vigor and, cleanliness. They clear the complexion; they cure colds. And no other treatment is so widely employed by the best physicians in the cure of most chronic diseases.

The Racine is not like the flimsy and unserviceable cabinets that are widely sold. It is a stout, double-walled room, rubber coated inside and outside, and fitted with a door. Merely tip it, and it folds into a six-inch space. The four best features in the Racine are controlled by our patents. Without them no cabinet can be satisfactory.

The Racine is guaranteed to be the best cabinet on the market. We sell on approval, to be returned at our expense if not satisfactory. Prices $5 up, freight or express prepaid. Alcohol or gas heater, vaporizer, face-steaming attachment and 35 prescriptions for medical baths included. Send today for our illustrated catalogue, and order from that.

**RACINE BATH CABINET CO.**
**Box X, Racine, Wis.**
**Chicago Exhibit, 1005 Monadnock Bldg.**

# Coffee Cost

A lady said, "Blanke's coffees cost more at first, but their best brand, the 'FAUST BLEND,' makes so much more coffee—either large or small cups—that I doubt whether it really costs more, in spite of their trade phrase, 'It costs more because it's worth more.'"

Write for booklet (free) or send $1.30 for 3-lb can of *Faust Blend*—whole, ground or pulverized, if your dealer doesn't keep it.

**Blanke's Coffee,**
St. Louis.

**KLIPS** Write for price-list. H. H. Ballard, 327, Pittsfield, Mass.

**The Piano is made accessible to all through the aid of the PIANOLA.**

**Price, $250.**

Can be bought by moderate monthly payments if desired. If unable to call, send for Catalog No. 12.

WHEN IT IS CONSIDERED how many pianos there are throughout the country which are not used, save as an ornament—

WHEN IT IS CONSIDERED how much pleasure is being realized from those pianos which *are* being used, for the purpose for which they are intended—

WHEN IT IS CONSIDERED how much *more* pleasure even these pianos would give if their owners could play upon them a greater number of selections—

WHEN ALL THESE THINGS ARE CONSIDERED then the purchase of a Pianola becomes a subject of self-interest to all owners of pianos—more than this, it offers the best as well as the *only practical reason* why you should invest from $200 to $1,200 in a piano.

The Pianola is an instrument which enables any one to play the piano, irrespective of musical training—

At the same time it allows the player entire command of expression.

The Aeolian Co.,
16 W. 23d St.,
N. Y.
50 Fulton St.,
Brooklyn.

***The* Pianola has not only satisfied curiosity, but it has gratified a longing for an instrument *which would do just what the Pianola does*—i. e., enable any one to play the Piano without the necessity for tedious practising.**

not think that I kept my cap on from want of respect. If these urchins learned that there is a man on earth to whom their master must humbly uncover, the devil himself could not bring them into subjection again.'"—*Translation made for* THE LITERARY DIGEST.

**Bernhardt in Men's Rôles.**—Considerable discussion was raised when Sarah Bernhardt, about a year ago, announced that she would appear in the rôle of Hamlet. Now she has again undertaken the rôle of a man, in "L'Aiglon," and in *Harper's Bazar* (December 15) she discusses the difficulties encountered by a woman in the interpretation of such rôles. She writes:

"Most women's parts are mere play. The characters are required to look pretty, to move gracefully, and to portray emotions natural to the average woman. The fascinating frivolities of Frou Frou are a bagatelle compared with the intellectuality and philosophic study of Hamlet. Camille, with all her pathos and passion, is an easier study for a woman than L'Aiglon with his heroic aspirations and frail infirmities. There is one woman's part, however, that I rank equally as a serious and important study with Hamlet and L'Aiglon. I refer to Phèdre. As much thought and dramatic ability is required to play the part of this wonderful woman as is necessary in portraying the other two characters under discussion. The three parts, each in its different way, I hold of equal importance. . . . . .

"I have no special time or place for study When I am working up a new rôle, I think of nothing else until I have completely associated myself with the character. I will study in my carriage, in bed, when eating—all the time. Then, when the character is mine, it is ready at any time to be assumed like a costume, and it should be equally well-fitting.

"There is one important reason why I think a woman is better adapted to play parts like L'Aiglon and Hamlet than a man. These rôles portray youths of twenty or twenty-one, with the minds of men of forty. A boy of twenty can not understand the philosophy of Hamlet, nor the poetic enthusiasm of L'Aiglon, and without understanding there is no delineation of character. There are no young men of that age capable of playing these parts, consequently an older man essays the rôle. He does not look the boy, nor has he the ready adaptability of the woman, who can combine the light carriage of youth with the mature thought of the man. The woman more readily looks the part, yet has the maturity of mind to grasp it."

**For Debilitated Men,**

**Horsford's Acid Phosphate**

Dr. J. B. ALEXANDER, Charlotte, N. C., says: "It ranks among the best of nerve tonics for debilitated men." Renews the vitality.

HEZEKIAH: "He ordered her to be immersed ten times in the ducking-pond."

OBEDIAH: "Good Saints! I didn't think he'd soak her that hard."—*Puck.*

**Luck Not on His Side.**—TRAVELER: "Get on, man; get on! Wake up your nag."

DRIVER: "Shure, sor, I haven't the heart to bate him."

TRAVELER: "What's the matter with him? Is he sick?"

DRIVER: "No, sor, he's not *sick*, but it's unlucky 'e is, sor, unlucky! You see, sor, every morning, afore I put 'em in the car, I tosses 'im whether *'e'll* have a feed of oats, or *I'll* have a dhrink of whisky, *an' the poor baste has lost five mornings running!*"—*Punch.*

## Current Events.

### Foreign.

CHINA.

February 4.—An American missionary, the Rev. William S. Ament, is arrested on the charge of trying to extort money from Chinese villagers.

February 5.—The Chinese plenipotentiaries confer in Peking with the foreign envoys regarding the punishment of officials, and it is agreed that a list shall be submitted by the latter for the consideration of the former; the question of withdrawal of foreign troops is also mooted.

February 6.—The list of twelve Chinese officials whose execution is demanded by the foreign envoys is made public, together with a special plea by the Chinese plenipotentiaries for one of the number.

February 7.—The Chinese plenipotentiaries at Peking reply to the note of the foreign ministers, suggesting moderation of several penalties demanded.

SOUTH AFRICA.

February 4.—General Kitchener reports brisk fighting in South Africa, with the capture of a Boer gun and the killing of sixteen Boer invaders of Cape Colony.

February 6.—The British War Office decides to send 30,000 more mounted men to the aid of General Kitchener; the Boers cut the railroad line near Lorenzo Marques.

February 7.—The editor of *The South African News* is arrested at Cape Town for seditious

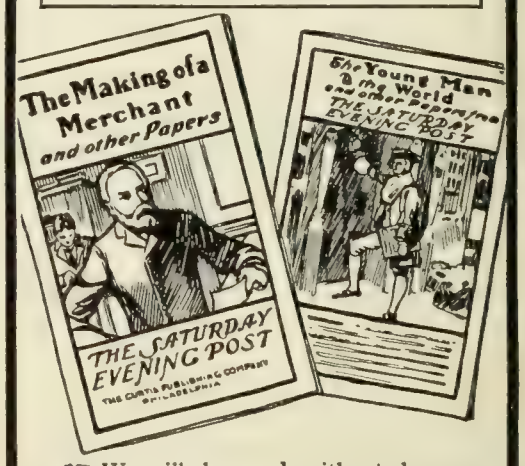
***THE SATURDAY EVENING POST***

**OF PHILADELPHIA**

**Sent to Any Address Three Months (13 weeks) on Trial on Receipt of Only 25 Cts.**



☞We will also send, without charge, a copy of each of the two books: "The Young Man and the World" and "The Making of a Merchant." These books are reprints of the best of the famous series of articles for young men which appeared in the POST, written by such well-known men as **ex-President Cleveland; Senator Beveridge; former Senator John J. Ingalls; Harlow N. Higinbotham,** of Marshall Field & Co.; **Robert C. Ogden,** of Wanamaker's, and others.

**The Curtis Publishing Company, Philadelphia, Pa.**

**Our Business is to Make Folks Comfortable**

The **"UNIVERSITY"** is the name of this, one of our latest Easy Chairs. It's a brain worker's chair. The back is adjustable. The arms lift up and turn over, forming shelves for writing, holding books, etc.

We also make five other lines of **Reclining Chairs,** the **Regent, Columbine, Siesta, Manhattan** and **Oriental,** meeting every demand of necessity or luxury. Our Catalogue C describes them all.

**Rolling Chairs.**—We make over 50 styles, and can furnish a suitable chair for any case. Catalogue B.

**Sargent's Economic System of Devices for Brain Workers**

is also something worth knowing about. It embraces **Sargent's** Unrivaled Rotary Book Cases, Reading Stands, Dictionary, Atlas and Folio Holders, Adjustable Reading Desks attachable to chairs, etc. Catalogue D. In writing particularize. No charge for catalogues.

**GEO. F. SARGENT COMPANY**

**289 D Fourth Avenue** (next 23d St.), **New York**

libel; news is received of a second Boer victory at Moddersfontein, resulting in nine British soldiers killed and thirty-one wounded.

February 9.—General French occupies Ermelo, in the Transvaal, six thousand Boers retiring before his advance; a determined Boer attack on a British outpost at Bothwell is repulsed.

February 10.—General Kitchener reports that a Boer force under Louis Botha attacked General Smith-Dorrien's camp and was driven off with considerable loss; the Boers under DeWet attack a British force and capture a gun.

OTHER FOREIGN NEWS.

February 4.—The body of Queen Victoria is entombed at Frogmore Mausoleum, Windsor, beside that of the Prince Consort; King Edward issues messages to the people of the British empire.

The beginning of the festivities to mark the marriage of Queen Wilhemina takes place at The Hague.

February 5.—The German Emperor concludes his English visit and takes leave of King Edward.

Queen Wilhelmina and Duke Heinrich receive the congratulations of the representatives of all foreign powers at the court.

February 7.—The wedding of Queen Wilhelmina and Duke Heinrich of Mecklenburg-Schwerin takes place at The Hague.

Five hundred people perish in an oil conflagration at Baku, Russia.

The Italian ministry resigns.

February 8.—The British Government, it is learned, will shortly transmit a reply to the Nicaragua Canal proposals of the United States.

February 9.—Anti-Jesuit demonstrations continue in Spanish cities.

### Domestic.

CONGRESS.

February 4.—Both houses unite in celebrating the John Marshall centenary, addresses being made by Chief Justice Fuller and Wayne MacVeagh.

February 6. *Senate:* The ship subsidy bill is considered in night session; the war tax reduction bill and military academy appropriation bills are passed.

*House:* Discussion on the post-office appropriation bill continues.

February 7.—*Senate:* Debate on the ship subsidy bill continues; the pension appropriation bill is passed.

*House:* The post-office appropriation bill is passed.

OTHER DOMESTIC NEWS.

February 4.—Mrs. Nation, with half a dozen other women armed with hatchets, raids saloons in Topeka.

February 5.—The President appoints general officers under the army reorganization law, making Miles lieutenant-general and Young, Chaffee, and MacArthur major-generals.

Henry E. Youtsey, convicted in Kentucky of complicity in the murder of Governor Goebel, is sentenced to life imprisonment.

February 6.—It is announced that the holdings of Andrew Carnegie in the stock of the great steel company which bears his name are to be taken over by J. P. Morgan & Co.

February 8.—The report of the congressional committee on hazing at West Point is made public.

Mrs. Nation travels from Topeka to Des Moines, Iowa, greeting great crowds en route.

February 10.—Col. Albert D. Shaw, former commander-in-chief of the Grand Army of the Republic, dies at Washington.

AMERICAN DEPENDENCIES.

February 5.—*Philippines:* Secretary Root announces that the new military appointments will not necessarily involve any change of commands in the Philippines.

February 6.—Two Manila merchants are arrested on charges of aiding the Filipinos.

**The Ingersoll Dollar Watch**

**A MERITED SUCCESS.** In 1892, the year of its appearance, about 30,000 Ingersoll Dollar Watches were sold. In 1900 the sales of this watch were over a million and a half.

Each intervening year has been one of steady, natural growth, an irrefutable testimonial of its merit. And each succeeding year has also seen the sterling qualities which characterized the early models still further emphasized by improvement in movement, reduction in size, and the enhancing of its appearance, until the 1901 model is a most accurate and reliable timepiece, conventional in size and handsome in appearance. "The watch for the millions."

*Guaranteed to Keep Accurate Time for One Year.*

**For sale by 10,000 dealers, or sent postpaid in U. S. or Canada for $1.00**

***Alois P. Swoboda*** teaches by mail, with perfect success, his original and scientific method of Physiological Exercise without any apparatus whatever, and requiring but a few minutes' time in your own room just before retiring. By this condensed system more exercise can be obtained in ten minutes than by any other in two hours, and it is the only one which does not overtax the heart.

It is the only natural, easy and speedy method for obtaining perfect health, physical development and elasticity of mind and body.

***Absolutely Cures Constipation, Indigestion, Sleeplessness, Nervous Exhaustion***
***. . . and revitalizes the whole body . . .***

Pupils are of both sexes, ranging in age from fifteen to eighty-six, and all recommend the system. Since no two people are in the same physical condition, individual instructions are given in each case. Write at once for full information and Booklet containing endorsements from many of America's leading citizens, to

**Moller's Oil is different**

from other cod liver oils, as it is never sold in bulk. It is bottled when manufactured, thus passing direct to the consumer without the possibility of adulteration. Each bottle of

**Peter Moller's Cod Liver Oil**

bears on the label, in perforated letters, the date of manufacture, so that the purchaser may always insist on having oil of the latest season's production, and know that he is getting it.

Moller's Cod Liver Oil is put up only in flat, oval bottles, and bears our name as sole agents.

Schieffelin & Co., New York.

palpably increasing the Queen's power"—W. W.; "Extremely puzzling on account of an *idée fixe* of mine that the Kt must go to Q 5"—G. D.; "A great piece of Chess-strategy. The B's moves to R 3 are especially to be admired"—A. K.; "The competition must have been weak, if this problem merited first prize, as there is a total lack of strategy or subtlety"—W. R. C.; "One of the best"—J. G. L.; "I vote it a first prize"—S. M. M.; "As nearly perfect as they make them"—J. E. W.; "No wonder that this got the first prize"—D. G. H.; "Especially good"—O. C. B.

There is a very general opinion that 2-ers are very easy; and, yet, we have the strange fact, in this week's solution, that several who solved the difficult 3-er (534) failed on the 2-er. There are three "tries" that caught many of our solvers: R—R 4, answered by B—Kt 5; R—K 3, and B—Q 6, answered by B x P.

In addition to those reported, S. W. Shaw, Midnapore, Can., got 526, 530, 531, and 532; W. W., and W. De Laun, New York City, 531; G. W. and Miss W. Hill, McLeansboro, Ill., got 531 and 532.

## A "Hot Scotch."

The Scotch Gambit is not an easy opening to defend, and Black, if he be not posted, very early gets into difficulty. The following game played recently in the Tourney of the Chess, Checker, and Whist Club, New Orleans, is worth preserving as a fine example of the correct defense.

Scotch Gambit.

*Notes from the Times-Democrat, New Orleans.*

(a) The older form of attack, constituting the veritable Scotch Gambit.

(b) The only proper response.

(c) Best, leading in every variation to Black's advantage.

(d) This turns the game altogether out of normal channels; but either of the "book" continuations, 6 Kt x B P, or 6 Q to R 5, is unfavorable for White. The latter is simply answered by 6.., Q—K 2 and 7.., P—Q 3. The former leads to very interesting play: 6.., Kt x Kt; 7 B x Kt (ch); 8 Q—K 2, P—K Kt 4; 9 Q x B, P—Q 4! (Schumoff's move); 10 Castles, B—K 3; 11 P—Q B 3, P x K P; 12 P x P, Q x P, with the advantage.

(e) Initiating an ingenious attack, but overlooking the force of Black's telling reply.

(f) Black has played the last four or five moves in capital style, and this gives him at once a marked superiority.

(g) He has no other move, of course to save the K R P, but it at once plunges him into inextricable difficulties. The game is really over.

SENT FREE AND PREPAID.

# What Shall We Eat

## To Keep Healthy and Strong?

A healthy appetite and common sense are excellent guides to follow in matters of diet, and a mixed diet of grains, fruits and meats is undoubtedly the best, in spite of the claims made by vegetarians and food cranks generally.

As compared with grains and vegetables, meat furnishes the most nutriment in a highly concentrated form and is digested and assimilated more quickly than vegetables or grains.

Dr. Julius Remusson on this subject says: Nervous persons, people run down in health and of low vitality should eat plenty of meat. If the digestion is too feeble at first it may be easily strengthened by the regular use of Stuart's Dyspepsia Tablets after each meal. Two of these excellent tablets taken after dinner will digest several thousand grains of meat, eggs or other animal food in three or four hours, while the malt diastase also contained in Stuart's Tablets cause the perfect digestion of starchy food, like potatoes, bread, etc., and no matter how weak the stomach may be, no trouble will be experienced if a regular practice is made of using Stuart's Dyspepsia Tablets because they supply the pepsin and diastase so necessary to perfect digestion, and any form of indigestion and stomach trouble except cancer of the stomach will be overcome by their daily use.

That large class of people who come under the head of nervous dyspeptics should eat plenty of meat and insure its complete digestion by the systematic use of a safe, harmless digestive medicine like Stuart's Dyspepsia Tablets composed of the natural digestive principles, peptones and diastase, which actually perform the work of digestion and give the abused stomach a chance to rest and to furnish the body and brain with the necessary nutriment. Cheap cathartic medicines masquerading under the name of dyspepsia cures are useless for relief or cure of indigestion because they have absolutely no effect upon the actual digestion of food.

Dyspepsia in all its forms is simply a failure of the stomach to digest food and the sensible way to solve the riddle and cure the indigestion is to make daily use at meal time of a safe preparation which is endorsed by the medical profession and known to contain active digestive principles, and all this can truly be said of Stuart's Dyspepsia Tablets.

All druggists throughout the United States, Canada, and Great Britain sell them at the uniform price of fifty cents for full treatment.

**A Guaranteed Investment**

in sums of $25 and upwards. Cash or monthly payments. We offer 25,000 shares of "Norwood Mining" stock at $1.00 per share. One concentrating plant completed. Two shafts in ore. Money wanted to make additional improvements and developments and to build another plant and thus double output. No salaried officers. No preferred stock. No bonds. Will soon pay

**1% Monthly Dividends**

with prospects of 2% monthly as soon as proposed improvements are completed, when stock will be worth $2.00 per share, thus making 100% profit on your investment. Buy now as prices will advance within a short time. Strictly on its merits we believe the "Norwood" is the best mining stock ever offered, but in addition your investment absolutely guaranteed against loss by reliable company of $250,000 responsibility. Most rigid investigation invited. Before investing send for booklet "F", mailed FREE.

# The Literary Digest

VOL. XXII., NO. 8 NEW YORK, FEBRUARY 23, 1901. WHOLE NUMBER, 566

Published Weekly by
FUNK & WAGNALLS COMPANY,
30 Lafayette Place, New York. 44 Fleet Street, London.
Entered at New York Post-Office as Second-Class Matter.

**TERMS OF SUBSCRIPTION.**

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

**CAN YOU GO TO EUROPE THIS YEAR?**

The party of LITERARY DIGEST readers now being organized for a personally conducted tour through Europe this summer affords an attractive opportunity for all who contemplate a trip abroad. Freedom from care, saving of expense, and congenial companions are to be gained by joining this party. See the announcement on the opposite page, and read what is said by those who took the same tour last summer under the same management.

## TOPICS OF THE DAY.

### A $1,500,000,000 CONGRESS.

THE Fifty-sixth Congress, which appropriated $710,000,000 during its first session, seems likely to appropriate nearly $800,000,000 more during the session that is now closing; and the party leaders, in Congress and in the press, are showing signs of alarm. In a recent debate in the Senate Mr. Allison (Rep.), chairman of the committee on appropriations, remarked that "in round numbers, the appropriations for the next fiscal year will be probably from $760,000,000 to $780,000,000," and the following colloquy ensued:

MR. HALE (another Republican member of the committee on appropriations): "We have not found any place yet where we could cut off anything. The tide, immensely swollen heretofore, is more swollen and more turbid."

MR. SPOONER (Rep.): "And still rising."

MR. HALE: "And still rising."

MR. ALLISON: "And rapidly rising."

MR. HALE: "And rapidly rising. The country knows nothing about it."

MR. COCKRELL (a Democratic member of the committee): "Going into a current, in other words."

MR. HALE: "We were shocked at the idea of a billion-dollar Congress, and before we know it we will have a billion-dollar session. . . . It ought to be known and appreciated that we are going on in a way that the military budget of this country will be nearly $400,000,000—about twice that of any great European power."

The New York *Press*, a strongly Republican paper, regrets the "scandal of extravagance" of the present Congress, but thinks that now "it is doubtless too late for the party managers to save the party reputation in this respect of lavish appropriations." The Cleveland *Leader* (Rep.), too, remarks that "patriotism does not mean extravagance," and it recalls that "only a few years ago the expense of the Government in all of its departments amounted to about a million dollars a day," while "now more than that sum is spent for soldiers, sailors, pensioners, guns, and ships." Indeed, observes the Philadelphia *Times*, (Dem.), "we are actually paying, for army, navy, and pensions, as much as France and Germany together, nearly twice as much as Russia, more than the whole Triple Alliance." The same fact is pointed out in more detail by the New York *World* (Ind. Dem) as follows:

"Our army and navy numbers 120,000 men only—the smallest establishment of all the great nations. We pay for it $253,696,870, exclusive of pensions, which is $14,000,000 a year more than England pays, inclusive of pensions, for an army and navy that numbers 364,000 men. Inclusive of pensions our military budget now totals $398,942,103, which is more than twice as much as the military budget of France, with her army and navy of 622,000 fighting men; almost twice as much as Russia's, with nearly a million soldiers and sailors; nearly double Germany's, with her half-million of enlisted men, and almost five times as much as Austria's, with a fighting array of 278,000 men."

"Obviously the only way to meet this difficulty," says the New York *Evening Post* (Ind.), "is to cut off the receipts," and the Philadelphia *Bulletin* (Rep.) calls for "the speedy enactment of the bill cutting down the war taxes," because "with less money in the treasury the next Congress will be compelled to spend less." "But as long as Congress continues to pass pension bills just because they are pension bills, to squander money on river and harbor improvements, and generally to use the Government and its treasury as agencies for the advancement of the political and personal fortunes of its members, and as long as the President signs practically every bill that is sent to him," thinks the Indianapolis *News* (Ind.)," we may expect that 'the tide' will continue to rise."

Not all the press, however, feel that Congress is extravagant. The Philadelphia *Inquirer* (Rep.) says that the large appropriation "simply means that we are growing—as we ought to grow," and that "if this money goes for public improvements men are put at work, and the men who work do not complain," so that "if we have become a billion-dollar country, so much the better. Let us hope that shortly we will become a two-billion dollar country." The Brooklyn *Eagle* (Ind.), too, believes that the increased expenditure "is a measure of the growth and expansion of the United States," and that "the country will not complain so long as the money is honestly used."

**Sampson and Schley Again.**—The President's request that the Senate confirm his advancement of Rear-Admiral Sampson five numbers, and Rear-Admiral Schley three numbers, "to take rank next after Rear-Admiral Sampson, when advanced," has stirred up the friends of these two commanders again, and their newspaper partizans agree that the proposed advancement is an "infamy," only disagreeing as to which part of the proposition merits that term. The Philadelphia *Times* (Dem.), for example, a firm friend of Rear-Admiral Schley, declares that "the renewal at this late date of the Navy Department scheme to advance Admiral Sampson above Admiral Schley is simply infamous. The Senate has already refused to permit this wrong, and tho it has lately been tolerant of the President's personal favoritism, it must again refuse. . . . Such rank injustice is grotesque. It is indefensible, it is infamous. If allowed to be

SIX LEADERS IN THE STEEL CONSOLIDATION.

consummated, it will be a shameful blot on the bright history of the United States navy." And the New York *Sun* (Rep.) is equally firm in asserting that "if Rear-Admiral Schley, whose transgressions as an officer, crowned by an act of positive dishonesty, are all on the official records of the Government, should be promoted while in that condition, the navy of the United States would feel a blow never felt by any sister service in the world." Some of the other papers observe that it has been just such strenuous comment as this by the friends of each admiral that has prevented the promotion of either.

## MORE REFLECTIONS ON THE STEEL TRUST.

THE unprecedented concentration of railroad, coal, and steel interests in this country during the past few months, culminating in the tremendous combinations reported in our pages last week, seems to leave no room for doubt that, in the words of the Brooklyn *Eagle*, "combination is in the air and we shall see much more of it in the near future." "Fortunes will be made and lost before we see the end of the movement," adds the same paper; "the sums involved are so great that no man can comprehend them, and the possible profit to come out of the enterprises will make the men who receive it rich beyond the wildest hallucination of the most madly avaricious." The New York *Journal of Commerce* is authority for the statement that Mr. Carnegie has gone on record as saying that he will now have an income of $15,000,000 a year, and the Springfield *Republican* facetiously remarks that "in living up to the letter of his 'gospel of wealth,' Mr. Carnegie is badly in arrears, and has an immense amount of giving on hand just ahead of him." As to the extent of J. Pierpont Morgan's wealth and income, only the wildest guesses can be made; but probably few will dispute the statement of a writer in the current issue of *The Home Magazine* (New York) that "he can command more ready money of his own and of other people for the furtherance of any great enterprise than any [other] one man in the world." The same writer continues:

"If Mr. Morgan were to devote his time to speculating, he could be the richest man in America, for his power in Wall Street is practically unlimited. But he holds stock-tickers and speculators in contempt, and prefers to amass his millions by organizing and reorganizing. Finance to him is a science, and to this is due his success, for he long since mastered the science. He is practically the American representative of the English and European millions seeking investments in this country."

The most gloomy pictures are drawn by some papers as to the final outcome of present industrial tendencies. For example, the New Orleans *Picayune* makes the following prophecy:

"After a while, governments will be operated, congresses and legislatures will be maintained and continued for the express purpose of legislating for and settling the controversies of these mighty financial, commercial, and industrial corporations, and individuals, save where they appear in the criminal courts as prisoners and defendants, will cease to be considered. A man will then be designated merely according to his relations as an employee of some vast corporation and will be known only by a number, his name and social condition being of no consequence to any other than himself and others like him. Otherwise he will only be a mere atom or item in a vast system.

"Then, it may be imagined, through the buying up or subsidizing or establishing of newspapers to advocate the interests of the tremendous corporations, all the independent or opposition press will be crushed out, and the human atoms in the vast system will have no voice in declaring their views and wishes, and there will be no real public opinion, while the elections will be manipulated in the interests of the monopolies. After that, what?"

The Minneapolis *Tribune* is inclined to take a much more optimistic view. Combination of capital, it declares, has benefited the country by "increasing our foreign trade, and turning the balance of trade in favor of the United States, making this a creditor instead of a debtor nation." It continues:

"The advantages claimed for the union of interests is greater stability in prices, the regulation of output to avoid a congested market, and consequently, stability of industrial and financial conditions. It is a patent fact that most of the panics and business depressions which this country has experienced at different times have been brought about by overproduction. The usual succession of events is a boom, with all the mills and shops worked to their full capacity, then a glutted market; then falling prices, and finally business stagnation resulting in the shutting down of works and thousands thrown out of employment. If the 'community of interests' management can avert these ups and downs and maintain steady employment, avoiding the extremes

of overbooming or collapse, the effect in the long run will be good."

A bill introduced in Congress by Representative Babcock, of Wisconsin, for the express purpose of regulating the gigantic steel trust, is in the nature of an amendment to the Dingley tariff act, and proposes to put steel rails, billets, wire, nails, etc., on the free list. "Such a step," says the Springfield *Republican*, "is not only reasonable, but it would be effective in pulling the teeth of the proposed steel trust. . . . An industry in this position needs no protection. The protective tariff in such case is merely a tariff for the protection of monopoly in placing the home market under monopoly tribute." On the other hand, the Chicago *Evening Post* doubts the efficacy of the proposed measure. "Atttractive as the withdrawal-of-the-tariff remedy is," it declares, "in the case of trusts guilty of extortion, it is recognized by fair-minded economists like Professors Jenks and Ely that, instead of checking monopoly, it may under certain conditions foster it by preventing successful operations by weaker competitors."

More radical remedies find favor in some quarters. The New York *World* looks toward ultimate state control of trusts and monopolies. "Outside of the United States," it says, "the movement of all English-speaking peoples is toward either the out-and-out ownership or the iron-handed control of all public utilities." "If the consolidation movement should continue further," adds the St. Louis *Mirror*, "it will ultimately be an easy proposition for the Government to assume control of every railroad and manufacturing plant in the country, and to realize the cherished dreams of the followers of Marx, Lassalle, and Bellamy."

---

**Progress in Porto Rico.**—In face of the unsatisfactory conditions hitherto prevailing in the Philippines and Cuba, Governor Allen's cheering reports from Porto Rico are the cause of general gratification. The accounts of destitution and suffering, he declares, which have been published in several quarters, are quite unwarranted by the conditions. The crops this year are "abnormally large," and the wages of farm-hands and laborers are higher than ever before known in the island. According to the latest report of the Bureau of Agriculture of Porto Rico, there are 80,034 acres of sugar land under culture, 180,289 of coffee, 15,324 of tobacco, and 104,059 of other crops. "Our customs receipts are constantly increasing," says Governor Allen, "as well as the internal-revenue collections. Civil government in Porto Rico has not cost the people of the United States one penny. It has been self-sustaining from the beginning."

Commenting on this "gratifying state of affairs," the Washington *Star* (Rep.) remarks:

"All pessimists who doubt the capacity of the United States to successfully manage the affairs of the new possessions should give heed to the conditions in Porto Rico. American control has existed but a little over two years. We found squalor and want and ignorance in every part of the island. The people to-day are busy and contented, and the system of schools now in operation is superior to any ever before known there. . . . A fair promise is that in a score of years Porto Rico will be one of the richest islands of its size in the world, and its people among the happiest living anywhere under the Stars and Stripes."

The Detroit *Journal* (Rep.) expresses the hope that the enactment of the Spooner bill may mark the beginning of a similar era of prosperity and good government in the Philippine islands.

---

## FATE OF THE SHIPPING SUBSIDY BILL.

NEWSPAPERS opposed to the shipping subsidy bill have been expressing the opinion for some time that it would not pass during this session of Congress; and now the Washington despatches in the New York *Sun* and *Tribune*, two Republican papers that favor the bill strongly, say the same thing. *The Sun's* Washington correspondent says that "it can be authoritatively stated that no further legislation will be enacted at this session of Congress than the passage of the appropriation bills and the adoption of conference reports on bills already passed. The ship subsidy bill is now officially dead."

Many prominent papers, Republican as well as Democratic, the country over, view this result with considerable equanimity. The Portland *Oregonian* (Rep.), for example, said last week that "should the ship subsidy bill pass it will become a great factor in politics, and will contribute a mighty force toward defeat of the Republican Party in future elections. It is an extra-hazardous thing to propose to take two hundred millions in cash from the Treasury and bestow them upon men already enor-

SNAP-SHOTS OF THE STEEL KINGS.

mously rich. On an act of this kind the country will be heard from later. No one should deceive himself." The Kansas City *Times* (Dem.) calls the bill a "steal" and an "infamous measure," and the Minneapolis *Journal* (Rep.) calls it "indefensible," "vicious," and "obnoxious," and declares that it is "a measure that the country has never asked for and does not want." In the Middle West the Chicago *Tribune* (Rep.) has been collecting the views of the editors in Illinois, Indiana, Ohio, Wisconsin, and Iowa on the bill, and finds that the balance of opinion is strongly against it. In Illinois thirteen (eight of them Republicans) oppose the bill, and eight favor it; in Indiana eleven oppose and one favors; in Ohio the poll stands sixteen against and thirteen for; in Wisconsin eleven against and nine for; and in Iowa thirteen against and eight for, nearly all the editors interrogated being Republicans. In the South the New Orleans *Times-Democrat* (Dem.) and *Picayune* (Dem.) oppose the measure, the latter paper referring to it as a "grab which proposes to tax the people to the amount of nine million dollars a year to enrich a few ship-owners," and the Atlanta *Constitution* (Dem.) thinks that the possibility of advantage to Southern ports from the subsidy is very remote.

It must not be supposed, however, that this measure is without strong friends in the newspaper world. The following list shows the division of opinion among some of the leading Republican and commercial journals. The Independent and Democratic press are almost a unit in opposing the measure, and if included would greatly extend the list of those opposed:

| Commercial and Republican Journals in Favor of the Bill. | Commercial and Republican Journals Opposed to the Bill. |
|---|---|
| *The Manufacturers' Record.* | The New York *Journal of Commerce.* |
| *Bulletin of the Iron and Steel Association.* | *The Iron Age.* |
| The New York *Tribune.* | The Boston *Transcript.* |
| The New York *Sun.* | The Boston *Record.* |
| The Brooklyn *Times.* | The Philadelphia *Ledger.* |
| The Boston *Journal.* | The Philadelphia *North American.* |
| The Philadelphia *Inquirer.* | The Philadelphia *Bulletin.* |
| The Philadelphia *Press.* | The Pittsburg *Dispatch.* |
| The Chicago *Inter Ocean.* | The Baltimore *American.* |
| The Kansas City *Journal.* | The Cleveland *Leader.* |
| The Denver *Republican.* | The Indianapolis *Journal.* |
| The Colorado Springs *Gazette.* | The Chicago *Tribune.* |
| The San Francisco *Chronicle.* | The St. Paul *Dispatch.* |
| | The St. Paul *Pioneer-Press.* |
| | The Portland *Oregonian.* |

The Detroit *Journal* (Rep.) prints an interesting dispatch from its Washington correspondent, in which he says that the idea that the bill is a Republican measure is a "delusion," and that it is, on the contrary, "a transportation trust measure"; and he goes on to quote the opinion of a Republican Senator, a member of the steering committee, to the effect that a great ocean-carrying trust is bound to come whether the ship subsidy bill is passed or not. The Senator is quoted as saying, in part:

"We will drive England out of the ocean transportation business because we can by superior methods do the carrying cheaper. Look at the haphazard, scurrying methods of her freighters. There is no comprehensive system. Every man for himself is the rule.

"Our transportation men will form a trust. We will drive the tramp freighters out of business the same as we put the stage-coaches out of business. Our trust will manage the shipping of the seas as systematically as Mr. Morgan's hired men will manage Mr. Carnegie's business. Mr. Frye says that one of the reasons for the bill's passage is that it costs twenty-five per cent. more to build ships in this country. The chief of the bureau of navigation said the same thing. That would be of consequence if it were true. We can build cheaper. A ship is made of iron and steel. We can make things out of iron and steel cheaper than any people in the world, no matter whether it is a plow or a ship.

"I will vote for the bill. . . . However, I do not wish to see this bill supported under a wrong impression or rather through false hopes. As soon as it is passed the great land transportation lines will extend their terminals across the sea. They will girdle the earth as they have gridironed the continent. These transportation extensions will get the subsidies. There should be no delusion about it. If the Congress does not vote a dollar, the extensions will be made just the same. . . . . .

"If the Government does not aid in forming these ocean transportation schemes, they will be formed anyway. It is only a matter of hustling them along. With this Government sanction money would come pouring in from all parts of the country and from all the cities of the world where there are surpluses to invest in these schemes, the ocean freighting companies. The Government's assistance will cause a fever of investing in such lines. See the point? Then with these $9,000,000 a year to pay interest on bonds, the whole thing would boom. We'll do the trick anyway, but it will be slower. We'll drive the English out of the transportation business. Sure as shooting! I am sorry to see that there is a general misunderstanding about the measure. It is worth standing on its merits or falling. There is fair room for difference of opinion. I hate the buncombe in it. I would be willing to vote for making the Mississippi River a straight and navigable canal from Minneapolis to the gulf, wide enough and deep enough for ocean commerce, if it could be done and would make America greater."

## IS REVOLUTION IMPENDING IN SPAIN?

THE outbreaks of rioting in Madrid, Valencia, Granada, Saragossa, Valladolid, Alicante, and other cities in Spain are again calling attention to the condition of the peasantry in that country, and to the feeling displayed toward some of the monastic orders. Most of the riots so far reported have included attacks on monks or monasteries. The cables report that the immediate cause of the outbreaks is the marriage of the Princess des Asturias to Count Don Carlos de Bourbon. The Princess is the sister of Alfonso, the fragile boy King, and, in case of his death, the Princess will become Queen, and the Count will become Prince Consort. As the Count is identified with the reactionary element, the people have risen in revolt in many places, and have attacked the monasteries as institutions that stand for the old order of things in Spain rather than for progress.

COUNT DE BOURBON.

Photo by Valentin, Madrid.

PRINCESS DES ASTURIAS.

In Madrid General Weyler seems to be keeping the peace with an iron hand. The Washington correspondent of the New York *Times* learns "from an absolutely reliable source" that General Weyler "has not only proclaimed martial law in Madrid, but has posted his troops in such a manner as to command every part of the city," and that "there is a suspicion that this proceeding may be a *coup d'état* of General Weyler's," as "that officer has for the last two years been acting exactly like a general who was preparing for the rôle of the 'Man on Horseback,'" and "he has been making speeches and giving out statements the effect of which was to show that he was the only man who could bring Spain through her troubles." The same correspondent goes on to interpret the situation as follows:

"The disturbances which General Weyler is now trying to quell are not, it is said by persons familiar with the situation, of either Carlist or Republican origin, altho both parties are no doubt active in trying to take advantage of the trouble. The anti-Jesuit movement, too, is only a symptom, and not the cause of the trouble. It is declared that the uprising is in reality an outbreak of the discontented. Those taking part in it comprise all classes of malcontents, and its causes are like those which brought about the French Revolution.

"As one well-informed diplomat put it: 'Spain is suffering from a complication of diseases.' Poverty has been increasing, the burden of taxation has been growing heavier, and the laboring classes are ripe for revolution. At the same time the ruling dynasty is unpopular, and there is a strong movement against the church. All these complications and a number of others have brought about a widespread feeling of unrest, and great events are looked for in Spain unless the incipient revolution is quelled.'

"Spain has been tending toward a rebellion for many years. Even in the lifetime of King Alfonso XII. there were continual disturbances, and in the closing years of his reign there were labor riots of such seriousness that it was reported that the rioters had poisoned the wells in many places. The Queen Regent has always been unpopular, and during the Spanish-American war she received the significant nickname of 'the Austrian woman,' the same epithet which was applied to Marie Antoinette. Only a short time ago an attempt was made to assassinate her. Bad as was Spain's condition in the lifetime of Alfonso XII. and later, the impoverishment resulting from the war with America has made it immeasurably worse, and has driven the laboring classes to desperation."

---

## MARK TWAIN AND EX-PRESIDENT HARRISON ON THE PHILIPPINE POLICY.

AFTER the despatch from General MacArthur two weeks ago, saying that the "expectations based on result of election have not been realized," and that conditions in the Philippines were "very inflexible and likely to become chronic," his despatch of last week was welcome news to the expansionist papers. In this later despatch, he says that the surrender of Simon Tecson, a Filipino colonel, with seven officers, seventy-one soldiers, fifty-nine guns, and two thousand rounds of ammunition, on Monday, February 11, "breaks up group insurrectos heretofore operating in mountains east of Bulacan"; and "removes from Northern Luzon the last formidable organized force excepting in the first district." He says further that the "rigid enforcement of proclamation December 20," and the "spontaneous action of people through federal party in behalf of peace and self-protection are producing most satisfactory results and encourage hope of entire suspension of hostilities at an early date." "When the commanding officer of the Philippines does not know from one month to another what the conditions are in the Philippine Islands," says Mr. Bryan's *Commoner*, "it is too much to expect that the Administration organs will be implicitly believed every time they say the insurrection is ended and the Filipinos happy under American rule." While waiting to see whether subsequent events justify the change of view experienced by our commanding general in the Philippines, it is interesting to turn to two notable articles in the current *North American Review*, in which the Administration's Philippine policy is put under the scalpel by Mark Twain and ex-President Harrison. Mark Twain's article is an attempt to explain "To the Person Sitting in Darkness" the seeming inconsistency between our Christian professions and the facts. The facts "look doubtful," he says, "but in reality they are not"; and he goes on:

"There have been lies; yes, but they were told in a good cause. We have been treacherous; but that was only in order that real good might come out of apparent evil. True, we have crushed a deceived and confiding people; we have turned against the weak and the friendless who trusted us; we have stamped out a just and intelligent and well-ordered republic; we have stabbed an ally in the back and slapped the face of a guest; we have bought a shadow from an enemy that hadn't it to sell; we have robbed a trusting friend of his land and his liberty; we have invited our clean young men to shoulder a discredited musket and do bandit's work under a flag which bandits have been accustomed to fear, not to follow; we have debauched America's honor and blackened her face before the world; but each detail was for the best. We know this. The head of every state and sovereignty in Christendom and ninety per cent. of every legislative body in

Christendom, including our Congress and our fifty state legislatures, are members not only of the church, but also of the Blessings-of-Civilization Trust. This world-girdling accumulation of trained morals, high principles, and justice, can not do an unright thing, an unfair thing, an ungenerous thing, an unclean thing. It knows what it is about. Give yourself no uneasiness; it is all right.'

"Now, then, that will convince the person. You will see. It will restore the business. Also, it will elect the master of the game to the vacant place in the trinity of our national gods; and there on their high thrones the Three will sit, age after age, in the people's sight, each bearing the emblem of his service: Washington, the Sword of the Liberator; Lincoln, the Slave's Broken Chains; the Master, the Chains Repaired.

"It will give the business a splendid new start. You will see.

"Everything is prosperous, now; everything is just as we should wish it. We have got the archipelago, and we shall never give it up. Also, we have every reason to hope that we shall have an opportunity before very long to slip out of our Congressional contract with Cuba and give her something better in the place of it. It is a rich country, and many of us are already beginning to see that the contract was a sentiment, a mistake. But now—right now—is the best time to do some profitable rehabilitating work—work that will set us up and make us comfortable, and discourage gossip. We can not conceal from ourselves that, privately, we are a little troubled about our uniform. It is one of our prides; it is acquainted with honor; it is familiar with great deeds and noble; we love it, we revere it; and so this errand it is on makes us uneasy. And our flag—another pride of ours, our chiefest! We have worshiped it so; and when we have seen it in far lands—glimpsing it unexpectedly in that strange sky, waving its welcome and benediction to us—we have caught our breath, and uncovered our heads, and couldn't speak, for a moment, for the thought of what it was to us and the great ideals it stood for. Indeed, we *must* do something about these things; we must not have the flag out there, and the uniform. They are not needed there; we can manage in some other way. England manages, as regards the uniform, and so can we. We have to send soldiers—we can't get out of that—but we can disguise them. It is the way England does in South Africa. Even Mr. Chamberlain himself takes pride in England's honorable uniform, and makes the army down there wear an ugly and odious and appropriate disguise, of yellow stuff such as quarantine flags are made of, and which are hoisted to warn the healthy away from unclean disease and repulsive death. This cloth is called khaki. We could adopt it. It is light, comfortable, grotesque, and deceives the enemy, for he can not conceive of a soldier being concealed in it.

"And as for a flag for the Philippine province, it is easily managed. We can have a special one—our States do it: we can have just our usual flag, with the white stripes painted black and the stars replaced by the skull and cross-bones.

"And we do not need that civil commission out there. Having no powers, it has to invent them, and that kind of work can not be effectively done by just anybody; an expert is required. Mr. Croker can be spared. We do not want the United States represented there, but only the game.

"By help of these suggested amendments, progress and civilization in that country can have a boom, and it will take in the persons who are sitting in darkness, and we can resume business at the old stand."

Ex-President Harrison, in his "Musings upon Current Topics," in the same magazine, considers America's appearance in the new rôle of a "world power," and asks what it means. "In a moral sense," he says, "we have long been familiar with the idea that we were the greatest of world powers," and "we have been a power in a military sense on the land for many years, and by spells a naval power of renown." These are not the senses, therefore, in which the expression is used. A "world power," he finds, seems to be "a power having the purpose to take over so much of the world as it can by any means possess, and having with this appetite for dominion military strength enough to compel other nations having the same appetite to allow or divide the spoils." Such, at least, is the character of the other "world powers" that make up the European family. That our initiation into that family does not meet the ex-President's enthusiastic approval is evident. He says:

"If to be a world power is to do as the world powers do, then we must disclaim this new degree which the European college of applied force has conferred upon us. The taking over of the Philippines has been declared, by those who should know, to have been casual—of necessity—the acceptance of a divinely imposed duty. The question of the disposition of them, when their people shall have submitted to legal authority, is said to be still open. All of which is to say that the acquisition of these distant islands does not commit the nation to a scheme of colonization. The United States seems thus far in China to have stood firmly against dismemberment; not because of the practical difficulties

CARIBBEAN PROBLEMS IN CARICATURE.

of allotting the parts, but out of regard to the rights of the Chinese to preserve their national autonomy. But we are hearing now a great deal of the riches and the strategical advantages which have come to us with the docile acceptance of the divine will in the Philippines, and a great deal of irresponsible nonsense about our being a world power. If we allow ourselves to drift into bad ways, it is quite the same as if we had sought them.

"The barbarous conduct of some of the allied forces in China, the shameless looting of private houses and public institutions, and the contemptuous and cruel disregard of all the sensibilities and rights of alien races which characterize the world powers, shock our sensibilities. We have almost more pride in General Chaffee's blunt letter of protest against looting and cruelty than in his splendid fighting. Let us not be a world power, in any save the good old sense—that of a nation capable of protecting in all seas the just rights of its citizens, and incapable everywhere of a wanton infringement of the autonomy of other nations."

The Administration papers reply to Mark Twain's article with the argument that he is a humorist, and is not to be taken seriously. The New York *Sun* (Rep.), for example, remarks: "We are sorry to say that Mark is on a spree. Don't mention it. For the moment he is in a state of mortifying intoxication from an overdraught of seriousness, something to which his head has not been hardened. Wait, and welcome the prodigal as of old on his return. He will be along again in time."

## ENDING OF THE CHICAGO BUILDING-TRADES STRIKE.

ACCORDING to the Chicago papers, the building-trades strike in that city is "ended" again. Last June the same papers declared it was ended when the bricklayers withdrew from the Building-Trades Council and signed an arbitration agreement with the contractors. Now the carpenters have done the same thing, and "Chicago's great industrial conflict," says the Chicago *Evening Post*, "is practically ended." "Chicago has cause for thanksgiving," continues the same paper, "in this termination of a disastrous struggle that has paralyzed business, provoked lawlessness at times, and driven capital away. The benefits will be widely diffused and lasting. The contract is for two years, but its principles are now established for good. The lesson of the struggle will not be easily forgotten." This strike has been in progress a little over a year, and in the disturbances that accompanied its early stages five persons were killed and one hundred and fifty injured, some of the victims being crippled for life. A press despatch sent out from Chicago says that "by the strike thirty thousand men in the building industry were kept out of employment, and twenty thousand in the trades manufacturing building material. Most of these were able to keep their families from suffering by doing odd jobs at anything which offered. It is estimated that $50,000,000 in contracts for buildings and in plans in the architects' offices were held up for a year by the trouble."

By the present agreement the contractors grant the carpenters the following concessions: (1) Saturday half holiday. (2) Eight-hour day. (3) Forty-two and a half cents an hour and time and a half for overtime. (4) Piece work prohibited. (5) Non-union men not to work below union wage scale. (6) Need not work with non-union carpenters. (7) Weekly pay days. The carpenters, on their part, grant to the contractors the following terms: (1) Union to withdraw from the Building-Trades Council. (2) Sympathetic strike abolished. (3) All disputes settled by arbitration without stoppage of work. (4) Use of apprentices not prohibited. (5) No limitation of the amount of work to be done in a day and no restriction of use of machinery or tools or of any manufactured material, except prison-made. (6) Foreman not to be subject to rules of his union while acting as foreman. Upon the question of withdrawal from the council, the vote of the members is to be taken, but it is said that the union will ratify the action of its arbitration committee.

**Is Woman's Testimony Less Reliable than Man's?**—Judge Waterman, of Chicago, has recently produced something of a sensation by granting a new trial in a case before him upon the ground that the verdict which it was sought to set aside had been based largely upon the testimony of women. "The evidence of one written document," he is reported as saying, "is of more weight than the oral testimony of a dozen witnesses, particularly when women are concerned. Tho women are undoubtedly upon a higher moral plane than men, they are not as reliable on the witness-stand. It seems that women are of a more imaginative nature, and, tho it is no doubt unintentional, they come to believe as true what they at first only imagine, and maintain their belief in spite of all evidence against it." Says the Philadelphia *Inquirer*:

"These are surprising charges and no less grave than surprising. If they are to be accepted as true, there is no escape from the conclusion that from at least one point of view, the point involved in the opinion of this Chicago judge, women are not entitled to be regarded as responsible human beings. The person who is not able to distinguish between what is fancy and what is fact is a person whom it is hardly safe to allow to be at large. It can not be admitted of such a person that he or she is in the full possession of his or her senses. To mistake illusions for realities is one of the most constant and characteristic indications of insanity, so that the statement of the Chicago judge is equivalent to an assertion that women as a body are what the lawyers call *non compos mentis*. We don't believe that there will be any considerable or respectable body of assent to that proposition.

"We should be inclined to say that women make at least as good witnesses as men, if not better, and that for several reasons. They are naturally more observant; they are apt to have a better memory for details; and they are more conscientious about stating in court what they believe to be true. This Chicago judge himself admits that they are upon a higher moral plane than men, and if that doesn't mean among other things that they have a more scrupulous regard for the truth the Chicago man is loose in his use of language. Of course there are women who can't be trusted upon their oath just as there are men; but it may well be questioned whether upon the whole women are not the more truthful of the two."

IT is now reported that, following the example of the United States, Germany is to collect her claim against the Sultan by constructing a Turkish war-ship. If all of Turkey's creditors take this method of collecting their debts, the sick man of Europe may yet have such a navy as to be able to make it decidedly unhealthy for collectors.—*The Louisville Courier-Journal.*

DIFFERENT NOW.—"Yes," said the statesman with the kindly eye but the firmly set mouth, "I like to read about Noah and the ark." "What brought them to your attention?" "Nothing in particular. I couldn't avoid being struck by the manner in which Noah and his sons went to work and carried the enterprise through without asking a penny's assistance from the Government. But, of course, those were primitive days."—*The Washington Star.*

## LETTERS AND ART.

### LITERARY TASTES OF THE NEW KING AND QUEEN OF ENGLAND.

FEW monarchs have ascended the throne so well equipped in intellectual balance and in genuine grasp of mind as Edward VII., writes Mr. F. Cunliffe-Owen, an English writer who has long been a friend of the King's. He continues (in *The Independent*, February 2) :

"In addition to an unrivaled knowledge of men and affairs, not only in England, but also abroad, he is well read to a degree that is generally ignored. If I lay stress on this fact, it is because some years ago a paragraph, frequently quoted since, appeared in the London *World* over the signature of the late Edmund Yates, declaring that 'His Royal Highness's reading is very limited.' Quite the reverse is the case. Not a single new book of importance appears in either English, German, or French that does not receive King Edward's attention, and every literary 'primeur' is read and discussed at Marlborough House or Sandringham long before its review appears in the London press. A number of French authors make a point of sending one of the very first copies of each of their works to King Edward, and the late Alphonse Daudet even went so far as to furnish the then Prince of Wales with the key to the characters in several of his best-known novels. I remember M. Gambetta expressing to me on one occasion the most unbounded surprise that a man who had the reputation of being so exclusively addicted to pleasure as Queen Victoria's eldest son should have read so much. On the occasion of the great French statesman's first meeting with King Edward at a *déjeuner* at the Hôtel Bristol, in Paris, literature constituted almost the sole and only theme discussed at table, and a work which no one present but Gambetta and his royal host happened to have read—namely, the memoirs of Nassau Senior—became the topic of most interesting conversation. To show how very catholic are the tastes of King Edward and of his consort in the matter of literature, I may mention that about the time of the assassination of Czar Alexander II. I had occasion to despatch to Sandringham, at their personal request, a large package of Nihilistic literature, which I had collected, including Tchernyshevsky's 'What Is to Be Done?' and other equally revolutionary writings, in order that they might make themselves thoroughly acquainted with the ideas, the doctrines, and the aims of the revolutionary party in Russia, about which little was known at the time.

"True, King Edward has never posed for being a man of superlative intellect, or as a savant. Yet he possesses something more than a mere smattering of science, and I have often heard the late Lord Playfair declare that his former royal pupil knew a great deal about chemistry. Aside from any question of studies which he may have pursued in times gone by, it must be borne in mind that for forty years past he has become personally acquainted with all the most distinguished men of the day both at home and abroad. When presented to him their main object has almost invariably been to create a lasting impression upon his mind in connection with that particular science or craft in which they had achieved eminence, and they consequently may be said to have endeavored to impart to him during the course of their interview the very pith and cream of all their learning. Thanks to this and to his truly royal memory King Edward has gathered together an amount of information that is as extraordinary in its variety as in its extent, and which could never have been derived by mere study even if King Edward had passed his entire life among books."

In the same journal the Baron de Stampenbourg, who as a nobleman connected with the Danish court had an exceptional opportunity to know the present Queen, thus refers to a side of her career almost unknown hitherto:

"Few people know the secret aspiration of the Princess of Wales as a young lady. She wanted to be an actress. Her beauty, her perfection of manner, and her not inconsiderable voice only tended to encourage her in an attainment of her ideal. She secretly studied the great playwrights behind blinded windows at a late hour, when she was supposed to be in bed. She and her two sisters, Dagmar, now Czaress Dowager of Russia, and Thyra, the Duchess of Cumberland, arranged for amateur theatricals on an improvised scale. Alexandra always insisted on playing the heroine. Being the oldest, her sisters surrendered the monopoly to her unconditionally. She is said to have evinced considerable talent, especially in character portrayal. As soon as her mother, the late Queen Louise, found that Alexandra was stealing the hours of her sleep studying Goethe and Oehlenschlaeger, manifesting a more than amateurish propensity for the stage, she banished theatricals from the castle forever. She forthwith impressed upon her artistically inclined daughter that she was put into the world for something of greater importance than amusing people, and that she would have to give up all thought of ever being permitted to follow any sort of a professional career. Very few girls, even among royalty, have had an opportunity to give up as much for a professional choice as Alexandra was ready to lay upon the shrine of scenic art at that time. Later on, at her marriage to the Prince of Wales, her splendid destiny dawned upon her, and we hear no more of the 'stage-struck' Alexandra, altho she remains to-day the patron of the art."

### POPULAR DEMAND FOR FICTION IN PUBLIC LIBRARIES.

THE question as to how far public demand for current fiction and other kinds of ephemeral literature should influence the purchase of books for public libraries is still an open one. Some librarians hold that such forms of pseudo-literature constitute a useful means of first reaching a large class of readers and of developing an elementary love of books—a love that will thereafter in most cases lead to a taste for better things. Others deprecate all such reading, even while as public officials they are to some extent compelled to bow before a widespread demand. A writer in *The World's Work* (January), who tho anonymous is stated to be a public librarian, favors the moderate purchase of books of fiction, but shows by statistics that many libraries are transcending the proper limits of this kind of literature. He says:

"In my opinion, a library supported by the public funds has no more right than a theater or a circus to a share of the public money if it aims only to amuse the people, or to cater continually to the lowest mental appetites. The public library is a people's university, founded not to entertain the people for amusement's sake, but to carry on a great general education of the masses after the public school has but fairly begun it. Recreation plays an exceedingly important part in the great scheme, it is true. Certain books of questionable value may be admissible only when there is a class of neglected, uneducated people to be attracted who could not be drawn to the library with any other bait. And so I consider it necessary to purchase fiction of both the first and the second grade for the purpose of getting all those people into the habit of reading who would never read at all if they could not get a novel on their own plane. In raw, new, manufacturing districts, for instance, it would not be surprising if three fourths of all the books circulated for a year or two were fiction. But what are we to think when a good old New England town like Salem confesses to a circulation of eighty-three per cent. of fiction in its library? Then there is a Connecticut city, famed for its university, which circulates twenty juveniles and fifty-one novels out of every hundred books, while a Wisconsin city, famed for its beer, gives the lowest percentage of froth in literary form.

"The library is not fulfilling its mission, I believe, where more than sixty per cent. of fiction, including juveniles, is circulated. Forty books, including works of reference, history, biography, travel, religion, science, literature, art, and the many other divisions of a well-stocked library, are surely not too many to be circulated out of every hundred from 'the people's university.' The abnormal circulation of fiction in many libraries demands far more serious consideration than it is receiving. Large sums of public money, and, what is vastly worse, an immense amount of time and effort, are expended on books that produce useless, if not pernicious, results. Undoubtedly too much that is trashy and ephemeral is offered to the public."

The writer gives the following list of libraries chosen at ran-

dom, showing the percentage of circulation of fiction and of juvenile literature, which consists almost wholly of fiction:

TABLE SHOWING PERCENTAGE OF FICTION AND JUVENILES OF ALL BOOKS CIRCULATED.

| State. | Town or city. | Fiction | Juvenile literature. | Fiction and juvenile. |
|---|---|---|---|---|
| California | San Francisco | 41 | 14 | |
| Connecticut | New Haven | 51 | 20 | |
| Illinois | Chicago | 43 | 27 | |
| | Evanston | 38 | 21 | |
| Maine | Portland | 54 | 20 | |
| Maryland | Enoch Pratt Free Library, Baltimore | .. | .. | 63 |
| Massachusetts | Brockton | 52 | 19 | |
| | Brookline | 67 | | |
| | Cambridge | .. | .. | 71 |
| | Salem | 83 | | |
| Michigan | Detroit | 51 | 23 | |
| | Grand Rapids | 41 | 25 | |
| Minnesota | Minneapolis | 50 | 21 | |
| Missouri | St. Louis | 55 | 25 | |
| | St. Joseph | 78 | | |
| New Jersey | Jersey City | 52 | 26 | |
| (1897) | Newark | 61 | 19 | |
| New York | Brooklyn | 36 | 29 | |
| | Buffalo | 67 | | |
| | Jamestown | 55 | 21 | |
| | New York Mercantile Library | 55 | | |
| | Syracuse | 81 | | |
| Ohio | Cincinnati | 79 | | |
| | Cleveland | 40 | 18 | |
| | Springfield | 57 | 18 | |
| Pennsylvania | Pittsburg Carnegie Library | 70 | | |
| | Scranton | 73 | | |
| Wisconsin | Milwaukee | 33 | 17 | |

The writer's remedy for this state of things is the familiar one of "an educated public sentiment." "If people of cultivation used libraries more, instead of holding aloof, as too many do, in the belief that the public library is intended solely for 'the great unwashed,'" he remarks, "the whole tone of the literature offered would be greatly improved."

A discussion of the same topic from another viewpoint appears in the Springfield *Republican* (February 7), by Mr. Charles A. Cutter, librarian of the well-known Forbes Library in Northampton, Mass. He says:

"I think many most excellent persons do not really enter into the state of mind of those who are at a state of culture or mental ability or esthetic taste which they have passed beyond. If they could, they would know that there are men of a certain rigidity of mind to whom a book which is two degrees above them is as much a sealed book as if written in Chinese. Sometimes it need not even be above a man to be lost to him. A book on his level, if it be a little aside from his ordinary range, is as if it did not exist. . . . . .

"For, after all, 'best,' like many other words, is relative. A year or two ago a certain librarian sent out circulars to a score of other librarians asking each to furnish a list of the ten best books. I wrote back asking for definitions—best in what? In style? in interest? in instructiveness? Best for whom? For the ignorant? for children? for college graduates? for the retired scholar? for the people in general? He replied, 'Best for you.' You see at once that it would not do for any book-selector to take that definition of 'best' as his absolute guide. Not to be disobliging I sent him a list of the ten (or twenty) books that, so far as I could tell, had most influenced me. I wasn't quite prepared to call them the best books. One of them was, I think, Carlyle's 'Sartor Resartus.' That had happened to fall into my hands just at the psychological moment, just when I was ready for it. It opened my eyes to a whole new world of thought and expression. I believe I owe a great deal to it. And yet I can imagine its being taken up by some one not prepared for it to whom it would say absolutely nothing, and by some one else who had passed by its stage to whom it would seem empty and pretentious. . . . . .

"Select your library then, as Shakespeare wrote his plays, the highest poetry, the deepest tragedy side by side with the comic and the vulgar. Do not make the regularity, balance of parts and dignity of expression of the French classic drama your model, or you will have only a *succes d'estime*. Imitate a Gothic cathedral. Do not fancy that libraries can be Grecian temples, made by rule, all just alike wherever they are, perfect in form, suited to one limited use."

## THE TRILOGY OF SIENKIEWICZ AS AN INTERPRETATION OF POLISH NATIONAL LIFE.

INCOMPARABLY the greatest prophet of Polish nationality is Henryk Sienkiewicz, says Mr. Louis E. Van Norman, who has lately returned from a visit to that country, and whose forthcoming book on "The Country of Sienkiewicz" has lately been announced. In the Trilogy, he writes, "the novelist has gathered up all the threads of the national life and character of his countrymen and woven them deftly into one shining cord." Of this Trilogy—the series of three realistic historical romances, "With Fire and Sword," "The Deluge," and "Pan Michael"—writing in *The Bookman* (February), he says:

"It is in the Trilogy that Poland is mirrored. The other novels of Sienkiewicz are not essentially typical. 'Quo Vadis' is a powerful romance, but it is not the Sienkiewicz *milieu*. 'Without Dogma' is a fascinating psychological study, but a

HENRYK SIENKIEWICZ.

From a pastel by Leon Wychulkowski, at Zakopane, in the Carpathian Mountains, in 1899, and presented to the novelist's daughter, Jadwiga. This reproduction is by special permission of author and artist.

Courtesy of *The Bookman*.

study that is human-broad. 'The Family of Polanyetski' is also psychological and human, not exclusively Polish. 'The Knights of the Cross' is the history of an obscure, seething period set in an absorbing romance. The Trilogy *is* Poland. Podbipienta, large-limbed, large-hearted, chivalrous, taciturn, patient, relentless, 'so tall that his head nearly struck the ceiling . . . , but with an honest, open expression like that of a child,' represents Lithuania, the vast, savage northeast domain that came to the commonwealth with the marriage of the Christian Jadwiga to the barbarian Jagiello. Zagloba is the type of the *petite noblesse*, boastful yet brave, enormous eater and drinker, good companion, good talker, kind-hearted, grumbling at times, yet in the main content with what fortune brought him, 'always ready to outdrink and outtalk a whole regiment.' Volodiyovski is the thoroughgoing soldier, the splendid swordsman, a conqueror in war and love, a very typical Polish character. Volodiyovski, moreover, actually existed. Bohun, in 'With Fire and Sword,' represents the Cossack, and Azya, in 'Pan Michael,' the Tartar, those fierce, untamed races, human birds of prey, that surrounded the Polish commonwealth, and but for the swords of the Poles would have overrun Western Europe. Prince Boguslaw, of 'The Deluge,' is the type of the 'foreignized' Polish aristocrat, at whose door may be laid most of the blame for the futility which has been the reward of the patriotism of all other classes. French in manners, in dress, in habits, French in the faultless punctiliousness and pomp of his chivalry, he was French also in his hollow pretensions, in his cynicism, in his amours. Boguslaw brought his French servants, his French dress, and his French manners into the commonwealth, treating the Poles with whom he came in contact as inferior beings, and lauding foreign ways, foreign military service, foreign everything. He is the prototype of the Polish noble of to-day, who so often lives

abroad—in France, in England, in Italy—who spends his money lavishly at the English Derby, the French Grand Prix, at Monte Carlo, on the Riviera—but who, when he comes to Warsaw or Krakaw, the most Polish of cities, pulls tight his purse-strings and haggles over the amount of his hotel bill. He will entertain you as tho you were a prince, but his own countrymen he does not deign to patronize. A true, an unfortunately true type, this Boguslaw.

"Pleasanter to contemplate are the wholly noble creations of the Trilogy, especially so far as the novelist could find real, actual historic characters to stand as types. These types can be found to-day among the Poles. Skshetuski, the mirror of chivalry; Volodiyovski, the simple-minded, ideal soldier; Kmita, the dashing, devoted cavalier; Kordetski, the patriot priest; Charnyetski, the splendid, terrible leader of armies; Sapyeha, the large-souled, pleasure-loving marshal; Vishnyevetski, the peerless leader—what a splendid array! And all were actual, living men; as were also the terrible Hmelnitski and the equally terrible Radzivill."

## DECLINE OF THE CABARETS OF PARIS.

THE cabarets of Paris, those strange, picturesque resorts—café, literary society, social club combined—where so many French poets have made their début in verse, are beginning to lose their distinctive literary character and to become more exclusively cafés-chantants—the French equivalent of the dance-hall. This tendency is noted by Julien Sermet, who records his "impressions" of the cabarets now patronized in the Montmartre district, in a recent number of the *Revue Universelle*. The cabarets have already become, according to this writer, small theaters where new pieces of catch-penny character are first "tried" on the Paris public.

DESIGN FOR THE POSTER OF A NEW CABARET.

*Courrier Français.*

The "poètes montmartrois," in their efforts which are still heard in the cabarets, generally prefer to satirize political celebrities. The present republican régime comes in for a good share of their poetic gibes, "which always exalt the extremely reactionary in sociology, politics, and philosophy."

The famous "Café Neant" ("Café Nothingness") is described by M. Sermet as follows:

"In this grewsome place the walls are covered with hangings showing death scenes. Undertakers' mutes serve the drinks upon oaken coffins which are used as tables. The merry feasters who desire to enjoy themselves to the full in this cabaret can offer to their friend the pleasant occupation of a *post mortem*. By means of a trick of th ice-cream maker, they are able to present t the view of their friends th gangrened countenance of a dead man, moving with vermin in all the horrible decay of animal dissolution."

This description gives some point to the remark of a German writer in a recent issue of the *Preussische Jahrbücher*. Under the heading: "Moralische Niedergang des französischen Volkes" ("Moral Decline of the French People"), he says: "The French have begun to extract a morbid enjoyment from the contemplation of death scenes. They have a psychological premonition of what is close at hand." The spectacular character of these resorts may be faintly imagined from some of the names: "The Black Bowl," "The Hole of Fire," "The Great Spike," "The Undertaker's Mute," "The Descent into Hell." "The Blue Cradle," "The Faithful Cudgel," "The Sow that Sings," "Where the Jaws Snap." The pioneer cabaret, "Au Chat Noir" ("At the Sign of the Black Cat"), has become world-famous.—*Translation made for* THE LITERARY DIGEST.

## THE CLAIMS OF WALT WHITMAN UPON LITERARY ATTENTION.

AT present the world has not decided in what light to look upon Walt Whitman. We have estimates of him from the most antagonistic standpoints by Swinburne, Stevenson, Watts-Dunton, Symonds, William G. Rossetti, John Burroughs, and Edmund Clarence Stedman. To one he is a half-articulate savage with a "barbaric yawp"; to another he is the poet and prophet of the age. A writer in *Literature*, Mr. H. F. Carlile, makes a plea for more general consideration of Whitman. "'Leaves of Grass,'" he writes, "is a problem that cries for solution, and an essay on the merits of the author ought to be constituted the diploma-work of every one who aspires to write criticism." He continues:

"For one thing, his influence on the vocabulary and syntax of English prose is already strong and may well become irresistible; and were it only as a phenomenon to be somehow historically explained, as an object-lesson in esthetics or pathology, he would deserve far more study than he has yet received. His personality, his ethics, his view of the world, his notions of art are all alike irritating and perplexing to the last degree. Whitman owes nothing, or next to nothing, to the past. He invents his literary form, his system of ideas, his very language. What is more, he is from the first fully and unmistakably alive to his position, his purpose, and his qualities. His worst excesses are committed of malice aforethought and with a perfect consciousness of their effect; until one recognizes this, one has not even begun to understand him. To apply the ordinary standards of criticism to Walt Whitman is merely to beg the question. He denies the premises. Admit everything against him; draw up a list of the canonized poetic virtues and point to his utter lack of each and all—it s nothing; the man himself in all his incorrigible naïveté is untouched. The terms that can do justice to his genius have yet to be invented. Our usual phrases have been so thumbed and worn in the service of more conventional writers that they have lost all the gloss and sincerity of their meaning. For this strange being we want a vocabulary as strange as his own—'fluid,' 'merge,' 'effuse,' 'a pallid float,' 'lambent tableaux,' and the like. . . . . .

"We are accustomed to think of a poet as first of all a creature of instinct, entering unawares into his kingdom, traveling freely by virtue of some obscure impulse over heights where a moment's self-consciousness means bathos and annihilation. But this American prophet 'shakes his white locks at a runaway sun,' and talks in the next breath about his digestion or his opinions on feudalism without losing his serene self-possession for a moment. Bathos there is, but somehow there is not the shock that one ought to feel. And this is because he makes a cult of 'the art of sinking in poetry' One can imagine him saying: 'Bathos, ma femme, I salute you. I do not despise you as others do; for I perceive you are a part of the great watchword "Ensemble" '—and hence to various conclusions on the subject of democracy or the manufactures of Chicago. This is one,

at any rate, of Whitman's secrets. He does the most outrageous things, but always on purpose. In a sense his intention is the very denial of art. Does he write metrically? He hastens to throw in a shapeless scrap of prose. Does he let slip an exquisite phrase? In a moment he caps it with an outburst of heartrending journalese. Again, in defiance of Aristotle, his work has neither beginning nor end. It is strictly a sort of philosophic panorama, structureless and spasmodic—undifferentiated literary protoplasm, so to call it. And not only is the form undefined; the indifference with which the matter is chosen has something in it alien to one's ordinary notions of art. He 'does not call the tortoise unworthy because she is not something else,' and he thinks 'the tree-toad' (in his nameless dialect) 'a chef d'œuvre for the highest.' He bids us worship and glorify the world and all that is in it without distinction, and the half of him is given up to translating elementary sensations. . . . In the heat of his emotion sentences run one into another or pass into a sort of luminous haze; new words, new constructions are seen *nantes in gurgite vasto*, and the motion of the whole is invested with an unearthly, fluid, elemental vigor. It is Pre-Adamite art—and whether we are to call it poetry or prose is a question that can interest none but compilers of dictionaries. At least, it is powerful stuff—a medium as pliant and various as the heart of man could desire, and certainly the only possible form for Whitman's philosophy. The ordinary English of prose and verse is too clear-cut, too punctuated, too free of false distinctions to give the illusion of limitless force and magnificence on the one side, answered by vast and inarticulate feeling on the other. . . . . .

"This, perhaps, is his keynote—a boundless assertion of the individual, not standing aloof from nature, but palpably and indubitably centered in the very stream of the world, in touch with everything that sense can feel, inexhaustibly emotional, incommunicably alive; not Carlyle's hapless unit poised between two eternities, but a whole universe, as it were, conscious at once of its past and its future, and grasping both in a triumphant present."

---

## QUEEN VICTORIA'S RELATIONS TO LITERATURE.

ALL the English literary journals join the rest of the press in tributes to the Queen, and comment on her relations to the literature of her reign. *The Athenæum*, which, like the other literary weeklies, appears in heavy mourning borders, says (January 26):

"On many of her virtues and excellences it is not our privilege here to dwell; but we may note the ever-ready interest she took in literature and art, which changed their phases so many times in the Victorian era. Never was the Queen more sensible, more gracious, more human, than in her intercourse with the great men of her time marked out by intellect. She was, we think, the first English monarch since James I. to write books. Helps induced her in 1868 to publish 'Leaves from the Journal of our Life in the Highlands.' In 1884 'More Leaves' appeared; yet neither gave much of the writer's personal predilections. Ever since Lord Melbourne's time the Queen was notable for judicious reticence."

*The Academy* (January 26) points out that "the sympathies of the beloved and august lady whose loss the nation is mourning were wide, and on many points they touched literature":

"An author herself, she had the interests of authors at heart, and in the great grief of her life, the death of the Prince Consort, she found her consolation in a poem written by one of the most distinguished of her subjects—Tennyson's 'In Memoriam.' We take from the present Lord Tennyson's life of his father the following account of Tennyson's first visit to the Queen after the death of the Prince Consort:

"'He said that she stood pale and statue-like before him, speaking in a quiet, unutterably sad voice. "There was a kind of stately innocence about her." She said many kind things to him, such as "Next to the Bible 'In Memoriam' is my comfort." She talked of the Prince and of Hallam and of Macaulay and of Goethe, and of Schiller in connection with him, and said that the Prince was so like the picture of Arthur Hallam in "In Memoriam," even to his blue eyes. When A. [Tennyson] said that he thought that the Prince would have made a great king, she answered: 'He always said that it did not signify whether *he* did the right thing or did not, so long as the right thing was done.'"

"How the Queen's friendship with Tennyson grew and deepened may be seen in the following passage in the Queen's private diary, written at Osborne, August 7, 1883:

"'After luncheon saw the great poet Tennyson in dearest Albert's room for nearly an hour; and most interesting it was. He is grown very old, his eyesight much impaired. But he was very kind. Asked him to sit down. He talked of the many friends he had lost, and what it would be if he did not feel and know that there was another world, where there would be no partings; and then he spoke with horror of the unbelievers and philosophers who would make you believe there was no other world, no immortality, who tried to explain all away in a miserable manner. We agreed that, were such a thing possible, God, who is Love, would be far more cruel than any human being. He quoted some well-known lines from Goethe, whom he so much admires. Spoke of the poor Lily of Hanover [Princess Frederica of Hanover] so kindly; asked after my godchildren. He spoke of Ireland, and the wickedness of ill-using poor animals: "I am afraid I think the world is darkened; I dare say it will brighten again."

"'I told him what a comfort "In Memoriam" had again been to me, which pleased him; but he said I could not believe the number of shameful letters of abuse he had received about it. Incredible! When I took leave of him, I thanked him for his kindness and said I needed it, for I had gone through much; and he said: "You are so alone on that terrible height; it is terrible. I've only a year or two to live, but I shall be happy to do anything for you I can. Send for me whenever you like."

"'I thanked him warmly.'

"To authorship the Queen herself made no pretensions, and in publishing her private diaries of life in the Highlands she only gave to the world, under persuasion, the most artless of records. But, artless tho they were, they deeply interested her subjects; and even the literary critic felt that here were two qualities which are not always found in diaries of greater literary pretensions—a most engaging candor, and absolute discretion. They revealed the secret of the Queen's love of Scotland by showing how she enjoyed—nay, reveled in—the beauties and sublimities of nature and the amenities of humble lives, lived far from the madding crowd."

*Literature* (January 26) says that "whatever else the rule of Queen Victoria may have done for the higher life of the nation, literature and art owe to her one debt of gratitude besides which all other obligations become insignificant." By the preeminent sincerity and simplicity of her life, upon which, it adds, were concentrated the eyes of a vast empire for nearly three quarters of a century, noble and honest work was everywhere encouraged and affectations put to shame:

"Throughout her reign it is this quality which has marked her relations with her subjects, and it is this which has shone so brightly in her own writings and in the personal records of those who were admitted to her intimacy. . . . It was the transparent simplicity of her nature which formed one, tho not the only, merit of her Majesty's two series of 'Leaves from the Journal of our Life in the Highlands.' In sending a copy of the second series to Lord Tennyson she described herself as 'a very humble and unpretending author.' And of the book she said, 'Its only merit is its simplicity and truth.' Tennyson, a man equally free from any taint of hypocrisy, was able to take a less modest critical estimate of a book containing, as he said, 'the lofty and tender sentiments and the hearty enjoyment of nature, expressed in pure English, which can not fail to make a book interesting, apart from the special interest which must of necessity belong to this particular volume.'"

---

THE failure of the Grau-Savage English Opera Company is a great blow to the many who had hoped that this was a beginning of a distinctive American and English opera. It is evident, the press thinks, that the public does not want opera in English, or rather in such English as is given in the translated librettos, which lose the original spirit and become inane in many instances. A few of the singers were exceptionally good in the Grau-Savage Company, but the public at present desires foreign talent, it is thought, a talent which it will take many more years of careful training on the part of English singers to equal.

# SCIENCE AND INVENTION.

## THE FORCE OF HABIT.

EXACTLY how strong is the force of habit? A means of measuring this in any given instance is to see how many times an habitual action will be repeated under adverse conditions until it is replaced by reasoned action more appropriate to the circumstances. With man, we know that reason always triumphs over instinct; but with lower creatures this is not so clear. It has been assumed by some that instinct never gives way. Every one knows how an ant will persist in trying to drag a straw to its nest in some impossible way simply because it is the usual way. It is quite possible, however, that by experimenting long enough it might be found, in every instance, that there is a point where the force of habit gives way to reason. This has been proved in one very interesting instance by Mr. and Mrs. Peckham, two ingenious American students of insect life, in some experiments on the curious habits of the sphex-fly, a predatory fly resembling a wasp in appearance. This fly stings its prey and paralyzes it, after which it drags the victim to its underground nest. Its performances in doing this are thus described in a notice of the Peckhams' work in the *Revue Scientifique* (Paris, January 19). Says the writer:

"It is known from the observations of our fellow countryman, M. Fabre, and from those of Mr. and Mrs. Peckham, that the *Sphex ichneumona*, after having captured a grasshopper, is accustomed to lay its victim at the entrance of its hole and to visit the latter before transporting its prey thither. It is also known that if, during the visit of the sphex, the position of the grasshopper is slightly altered, the sphex puts it back, and will not carry it into the hole without again exploring it, altho it was examined less than a minute before. This way of doing things is curious, and it has been asked whether it is invariable."

Mr. and Mrs. Peckham have made some interesting observations with a view to answering this question. Their conclusions, which are printed in *The American Naturalist* (October), are, in condensed form, as follows: The observers noted that the insect, after catching its prey, lays it down about four or five inches from the entrance to its nest and, after making its visit to the nest, drags the prey by the head to the opening, enters the hole head first, turns around, and, returning, seizes the prey again by the head and drags it, walking backward, into the hole. The grasshopper was removed about five inches from its position while the sphex was absent on its domiciliary visit. The insect, on its return, hunted about for its prey and, finding it, replaced it and then descended again into the hole, as M. Fabre had observed. During this visit the grasshopper was again displaced. The sphex returned and repeated his performance. In all he repeated it four times, the observers doing the same on their part. But, at the fifth, the insect gave it up; as soon as he had found the grasshopper he dragged it at once into the nest. The following day the experiment was tried again. Four times again was the performance repeated; at the fifth, as before, the sphex dragged off its prey without previously visiting the hole. The experiment was tried for two more days, and the result was the same, with this difference, that the sphex repeated his performance seven times before deciding to carry off his prey without repeating his visit to the nest. It therefore follows that the sphex, conservative and follower of tradition tho it may be, can, when circumstances require it, adapt itself to them, and modify its mode of action. It is sufficiently conservative to prefer the traditional method, but progressive enough to give it up when obstacles present themselves. Reason thus triumphs over instinct. In commenting on these experiments, the writer in the *Revue Scientifique* adds:

"It is to be regretted that Mr. and Mrs. Peckham, to whom we owe so much excellent work on the customs of the sphex and other insects, did not decide to carry their experiment still further. Perhaps (of course with the same insect) by arranging the manner of giving it its lesson in some regular system, they might finally have succeeded in teaching it to give up entirely, or almost entirely, its domiciliary visit, and to drag its prey in at once, or at least after a single exploration. The experiment might be tried with an artificial nest, and it would be well worth while."—*Translation made for* THE LITERARY DIGEST.

## THE ELECTRICAL CENTURY.

WHICH is, or will be, *the* "electric century," the nineteenth or the twentieth? At a recent banquet, after one speaker had referred to the opening century by this title, he was taken to task, on the ground that all the great discoveries in electricity had already been made, altho not all developed to the greatest possible degree. In the words of another speaker: "The change in kind was made in the nineteenth century; the change in degree will be made in the twentieth." Another still summed up as follows: "I think that the great development of the century we are going to see is in the growth in degree—not in the creation of novelties." These views are opposed by W. J. Hammer, in a letter to *The Electrical World and Engineer* (February 2). He says:

"While listening to these gentlemen the other evening, my thoughts ran back to the year 1882, when, during a residence in England, I was looking through an old library in London, and came across a book dated sixteen hundred and something—the exact date I do not now recall—which spoke of electricity as being 'a peculiar effluvium,' and the author went on to say—as nearly as I can recall his words: 'We have doubtless now arrived at the point where we know all regarding the practical applications of electricity that will ever be known.' How vividly this all came back to me the other night, and before the distinguished speakers had concluded their remarks it had occurred to me to wonder who would have believed just before the Centennial Exhibition of 1876, at Philadelphia, that the human voice would within a few months be transmitted over a wire by means of the telephone. Who would have believed—say seven years ago—that the human eye would be able to examine the anatomy of a living person, and observe not only all the bones, but even observe the action of the heart, etc., through the intermediary of the Roentgen ray and the fluoroscope? . . . . . .

"In view of the fact that never in the history of the world have so many able men been engaged in scientific research and experimentation; that never have scientific men and educational institutions been so endowed with well-equipped laboratories, accurate instruments, and other exceptional facilities for making the most delicate of scientific tests and carrying on of original researches, . . . is it not perfectly rational to expect, and does not the past history of human development lead us to expect, that with all these advantages the new century will outstrip the old one in electrical development, as well as in other matters?

"Electrochemical research offers an enormous field, which is almost 'virgin soil.' The wonderful work now being done in the study of the constitution of matter may lead to developments of a most revolutionary character; and who knows how much of the correlation of the vital and physical forces we shall have to set down to the credit of electricity? What has occurred in the past century which would lead the world to consider the discovery of a means of getting electricity direct from coal as of secondary importance; and who shall say this century will not see this problem solved; and who knows but that during this century a way will be discovered to make an electric light with the coldness and efficiency of that given out by the firefly; and what more important or of more radical nature has been done in the valuable electric-lighting work of the past century? . . . . . .

"Who knows but that in the coming century we shall learn what electricity is, perhaps what gravitation and heat and other things, the effects and uses of which we are so familiar with, really are? A distinguished scientist recently said: 'It seems surprising that no one knows what draws two pith-balls together

and holds them together, tho the phenomenon itself is as old as the century.' Perhaps the new century may tell us.

"In conclusion, I would ask, should not the electrical profession insist that the electrical century started fifty years ago, and that it has still fifty years yet to run? Personally, I believe that were a canvass made among electrical men, by far the greater number of them would agree that by all odds the best fifty years of the electrical century are yet to come."

## OZONE IN HYGIENE AND IN THE INDUSTRIES.

IN 1887 James Chappuis discovered that active oxygen, or ozone, is a formidable enemy to bacteria, and that under certain circumstances it can not be resisted even by those bacteria which are most tenacious of life. As a disinfectant, however, ozone, in consequence of the great expense required for its preparation, failed to find extensive use; but recently it has assumed importance in the industries. From the *Magdeburger Zeitung* we extract the following data:

"Ozonized oxygen—pure oxygen is yet unknown—looks bluish in a thick stratum, dark blue when it is compressed, and under a pressure of one hundred and fifty atmospheres its density takes the form of drops as blue as indigo. Ozone is known to us by its odor rather than by its appearance. The peculiar pungent odor of fabrics which have been newly washed, which is often the cause of headache and of bleeding at the nose, is due primarily to the ozone that has accumulated in the pores of their tissues. The 'smell of sulfur' which is reported usually as noticeable after a bolt of lightning has struck should be known as the odor of ozone, for electrical discharges, such as may be smelled in the vicinity of every working electrical machine, develop ozone from the air; and the peculiar fragrance of the air that is perceived after a storm arises from the greater impregnation of the air with ozone, and this fact accounts also for the souring of milk during a storm. In the air of the country, the forests and the ocean, ozone is always present; it is always absent from the air of large towns and cities, from the air of our living rooms, and from the vicinity of dunghills and stables. The stronger the wind, the richer the air becomes in ozone. It is claimed that such beneficent influences as the air may have on human health may be measured by the quantity of ozone with which it is charged; and in almost all the laudatory descriptions of summer resorts the chief attraction mentioned is the 'air rich in ozone.' Certainly it may be believed that where the air is charged with ozone it is pure and rich in oxygen; whether, however, ozone itself is necessary to human welfare may be doubted. Schoenbein, developing his discovery, tried to use artificially ozonized air in medical practise; it was administered to patients by inhalation, and the result was—catarrh of the organs of respiration. Many physicians still have the opinion that ailments such as inflammation, of the lungs, bronchial catarrh, etc., become more acute as the quantity of ozone in the air increases, but become less distinct, and the patient shows positive signs of relief, as the ozone becomes less appreciable. While the internal application of ozone has not been made with unqualified success hitherto, the use of it in surgery has been attended with large benefit. In Fitzroy Square, London, there is a special hospital in which oxygen and ozone are used with unmistakable success as remedies for old and unclean wounds."

As a disinfectant, we are told, ozone has not become a practical success, as it begins to kill germs only when it prevails in the proportion of 1:1,000 in the air, and such air human beings can not breathe. Its oxidizing power has, however, been especially efficacious in purifying dirty water. It not only kills all the harmful germs inhabiting such water, and the results of their change of matter, but it also oxidizes all organic matter held in solution—burns it, one might say, for in the dark the process is attended with the emission of light. Last year a plant was established in Lille for purifying the water of the Seine with ozone, and recently a plant for the same purpose was established in Paris. The ozone does not diminish the proportion of salts in the water.

Of the manifold uses of ozone in industrial arts, the *Magdeburger Zeitung* goes on to speak as follows:

"Beer-kegs are cleaned with it, oils are cleared with it, greasing oils are prepared with its aid, and siccative processes are produced with it; your cognac and wine receive under the influence of ozone the taste of such beverages stored in cellars for many years. Pasteur declares that it is only oxidation that gives age to wine and produces its clearness. The change made in wine by oxygen during the long years the beverage is stored is effected by ozone in a few hours. To ozonize wines and spirituous liquors is consequently to hasten, only, natural chemical action. The development of ozone by electricity is so cheap that the gas can be used for the improvement of very cheap goods. To clear a commercial cask of linseed oil, about thirty cubic yards of ozonized air are used—forty to forty-five cubic yards costing usually thirty-two cents. Tho fabrics are bleached with chlorin at a very slight expense, as every housewife knows, even in this branch of industry ozone has found application. . . . Starch and substances containing starch and sugar, cleaned and bleached with ozone, attract emphatic preference from buyers of these goods. In tanning, too, ozone has become an important factor. To make freshly tanned leather pliant, it was rubbed with a grease that was usually prepared from fish oil, which was dear enough when of good quality. Through treatment with ozone, animal oils, and especially cheap fats, have become an equally serviceable grease for leather.

"In the manufacture of musical instruments ozone is no inconsiderable factor. The kinds of wood of which such instruments are made are treated with it to give them increased clearness and mellowness of sound. As is well known, the wood used for stringed instruments is much better as it grows older, that is, drier; and is it not related that the celebrated Stradivarius violins were made of the wood of the old choir stalls of an Italian church? Instead of letting the wood lie for years in special sheds to dry, it is now made ready for use in a short time by treatment with ozone. . . . Tieman has discovered that vanillin, the aromatic substance of the vanilla bean, may be produced artificially by treating the acid of cloves, the chief constituent of the oil of cloves, with ozone. The result is a substance of which the odor and taste equal, in every respect, those of the vanillin obtained from the vanilla bean. Also in the refinement of perfume ozone is often used from strong preference."—*Translation made for* THE LITERARY DIGEST.

## ACTION OF YEAST AND YEAST-EXTRACT.

SO long as alcohol and its physiological action remain the subjects of controversy, the mode of its production will never be devoid of interest. Every one knows that this substance, whether it be food, medicine, or poison, is formed by the decomposition of sugar in the process known as fermentation; and it was believed until recently that this process was always dependent on the growth of a low vegetable organism known as yeast, whose cells took in sugar and gave off alcohol and carbonic acid. In 1897 a German experimenter named Büchner created a sensation by showing that fermentation was not, as had been supposed, dependent on the presence of the growing yeast-plant. He isolated from the yeast-cell a liquid extract which acts on fermentible sugar exactly as the yeast itself does. This substance has received the name of "zymose." Three English experimenters have recently gone over this investigation still more thoroughly, to find out whether the fermentation due to zymose is real fermentation; that is, whether the usual products—carbonic acid and alcohol—are produced by it in the usual proportions, and whether the amount of sugar transformed agrees with the quantities of these substances produced. We translate a report of the result that appears in the *Revue Scientifique*:

"After due correction, . . . the results show that the proportion between alcohol and carbonic acid varies greatly, and does not reach that found by Pasteur. . . . But the most curious fact

of all is that the quantity of sugar that disappears is much greater than that which undergoes fermentation. Here is a phenomenon whose explanation is yet to be found."

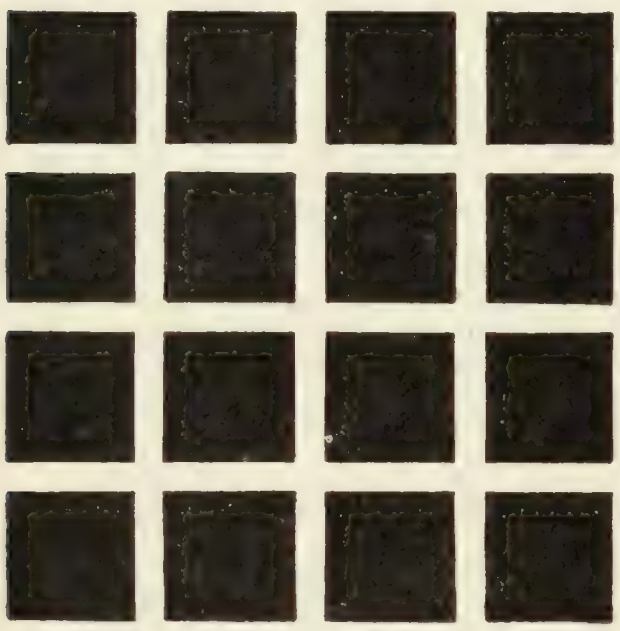
The English experimenters propose an hypothesis which, briefly stated, is simply that the yeast extract may be able to perform certain chemical processes in imitation of the vegetable organism from which it is derived, but it can not keep these up indefinitely. It is able, however, to incorporate sugar for a longer time than it can decompose this into alcohol and carbonic acid; hence a larger quantity of material disappears as sugar than reappears in the form of these two products. The balance has gone into the substance of the yeast extract.

If this hypothesis be proved, a most interesting principle will have been established—the ability of an extract from a living organism to perform certain functions supposed to be peculiar to the action of the living cells of the organism itself. It is hardly to be expected that the advocates of the medicinal use of animal extracts will allow this to go unnoticed.—*Translation made for* THE LITERARY DIGEST.

## A NEW OPTICAL ILLUSION.

THE following new and curious optical illusion is contributed by M. Henri Coupin to *La Nature* (January 5). He says:

"Our illustration represents a series of black squares placed at regular distances apart and separated by white bands crossing each other regularly at right angles. At least this is how the illustration has represented them. But in reality, in each of the places where the white bands cross we see a very plain shadow, or, more exactly, a sort of penumbra with indefinite boundaries. If the attention be fixed on one of these spots in particular it disappears at once, while the neighboring spots persist. This is evidently due to the fact that the phenomenon is produced only in regions of the retina distant from the 'yellow spot' [spot of most distinct vision]—regions where the sight is always a little confused. It would be interesting to vary the size of the squares and of their intervals to see at what moment the phenomenon would disappear. Optical illusions are a good deal more than mere amusements. Studied with care, they can do a good deal toward clearing up the problem of vision which is still so imperfectly understood."—*Translation made for* THE LITERARY DIGEST.



**Evolution of the Thermometer.**—Scarcely another instrument so indispensable in scientific work is at the same time so extensively used by the laity as the thermometer. A history of its "evolution" has been written by Dr. H. C. Bolton and published in book form. From a review in *Science* (January 25) we quote as follows:

"The book opens by disposing of the oft-repeated claims that the inventor of the thermometer was Drebbel. The first use of the name thermometer and the first accurate description come from Leurechon in 1624, but the real inventor of the instrument was Galileo, and the date between 1592 and 1597. This is proved, not from any statements of the inventor, but from letters written to him, and the proof is complete. This first thermometer consisted of a bulbed tube, inverted in colored water, in which the liquid rose and fell with the temperature of the bulb. . . . In 1632 Dean Rey made a water thermometer, in which the expansion of a fluid replaced that of air; and, not long after this, Ferdinand II. of Tuscany, by sealing the top of the tube, gave approximately the modern form to the instrument. Mercury had been previously used to show expansion by heat, but in 1714 Fahrenheit constructed the first mercury thermometer with a reliable scale.

"Many different scales have at various times been applied to the thermometer, and in most of them the graduation has been almost purely arbitrary. The origin of the Fahrenheit scale is involved in much obscurity. Réaumur was the first to use the melting-point of ice for zero, while his boiling-point of water, 80°, was obtained by the expansion of one thousand parts of eighty-per-cent. alcohol between the freezing- and boiling-points of water. As this was eighty parts, he used this number for his higher fixed temperature. The first to adapt 0° and 100° for the two points was Celsius, but in his instrument 0° represented the boiling-point of water. Finally, th change to the modern centigrade scale was made independently by Christin, of Lyons, and Strömer, of Upsala, in 1743."

## MORE OIL IN THE UNITED STATES AND ITS COLONIES.

THE recent oil craze in Texas has already been described in these columns. We now reproduce from *The Engineering and Mining Journal* (January 26) a description of the Lucas oil well, near Beaumont, a picture of which appeared in our issue of February 9, and which is said to be the largest in the world. Says this paper:

"The surface of the tract where the operations were conducted is marshy and level prairie, fit only for rice cultivation. The country rock is undoubtedly of recent quaternary formation. Much difficulty was experienced in sinking through the water-bearing surface soils, but Captain Lucas finally adopted the system used by him in boring for salt in Louisiana. . . . The casings used were heavy and were in succession 12 in., 10 in., 8 in., 6 in., and 4 in., each smaller pipe telescoping with the one above it. The lower or boring pipe, fitted with a cutting edge, was driven downward with a constantly revolving motion, while water was forced through by means of a circulating pump. In this way the borers were enabled to cope with the immense bed of quicksand, which had deflected the previous attempts—made in 1894, in 1896, and in 1898—to prospect for oil in the same locality.

"At a depth of 1,300 ft. oil was struck suddenly and almost without warning. The 4-in. pipe in use, which weighed at least 6 tons, was forced to the surface by the sudden flow of oil, carried through the top of the derrick—which is 60 ft. high—and thrown up in the air a distance estimated at 300 ft. The tackle and the top of the derrick were carried away, while the pipe bent and curled up, falling to the ground clear of the derrick in a position where, fortunately, it injured no one. The water in the pipe, which was used in the hydraulic boring, was thrown up to a great height, followed by some gas and a steady stream of oil. This flowed with such force that large pieces of rock were carried up with it. The first flow was estimated at 250 bbls. an hour; it increased gradually to 500 bbls., and on January 13 was estimated at from 600 to 1,000 bbls. an hour, with the flow still increasing. At times the column reached a height of nearly 600 ft., and some observers, among whom were some employees of the Standard Oil Company, were inclined to think Captain Lucas too conservative and put the flow as high as 2,000 bbls. an hour."

In a subsequent issue of the same paper (February 2) an account is given by its Manila correspondent of the recent development of the oil industry in the Philippines. The existence of petroleum in some of the islands, we are told, has been known for a long time, but under Spanish rule there was little or nothing done in the way of development. The discoveries are of considerable importance, and may have much effect on the oil

trade of the East, besides providing a supply of fuel which may be of great service in the future. Says the correspondent:

"Since the foreign miners have been here prospecting among mineral-producing lands of the islands there have been some noted changes in the situation, and the output of oils from some of the wells is so large that there is no further need of the imported article. Oil has been discovered and is worked in Panay, Luzon, Mindanao, Negros, Gimeras, and quite a number of the other islands of the group. There are already several good-sized refineries in operation, and a number of small refineries.

"The oil in most cases lies in an oil-bearing stratum of rock several feet in thickness and about 350 ft. below the surface. Pole tools are used chiefly for drilling, altho some of the natives who are operating the deposits are rigging up all sorts of ingenious contrivances for getting at the products. In many instances these home-made devices prove satisfactory; but I have seen some of them that are complete failures. . . . . .

"The cost of getting the petroleum oils in this country is much lower than in America, for the reason that native and Chinese labor can be hired at low rates. The natives are good workers as a rule, and they can be secured in large numbers at wages ranging from eight to fifteen cents daily. The price paid the Chinese is about the same."

## DO WE THINK WITH ONE HALF OF OUR BRAIN?

IS it not possible that in a healthy, normal condition we do all our thinking with one half of the brain? In a recent number of *The American Journal of Insanity* it is contended that we do. Says the writer:

"The brain is, anatomically, a double organ, yet mental processes are single. *A priori*, we should expect in a double brain a double mind. A sufficient number of cases have been recorded to make it certain that a man can retain his personal characteristics and mental activity in whom one half the cerebrum has been destroyed. Physiological arguments in favor of this view are found in the following facts: While coarse movements can be performed nearly as well by one half of the body as by the other, whenever it becomes necessary to carry out movements involving speed, dexterity, and accurate judgment, nature organizes one half of the brain much more fully than the other. Righthandedness is not an accident."

We are told that the phenomenon of "double consciousness" means nothing more than a large increase in the activity of the half of the brain which usually has no part in conscious life. The theory makes explicable many of the most puzzling abnormal mental states. Among other conclusions, the author presents this:

"Anything which tends to make the ordinarily quiescent half [of the brain] assume control tends to impairment of mental processes and the damage of the individual. If this be true, the attitude of those who advocate a cultivation of ambidexterity is thoroughly illogical. Instead of trying to make a right-handed person less right-handed we ought rather to try to make him more right-handed. Conversely, the attempt to make a left-handed boy right-handed is a physiological crime. Every effort ought to be made to make the left-handed boy more left-handed."
—*Translation made for* THE LITERARY DIGEST.

**Heating Effect of Various Lighting-Systems.**—A study of the number of heat units given out by different sources of light has been made by F. Erismann, who has read a paper on the subject before the German Association at Nuremberg. According to this, the stearine candle is the most wasteful source of heat, per candle-power of the light furnished. It gives out 7,881 heat units for every 100 candle-power, whereas the ordinary gas-burner gives out 6,380, the Welsbach 1,000, the incandescent electric light 260, and the arc-light only 26. Says *Cosmos* (December 8):

"We see that we are succeeding to-day in achieving a better luminous result from materials used in lighting, and that for an equal degree of light we develop much less heat than formerly. It is to be hoped that progress along this line may continue. Certain sources of light radiate so much heat that one experiences a disagreeable sense of heat near them, ending finally in headache. According to Rubner, who has studied this matter in detail, we should not tolerate a source of light that radiates more than $\frac{1}{20}$ of a heat unit a minute on each square centimeter [$\frac{1}{6}$ square inch] of our skin. The proportion of heat radiated per unit of intensity varies not only with the materials, but also with the illuminating device that utilizes them. . . . In general, a source radiates less per unit of intensity as its intensity becomes greater. The greatest part of the energy radiated is in the form of obscure rays, and the smallest part (only four to five per cent.) under the form of luminous rays. The color of the light has some influence on the radiation of heat, which is greater with red light. . . . Observation shows that luminous sources due to incandescence can be borne very close to the skin without inconvenience, which enables us to utilize a good part of the light in proportion to the luminous intensity."—*Translation made for* THE LITERARY DIGEST.

**Slot-Machine for Car Tickets.**—If the idea of selling car tickets at elevated stations, for instance, by means of slot-machines had originated in this country, it would have been thought a typical "Yankee notion." This eminently practical plan, yet unknown in the United States, is in daily use in Germany. Says *The Ledger* (Philadelphia, February 1):

"Automatic machines for the delivery of railway tickets are a prominent feature at all railway stations in Berlin and the suburbs. Their employment is facilitated by the fact that the zone tariff system is in force on the Stadt and Ring railways, which run through and round Berlin and on the chief suburban lines. A ten-pfennig (about a penny) ticket can be used by a passenger for a third-class journey from any station on the line to any up to the fifth station from the point of departure. For all stations after the fifth double fare is charged. Second-class single fares under the same conditions are fifteen and thirty pfennige, respectively. A fifteen-pfennig ticket can also be obtained from the automatic machines; two 'nickels' have to be put in the slot in that case, whereupon the machine delivers the ticket with a five-pfennig piece as change. This system saves the passenger much time, and certainly saves the railway company at least one window at each ticket-office. In all Berlin railway stations no one is allowed on the platform unless he is going by train or purchases a platform ticket. This ticket costs ten pfennige, and is also supplied by automatic machines. It may be mentioned that by the sale of these platform tickets the state, which owns the railways, nets over £100,000 a year. During the last year over 30,000,000 tickets were supplied to the public by automatic machines at Berlin city and suburban stations. Few cases of fraud are heard of, for the 'nickel' is small and light, and it is difficult to find a substitute for it."

## SCIENCE BREVITIES.

"THE practise of injecting cocain within the meninges of the spinal cord has already been designated by a remarkable number of names," says the New York *Medical Journal*. "Some of them are the following: 'Spinal-canal cocainization,' 'cocain analgesia from subarachnoid injection,' 'intraspinal cocainization,' 'subarachnoid injections of cocain,' 'intradural injections of cocain,' 'endomeningeal spinal cocainization,' 'medullary injections,' 'subarachnoid cocainization,' the 'subdural infiltration method,' 'subarachnoidean injections, 'medullary narcosis,' 'Corning's method of medullary narcosis,' the 'spinal subarachnoid method,' and (from what evolved we can not imagine) 'Chicago chloroform.'"

"UNLESS, we are entirely wrong in our premises," says *The Electrical World and Engineer*, "we think Mr. Tesla is mistaken in his ideas of the mechanism of transmitting electric radiant energy from one planet to another. We hope that Mr. Tesla will publish a precise description of the phenomena which he observed, and which led him to suppose that ultra-terrean causes were at work. From his well-known experimental skill, a description of his observations before some scientific body would doubtless be extremely interesting. Our readers can not but agree to some extent with the editorial article in the New York *Tribune*, which, speaking for the lay public, ventures to say: 'It is to be regretted that the first news of the incident was not given to a scientific society of standing, rather than to a philanthropic organization or an ordinary newspaper.'"

# THE RELIGIOUS WORLD.

## THE KING OF ENGLAND'S RELATION TO PROTESTANTISM.

DISCUSSION is already beginning to arise in England over the religious aspect of the oath which the law requires the King to take on first opening Parliament and at the coronation service next year. At the time this oath was composed, the strife between Protestantism and Roman Catholicism was at its height, and not only was the sovereign compelled by law to abjure the doctrines and allegiance of the Roman see, but all office-holders in the kingdom and all students in the universities were also forced to take the same oath. Since that time, these Roman Catholic disabilities have been removed, until only the sovereign, the Lord Chancellor of England, and the Lord Lieutenant of Ireland are required by law to be Protestants. As an evidence of how far English tolerance has progressed, it is often pointed out that the late Lord Chief Justice of England, a recent lord mayor of London, many judges, and scores of members of Parliament are Roman Catholics. It is felt by many adherents of both faiths, however, that while England can hardly be expected to permit the rule of a Roman Catholic sovereign any more than a Roman Catholic country on the Continent would accept a Protestant prince, yet the wording of the coronation oath is unnecessarily harsh. The London *Tablet* (Rom. Cath., February 2), in discussing this, says:

"The form of the coronation oath does much more than show its preference for the 'Low,' rather than the 'High,' in Anglicanism. It goes out of its way to make the sovereign not merely the abjurer of this or that 'High' tenet, but the open insulter of the faith of his Catholic subjects, whose sacred beliefs are branded as idolatry and superstition. 'I do believe,' Edward VII. will be expected to declare, 'that in the sacrament of the Lord's supper there is not any transubstantiation, and that the invocation and adoration of the Virgin Mary or any other saint, and the sacrifice of the mass as they are now used in the Church of Rome, are superstitious and idolatrous.' As if this were not enough to enforce on the King, who has knelt time and again at nuptial and at requiem mass before our altars, the altars of God, a passage is thrust upon his tongue which causes him to impugn by implication the personal honor of Catholics as men of truth and plain speakers—and this in the very presence of his earl marshal [the Duke of Norfolk, the chief Roman Catholic layman in England]. The theory is that a Catholic would take the oath with reservations. He would have his crown and his mass too. So the King must stand up and say: 'I do solemnly declare I make this declaration, and every part thereof, in the plain and ordinary sense of the words read unto me, as they are commonly understood by English Protestants'—(the irony of it to-day!)—'without any evasion, equivocation, or mental reservation whatsoever, and without any dispensation already granted me for this purpose by the Pope, or any authority or person whatsoever, or without any hope of any other such dispensation from any person or authority whatsoever, or without thinking that I am or can be acquitted before God or man, or absolved of this declaration or any part thereof, altho the Pope, or any other person or persons or power whatsoever, should dispense with, or annul, the same, or declare that it was null and void from the beginning.' Such language from the mouth of the ruler of ten millions of loyal Catholics, we must plainly say, is intolerable. It is an insult to the Pontiff and to the Catholic world: it is an insult to the King himself, and to nobody, we are certain, will its terms be more utterly obnoxious."

The legal status of the King in relation to the Church of England is a topic much discussed just now. He has been referred to as "the supreme head of the English Church," and Roman Catholic papers in America are fond of calling him "the English Pope." The London correspondent of the Boston *Evening Transcript*, however, points out the error of such assertions:

"The legal status of the King of England in relation to the Church of England is in no sense spiritual and it never has been. The Church of England is, according to its own claim, 'that pure and reformed part of Christ's Holy Catholic Church which is established within this realm.' The word 'established' is held to imply that certain relation which exists between it and the realm itself; and the Church of England is established in its recognition as the national organization for the maintenance of Christian belief and practise. According to the official declaration, the King is one of the members of the church and its supreme governor upon earth. In practise the office of governor has ever been held to refer to civil matters only, and the King, in all matters spiritual, is no more than any other member of the same religious body. The King can not become a member of any other religious body, and is therefore not free as are other people to change his religious affiliation. The Church of England existed, as matter of history, before the kingdom did, even before that part now known as England was under one government. When there were the kingdoms of Wessex, Kent, and others, the church had an organization which was coterminous with the present political bounds. Hence the spiritual power preceded the political one and has ever kept its precedence."

## THE NEW INDEX EXPURGATORIUS.

THE new edition of the Index Expurgatorius, or table of books prohibited by the Roman Congregation of the Index, differs from all preceding editions in important particulars. It is a complete revision, characterized as more in accord with the spirit of the times, or, as Pope Leo XIII. himself expresses it, an *adoucissement*. All the condemnations prior to the year 1500 are effaced, together with all books dealing with forgotten disputes and controversies long since settled, as well as many books which are praiseworthy for their erudition and elegance of style, even tho they may contain some minor passages regarded by the Congregation as reprehensible. Notwithstanding this softening of the church's anathemas, the list still makes a volume of 278 pages, containing the formal condemnation of 3,286 books. The *Courrier des États Unis* gives the following account of this new Index:

"It is a curious collection, and many people will be surprised to find in it certain names illustrious in the church. Among them are Bossuet and Jacques Bénigné for his 'Reply to M. de Tencin, Archbishop of Embrun, communicated to the ecclesiastics of the diocese of Troyes for their information.' Then come Fénélon, and François de Salignac, the latter for his 'Explication des maximes des Saintes sur la vie intérieure.' Among the philosophers are Michel de Montaigne for his 'Essais,' and Descartes for his 'Meditations,' his letters to Père Duret—in fact, all his philosophical works except those subject to revision, and his 'Discours sur les passions de l'âme.' After Descartes comes Nicholas Malebranche for several works, especially his 'Traité de la nature et de la grâce,' his 'Discours sur la recherche de la verité,' his 'Entrétiens' and his 'Sur la métaphysique.' Even Pascal is not spared, on account of his 'Lettres provinciales' and his edition of 'Pensées' annotated by Voltaire. It is hardly necessary to say that all the philosophers of the eighteenth century are condemned in general; including Montesquieu, for 'L'esprit des lois' and his 'Lettres Persanes'; Fontanelle still stands condemned for his 'Plurality of Worlds.'

"Our contemporary writers hold a conspicuous place in the volume. Balzac catches it for all his love romances. So do Alexandre Dumas, Eugene Sue, George Sand, Ernest Feydeau, and Flaubert. Paul de Kock is not even mentioned; but Lamartine is stricken down for his 'Jocelyn,' his 'Voyage en Orient,' and the 'Chute d'un ange.' Victor Hugo is condemned for 'Notre Dame de Paris' and 'Les Misérables.' Nothing is said about his 'Châtiments' or his 'Quatre-vingt-treize.' Emile Zola is wiped out with the words 'All his works.' The history of the French Revolution by Mignet is included, but that of Thiers is allowed to stand. We might mention also the names of Edgar Quinet and Michelet, the latter for six of his works, and Jules Simon for 'Religion naturelle.'

"The omissions are no less strange than the designations. For example, we seek in vain in this new edition for the trace of the censures which created such a flurry in 1859–60 in regard

to the pamphlets and books published on the Roman question. About, with all his semiofficial works, and La Guéronnière, who wrote at the dictation of Napoleon III. 'Le Pape et le Congrés,' have been condemned as belonging to the category of authors of '*pamphlets de circonstance.*' In reality, the Congregation examines only the works that have been denounced. There are some of them whose character is such that there is no need of calling attention to them on account of their general reprobation by the faithful. In this way certain apparent contradictions can be explained. The Index is made especially to solve difficult questions and to cut away certain scruples of conscience. The reading of the volume is for Catholics, and the condemnations which it enumerates are only to be regarded by Catholics."

## MULHALL'S RELIGIOUS STATISTICS OF THE WORLD.

THE new religious statistics of the late Michael G. Mulhall, published a week or so before his death in December last, are of unusual value. Mr. Mulhall was commonly regarded as the most eminent statistician in the world, and his principal work, "A Dictionary of Statistics," is an accepted standard of reference. The accuracy of his scientific method of estimate is indicated by his remarkable forecast of the present population of the United States, published in *The North American Review* for July, 1890. His estimate then made was 76,200,000. The actual number returned in the official report of the director of the census, made last year, was 76,304,799.

From the New York *Freeman's Journal* we quote the following from Mr. Mulhall's paper read before the recent Australasian Catholic Congress (Mr. Mulhall was a Roman Catholic and a private chamberlain to Pope Leo XIII.):

"The population of the world in 1898 was estimated at 1,450,000,000, of whom little more than one third were Christians, viz.:

| | Christians. | Mohammedans. | Jews. | Pagans. |
|---|---|---|---|---|
| Europe | 348,500,000 | 6,600,000 | 6,500,000 | ..... |
| America | 126,400,000 | ..... | ..... | 1,300,000 |
| Asia | 12,600,000 | 109,500,000 | 200,000 | 667,800,000 |
| Africa | 4,400,000 | 36,000,000 | 400,000 | 91,000,000 |
| Oceanica | 9,700,000 | 24,700,000 | ..... | 4,400,000 |
| Total | 501,600,000 | 176,800,000 | 7,100,000 | 764,500,000 |

"We find that more than one half of mankind is still enveloped in paganism, and that the degrading tenets of Mohammed hold sway among many of the principal states of Asia and Africa. If we proceed to classify all Christians under three heads they will be found to stand thus:

| | Catholics. | Protestants. | Greeks. | Total. |
|---|---|---|---|---|
| United Kingdom | 5,400,000 | 34,700,000 | ..... | 40,100,000 |
| France | 37,700,000 | 700,000 | ..... | 38,400,000 |
| Germany | 18,600,000 | 32,700,000 | ..... | 51,300,000 |
| Russia | 8,300,000 | 3,100,000 | 73,800,000 | 85,200,000 |
| Austria-Hungary | 33,800,000 | 4,100,000 | 3,300,000 | 41,200,000 |
| Italy | 31,100,000 | 60,000 | ..... | 31,160,000 |
| Spain-Portugal | 22,700,000 | 10,000 | ..... | 22,710,000 |
| Scandinavia | 10,000 | 9,290,000 | ..... | 9,300,000 |
| Belgium and Holland | 7,990,000 | 2,710,000 | ..... | 10,700,000 |
| Rumania, Greece, etc. | 1,900,000 | 4,130,000 | 12,400,000 | 18,430,000 |
| Europe | 167,500,000 | 91,500,000 | 89,500,000 | 348,500,000 |
| Europe | 167,500,000 | 91,500,000 | 89,500,000 | 348,500,000 |
| United States | 9,900,000 | 62,300,000 | ..... | 72,200,000 |
| Canada | 2,100,000 | 2,800,000 | ..... | 4,900,000 |
| Spanish America | 45,600,000 | 100,000 | ..... | 45,700,000 |
| West Indies | 2,500,000 | 1,100,000 | ..... | 3,600,000 |
| Australia | 900,000 | 2,900,000 | ..... | 3,800,000 |
| Philippines, etc. | 5,700,000 | 200,000 | ..... | 5,900,000 |
| Asia | 3,100,000 | 700,000 | 8,800,000 | 12,600,000 |
| Africa | 2,700,000 | 1,700,000 | ..... | 4,400,000 |
| The world | 240,000,000 | 163,300,000 | 98,300,000 | 501,600,000 |

As to the relative strength of Protestants and Roman Catholics in the chief missionary countries of the world, Mr. Mulhall gives the following table (compiled in 1893) from the leading Protestant authority, the American Statistical Association, showing the ratio of Protestants to Roman Catholics in these countries to be as one to five:

| | Catholics. | Protestants. | Total. |
|---|---|---|---|
| India | *1,199,000 | 544,000 | 1,743,000 |
| China | 1,116,000 | 88,000 | 1,204,000 |
| Siberia | 70,000 | 20,000 | 90,000 |
| Japan | 30,000 | ..... | 30,000 |
| Syria, etc. | 663,000 | 20,000 | 683,000 |
| Asia | 3,078,000 | 662,000 | 3,740,000 |
| Africa | 2,660,000 | 1,740,000 | 4,400,000 |
| Manila, Java, etc. | 5,720,000 | 220,000 | 5,940,000 |
| Totals | 11,458,000 | 2,622,000 | 14,080,000 |

* The English Catholic Register for 1898 gives the number as 1,870,000.

It is interesting to ascertain which phase of Christianity increases numerically the faster throughout the whole world. As to this, Mr. Mulhall says:

"There can be no doubt that the principal Protestant nations, such as Great Britain, Germany, and the United States, are advancing with rapid strides in population, whereas such Catholic countries as France, Ireland, Spain, and Portugal, have little or no increase yearly. But when we come to make a survey of the whole of Christendom, we find that the numbers are pretty equal. The following table shows the annual surplus of births over deaths, that is the natural increase (exclusive of the returns for the Greek Church), according to official returns for five years, ending December, 1897, the figures for each religion being in the ratios corresponding to the latest census reports, viz.:

ANNUAL INCREASE.

| | Catholics. | Protestants. | Total. |
|---|---|---|---|
| United Kingdom | 55,000 | 385,000 | 440,000 |
| France | 10,000 | ..... | 10,000 |
| Germany | 240,000 | 420,000 | 660,000 |
| Russia | 80,000 | 30,000 | 110,000 |
| Austria-Hungary | 365,000 | 45,000 | 410,000 |
| Italy | 319,000 | 1,000 | 320,000 |
| Spain and Portugal | 130,000 | ..... | 130,000 |
| Scandinavia | ..... | 104,000 | 104,000 |
| Holland | 25,000 | 38,000 | 63,000 |
| Belgium | 55,000 | ..... | 55,000 |
| Switzerland | 10,000 | 14,000 | 24,000 |
| Other Countries | 6,000 | 3,000 | 9,000 |
| Europe | 1,295,000 | 1,040,000 | 2,335,000 |
| United States | 210,000 | 1,230,000 | 1,440,000 |
| Canada | 26,000 | 35,000 | 61,000 |
| Australia | 17,000 | 58,000 | 75,000 |
| Spanish America | 792,000 | 8,000 | 800,000 |
| West Indies | 20,000 | 9,000 | 29,000 |
| Totals | 2,360,000 | 2,380,000 | 4,740,000 |

An examination of the relative progress of Protestantism and Roman Catholicism in the English-speaking countries, however, reveals, he states, a much greater percentage of gain for the latter faith:

"In the United Kingdom there are no fewer than 4,600 Catholic churches, almost all built in the nineteenth century, and representing an outlay of at least £20,000,000 sterling. The progress of Catholicity in Great Britain is chiefly among the educated classes, as appears from a work just published by Swan & Sonnenschein, London, which states that since the Tractarian movement of 1850 the persons who 'have gone over to the Church of Rome include 445 graduates of Oxford, 213 of Cambridge, and 63 of other universities, besides 27 peers, 244 military officers, 162 authors, 129 lawyers, and 60 physicians. Among the graduates were 446 clergymen of the Established Church.' The secession of so large a number of distinguished persons from the Church of England to enter the Church of Rome has been accompanied by a reaction among the masses of the English people, who have gone over largely to the Methodist and other sects. This is apparent from the returns of marriages in Eng-

land and Wales during forty years in the different places of worship, showing the following ratios:

| | 1865–65. | 1866–75. | 1876 85. | 1886–95. |
|---|---|---|---|---|
| Church of England | 860 | 761 | 720 | 697 |
| Roman Catholic | 46 | 42 | 43 | 42 |
| Dissenters | 94 | 197 | 237 | 261 |
| Totals | 1,000 | 1,000 | 1,000 | 1,000 |

"In the decade ending 1865 the Church of England stood to dissenters as 9 to 1, but at present it is less than 3 to 1. The dissenters have gained what the Church of England has lost, last while the ratio of Catholics has slightly fallen off in the forty years. We see that in England and Wales only 4 per cent. of the population is Roman Catholic, as compared with 8 per cent. in Scotland, 78 per cent. in Ireland, 40 per cent. in Canada, 14 per cent. in the United States, and 22 per cent. in Australia.

"The Roman Catholic hierarchy of the United States recently celebrated the centennial (1889) of the consecration of the first bishop, Dr. Carroll, of Baltimore, and so rapid has been the growth of Catholicity in that country that it now possesses more bishops than France, Austria, or Spain. There are, moreover, 10,500 churches, 520 hospitals and asylums, 930 colleges, and 3,100 schools built and maintained by Roman Catholics in the Union."

## NEW MISSIONARY PLANS OF BUDDHISM.

SINCE the Parliament of Religions in Chicago eight years ago, there has been a growing interest in Buddhism in America; and thus, in the opinion of leading Buddhists of Japan, the time was ripe for the establishment of the Buddhist mission in San Francisco last year. This was done under the authority of the high priest of the Western Hongwanji Temple of Japan, in cooperation with leading Buddhists of both the Southern and Northern churches of Asia. Concerning this American mission and the general awakening of Buddhist missionary activity throughout the world, *The Orient* (Tokyo, January) says:

"The Buddhist order in America will be *non-sectarian* in nature, and *universal* in its scope of propaganda, with the object of bringing the Buddhist Sangha [church] in all parts of the world into harmonious relationship, whereby some concerted plan for international and cooperative action may be arranged for the advancement of the *Dhammacakka-ppavattana Suttam* for the good, for the gain, for the welfare of mankind, out of compassion for the world. The first step of the Dharma-Sangha of Buddha will be to present an invitation to the Dharma-Rajas and high priests of the principal Nikāyas [temples or sects] in the world, asking them to become counselers of the order; while an earnest invitation is also extended to the priests of all recognized Nikāyas, to devout Buddhists and sympathizers of all nations, to become members of the Dharma-Sangha of Buddha. The second step will be to convene an international Buddhist council to consider plans for the establishment of a central organization for the proper management of missions and education.

"History and every-day experience familiarize us with the terrible curse brought upon mankind by sectarianism, bigotry, and persecution. No people have had more painful experience in religious matters than the Christian world. This sad condition is deplored by all devout and learned men in the civilized world.

"The Buddhist world has not suffered so much from the terrible curse of intolerance. At no time in Buddhist history has persecution been resorted to by the Sangha. The spirit of intolerance, as expressed in the rock-inscribed edicts of Asoka the Great, 259 B.C., has been universally practised among all sects: 'The King Piyadasi wishes that all sects should dwell everywhere (unmolested); for all of them approve of restraint (of the passions) and the perfecting of good deeds.' Again: 'The King Piyadasi honors all sects . . . but there is a fundamental law for every sect, viz., moderation in speech; that one should not exalt one's own sect in decrying others and not depreciate them lightly, but that one ought, on the contrary, to show always to other sects the honor due to them. . . . Therefore peace alone is good, so that all should hear and listen gladly to the opinion of others.' . . . . . .

"The most important and valuable feature of the exhortation of the Tathâgata concerning this matter, as also in all the teachings of the Holy One, is the *positive*, superimposed as it were upon the *negative* order of the good law; the observance of which insures perfect harmony and peace in the world, which constitute *Nirvana*. By the harmonious action of both the positive and negative forces in nature, the universe exists; without it, all life would cease. The Enlightened One said, therefore, that one must not only cease to do evil and to purify one's own heart, but must also perfect good deeds. Again, the Blessed One said:

"'A man that stands alone, having decided to obey the truth, may be weak and slip back into his old ways. Therefore stand together, assist one another, and strengthen one another's efforts.

"'Be like unto brothers; one in love, one in holiness, and one in your zeal for the truth.

"'Spread the truth and preach the doctrine in all quarters of the world, so that in the end all living creatures will be citizens of the kingdom of righteousness.

"'This is the holy brotherhood; this is the church of Buddha; this is the Sangha that establisheth a communion among all those who take the Buddha as their guide'—in other words a *Universal Sangha.*'

"The condition prevailing in the Buddhist world since the Third Buddhist Council goes to show that the followers of the Buddha have been apathetic and exhibited a great lack of energy, in so far, at least, as the *positive* teaching is concerned. For, until recent years, when, from sheer force of circumstances, some few zealous members of the Northern and Southern Sanghas have been inspired to action, nothing worthy of mention was done to bring even the followers of the good law into the bonds of brotherhood; much less to cooperate for the universalization of all religions and creeds. It is much to be regretted that no international Buddhist council has been held for over two thousand years, and but little effort put forth to 'carry the doctrine to all nations,' as commanded by the Blessed One. Each Nikāya stands firm in its mountain fastness of sectarianism, tolerant and friendly, perhaps, to its neighbors, but withal independent and firm to its peculiar forms, rites, and ceremonies; each Nikāya and each Buddhist country standing aloof from all others, while the gulf between the Northern and Southern Buddhists is still wider. Thus have all Buddhists deprived themselves of the glorious privileges of *brotherly love*, *concord*, *unity*, and *peace*. And the truth itself can find no place in the hearts of mankind for the want of harmony. The preaching of the good law has languished until darkness covers the earth and gross darkness the people. Well it is that of late years circumstances are bringing the Dharma-Rajas, priests, and devout Buddhists to a sense of their duty, and are leading them to see, at last, that modes of worship, rites and ceremonials, peculiar to the different Nikāyas and countries, each being in accordance with the customs and manners of the people of the various nations, do not in any way add to, or take from, the good law proclaimed by the Tathâgata."

## THE PARIS CONGRESS OF RELIGION AND THE COMPARATIVE METHOD IN THEOLOGY.

THE advances already made by the application of what is known as "the comparative method" in theology, altho apparent on every hand, have perhaps never been so vividly brought to the attention of the world as in the recent sessions of the International Congress of the History of Religion, at Paris. The Rev. Nathaniel Schmidt, professor of Semitic languages and literature at Cornell University, and American delegate to the congress, writes in *The Independent* (January 24):

"This congress was attended by over one hundred and fifty scholars, representing many lands and many religions. There were Catholics and Protestants, Jews and Mohammedans, Buddhists and Brahmans. Over sixty papers were read and discussed dealing with the most different epochs in history and the most divergent phases of religious life. The great theologians whose fame in centuries past drew crowds of students from many lands to the Sorbonne would have opened their eyes wide with astonishment could they have looked upon the assembly that gathered in the old temple of learning. Yet nothing would have seemed so strange to them as the method of approach to whatever subject was discussed quietly adopted by every participant. What kind of theologians were these who spent a whole week

together without producing a single masterpiece of apologetics, without even attempting a defense of their holy faith, and with never a quarrel over creed or ritual? As naturally as if there never had been any war of religions each man, whether he was a Japanese Buddhist, a Jewish rabbi, or a Christian theologian, presented his facts, calling them neither good nor bad, and brought in the tenets and rites of one religion to explain those of another. There was no seeking after a common ground. For every man knew that such a ground already existed in the common method of research.

"This method engenders sympathy, without which there is no true understanding. Senart, Sylvian Levy, and G. Oppert spoke as reverently of Buddhism as did Fujishama and Chicadzumi, and the natural love of these Japanese scholars for the faith of their fathers did not cause them to introduce any apologetic strain into their discussions. Rabbi Klein, in discussing the influence of Essenism on Christianity, evinced the warmest interest not only in the teachings of Jesus but also in the world of thought and sentiment that meets us in the Fourth Gospel. Not the most sensitive child could be offended by the manner in which Marillier treated its nursery rimes, using them as keys to unlock the mysteries of primitive religion. Not the most conservative theologian could take exception to the spirit in which Sabatier described the services of Biblical criticism to the science of religion."

The facilities for comparative study of the religions of the world are constantly increasing, says Dr. Schmidt, and the theologian of to-day must employ this method if he is to keep in touch with the best results of religious science:

"In a carefully prepared paper that may soon be read in the *Revue de l' Histoire des Religions*, where also the other contributions will first appear before their final publication in the Proceedings of the Congress, Jean Reville described the opportunities now afforded by the universities of Europe and America. But the method is not confined to academic life. An ever-growing number of men are employing it, with the most salutary effect, in their private researches, in pulpit and in press. The theologian of to-day, whatever his immediate affiliation, begins to realize that he must be familiar with the facts of man's religious life, not only within a limited field, but in all ages and all lands. He must be able to cite his proof-texts with something of the accuracy that characterized a past generation of divines, yet not from one collection of books merely, but from all sacred writings and other documents of religion, and not as *dicta probantia*, proving what should be believed, but as evidence of what men have believed. He must be sufficiently conservative to recognize that he can not do without the assistance of humanity, whose experiences, observations, and interpretations should be present with him even when in solitary meditation he faces directly the realities of the universe, and sufficiently progressive not to follow slavishly even this guide, but to question statements and doubt conclusions in order that he may believe what is true. And he must have something of the dogmatician's capacity for coordinating his knowledge for bringing into a system what personal reflection, enriched and guided by the collective thinking of the race, leads him to regard as truth.

"By the adoption of a correct method theology may rise again, by virtue of the vital importance of her subject-matter, to the dignity of a queen among the sciences, and should be able to command the services of the best-equipped minds for work that requires intellectual and moral power of a very high order."

---

**The Cost of Christianity.**—Recent statistics show in a striking way the vast sum of money now expended each year to maintain the several Christian denominations. A writer in the Nashville *American* (January 30), basing his statements upon the returns from the churches compiled for 1900, says:

"There are 187,800 churches, with a value of $724,900,000. Last year the running expenses of the churches of the United States were $287,000,000. It required nearly $9,000,000 for New York City alone. For the four cities of New York, Philadelphia, Chicago, and Boston over $18,000,000 was required, and this does not include new buildings, mission contributions, or general charities. One hundred years ago there was not a missionary society in this country; now our missionary societies collect and disburse $25,000,000 a year. Statistics recently compiled show that it costs $14,600,000 a year to maintain the Episcopal churches of this country, while the Presbyterian cost $20,375,000; Baptist, $12,348,000; Methodist, $26,267,000, and Roman Catholic $31,185,000. The Sunday-school lesson papers, libraries, etc., cost $7,250,000. . . . . .

"Trinity Church, of New York, is regarded as the richest church in America, it having large holdings in real estate; but St. Bartholomew's Episcopal Church, New York, has an income of about $200,000 a year, while Trinity, also Episcopal, receives about $168,000 a year. There are several Episcopal churches in New York, Philadelphia, and Boston having incomes of from $50,000 to $130,000 a year. The largest income of any Presbyterian church is that of the Brick, New York, which is $116,000 a year; the next largest is the Second of Indianapolis, with $85,000. Madison Avenue, New York, has the largest income of any Methodist church, $39,000 a year. The wealthiest Baptist church is Fifth Avenue, New York, its income last year amounting to $145,000. The Rockefellers attend this church, and its income last year does not represent a fixed annual amount. While the Baptist churches have more than six times as many members as the Episcopalian, the cost of maintaining the latter is more than $2,000,000 greater. The Episcopal Church, in proportion to numerical strength, cost from three to five times as much for maintenance as either the Baptist, Presbyterian, Methodist, or Catholic.

"About $2,000,000 a year is spent for Bibles by the American people, while $500,000 a year goes for hymn-books and $60,000 a year for prayer-books. The cost of religious periodicals and other literature amounts to $11,750,000 a year. Last year the amount of money spent by all countries in the interest of Christianity amounted to much more than $1,000,000,000."

---

## ATTITUDE OF "RITUALISTS" TO THE ROMAN SEE.

IT is frequently said that the object of the Catholic or "Ritualist" Party in the English Church is to "Romanize" the Established Church of England and to bring about an acknowledgment of the Pope's supremacy. The London *Daily News*, for instance, in a review of a recent book by Mr. Walter Walsh, author of "The Secret History of the Oxford Movement," says:

"The destination of the Oxford Movement from the very first has been Rome. . . . For corporate reunion with Rome Newman (in his Anglican days), Froude, Keble, and, above all, Pusey, labored and prayed. . . . They wished to take the whole Church of England, with all her cathedrals and parish churches and her vast wealth with them, a present worthy of the Pope's acceptance and on conditions easy for him to accept. Nothing less than this would satisfy them, and nothing less than this will satisfy the leaders of the ritualists at the present day."

The London *Church Review* (Anglican-Catholic) denies this allegation *in toto*, and states the position of the great party it represents—and thus incidentally of American "Ritualists"—as follows:

"The objective of the revival has never been concealed, and that object is absolutely inconsistent with 'handing over the Church of England' upon any terms whatever, 'easy' or otherwise, to the Pope. We long for the reunion of historic Christians in East as well as in West; but we would never purchase that reunion by submission to the Petrine claims, or by acknowledgment either of papal infallibility or papal supremacy. It is slander of the dead to suggest that Pusey or Keble would have done so either. So far from desiring to go to the Pope, our view rather is that he must abandon his unhistoric and un-Catholic pretensions, and approach us and the holy bishops of the Orthodox East. Rome made the separation, and Rome must mend it. We may point out to *The Daily News* that these provinces [that is, the English Church, composed of the two ecclesiastical provinces or archbishoprics of Canterbury and York] never separated from the communion of Rome, altho they did repudiate the papal and even the patriarchal claims of that Apostolic See. Twelve years after the accession of Elizabeth Rome excommunicated us.

We have never sought to return the compliment. In any case, it should be clear to men of good will that the objective of the English Catholic movement is not submission to Rome, but the amendment of Rome and the peace of all Christendom; probably, in the first instance, by way of intercommunion between Canterbury and Moscow. In the eyes of men of the world such hopes may seem utopian, and even chimerical. At least they are neither disloyal nor dishonest."

The aim of Lord Halifax and of the Anglican "Order of Corporate Reunion" is, its members state, to bring about such an understanding between the English Church, the Pope, and Eastern Orthodox believers as shall enable all Christians to be united and to acknowledge what is termed the "primacy of honor" of the Pope, as incumbent of the ancient patriarchal see of Rome.

## MR. MARION CRAWFORD ON RELIGION IN ITALY.

THE religious situation in Italy since the accession of the new King has been a subject of much speculation. Opponents of the Vatican have said that there never was a time when the Pope's aspirations for temporal sovereignty were less likely to be realized; while on the other hand several unmistakable signs have proceeded from the Vatican revealing the fact that the Pope has not in the smallest degree abandoned his claims or laid aside his hopes. Some light is shed upon these and kindred religious matters in Italy by Mr. F. Marion Crawford, who, himself a Roman Catholic, has by a prolonged residence in Rome become well acquainted with Italian national and religious aspirations. In regard to the much debated character of the new King, who has been called in turn an atheist and a strong Roman Catholic, he says (in the New York *Tribune*, January 26):

"Humbert was an easy-going fellow. To look at his portrait you would have taken him to be a terribly ferocious potentate and full of energy. In reality, he was a very exceptionally tender-hearted country gentleman, who cared little about the work of statecraft. This King, on the contrary—I met him several times when he was Prince of Naples—looks like a thin, weak man, who can not possibly exert himself to any great degree, when, as a matter of fact, he is always exerting himself, and never seems to be any the worse for it or to need rest. He is capable, too, and splendidly educated. His education was superintended by William Bliss, an English Catholic and a man of the highest learning. Oh, yes, the present King of Italy is not by any means a freethinker, whatever idea people may have derived from the antagonism with the Holy See in temporal affairs into which the House of Savoy has been thrown by circumstances. King Humbert, altho it may not be generally known, received the last sacraments and died in full favor with the church, and his son is a devout and orthodox Catholic."

Concerning the recent utterances of the Duke of Norfolk in favor of the temporal power, which have aroused so much angry comment in England, Mr. Crawford says that their importance has been much exaggerated, and that the duke's position as a "black," or papal advocate, is well understood in Italy:

"I did hear it said that the English pilgrimage to the Holy See came after all the others because the English were angry at the position of the Roman Curia in regard to the Boer war; but the Duke of Norfolk himself could have had no such motive, because he had been in Rome on his own account some time before the pilgrimage arrived. I don't even know that the Curia is pro-Boer. As for the Italians, there is a reason for their attitude which I don't think is generally understood abroad. All Italians—Romans included—whether they are 'black' or 'white,' papal or anti-papal, are strongly sympathetic with every movement that has the appearance to them of being 'liberal,' which means, with a republican tendency. Perhaps you don't know that in the days of Austrian domination men were arrested in Northern Italy for crying 'Viva Pio Nono!' That was when the Pope was himself something of a republican leader. Now both 'blacks' and 'whites' regard the British in South Africa as representing autocracy and the Boers as fighting for republican ideas. If the Boers are bigoted Calvinists and have been hard on Catholics in their country, the fact has not been brought home to the Romans, 'white' or 'black.'

"The feelings of the Romans in matters of church and state are not easy for outsiders to understand. For an example, take the case of the present Prince Colonna. The head of the house of Colonna is one of the two hereditary prince assistants of the Holy See, the head of the house of Orsini being the other. But the Colonna have been white—or Ghibelline, which is much the same thing—for seven hundred years, more or less, and before his father's death, in 1894, the present Prince was an officer in the Italian army. And yet, as soon as his father died, the young prince took off King Humbert's uniform and put on the medieval costume of his hereditary office. And now he walks in solemn procession behind the Pope on all occasions of state, and never goes near the Quirinal, altho his brother is mayor of Rome."

The London *Saturday Review*, commenting on the Norfolk incident, says:

"The duke doubtless expressed himself indiscreetly, but the newspapers, 'looking beyond him quite,' have attached to his words a political gravity utterly disproportionate. We are sure that the duke was thinking only of spiritual and religious interests when he desired greater freedom for the Holy See. And we must say that the Italian Government and Chamber are by no means so admirable as institutions as to justify their extreme sensibility to the smallest reflection upon their character."

**A Parody of Applied Christianity.**—In our issue of February 9, we credited, through a slip of the pen, to *The Churchman* instead of to *The Church Standard*, a strongly worded denunciation of the recent doings of Christian nations in China. *The Churchman*, while not employing quite such extreme expressions as in the item quoted, speaks as follows (February 9) of the Christian powers:

"The allies in China, under the command of a German marshal, have been guilty of conduct that is a disgrace to the Christianity of the nations whence they came, and that must sadly hamper the work of all missionaries in the far East for generations to come. That is a disagreeable fact, but it is impossible to evade it. Evidence multiplies day by day that the worst has not been told. . . . Things have been done in the Chinese empire that would have driven any nation with a spark of self-respect to revolt, and the missionaries can not hope to build up a Christian national church among a people whose national self-respect is gone. There has been a wanton disregard, too, of Chinese feeling as well as of Christian charity and Christian honesty. There have been even devoted missionaries sadly lacking in the grace of tact, and some, tho not of us, who have made themselves, as is matter of official record, willing tools of political intrigue. This last year has witnessed an awful object-lesson, or rather an awful parody of applied Christianity."

## RELIGIOUS NOTES.

OF late there has been a noticeable reaction among French men of letters, previously noted in these columns, in favor of the Roman Catholic Church. These include such men as Coppée, Brunetière, Huysmans, and Bourget. In commenting on these conversions, *Literature* (London) says: "No one is entitled to point to them as signs of the times, or as indications of an increasing spirituality on the part of the community at large. The conversions, in short, of these two or three individuals of peculiar temperament are no more representative of the general tone of French thought than was the course of life which gave the conversions their *raison d'être*; and the converted individuals themselves are no more representative Frenchmen than are writers like Anatole France, who win public respect while they adhere to the religion of Voltaire."

ONE of the latest humanitarian movements is a church union for the cure of the morphin and cocain habits, which have had such a sinister development in recent years. The Rev. Dr. W. N. Richie, a Presbyterian minister, formerly of Philadelphia, is in charge of the work, and among those who have highly commended his enterprise are the late Dr. John Hall; the Rev. Dr. R. F. Sample, ex-moderator of the Presbyterian General Assembly; the Rev. Dr. S. S. Baldwin, recording secretary of the Methodist Episcopal Church; Dr. E. M. Bliss, of *The Independent*; Dr. C. A. Stoddard, editor of the New York *Observer*; Mother Prindle, of the New York Rescue Mission, and many other well-known men and women. According to the testimony of these persons, the remedy is one of the most efficacious and remarkable known to materia medica.

## FOREIGN TOPICS.

### EUROPEAN COMMENT ON KING EDWARD VII.

THE policy and the sympathies of the new King of England are the dominant topic of discussion in the European press. British journals commend him for his alleged knowledge of kingcraft, for his courtesy, tact, modesty, and sincerity, and also for his assumption of the name Edward. Says *The Times* (London) on this latter point:

"The name which the King has assumed takes us back step by step to the most critical periods in the development of the English nation, to the Reformation, to the Wars of the Roses, to the 'Hundred Years' War' with France, to the ending of the Saxon monarchy, and to the early conflicts with the Danes. Those who value the historical continuity of a nation will rejoice that King Edward VII. will thus take a place in our annals which will bring him into relation with the whole stream of national development."

VON BULOW: "Don't make such a fuss about it. You might disturb folks. Keep quiet."
—*Lustig Blatter, Berlin.*

*The Westminster Gazette* (London) thinks it quite natural that continental opinion should be hostile to England, "for, from the European point of view, it is the special vice of our politics that we refuse to be assimilated to the European system," but it hopes that the new King will inaugurate a change, expressing itself as follows:

"We have a habit of lecturing other people about their business, and we take little pains to understand their point of view. We are always asserting that our ways are better than their ways, and tho we are liberal in matters of commerce, we are in the political sense unneighborly. It is the constant complaint of foreign diplomatists and writers in the foreign press that our statesmen are grossly ignorant about the fixed points in European policy. They are always imagining that they can use Germany to check Russia, or spite Germany by friendliness to France, regardless of the vital considerations which constrain Germany to live in peace with Russia, and all three to keep the peace between their respective alliances. Thus, tho we are as a rule shrewd enough where our own interests are concerned, we seem generally to have no policy in the European sense of the word. Within four years we have been on the verge of serious quarrels with four great nations successively—a proceeding which, apart from the merits of any particular case, makes the statesmen of Europe gasp for its rashness and its heedlessness. So the universal view has come to be that we are an unstable, unassimilable element who are happily for the moment restrained from mischief because we have our hands full elsewhere."

The French papers believe His Majesty friendly to France, and the *Temps* (Paris) calls him "intellectually superior to all other princes of his house." The *Journal des Débats* (Paris) agrees with this statement and hopes that he will play a great part in "softening down prejudices and smoothing relations between both sides of the Channel."

"The new sovereign," says the *Tageblatt* (Vienna), "is the first nobleman of his empire. . . . It is to be hoped that the world is the richer for a prince of peace." The *Kölnische Zeitung* declares that King Edward has the confidence of the German people because he knows their character. But the *Vorwärts* (Berlin), Socialist organ, says: "Edward VII. has been satisfied with the reputation of being the best-dressed man in Europe, and has never shown mental gifts of understanding more serious conditions. His acquaintance with the demi-monde of all the European capitals will make it easy for him to follow in the footsteps of the three Georges."

The Russian press speaks, for the most part, in a critical manner. The *Viedomosti* (St. Petersburg) recalls King Edward's sympathy for France, and wonders if it will extend to France's ally. The *Novosti* (St. Petersburg) believes that, in view of this pro-Gallic feeling, the new King will be hostile to Germany. The pan-Slavist organ *Sviet* (St. Petersburg) demands that Russia take advantage of the death of Queen Victoria to bring pressure upon Great Britain for a partition of Beluchistan; "even as, at the moment of the death of Alexander III., England forced a new frontier in the Pamirs and Afghanistan." West Beluchistan, concludes this journal, "must, without fail, become a Russian 'sphere of influence.'"

King Edward's attitude to British imperialism and the Transvaal war in particular is awaited on the Continent with interest. The *Novosti* suggests that an opportunity is now given English to make peace with the Boers. How can King Edward continue the war, it asks, "since all war was so contrary to the views of his mother, the Queen, who, unhappily, could not prevent it?" *The Exchange Gazette* (St. Petersburg—published in England) calls on the King to dissolve Parliament and "give the British people the opportunity of impeaching its ministers." *Rossya* (St. Petersburg) thinks that Emperor William's visit to England was merely the graceful end of his personal connection with the realm of his grandmother, and that the Kaiser will soon actively attempt intervention in the South African war. Referring to King Edward's "friendship for the jingo Chamberlain," the *Herold* (St. Petersburg—published in German) asks: "Will the glowing persuasiveness of a Chamberlain, which up to now has hypnotized the English masses, also prevail in the palace, or will the new King see that Chamberlain's way is the way of destruction?"

Some of the London journals are advocating a change in the royal title. Since the British Isles are the keystone, not the entire arch, of empire, says *The Daily Mail* (London), why not amend the title, "King of Great Britain and Ireland, and Emperor of India," to "Emperor of the Britons, King of Canada,

KITCHENER (in pursuit of De Wet): "There seem to be several of him!"
—*Figaro, Paris.*

Australia, and India"? *The Mail* also refers to the time-honored British custom of issuing a new coinage at the beginning of a new reign, and says:

"It might be well to consider whether the new reign might not be made to coincide with a reform in our system of reckoning money. In almost every country of the world, certainly in every progressive country outside the British empire, the decimal system has long since replaced the clumsy and elaborate duodecimal of other days."—*Translations made for* THE LITERARY DIGEST.

## PROTECTION AND FREE-TRADE STRUGGLE IN GERMANY.

THE agricultural and manufacturing interests in Germany are so evenly balanced that the protection-free-trade battle which is now on threatens the empire with one of the gravest crises in its history. The German agriculturists, or Agrarians, comprise the wealthiest, most aristocratic, and altogether most powerful interests in the community, with great influence at court and in control of a large proportion of the total number of votes in parliament. On the other hand, within the past six or seven years, Germany has assumed great importance as a manufacturing country, reaching out for the markets of the world, and, in consequence, demanding cheap raw materials and cheap foodstuffs. In December, 1903, the commercial treaties which Germany concluded in 1892–94 with Russia, Austria, Italy, Switzerland, Belgium, Servia, and Rumania, by which numerous duties were reduced, will expire. The question now agitating the empire is whether, in 1903, Germany shall return to a strongly protective policy, or shall conclude other treaties of a similar nature. Each party to the contest is declaring that it will be ruined unless the Government enact laws in its interest and inimical to the interests of the other. The military and official classes fear a decline of the large agricultural element, and a number of scientific authorities deplore the tendency to "exclusive industrialism." Prof. Adolf Wagner, who is not an Agrarian, but a Socialist, argues (in the *Lotse*, Hamburg) as follows:

"In advocating the development of Germany as a purely industrial country, not enough attention is paid to the dangers of this course. The character of the nation can not be benefited. The unequal division of wealth is assisted by industrialism, and the unhealthy growth of the cities, combined with the depletion of the country districts, is a natural consequence of it. The increase of the power of plutocracy, unhealthy demands for large profits, envy and speculation, with their natural attendants of national demagogism, proletarianism, and revolutionary tendencies, are the results of industrialism. Unrestricted competition leads to monopolies, syndicates, and trusts, and it must produce the worst form of plutocracy. . . . England furnishes a striking example of the threatening dangers. Her geographical position, her wealth of coal and iron, are unable to preserve for her her monopoly in the face of competition and of such protective tariffs as those of the United States and Russia. These tariffs render competition eventually impossible, and the conditions which alone justify an overdeveloped industrialism on account of its profit must necessarily cease. Thereby the advantage of cheap agrarian produce as imported from abroad ceases, for even cheap bread is dear when there is no money for its purchase. A sufficient protection for our agrarian produce is therefore to be advocated in the interest of the whole nation, even if it should render the industrial development more slow."

The same conclusions are reached by Professor Oncken, who declares (in the *Woche*, Berlin) that the farming population forms the basis of national strength, and quotes from French authorities to show that Prussia owes her rise to her peasantry, which, compelled to toil hard and little accustomed to luxury, is the source of Prussian strength. The agrarians do not demand a prohibitive tariff (a duty of 50 marks ($12.50) per ton on wheat is generally mentioned); but one which will render possible agricultural competition with the United States and Russia.

The manufacturing interests, on the other hand, claim that Germany will enter upon a period of general poverty, emigration, and consequent national decline, unless she is enabled to keep open the markets for her industrial produce; and this can not be done, they declare, unless the Government is able to conclude advantageous commercial treaties with foreign nations.

The *Nation* (Berlin), one of the leading free-trade organs of the empire, has been issuing a series of pamphlets on the various phases of Germany's tariff relations with other nations. Its argument for free trade is mainly as follows:

Nothing can be more foolish than the argument that the trade with a foreign country is disadvantageous because the balance of that trade is against us. Were that the case, we would have become poorer during the last ten years. Instead, we have become richer. Our exports have grown steadily, and that is a source of wealth, even if the imports have grown still more. Not every manufacturer can arrange to become an exporter, but all benefit by the exports. Without exports, prices at inland points would be very low, and there would be no relief for overproduction. By our commercial treaties our exports were secured in the very quarters where they seemed most threatened. Without these arrangements, we would have been unable to provide work and bread for our growing population. The opponents of the commercial treaties intend to make bread dearer and work more scarce. If they succeed, we will be forced to export men instead of manufactures. Yet such a policy is defended as in accord with sound national economics!

The *National Zeitung* (Berlin) points out that the agrarians wish to provide a sliding tariff on agricultural produce, which would probably induce the foreign exporter to grant easier entrance to German manufactures.

In a supplement entitled "Tariff War or Free Trade with the United States of America," the *Nation* declares that, without doubt, the United States could, in the event of a tariff war, practically stop the shipment of German goods to this country. But Germany needs agricultural produce and there are competitors to America and Russia. Therefore, thinks the *Hamburger Nachrichten*, a tariff which, tho protective, is not prohibitive will not seriously disturb Germany's trade relations.

The Manchester *Guardian* compares the present tariff agitation in Germany to the agitation which preceded the victory of the Anti-Corn League in England, in 1846. Says *The Guardian*:

"The agrarians admit that these conventions [Germany's commercial treaties] have aided materially the growth of German manufacturing industry by enlarging the markets abroad for its productions. But they say that the freer admission of Russian, Austrian, and other foreign agricultural produce, which was the price paid for this enlargement, has proved disastrous for German farmers and landowners. Unless, therefore, steps are taken to check the competition of foreign food, the peasantry, 'the backbone of German military strength' and German loyalty, will decay, and then the country will be delivered over to the Socialists of the towns. On the other hand, if the duties are raised and the cost of living increased, no harm will come to the working classes of the manufacturing towns, because their wages will be proportionately advanced. It is a very simple doctrine. If you want to raise wages, all you have to do is to make food dearer and the desired result will follow. So said the English agrarians of the forties; but facts did not support them, for when bread was dearest wages were wretchedly low, and since the corn duties were abolished they have risen enormously. At present the German Government is showing great deference to the agricultural protectionists, probably under the conviction that it is good policy to conciliate them. But we have yet to see whether the necessity for expanding the markets abroad for German manufactures may not override all other considerations."—*Translations made for* THE LITERARY DIGEST.

---

**Irish and Radical Comment on the Queen's Death.**—The Irish papers generally commend the life of the Queen for its personal worth; but *The United Irishman* (Dublin) says: "The assurance that the late monarch was a model of British domestic virtue interests us [the Irish] as little as it would the Irish peasant who saw his house being leveled and his wife thrown out on the roadside in Queen Victoria's name." It continues:

"We are told that the late monarch was not to blame for the

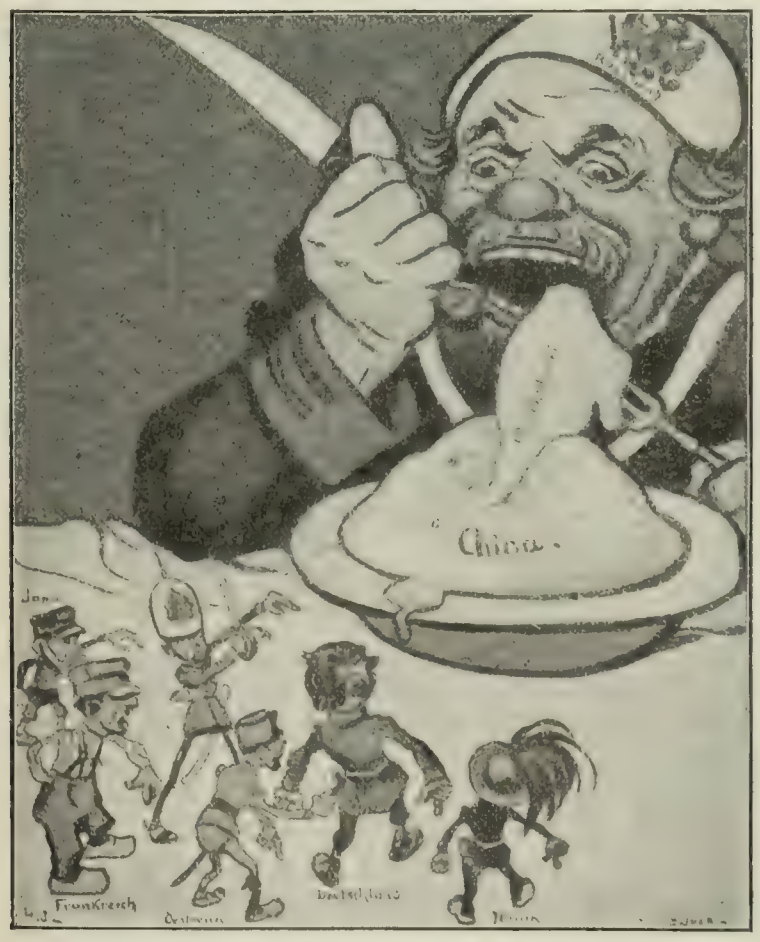
evil committed during her reign—that she was a mere figurehead and the creature of her ministers. But for acting as that figurehead she drew a salary of £620,000 per annum—a salary which the starving Irish were taxed to pay, and for her ornamental services her numerous progeny were maintained in luxurious idleness. Whether moral responsibility attaches to the man or woman who in consideration of a yearly salary allows the use of his or her name to sanction the oppression and despoiling of the weak we do not consider it worth while arguing."

*Justice*, the London Socialist organ, remarks that, "rare as common decency is among monarchs, we refuse to admit that the lady who has reigned over us for sixty-three years is worthy of all this overwhelming sorrow because she has accustomed the nation to respectable behavior in the highest place." Viewed from the point of view of the welfare of the huge aggregation of human beings of whom she was the official head, concludes this journal, "we do not hesitate to affirm that her late Majesty was a very selfish and self-regarding old lady. . . . We challenge her eulogists one and all to point to an instance in which the Queen and Empress incommoded herself in the slightest degree in order to further any great cause or to uphold any high ideal."

"According to her lights," says *The Clarion* (London), another Socialist journal, "Queen Victoria did her work perfectly. . . . The 'example' she has set will be rigorously exacted from her successors, and so long as that is maintained, our state will have as convenient, cheap, and effective a figurehead as human wisdom has yet discovered."

## SCANDINAVIAN FEARS OF RUSSIA.

RUSSIAN attempts to crush out national consciousness in Finland and in the Baltic provinces have excited a feeling of alarm in the Scandinavian countries and a disposition to seek closer relationship with Germany seems to be rapidly gaining



THE RUSSIAN HUNGER.

The only place where Europe can be touched is through its stomach.
—*Der Wahre Jacob, Stuttgart.*

ground. The *Deutsche Tages Zeitung* (Berlin) quotes from Scandinavian papers a number of utterances on the subject that are of considerable significance. In the *Dansk Tidskrift* (Copenhagen) the military expert Dahlhoff-Nelsen advocates the closer union of Denmark with Germany for military reasons. But an alliance with Germany, he says, can be of advantage only in case of a great continental war, and to take sides against their strong neighbor would in any case be disastrous to the Danes. The language troubles in the Sleswick frontier he regards as unimportant.

Similar views have inspired a great number of Swedish and Norwegian writers, especially since the Stockholm *Dagens Ny-*

THE RETURN OF THE IMPERIAL COURT TO PEKING.

The Russians return the Chinese Emperor's private property (4 idols, 3 dolls, 2 knives, and a bottle), and run off with Manchuria.
—*Kladderadatsch, Berlin.*

*heter* has showed great friendship for Russia. Everywhere it is said that Germany is the only power whose protection can safely be sought. The *Morgenbladet* (Christiania) takes occasion to indorse from a Norwegian point of view these Swedish wishes for an alliance with Germany. That would be the only guaranty of Scandinavian integrity, it argues, but it regards a moral *entente* as for the present sufficient. The Stockholm *Arbetet* goes much further. In an article headed "Idealism and Practical Politics" it argues as follows:

It has been thought that the Scandinavian countries could defend themselves against Russian aggression by a revival of the Kalmar Union. But the interests of Sweden and Norway are too divergent to permit a close union between these countries. It is not so long ago that the Northern nations feared the lust of conquest which was predicted as the natural consequence of the great power created by the consolidation of Germany. But this *horror teutonicus* has passed away. It may also be assumed that France no longer seriously thinks of a war of revenge; but if she ever attacks Germany, Russia will assist her. If Germany has to succumb, Russia will not refrain from annexing the Scandinavian countries, which she has long desired. There is but one logical course for the Northern nations: they must unreservedly back Germany. It is easy to do so, for Germany does not seek conquest and is highly popular in Sweden, as she aims only at a triumph of the Germanic nations in the work of civilization. The ideal form of such an alliance would be the entrance of Sweden into the German union on the same terms as those on which Bavaria, Saxony, Baden and Würtemberg entered the German federation. But the initiative must be taken by the Swedish Government. Germany would not refuse such a union. Some people may regard this as veritable treason; but we should not allow ourselves to be turned from the only course which can guaranty the preservation of our nationality and our language.

*Dagens Nyheter* admits that these are the reflections of a thoughtful and honest man, and should be respected as such.—*Translations made for* THE LITERARY DIGEST.

**Laws of Succession in Europe.**—The different laws of succession in Europe are sometimes confusing. *The St. James's Gazette* (London) explains the three different systems. It says:

"The most general is that known as the Salic system, under

which women are completely excluded. This is the rule in Belgium, Sweden and Norway, Italy, Denmark, and Germany. Then there is the German-Dutch system, under which males in all degrees of relationship take precedence of females, the throne passing to the female line only in case of the extinction of all the male lines, however remote. This is the rule in Holland—from which the law takes its name—Russia, and some of the minor German states. The third system is our own [English] under which females are excluded when there are males in the same degree of relationship, but take precedence of males whose degree of relationship is not so close as their own. Thus an elder daughter of the ruling sovereign gives way to all her younger brothers and their issue, but takes precedence of a male cousin or a nephew. This system is the rule in Spain and Portugal as well as in England."

## THE CHIEF CAUSE OF FRENCH DECADENCE.

DEPOPULATION and the remedies therefor have been the subject of animated discussion in the French periodicals for several years. Commenting on the statistics of the census for 1899, M. Bertillon, the well-known statistician, declares (in the *Economiste Française*) that they show the country to be in the same position as a man dying under the influence of chloroform. "It is painless, but still it is death." The figures indicate a stationary population, and if the present tendencies continue unchecked, an actual decrease is apprehended. Writing on the same subject in the *Revue Bleue*, J. Ernest Charles declares that something must be done at once, or "in one hundred years we will speak of France no more." A bill is now pending in the Senate for a severe tax on bachelors and spinsters, and other suggestions have been offered. Among the causes of the low birth-rate are mentioned the law for equal division of landed property, artificial checks such as Zola denounces in *Fécondité*, poverty, high taxation, etc. But two or three prominent writers have plainly declared that "alcoholism is the enemy"—the real cause of French decline in population, physiological vigor, and enterprise. A strong article on the subject is contributed to the Paris *Matin* by Henry Fouquier, a popular dramatist, critic, publicist, and novelist. In speaking of the prevalence of terrible crimes and other signs of degeneration, he says:

"Our race, however, is not peculiarly vicious and cruel. Paris, no doubt, has had crises of ferocity, but under the domination of passions which were perhaps justifiable. Paris has known all the follies, good and bad—those of bloodshed among others. But in ordinary conditions the French spirit is rather compassionate. 'Poor head and good heart' is still a national motto. We must seek outside of atavism and natural instincts of the French race the causes of the degeneracy of our morals. This decadence is, I hope, still curable.

"The poor Baudelaire, grand poet but absolutely irrational man, fancied he was opening to us the door of the 'artificial paradise' in extolling intoxication. In reality, the door opened is that of a hell. It is alcohol, in fact, in all its forms, which makes the veritable maniacs who live among us, here malignant, there brutalized—so numerous that they have ceased to attract attention except when their crimes take an unusual shape. . . . The ferocity of our manners springs from alcoholism, especially in what we still call 'the lower classes,' where there is at least one alcoholic for every ten persons, counting the unconscious as well as the conscious victims. The devoted persons who have made themselves the apostles of the crusade against alcoholism—a crusade which I esteem as the grandest work of our time—trace in their pamphlets and booklets the eloquent list of ravages produced by alcohol, no matter in what form it may be introduced into our economy. But they do not insist enough on disguised alcoholism, on that slow poisoning which may exist in persons who preserve all the appearance of temperance and who really are not addicted to intoxication.

"Whether it be hereditary or acquired, nervosity has become so general in our race that the evil of alcoholism may produce its ravages without the victims suspecting its influence upon them."

Fouquier goes on to give examples of intelligent and "correct" people who would be shocked to hear that they are alcoholics and who yet suffer from a predisposition to that disease. They drink moderately, yet that amount is fatal to them. They never get drunk, but their mind is never clear and strong, and their nerves never in normal condition. They are as degenerate as the drunkards that are universally despised and classed with the abandoned elements of society. Fouquier concludes:

"It is necessary that we should know the truth. Alcoholic poisoning may exist outside habitual intoxication. The enemy of the human reason may insinuate itself without noise or excess, drop by drop we may say, and gain control all the same. It is a Tartuffe who waits for the last act—delirium or paralysis—to proclaim himself master of the house. It is for us to shut the door to him by all possible means. Here I imply the use of public remedies for 'reasons of state.' If we invoke this argument in passing and personal interests, how much more legitimate it is to employ it where it is a question of safeguarding the health and grandeur of our race!"

By energetically fighting this evil, at least the worst manifestations of decadence would be checked, Fouquier believes. France, he holds, is becoming essentially more and more pacific, and the little "military outbursts" now witnessed do not imply a war spirit. Respect for life is, in fact, being strengthened, and the chief cause of degeneracy, disturbance and crime, he finds in drink.—*Translation made for* THE LITERARY DIGEST.

## CORRESPONDENTS' CORNER.

### Pudd'nhead Wilson and Freedom of Speech.

*Editor of* THE LITERARY DIGEST: The fact that your issue of January 26 contains a review of the late happenings at Stanford and also Peck's criticism of Mark Twain, recalls to me one of Pudd'nhead Wilson's new maxims which is very pertinent to the Stanford doings, and to me is a commentary on Mark's alleged decadence. It runs: "It is by the goodness of God that in our country we have those three unspeakably precious things: freedom of speech, freedom of conscience, and the prudence never to practise either of them." A. G.

HUENEME, CAL.

### Lutherans and the Deity of Christ.

*Editor of* THE LITERARY DIGEST: Altho THE LITERARY DIGEST is hardly calculated for a prolonged discussion between readers, I once more draw on your liberality. To Rev. McSorley's answer to me in THE DIGEST of January 5, I feel it my duty to reply in order to bring my church out in the right light.

1. His conviction that "one can seldom tell at any moment just what any Protestant does reject" could soon be changed as to the largest Protestant body, as the study of Symbolics will show that the Lutheran Church has a very definite confession. Formula Concordiæ gives the confession held by Lutherans always and to-day. Individual Lutherans can no more make that sound uncertain than Mivart makes it difficult to know what Catholics believe. We still can say: "Ecclesiæ magno consensu apud nos docent, . . . de unitate essentiæ divinæ et de tribus personis."

2. He will not deny that he has mentioned the Lutherans in such a connection with other Protestants as to include them in his accusation of "bold denial of the literal truth of the incarnation." This is true about some so-called Protestants, but it does not strike home to Lutherans who *with his own church* always held the "Athanasian Symbol" which was written on purpose to defend the Deity of Christ.

3. About Odinism in Norway and Sweden, he quotes the author. That may to some degree free him, but the statement remains false from whatever source. It would—even if true—still not be a proof of the degeneration of Protestantism, as he infers, any more than he would accept the "Los-von-Rom" movement in Austria as a proof of the degeneration of Catholicism.

"'Lucus a non lucendo" is misapplied; it strikes both ways. That is the habit of an antiphrasis, and besides—I do not believe in sarcasm in discussing sacred things. I have written, because his appreciative words to Protestants seemed to show a desire to be fair, and I would like to have every fair-minded Catholic brother know our position, that we may agree where we do agree as on the divinity of Christ and many other important doctrines. Yours in kindness, B. E. BERGESON.

*Pastor Norwegian Lutheran Church,*

BOSTON, MASS.

ACCORDING to the statistics lately published in the "Litterarischer Palästina-Almanach," the total population of Jerusalem is 45,536, of which 28,228 are Jews, 8,560 Moslems, and 8,748 Christians. The latter are divided as follows: Greek Catholics (Orthodox Eastern Church), 4,625; Roman Catholics, 2,513; Armenians, 659; Protestants of various bodies, 645; Kopts, 125; Ethiopians, 105; Syrians, 23.

## CURRENT POETRY.

### Poetic Tributes to the Queen.

THE poetic tributes to the memory of Queen Victoria have been many. The poet-laureate, Alfred Austin, published a dirge entitled "Victoria," in which the following lines are among the most notable:

And long and late this happy season wore,
This mellow, gracious autumn of her days,
This sweet, grave Indian summer, till we grew
To deem it limitless, and half forgot
Mortality's decree. And now there falls
A sudden sadness on our lives, and we
Can only bow disconsolate heads and weep,
And look out from our lonely hearths and see
The homeless drifting of the winter mist,
And hear the requiem of the winter wind.

The American press has not been wanting in its poetic tributes. Richard Henry Stoddard wrote in *The Mail and Express* on the day after the Queen's death:

Last night a Queen died who was more than Queen,
By virtue of her royal womanhood;
A potent Presence, rather felt than seen,
In the forefront of the world's life she stood:
For four score years her life was not her own,
But maid, wife, mother, widow, set apart
From private exercise of head and heart;
Mistress of millions, mateless and alone,
She was the State, and what the State must be
That governs well: that she hath governed well
There needs no clamorous peal from monster bell
To tell. Victoria, England mourns for thee,
Not with loud cries, but silently, with bowed head,
Proud of thy place among her dearest Dead!

Edwin Markham in his "The Passing of Victoria," wrote:

The kindly deed will live in memory
When London, in far centuries, shall be
As still as Babylon and both a dream—
When London dead shall be some poet's theme—
When all her tombs and towers shall be a flight
Of ghostly arches in the noiseless night.
Then as some bard on legends borne along
Shall build her faded glories into song,
Some Homer sing her darings and defeats,
Filling with crowds again the grass-grown streets,
Placing dead Kings back on their crumbled seats—
There suddenly will sweep into his rime
Victoria's name long lavendered by Time;
And all the poet heart of him will stir
At some small heart-warm chronicle of her,
The obscure whisper of some kindly deed
Of this dead Queen. . . . .

But the most frequently quoted lines of any have been those of Alfred Tennyson, written in 1851:

TO THE QUEEN.

Revered, beloved—O you that hold
A nobler office upon earth
Than arms, or powers of brain or birth
Could give the warrior Kings of old,

A NIGHT'S use of a "Practical" Hanger takes the wrinkles out of trousers, presses the bottom of the leg perfectly (removing all marks of turning up), and restores the original shapeliness. No other device can do this.

If you are "hard on clothes," or cramped for closet room, or careful of appearances, nothing will so please you as a set of our

Victoria,—since your royal grace
To one of less desert allows
This laurel greener from the brows
Of him that uttered nothing base;

And should your greatness, and the care
That yokes with empire, yield you time
To make demand of modern rime
If aught of ancient worth be there;

Then—while a sweeter music wakes,
And thro' wild March the throstle calls,
Where all about your palace walls
The sun-lit almond blossom shakes—

Take, Madam, this poor book of song;
For tho the faults were thick as dust
In vacant chambers, I could trust
Your kindness. May you rule us long,

And leave us rulers of your blood
As noble till the latest day!
May children of our children say,
"She wrought her people lasting good;

"Her Court was pure; her life serene;
God gave her peace; her land reposed;
A thousand claims to reverence closed
In her as Mother, Wife, and Queen;

"And statesmen at her council met
Who knew the seasons, when to take
Occasion by the hand, and make
The bounds of freedom wider yet

"By shaping some august decree,
Which kept her throne unshaken still,
Broad based upon her people's will,
And compassed by the inviolate sea."

## Current Events.

### Foreign.

CHINA.

February 11.—Foreign envoys in Peking find their conferences with the Chinese plenipotentiaries so fruitless that they decide to conduct future negotiations only in writing.

February 12.—The Emperor of China is said to have given a choice of modes of suicides to the officials whose deaths are demanded by the foreign powers.

February 15.—Something of a deadlock in peace negotiations is reported from Peking, due to differences between the foreign envoys and military authorities there.

February 17.—Count von Waldersee asks the American and French commanders in China to furnish all their available troops for an expedition to the west of Peking.

SOUTH AFRICA.

February 11.—Enteric fever is increasing in British garrison camps in South Africa; precautions against the spread of plague are taken at Cape Town; Secretary Chamberlain informs Sir Alfred Milner that there will be no change of British policy in South Africa.

February 14.—Lord Kitchener reports that his

**A Truly Remarkable Success.**

In the annals of American Life Insurance nothing has been more truly remarkable than the growth and development of The Prudential Insurance Company. Started in a modest way 25 years ago, The Prudential has become to-day the representative of the highest ideals of modern Life Insurance. During the 25 years of its existence its success and development have been without precedent, until to-day it stands firmly entrenched in the esteem and confidence of the public as a sound and reliable Company. While the ultimate success of any particular institution may be ascribed to a variety of causes, not least among the factors which have contributed to the Prudential's high standing has been the comfort and happiness which it has brought into thousands of American homes.

**THE LAW OF SUGGESTION.** A complete 10 Lesson Course on Hypnotism, prepared for thinking people. Price, complete, $1. **UNITED SUPPLY CO., Morrilton, Ark.**

troops are engaged with De Wet's force north of Philipstown.

February 15.—Reports of severe reverses to Boer arms in the Transvaal and Cape Colony are received.

February 16.—There is a growing feeling of optimism in British military circles that the Boer war is drawing to a close; General Kitchener reports that his troops are pursuing De Wet north of De Aar in Cape Colony, the Boer chief losing prisoners, a Maxim gun, and part of his ammunition train.

OTHER FOREIGN NEWS.

February 11.—Riots take place in many Spanish cities and are viewed with apprehension by the Spanish Government; martial law is proclaimed in Valencia.

February 12.—The marriage contract of the sister of the King of Spain is signed at Madrid; fears are entertained of a popular outbreak.

The King of Greece returns home from London, after an affectionate parting from King Edward.

February 13.—The Madrid police charges the populace in the streets, and many persons are injured; the preparations for the royal wedding are continued.

February 14.—King Edward VII., with Queen Alexandra, rides in state from Buckingham Palace to the houses of Parliament; in the house of Lords the King reads his speech from the throne, devoting it to a brief but comprehensive survey of the existing state of affairs throughout the empire.

The Princess of the Asturias is married to Prince Charles of Bourbon at Madrid, the ceremonies taking place within the palace and affording no opportunity for a popular outbreak.

February 15.—King Edward assumes the title of "Protector of English Masons"; he reviews Strathcona's Horse at Buckingham Palace.

Herr Bebel, the German Socialist leader, bitterly attacks Germany's policy in China, in a speech in the Reichstag.

Further disturbances occur in Spanish cities, tho Madrid is quiet; riots also take place in the streets of Budapest.

February 16.—M. de Witte, the Russian finance minister, issues a retaliatory decree raising duties on American steel and iron goods 50 per cent., because of Secretary Gage's tariff policy.

February 17.—Negotiations for the sale of the Danish West Indies to the United States cease, and the islands are to be administered in the future by the Danish East Asian Steamship Company.

Mines on Vancouver Island are flooded, and sixty miners are entombed.

## Domestic.

CONGRESS.

February 11.—*Senate:* The naval appropriation bill is passed; Mr. Caffery, of Louisiana, speaks on the ship subsidy bill.

*House:* The diplomatic and consular appropriation bill is passed; Mr. Sulzer makes a speech of sympathy with the Boers and attacks Secretary Hay.

February 12.—*House:* The army appropriation bill is passed.

February 13.—Both houses meet in joint convention and witness the counting of the electoral vote, the election of McKinley and Roosevelt being formally declared.

February 15.—*Senate:* In the debate on the ship subsidy bill, Senator Teller announces his purpose to prevent a vote at the present session of Congress, which draws sharp rejoinders from several of the Republican Senators.

OTHER DOMESTIC NEWS.

February 11.—An important conference is held at the White House on the President's nominations for army promotions; the nomina-

### Solution of Problems.

We are peculiarly unfortunate with the problems of February 2, as each of them has two solutions.

No. 533 (2d).

Author's Key, Q—B sq.

Second solution, Q x Kt.

Solved with author's key, by M. W. H., University of Virginia; the Rev. G. Dobbs, New Orleans; A Knight, Hillsboro, Tex.; the Rev. S. M. Morton, D.D., Effingham, Ill.; F. S. Ferguson, Birmingham, Ala.; the Rev. J. G. Law, Ocala, Fla.; G. Patterson, Winnipeg, Can.; O. C. Brett, Humboldt, Kan.; F. E. Reid, New York City; N. Weil, Calhoun, Ky.; H. M. Coss, Cattaraugus, N. Y.; H. A. Horwood, Hoboken, N. J.; H. A. Seade, Mahomet, Ill.; T. Hilgers, Paterson, N. J.; A. H. Gansser, Bay City. Mich.; L. H. R., Bennington, Vt.; J. E. Vincent, Lafargeville, N. Y.; J. E. Cannon, Richmond, Va.; F. F. Carroll, Aiken, S. C.

Second solution: J. E. Wharton, Sherman, Tex.; W. W. S., Randolph-Macon System, Lynchburg, Va.; Dr. O. L. Telling, Denver, Col.; W. J. Leake, Richmond, Va.; the Rev. P. Inon, Eckert, Mich.; H. Sleeper, Meriden, N. H.; the Rev. A. De R. Meares, Baltimore, Md.; R. H. Renshaw, Richmond, Va.; S. Stoddard, Kansas City, Mo.; D. Schandi, Corning, Ark.; J. T. Graves, Chicago, Ill.; I. S. Pepper, Atalissa, Ia.; "Merope," Cincinnati; J. Best, Dixon, Ill.; S. W. Shaw, Midnapore, Can.; D. A. Stewart, Plum Coulee, Can.

Both solutions: C. R. Oldham, Moundsville, W. Va.; M. Marble, Worcester, Mass.; W. R. Coumbe, Lakeland, Fla.; D. G. Harris, Memphis, Tenn.

No. 534 (2d).

Author's Key, B—Q 8.

Second solution, Kt—K 8.

Author's key: M. M., W. W., the Rev. G. D., the Rev. J. G. L., G. P., O. C. B., F. E. R., T. H., A. H. G., W. W., O. L. T., S. S., J. E. C.

Second solution: N. W., H. A. H., J. E. W., D. G. H., S. W. S., F. F. C.

Both solutions: M. W. H., W. R. C., H. A. S.

The only explanation that we can offer is that 533 came to us very highly commended, and we did not look for a "capture" as the key. No. 534 is a prize-winner. With the judges who awarded the prize, we did not see the second key, because the Kt is *en prise*, and we took it for granted that the Kt was not to move. It is worthy of notice that only four solvers found both solutions of 533; only three, both solutions of 534; and only one person sent both solutions of both problems.

In addition to those reported, S. W. S. got 533 and 534 (1st); F. F. C., 533 (1st); N. W., R. B. Hill, McLeansboro, Ill., 534 (1st); L. H. R., 531, 532, 533; Dr. H. S., "Merope," A. S. Ormsby, Emmetsburg, Ia., 531, 532.

VOL. XXII., NO. 9 NEW YORK, MARCH 2, 1901. WHOLE NUMBER, 567

Published Weekly by
FUNK & WAGNALLS COMPANY,
30 Lafayette Place, New York. 44 Fleet Street, London.
Entered at New York Post-Office as Second-Class Matter.

**TERMS OF SUBSCRIPTION.**

**PRICE.**—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents.

**RECEIPT** and credit of payment is shown in about two weeks by the date on the address label attached to each paper.

**POST-OFFICE ADDRESS.**—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

**DISCONTINUANCES.**—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

**PRESENTATION COPIES.**—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

## TOPICS OF THE DAY.

### THREATENED TRADE FIGHT WITH RUSSIA.

WHAT the New York *Evening Post* (Ind.) calls "the hardest blow we have received in the way of trade reprisals since the war of 1812," and what the Boston *Transcript* (Rep.) calls "the most sensational movement in that direction that has ever confronted us," appears in Russia's increase of the duties on American machinery, steel and iron goods by fifty per cent. This almost prohibitive duty on a class of American trade that has been making a remarkable invasion of the foreign market is imposed in retaliation for Secretary Gage's recent decision, that Russian sugar imported into this country must pay the additional tariff imposed on subsidized products. Only about $300,000 worth of Russian sugar a year is affected by Secretary Gage's decision, while our exports of machinery, steel and iron to Russia are roughly reckoned at about $7,000,000 a year, and many newspapers think that Russia has returned a blow greatly disproportionate to the provocation. Far from intending to provoke a tariff war, Secretary Gage explains that he was only carrying out the plain provision of the Dingley law that "whenever any country shall pay or bestow directly or indirectly any bounty or grant upon the exportation of any article," "an additional duty equal to the net amount of such bounty or grant" shall be collected, and the "net amount of such bounties or grants shall be ascertained, determined, and declared from time to time by the Secretary of the Treasury."

The nib of the question seems to be whether or not Russia pays an export bounty on sugar in the meaning of the Dingley law. It appears that Russia levies a tax on beet sugar consumed at home, but remits the tax on sugar exported to foreign countries. If the remission of a tax is a payment of bounty, therefore, Russia pays one; if not, not. On this point the New York *Journal* (Dem.) prints an alleged despatch from S. J. Witte, the Russian Minister of Finance, saying that "Russian sugar is subject to an indirect impost applying only to internal consumption, and this impost does not apply to sugar exported to foreign countries"; and that "no bounty to encourage the export of sugar exists in Russia." On the other side, the New York *Times* (Ind.) prints an interview with Mr. Herman Sielcken, who, it says, has "intimate business relations with the American Sugar Refining Company" (the "sugar trust"), in which he says that the Brussels Beet Sugar Congress, in 1898, agreed with the claim of its Austrian and German delegates that Russia was paying directly and indirectly the largest bounty of any country in Europe; and Mr. Sielcken adds: "After the close of the Brussels conference, the United States Treasury Department despatched an expert to Russia to investigate the question whether a bounty was paid or not, and to report results. When he returned this expert's reports confirmed the same finding as that which the Brussels Beet Sugar Congress did, that Russia was paying the largest bounty of any continental country in Europe."

The critics of the decision divide their attention between the law and the Secretary. The New York *Sun* (Rep.) thinks that Secretary Gage's order "was of doubtful wisdom," and the Boston *Advertiser* (Rep.) calls it "the result of a tariff provision adopted to oblige the sugar trust." The Baltimore *American*, another Republican paper, remarks that the increased duty will probably bar the Russian sugar from our market, so that our Government will find no additional revenue in the increase, and the "only beneficiary" "will be the sugar trust, to which every man, woman, and child in the United States will be forced to pay additional tribute." "It is easy to understand," adds the same paper, "how a doubtful provision in the revenue laws might be decided in the public interests; but it is impossible upon any fair method of reasoning to comprehend why it should be decided against the most important business interests and against the immediate interests of every human being in the land, except the beneficiaries of the sugar trust." The Philadelphia *North American* (Rep.) makes a similar comment, and adds that "the Germans will be quick to possess themselves of the field from which Secretary Gage has compelled Russia, in self-defense, to bar American manufacturers," and says further that "once the Germans are in possession, even if the courts eventually decide that Secretary Gage was not correct in his construction of the Russian law, it will be a difficult and tedious task for American manufacturers to regain the forfeited territory." The Philadelphia *Ledger* (Rep.), too, thinks it will hardly pay to start a tariff war for the benefit of "a trust which taxes American consumers at its own sweet will and controls labor with an iron hand," and it observes that Congress "could not do a better thing than start the warfare against trusts by repealing this particular clause of the tariff act at once."

Secretary Gage says of his decision that he could not have done anything else. He declares in a newspaper interview: "It is not a question of what the manufacturers desire or think ought to be. It is not a question of what the sugar refiners or our beet-sugar raisers desire or think ought to be. It is a question purely of law and of fact. The Secretary of the Treasury is sworn to enforce the law, not to make law. The late decision as to the liability of Russian sugar to pay a countervailing duty is based on the department's apprehension of the law and of the facts." And he says further that "the exemption of Russian sugars from additional duty would rightly be regarded by the other bounty-paying countries as a discrimination against them and in favor of Russia." The Philadelphia *Inquirer* (Rep.) says that "neither the justice nor the legality" of the Secretary's

ruling "has yet been successfully impugned, and unless it can be shown to be either illegal or unjust it will be maintained, regardless alike of Russian displeasure and of Russian retaliation. We don't want to become involved either in a tariff or in any other kind of a war, but if one is to be forced upon us we shall probably be able to stand the racket, at least as well as those who choose to adopt the unprofitable policy of aggression." Our trade with Russia, too, the New York *Journal of Commerce* notes, "represents the smallest proportion of annual sales made by the United States to any civilized people under the sun. Sweden and Norway, with less than 7,000,000 inhabitants, bought from us a little more than Russia with her 135,000,000; Denmark, with a little over 2,000,000, bought fully $4,000,000 more, and even to impoverished Spain we sold last year 33 per cent. more than to Russia." "If Europe or any nation of Europe wishes to launch upon a policy of reprisal in the form of heavy or exclusive tariffs on goods made in the United States," says the Kansas City *Journal* (Rep.), "the way is open before her and we can have no rightful criticism to make. But Europe has experimented enough with this sort of thing to come fully to understand that heavy taxes on American products result in oppressing the poor and least efficient of her own citizens without gaining corresponding benefits in the form of greater productive and industrial activities."

The Washington *Post* (Ind.) remarks philosophically:

"It is a self-evident proposition that if the success of our industrial and commercial enterprises depended upon the indulgence of foreign countries, we should have been driven out of the business years ago. . . . The world is wide; the struggle for commercial supremacy is very strenuous; but we ask nothing more than fair dealing and an open field, and these things we intend to have. Meanwhile, we strongly advise our producers and manufacturers to avoid excitement and mental strain of every kind. It is incredible that Russia intends to wage commercial war upon the United States—tho we could survive it, should the issue indeed be made—and it is equally incredible that we meditate injustice or unfriendliness toward Russia. It is not to be doubted that dispassionate inquiry and honorable deliberation will soon smother this petty little tempest in a teapot."

## DOES SLAVERY EXIST IN SOUTH CAROLINA?

THE existence in South Carolina of an industrial system with certain obvious resemblances to slavery, carried on under the guise of so-called "labor contracts," was revealed at a trial in a murder case in Anderson, S. C., last week, and has occasioned wide surprise and indignation. Under this system negroes seeking employment on a farm are required to sign a contract, of which the following are some of the provisions:

"I agree at all times to be subject to the orders and commands of said landlord or his agents. He shall have a right to use such force as he or his agents may deem necessary to require me to remain on his farm and perform good and satisfactory services.

"He shall have the right to lock me up for safe-keeping.

"He shall have the right to work me under the rules and regulations of his farm.

"And if I should leave his farm or run away he shall have the right to offer and pay a reward of not exceeding $25 for my capture and return, together with the expenses of same, which amount so advanced, together with any indebtedness I may owe at the expiration of above time, I agree to work out under all the rules and regulations of this contract at same wages as above.

"The said landlord shall have the right to transfer his interest in this contract to any other party, and I agree to continue to work for said assignee, same as for the original party of the first part."

The testimony in the trial in question seems to show that a colored man was arrested, and, without being taken to court or given any opportunity to prove his guilt or innocence, was imprisoned together with convicts in a stockade, and held there under a labor contract. Upon attempting to escape from the stockade and to return to his home, the negro was shot down, like a common malefactor, and killed. In commenting on this case, Judge Bennet, of South Carolina, declared that this negro was compelled to labor under conditions that were "more than slavery" and was subjected to treatment "worthy only of Siberian prisons." "I doubt if there ever was such a contract framed or devised or conceived in any civilized or Christian community," he said; "no court would attempt to enforce it. It is against the public good and utterly null and void. No freeman in this commonwealth nor any other free country can be permitted, even if he desired to do so, to barter away his liberty and make himself a mere chattel. And that is what this contract attempts to do." Says the Philadelphia *Press*:

"It is thirty-five years since the black man was given his freedom. It is thirty years since he was given the ballot. And yet to-day he stands deprived of his political rights in the South; the methods by which this has been done are boldly flaunted on the floor of the United States Senate, and it is possible for him to be reduced to a state of peonage worse than that from which he was released as the result of a bloody war. It is time that the nation understood the situation and ended the indifferent policy in this matter into which it has been drifting for thirty years."

## THE PITTSBURG "RIPPER" BILL.

SELDOM has there come to light a more striking example the possibilities of political reprisal than that furnished by the present factional strife within the Republican Party of Pennsylvania over the question of the Pittsburg "ripper" bill. The "ripper" bill, so called because it proposes to rip into shreds the present city governments of Pittsburg, Allegheny, and Scranton, has already passed the State Senate, and there is a strong likelihood of its passing the House also. It abolishes the office of mayor in each of these three cities, and creates in its place the office of "city recorder," such recorder to be appointed by the governor for the term of two years and to be authorized to appoint the directors of the Departments of Public Works, of Safety, and of Charities; also the assessors and collectors of taxes and the Sinking Fund Commissioners.

The "ripper" bill is being vigorously pushed by Senator Quay and his followers, and the opinion is freely expressed in Pennsylvania papers that the whole measure is simply an act of political revenge against Senators Flinn and Magee, of Pittsburg.

"To such a condition of affairs has factional politics brought our proud commonwealth," declares the Philadelphia *Press* (Rep.), "that in order to punish Senators Flinn and Magee for their opposition to the reelection of Mr. Quay to the United States Senate, nearly a million of our citizens are to be disfranchized and their local government taken away from them." The Pittsburg *Times* (Senator Magee's organ) characterizes the measure as a "political outrage" exceeding in infamy the acts of the "Democratic Goebelites" in Kentucky, for "every person in public employment, from the mayor of the largest city to the constable of the smallest township, can be made the henchman of the cabal that has the power to pass bills at Harrisburg," and "all of the great public works that have been the pride of the various municipalities, all of the millions of public property, all of the machinery and appliances for the carrying out of municipal functions become the prey of the political marauder and subject to his tender mercies."

The Pittsburg *Dispatch* (Ind. Rep.), on the other hand, while not favoring the bill in its entirety, thinks that it is a step in the right direction and that it will benefit the city by "ousting the Pittsburg machine." The Pittsburg *Leader* (Ind.) takes a similar view. "No argument offered to the Senate," it says, "had greater effect in securing support for the 'ripper' than Senator Flinn's frank admission of bossism. . . . This one bald, bold, brazen fact was sufficient in the estimation of a majority of the members of the Senate to rip such a government out of exist-

ence." The Pittsburg *Post* (Dem.) favors the bill on the ground that "by ripping up the machine, root and branch, the people will have the opportunity to come by their own again." The Scranton *Truth* (Ind.) opposes the bill, but the Scranton *Tribune* (Rep.) commends its principal features, claiming that they would be especially advantageous to Scranton, "where inefficiency combined with dishonesty in councils has developed an unusual need for a strongly centralized executive power." Senator Quay's paper, the Philadelphia *Inquirer*, bases its advocacy of the measure upon the alleged corruption of Pittsburg's city government. "Flinn is a boss of the most pronounced type," it says; "he practically owns Pittsburg, politically speaking. Is it any wonder that the people want to unload this man, who has grown rich because of his control of their city, and welcome a new charter that will depose him from power?"

## IS AN EXTRA SESSION OF CONGRESS NECESSARY?

THE report sent out from Washington by the Associated Press that the President will convene Congress in extra session after March 4, is confirmed by the Philadelphia *Press* (whose editor is a member of the President's Cabinet), in the statement that "an extra session of Congress is now certain." As to the reason for the extra session *The Press* says:

"Cuba has a right to a prompt decision on its constitution. Its independence is pledged. The pledge will be kept. The national honor is involved in an honorable compliance with a pledge unnecessary but also voluntary. This pledge, however, requires much more than the mere acceptance of any government organized in Cuba. Such a government must be 'stable.' It must represent the people of Cuba for whom the island is held in pledge. The relations established with the United States must be such as to promise in the future a 'stable' government in Cuba. These issues must be decided by Congress. . . . They demand a decision which shall not only bring stable peace and order and prevent future conflict and collision, but shall clear the way for the future. They can only be settled after a full and fair inquiry on both sides, a decision by Congress as to principle,

CUBA.—"One calls for the other."
—*The Philadelphia North American.*

and a free conference between the United States and a nascent nation, to whose independence and free action the United States is honorably pledged."

The Chicago *Tribune* (Rep.), too, thinks that no one will find fault with the President if he shall ask Congress for definite instructions as to the disposition to be made of the Cuban question, and the New Orleans *Times-Democrat* (Dem.) believes that "it was never intended that the President should govern the country alone and should personally settle such grave questions as our treatment of Cuba and the Philippines. Congress should be heard on the subject and should act, expressing what it believes to be the popular sentiment."

The New York *Times* (Ind.), however, asks what Congress

HOW TO GIVE EACH OF THE THREE STARS OF THE INAUGURATION A FRONT PLACE IN THE PARADE.
—*The New York Journal.*

has to do with the constitution of Cuba, and declares that "the President can not submit the constitution of a foreign country to the Congress of this country." Then, too, it goes on to say, a discussion of the Cuban relations in Congress "would reveal only ignorance and yield nothing but ranting and partizan declamation," and "the President and his advisers are in a position to know whether that sort of thing would help them in Cuba." In fact, says *The Times*, "why not say frankly that if an extra session is summoned it will be for the purpose of passing Mr. Hanna's ship subsidy bill? There is only a very remote probability that any other public business will demand the presence in Washington of both houses of Congress after March 4."

Still stronger is the opposition of *The American Agriculturist* (New York), which says:

"Word comes from Washington city, 'An extra session of Congress is inevitable.' Why? Really because the sugar-refiners' trust and the cigar trust want things so fixed that Cuba shall be held in such subjection to the United States as to admit Cuban raw sugars and leaf tobacco into this country free of duty or at very much reduced rates.

"No matter if the solemn pledge of independence to Cuba is ruthlessly violated. No matter if destruction comes upon the promising beet-sugar industry of our Northern and Western States or the cane crop of the South. No matter if our vast domestic fruit and vegetable interests are blighted. No matter if domestic tobacco culture becomes unprofitable. No matter if the enormous business of cigar-making is transferred to Havana and Manila. No matter if the promising development of the rice industry is throttled. No matter if cotton drops back from ten cents to five cents per pound.

"Oh, no! why should these great domestic interests be considered at all? Of course the proper thing for Congress to do is to provide an unlimited market for tropical syndicates, and for their products grown by coolie labor. The scheme has worked beautifully in Hawaii. Let us repeat it in Cuba and the Philippines!

"So for an extra session to hold Cuba in apron-strings, to enact 'reciprocity' with Cuba and 'the countries at the south of us.' Never mind if thereby the farmers, laborers, and manufacturers of the United States, who furnished the blood and treasure to set

Cuba free, are financially prostrated. What was the war for, except to give the trusts a chance to exploit the tropics—and 'the public be damned!' What are the farmers for, or the public, except to pay taxes, support the army and navy, and enable the trusts not only to wax fat in the tropics, but absolutely to control things at home?

"Such is, apparently, the reasoning of the powers that seek to force an extra session upon Congress. Will the nefarious scheme succeed? Will Congress be deceived?"

---

## THE QUALIFICATIONS OF THE NEGRO.

THE article printed in our pages three weeks ago, entitled "A Negro's Arraignment of His Race," and dealing with William Hannibal Thomas's recent book on "The American Negro," has attracted considerable attention in the Afro-American papers and draws from them some interesting, tho naturally bitter, comment in vindication of their race. "Seldom, if ever," exclaims *The Afro-American Ledger* (Baltimore), "have we read such vile and deliberate slander of the race by one of the race who uses his own intellectual uplift to curse his brethren. The capabilities and possibilities of any race are to be judged by the best and not the worst specimens of that race. Over against the calumnies of Mr. Thomas we place the living record of self-sacrificing achievement of men of the race who were content to reproduce in their lives the virtues, excellencies, and attainments which Mr. Thomas proclaims as incomprehensible to negro brain and affection." "With respect to the mental powers of the negro, the faculty of intuitive comprehension, originality, perspicuity, and forcefulness," adds the same paper, "the simple recital of the names of such men as Alexander Crumwell, Henry Highland Garnett, Booker T. Washington, Frederick Douglass, John M. Langston, Kelly Miller, Scarborough, Du Bois, Grimke, Bishops Holly, Payne, Jones, Hood, and scores of others, are sufficient to demonstrate the absolute absurdity of the position of Mr. Thomas."

"All that Mr. Thomas says about the negro," observes the Mobile (Ala.) *Southern Watchman*, "is true of some of them, as it is of all other races. . . . That there are ignorant, superstitious, vicious, low-down, lazy, and dirty negroes in this country, no one will deny; and yet the general progress of the colored race in this country is unparalleled in the history of the world. Mr. Thomas has not yet pointed out one single crime or fault of the negro that is not common to all other races of mankind." Mr. Thomas's book is the subject of the following eloquent indictment in *The Colored American* (Washington, D. C.):

"It will encourage the racial enemies and the Southern oppressors of our race, and it will discourage many of our own race who have come to believe in the possible merits of the race in civilization and its final vindication by admission to permanent place among intelligent peoples. . . . It will help to light the torch about many innocent negroes in peril of the hunger of a mob for blood. It will become a stock quotation of lawyers' indictment and defamation of negroes at the bar, and it will keep many white men from giving their faith to black men asking of the world only a chance to work and make a living for themselves and their families and to lift themselves up into better things. I consider it such rank perjury to the race, as in my experience I have never known before. To cap the brutality of his denial of his own race's mental and moral worth, he adds the ineffable insult that the negro has not even been given by the Creator the ability to be sincerely religious. This Judas of an honest, struggling race has thus called down upon his head the righteous indignation of every self-respecting and decent negro throughout the world, and, like his prototype who betrayed our Lord for thirty pieces of silver, he should lose no time in going out and hanging himself. Like Cain, who murdered his brother Abel, there has been stamped upon the brow of William Hannibal Thomas the word TRAITOR! and unborn generations of the race out of whose loins he came will remember him as Judas and Cain are remembered by the civilized nations of the earth. A negro who thus contributes to the misfortunes of his race which is struggling as no other race has struggled to secure a place among the races of the earth, and to deserve the good-will and friendship of mankind, is fathoms deep beneath the contempt of the most depraved and polluted wretch that walks the earth. Earth can never forget him, and the negro race will always remember him as the educated Judas who betrayed it into the hands of its enemies for notoriety and cash. *Et tu Brute?*"

"The book which Mr. Thomas has written," adds the Savannah *Gazette*, in similar strain, "is LITERALLY TRUE in regard to himself as a negro, but not true of the negro as a race." In view of such bitter personal attacks on Mr. Thomas, the following facts about his life, from the Springfield *Republican*, are of interest:

"On his mother's side he comes of German and English stock. His maternal grandfather, the son of a white indentured colored man, was born in Pennsylvania. This branch of the family moved to Ohio in 1812. On the paternal side his grandparents, Virginians by birth, were of mixed blood. Mr. Thomas was born in a log cabin in Ohio in 1843, and had but scanty schooling till the age of sixteen, when, with money which he had earned, he entered the preparatory department of Otterbein University. His studies were interrupted by the war, his services as a soldier, rejected at first, being accepted after the authorities had become less squeamish. He saw a deal of hard fighting, and rose to the rank of sergeant before the loss of an arm terminated his military career. After his discharge he studied theology, and then engaged for a time in religious newspaper work, going South in 1871 to organize freedmen's schools. In 1873 he was licensed to practise law in South Carolina, having educated himself in law, without school or private instruction. He served in the South Carolina legislature, and was commissioned as colonel in the state militia."

*The Colored American* adds supplementary information to the effect that in 1881 he published and edited a magazine called *The Negro* (which was a financial failure) in Boston, where he has since resided.

Since the publication of Mr. Thomas's book, several instances of negro advancement have been reported in the newspapers which are pointed to to substantiate claims made in favor of the negro. The colored men of Jackson, Miss., are raising subscriptions among members of their own race for the purpose of building and operating a cotton-mill in that city. In Fayetteville, S. C., a most successful silk-factory of 10,000 spindles, employing 400 operatives, is run entirely by negro labor, managed by a mulatto. Robert R. Church, one of the wealthiest negroes of Memphis, recently contributed $1,000 for the entertainment of the Confederate veterans at their annual reunion in that city in May next, and his action is warmly commended by the Baltimore *Sun* and New Orleans *Times-Democrat* as a significant illustration of the growing broadmindedness of the colored race. On the occasion of Booker T. Washington's visit to Richmond, Va., a few days ago, when he addressed a public meeting at the Academy of Music under the auspices of the Negro Business Men's League, the city council and state legislature voted to attend the meeting in a body.

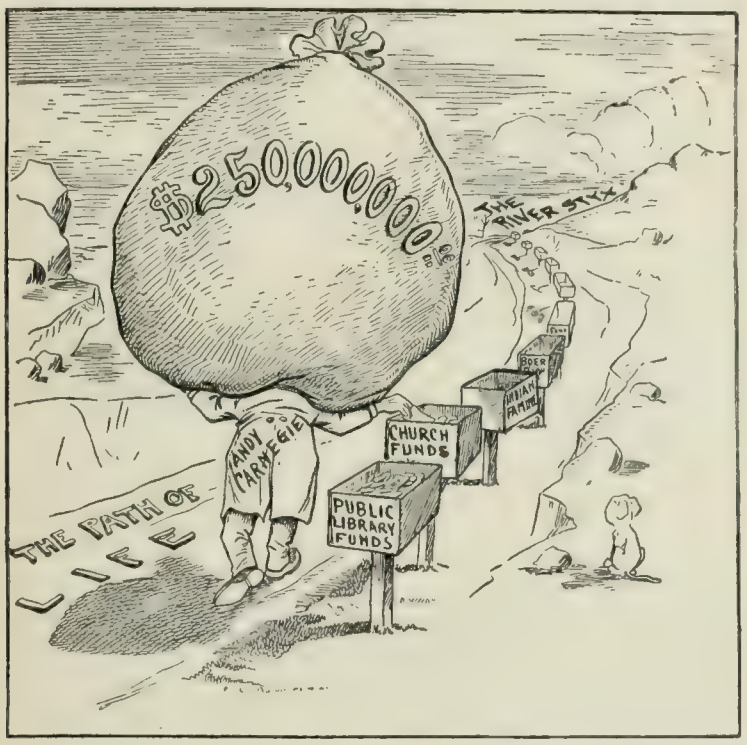
The valedictory speech of Representative George H. White, of North Carolina, now the only colored Congressman, and who goes out of office this session, has directed wide attention to the progress of the colored race. The Boston *Transcript*, in paying tribute to "the eloquence and pathos of this valedictory effort," declares that Mr. White's speech "shows that he is possessed of intellectual power, clear reasoning faculty, great earnestness, and a sense of justice that it would benefit many a white legislator to possess." The colored Congressman said in part:

"I would like to advance the statement that the musty records of 1868, filed away in the archives of Southern capitols, as to what the negro was thirty-two years ago, is not a proper standard by which the negro living on the threshold of the twentieth century should be measured. Since that time we have reduced

the illiteracy of the race at least forty-five per cent. We have written and published nearly 500 books. We have nearly 300 newspapers, three of which are dailies. We have now in practise over 2,000 lawyers, and a corresponding number of doctors. We have accumulated over $12,000,000 worth of school property and about $40,000,000 worth of church property. We have about 140,000 farms and homes, valued at in the neighborhood of $750,000,000, and personal property valued at about $170,000,000. We have raised about $11,000,000 for educational purposes, and the property per capita for every colored man, woman, and child in the United States is estimated at $75."

## A GOOD WORD FOR THE MILLIONAIRES.

EVERY unusually big business transaction, such as the recent combination in iron and steel, or the railroad consolidations, or the recent declaration of a $20,000,000 dividend on the stock of the Standard Oil Company, calls to mind the tremendous fortunes owned by some of the American captains of industry, and, as the New York *Financier* says, starts "the usual tirades against trusts and monopolies." Mr. Carnegie's remark that his income will now be about $15,000,000 a year (more than $28 a minute) has called up again the ever-recurrent question as to whether his services to the world have been worth the price. On this point *The Financier* makes this interesting comment:



CAN HE GET RID OF THE LOAD BEFORE HE REACHES THE RIVER?
—*The Minneapolis Tribune.*

"The brains that conceive and carry on great industrial deals have made the United States the foremost nation in the world today, so far as manufacturing is concerned. Time was when little charcoal iron furnaces manufactured all the iron in the country, and millions of dollars were exported to England to pay for rails at $180 a ton. Can it be said that the tremendous expansion of the iron industry which has resulted in a fall in the selling price of rails to $26 a ton, and which makes it possible for Mr. Carnegie to produce three pounds of product for two cents, has injured the nation? If the little furnaces have been wiped out, it is also true that tens of thousands of miles of railroads have been built, and sections of country furnishing homes to millions of people opened for settlement. So in almost every line of industry, the tendency has been to enhance the wealth of the nation. The men who have helped to create this condition may or may not have retained too much profit for themselves. There are two ways of looking at that. If the wealth of the country stood still while these men alone grew rich there might be cause for alarm; but they can not add to their own wealth without making the mass of citizens in general wealthier, and it is useless to deny that but for these same men, or others possessing equal business genius, the country would not have made the marvelous gains that really have occurred.

"As already said, we are not defending the trusts or their organizers. Gross injustice may have resulted in the fierce struggle for supremacy; but in the abstract the mass of people have participated in the benefits, and have suffered little, if any, from the evils. The day may come when it will be necessary to restrain the growth of power, but legislation which sets a limit to the rewards of genius, in business or other channels, so long as ordinary laws are not violated, is a dangerous exercise of privilege. . . . . .

"If the law had said to John Rockefeller: 'You can make half a million dollars and no more,' would oil have been as cheap today, or would civilization have benefited by the numberless products which oil now yields? And if the law had limited Mr. Carnegie to a small plant and small fortune, is it conceivable that the tremendous export possibilities now opening would have been remotely possible?

"We may argue over the so-called folly of accumulating useless riches, and point to vast resources of individuals as the embodiment of a selfish purpose, rather than evidence of a direct desire to add to the public good; but when all is said and done the fact remains that brains have been behind the whole movement, and that the country has been fortunate to possess men of this character. Let us be honest, at least, in looking at both sides of the question before passing judgment."

## POLICE SITUATION IN NEW YORK.

IN the game of political chess between Governor Odell, of New York State, and Mayor Van Wyck, of New York City, a rather unusual play has just been made, by which the governor and legislature remove a chief of police from the chessboard, and the mayor, by a clever move, puts him back again. According to the Republican papers, the next play will be made by the people, who will put the mayor out of the game, and all his chessmen with him, but whether that prediction will be verified or not remains to be seen. By the new police law, Chief Devery, of New York, is legislated out of office, and his successor, who is to be known as police commissioner, may be removed by either the mayor or the governor. But while the governor may remove the police commissioner, it is always the mayor who appoints the new one. If the mayor had appointed Mr. Devery commissioner under the new law, the governor might have removed him, and then, under the statute, he would have been ineligible for reappointment. The mayor, however, has appointed Mr. Michael C. Murphy commissioner, and Mr. Murphy has appointed Mr. Devery as his first deputy commissioner, who "shall, during the absence or disability of the commissioner, possess all the powers and perform all the duties of the commissioner except the power of making appointments and transfers." It may be added that Mr. Murphy is a semi-invalid, and the governor has *not* the power to remove the first deputy. The New York *Tribune* (Rep.) says: "Devery as deputy commissioner will, of course, dominate the situation. By retaining him Tammany declares its complete devotion to the policy hitherto followed in spite of its reform pretenses."

The New York *Journal* (Dem.) takes a similar view. It declares:

"By this action the mayor insolently challenges the framers of the law to do their worst. He and his commissioner defiantly range themselves on the side of vice and crime, and ask Tweed's old question: 'What are you going to do about it?'

"Mr. Murphy understands, of course, that by putting Devery into practical control of the police force he sacrifices every shred of character he ever had. He makes his service on the Committee of Five a piece of impudent hypocrisy. He becomes the associate and shielder of 'John Doe,' the 'Gamblers' Combine,' and 'the Allen Street Cadets.' He becomes an accomplice of the creatures that perpetrate Paterson murders in the dens of the Red Light District.

"As for Mr. Van Wyck, of course, he has no character to lose. . . . . .

"Of course, no practical good can be done. If the governor removes Murphy, Devery will remain in control. Among the 233,997 men who voted for Van Wyck in 1897 the mayor can probably find at least 50,000 scoundrels ready to subject themselves to any degradation for his and their advantage. He needs only 312 to fill out the rest of his term at the rate of one new police commissioner a day. He seems to have the governor on the hip, but still there is nothing for Mr. Odell to do but to fight or confess that his law is a ridiculous failure.

"Evidently the worst elements of Tammany are in control of the local situation. The reform element represented by Mr. Nixon has been betrayed by a member of its own investigating committee. If the organization is to be saved, the men in it who believe in decency must put on their war paint."

Mr. Murphy himself, however, starts out promisingly. Among his promises are the following, made in an interview that appeared in the New York *Herald:*

"I will suppress every poolroom in the city that I can find, and I will look for them.

"I will put a stop to all illegal gambling that I can find in the city, and I shall have my eyes open for it.

"I will take measures to stop the recurrence of any unseemly display of vice that may be brought to my attention, and I invite and expect citizens to report such matters to me.

"No excuse will be accepted from the police captain of any precinct in which these violations are shown to exist in a manner that should have attracted his attention.

"Discipline, to my mind, should be as complete and exacting in the Police Department as in the army, and that is the sort of discipline which I intend to enforce.

"On the other hand, merit shall be recognized under any and all circumstances.

"Measures will be taken to ascertain whether blackmailing or corruption of any kind exists in the department, and wherever it is found, if anywhere, the fullest disciplinary measures will be taken to suppress it and to punish those guilty. And, besides imposing such penalties as are within my power, in the case of any such discovery I shall at once communicate the facts as I ascertain them to the public prosecuting officers."

*The Herald* is about the only paper in the city that feels much confidence in the new commissioner. It says, in its news columns:

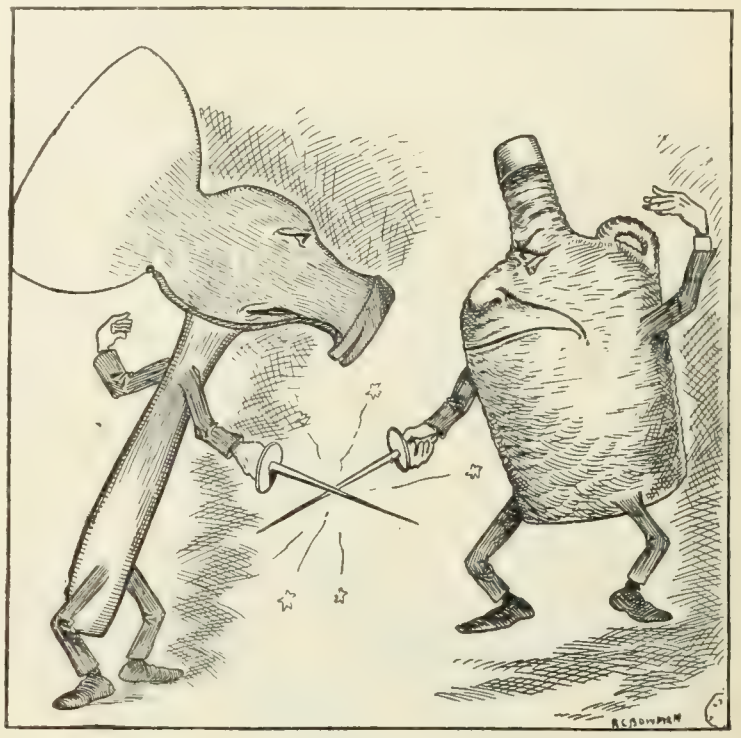
"Colonel Murphy, whose powers as the new head of the Police Department are almost autocratic, is a member of Lewis Nixon's Tammany reform Committee of Five. That body can no longer complain that it has not the cooperation and sympathy of the head of the force, since that head, with undivided and undisputed powers, is a member of the committee itself. Colonel Murphy is now in a position to act promptly and emphatically against the gambling-houses that he and his fellows of the Committee of Five have already reported as being legitimate objects of police interference. Perhaps no other feature of yesterday's whirligig is more interesting than this, or more potential in its possibilities.

"In his salutatory address, after being sworn in, the new commissioner promised to enforce the law unsparingly and unflinchingly, regardless of who may try to interfere. As the retiring head of the board of health—almost the one city department which under Tammany rule has not been the target for shafts of criticism or scandal—Colonel Murphy's promises are not held lightly. Gamblers are already showing a disposition to seek cover."

And in its editorial column, the same paper, says: "There is no gainsaying the fact that Colonel Murphy, as the head of the health board, has been a most efficient officer, and has made his city as physically healthy as he now says he will make it morally strong. If he keeps his promises in regard to the conduct of his new office, he can be assured of the hearty good-will and efficient aid of every respectable citizen of New York."

## LIQUOR JOURNALS AND MRS. NATION.

THE organs of the liquor business, altho they aver that Mrs. Nation is hurting the cause of temperance, do not for that reason give her any moral support in her saloon-smashing crusade, but protest, on the contrary, against her violation of the laws for the protection of property. *The New Voice* makes a collection of the opinions expressed in the columns of its hostile contemporaries. The Washington *Liquor Dealer*, for example, exclaims: "This lawlessness against the saloons must be stopped, and the sooner the liquor dealers combine and take a decided



—*The Minneapolis Tribune.*

stand for their rights the better for the trade. Instead of getting better, the unwarranted persecution of liquor dealers seems to be getting worse, and soon those engaged in the perfectly legal and legitimate business of selling liquor will have no rights at all that must be respected by the public." "All order is at an end when the law is enforced lawlessly," reasons *Mida's Criterion*, a Chicago liquor paper, while the Washington *Sentinel* argues that "if the Prohibition law of Kansas permits these things, then all the more reason for its repeal."

Most of the liquor papers, however, turn to a more direct consideration of Mrs. Nation and her methods. *Bonfort's Wine and Spirit Circular* (New York) thinks that "the poor creature should be confined in an asylum by her friends," and the Washington *Liquor Dealer*, quoted above, asks pityingly: "What man would be proud of a wife or sister that would engage in such violence? Better fifty years of an illicit liquor store than such degradation of the true function of womanhood. It was wrong to carry on the illicit trade, but it was a greater wrong to society to resort to lynch law and anarchy to destroy it. Two wrongs can not make a right." *The Wholesalers and Retailers' Review* (San Francisco) thinks that "it speaks for the chivalric consideration of the Kansas saloon men that they have not followed Ambrose Bierce's advice to 'hit her a swat with the bungstarter,' and suggests that "it might be a compromise to hire a female prize-fighter to welcome Carrie in such a way that the outlaw in skirts would always thereafter have recollections of having met 'the real thing.'" *Truth* (Detroit) says: "Mrs. Nation would be impossible in any other civilized country in the world. In other countries they may riot because laws are enforced; but this is the only country where they riot because the laws are not enforced. Mrs. Nations of both sexes will always be 'in our midst' as long as there are unbalanced minds, and a complacent unorganized majority allows a vociferous, organized minority to load down statute books with laws and encumber constitutions

with amendments that represent everything except the will, the desire, and the determination of society as a whole."

*The Champion of Fair Play* (Chicago) would not be sorry to see the Prohibitionists hanged. It says:

"Crazy Mrs. Nation is but the dupe of the fanatical Prohibitionists who defy all law when opposed to their own pet scheme of making people sober by legislation. On every hand they see the utter failure of their hobby, but to acknowledge it would mean the loss of their graft. For fear of this they craftily encourage crazy people to commit outrageous crimes in order to keep up the excitement. Years ago four men were hanged in Chicago, not for having committed murder, but, it was claimed, for having urged others to do so. Some people applauded the act, others called it judicial murder. If Spies and Parsons were lawfully hanged, then such men as Woolley and other leaders of the Prohibition Party should be arrested and tried for the crime that Mrs. Nation has committed. If in her frenzy she should commit murder, then the parties who have instigated her actions should hang. When this is done the country will not be long disgraced by the antics of dupes of cunning and crafty Prohibition grafters."

---

**Advantages of Our New Colonial Trade.**—Last year the United States bought from foreign countries upward of $400,000,000 worth of agricultural products, including sugar, coffee, vegetable fibers, fruits, nuts, tobacco, tea, wines, and vegetable oils. In the past it has often been found cheaper to buy these products from British, French, and German merchants, than from the islands at our very doors, on account of the wastefulness of Spanish methods. When our new tropical possessions are properly developed, declares the Chicago *Inter Ocean*, it will be possible to procure almost all of the articles named from Cuba, Porto Rico, Hawaii, or the Philippines. The same paper continues:

"All our tropic islands contain districts adapted to coffee-growing. We paid out $53,000,000 for coffee last year. The fruits and nuts for which we paid $19,000,000 last year are chiefly tropical. The vegetable fibers and oils for which we paid $57,000,000 and $6,700,000 last year are also tropical products. Most of them grow in our new possessions now. Of Manila hemp, for example, the most valuable cordage fiber known, the United States holds the monopoly, for it can not be grown in perfection outside our possessions. Our new islands also enlarge our possible areas of silk- and tea-growing. And in Porto Rico, Cuba, and the Philippines we now have the lands which produce the tobaccos deemed best by all the world.

"Thus, our new possessions put the American people in position to feed and clothe themselves with less reliance upon foreigners than ever before. This nation's great strength has been in the fact that it has been able to produce so large a part of its necessaries of life. That strength has been increased by our tropical acquisitions, for they give us ample supplies within our own territories of many things which we have hitherto been compelled to buy of foreigners."

## LETTERS AND ART.

### THE JAPANESE THEATER.

THE Japanese drama is widely different in its motive and methods from our own; and yet its history offers some striking points of similarity to the drama of Occidental nations. In *Westermann's Monatshefte* (January) Adolf Fischer, who has made several visits to Japan, thus writes of Japanese plays and players (we quote from a digest of his article in the New York *Staats-Zeitung*, January 27):

"The theater in Japan, as elsewhere, is an outgrowth of religious rites, from which there developed, in the fifteenth century, a sort of aristocratic and fashionable performance called the "*no*-play," consisting of dialog, music, and dancing. The *no*-plays are still performed and may be taken as representing the classical drama of Japan. Their authors, for the most part, were members of the highest nobility, and they are now chiefly frequented by the aristocracy. They are performed in a stereotyped manner, which is the reverse of realistic. There is a chorus similar in function to the Greek chorus. The object of its songs is to put the audience in the proper frame of mind to follow with interest the story of the miracles of Buddha and the exploits of famous heroes. The stage of the *no*-play is the simplest and plainest on earth, having neither curtain nor scenery, no traps or machinery of any sort. Six or more of these plays are performed in a single day. Each lasts about an hour and is followed by a *kiyogen*, or primitive farce, by way of relieving the tension of the audience.

KAWA KAMI, A CELEBRATED JAPANESE ACTOR.

"Very different from the *no*-play is the *kabuki*, which may be translated song-and-dance play. This is the popular drama, the mirror of unsophisticated Japanese manners and customs. Two dramatists of the sixteenth and seventeenth centuries—the first a woman—are venerated as its originators. Chikamatsu-Monzaimon (1635–1724), the author of more than a hundred plays, is its Shakespeare; a contemporary of his was the first to have plays printed; and the beautiful Shinto priestess, Okuni, is famed as the originator of radical reforms and improvements. Women played a great part in the history of the Japanese stage, on which they formerly were the chief performers. The result of this state of things was a great laxity of morals, in consequence of which, in the first half of the seventeenth century, women were forbidden to appear on the boards. Then young men assumed the female rôles until the edict of 1652 abolished the popular drama altogether. The result of this edict was the development of the puppet theater, *mingwo schibai*, which is to this day a very popular institution.

SADA YACCO, A CELEBRATED JAPANESE ACTRESS.

The Japanese puppets are life-size, and each is moved by one, two, or even three men, who stand behind the puppets, obscured, but not concealed, by black garments and hoods. The garments of the puppets are in many cases very rich and costly. The dialog is read by a reciter standing in the wings. The great puppet theater in Osaka boasts of the best reciter and the best puppet manipulator in Japan, and both are persons of distinction. The *kabuki*, however, was not suppressed permanently. It was revived long ago and is now as popular as ever.

"To the Japanese, a visit to the theater is not an evening's amusement, but an all-day festival. Children, even babes at the breast, are taken along; meals are brought in from the tea-house next door, and the little brazier beside each seat is always ready for the relighting of pipes. The spectators, thus made comfortable, follow the performance with lively, often passionate, interest. The Japanese have an unequaled faculty of voluntarily giving themselves up to illusion, a necessary prerequisite to all artistic enjoyment. Offenses against realism do not disturb them. Sometimes a table has to represent a mountain, and a chair a ship. Star actors are followed by men with candles, so that the play of their features may be more clearly seen. A horse is personated by two men, and slain warriors crawl quietly off the stage, but nobody seems to think such things objectionable or even funny."

SCENE FROM THE FIRST ACT OF "THE GEISHA AND THE CHEVALIER."

The statement that the popular drama was revived long ago must not be taken to mean that women are again allowed to appear on the Japanese stage. On this point the *Revue Illustrée* (November 15, 1900) quotes from an interview with Sada Yacco, the Japanese actress who was so successful in New York some time ago and who has since appeared in Paris. We summarize this article, based on the interview first printed in the Paris *Gaulois*:

In Japan Sada Yacco had been, before her marriage, a *geisha*, or singing and dancing girl—not, she was careful to add, a tea-house *geisha*. Her husband, who conducted a theater and a theatrical school on modern lines in Tokyo, left Japan with twelve of his pupils for a tour of the world, and she accompanied him. Just before the first performance of the troupe in San Francisco, the player of the principal female rôle fell ill, and she took his place.

"I had never been a member of the company," she said, "for it is forbidden, under the severest penalties, for a woman to ap-

pear on the stage with male actors. But what was impossible in my country might be attempted in San Francisco."

Another remark of the Japanese actress emphasizes this point, and is both interesting and surprising in itself. In London she played before Queen Victoria, who summoned her to the royal presence and asked what she could do for her. "I begged Her Majesty," says the actress, "to obtain from the Mikado permission for me to play in Tokyo with my husband's troupe of men. The Queen promised to intercede for me, and a few days later she sent me word that the Mikado had consented to what he called my unreasonable request."—*Translations made for* THE LITERARY DIGEST.

## THE DECAY OF DECADENCE.

THE singular movement in modern letters called "symbolistic" by its champions and "decadent" by its detractors, and which by the young writers of ten years ago was hailed as the dawn of a new literature, appears to be going the way of all the earth to dusty death. The school of Verlaine, Oscar Wilde, Stephen Crane, Arthur Symonds, and, earlier in the century, Gérard de Nerval, has "petered out" so completely in London and Paris that almost no trace of its influence is to be found in current literature. The New York *Evening Post* (February 16) gives an obituary of the movement. It says:

"The program of the young poets who gathered in obscure Parisian cafés, and rubbed shoulders in Lemerre's bookshop, was a fetching one. They found, or said they found, in the old poetry a certain literalness and conventionality that hindered anything like self-expression. They dreamed of a kind of mixture of all the arts in poetry—such a synthesis as Wagner had already achieved for opera. This union of the arts was to produce an effect upon the senses poignant beyond the power of any single art. Where the older poetry produced a comparatively simple mental image, accompanied by the music of the verse, the new poetry made a score of attacks upon the sensibilities. The mere vowel sounds were supposed to suggest colors.

A black, e white, i red, u green, o blue,

wrote Rimbaud—as a joke, to be sure, but the joke was taken seriously. Furthermore, the rhythm of the verse was supposed to have a kind of independent musical value and to evoke its independent series of sensations. The single words also had their individual tone values. Finally, the central idea might not be expressed directly, but suggested by a symbol, which produced a vague and penetrating sensation like that of music seeking words. Said the leader of the school, Stéphane Mallarmé: 'To name an object means to suppress three quarters of the pleasure of a poem—*i.e.*, of the happiness which consists in gradually divining it.' . . . . . .

"This peculiar and exaggerated nervosity, which is the very stock in trade of literary decadence, never made itself strongly felt among English and American writers. But a poem from the late Stephen Crane's 'Black Riders' so well illustrates the qualities and weaknesses of the school that we quote it entire. It bears the enigmatical title 'Content':

A youth in apparel that glittered
Went to walk in a grim forest.
There he met an assassin
Attired all in garb of old days;
He, scowling through the thickets,
And dagger poised quivering,
Rushed upon the youth.
"Sir," said this latter,
"I am enchanted, believe me,
To die thus
In this medieval fashion,
According to best legends;
Ah, what joy!"
Then took he the wound smiling,
And died content.

"The lines have that provoking quality for which the symbolists always sought. Their strange metrical form possibly drives home their somewhat obscure satire on the bookish temperament. But there is in them the strong element of solemn shamming —*fumisterie*—which was an essential weakness of the movement they represent.

"Many of these young writers were simply gulling the public that took them so seriously. Many of them owned up when the joke no longer passed. Many of them used the pose to gain notoriety and money, and when they had gained these dropped the pose. A few underwent a more sincere conversion, and returned cheerfully to the sane and even the commonplace. M. Henri de Régnier wrote 'Le Trèfle Noir,' but we had him last year among us delivering rather dull academic lectures for a price. So by defection and by the death of its chiefs, the school has pretty well dispersed, and those who pursue the old mystifications have already a belated look. It was always a movement without a country, and it is perishing to-day largely from inbreeding. . . . . .

"Many of the finer minds have been in revolt against the age —the great romantics and certain of the analytical schools. Symbolism has never reached the dignity of revolt. It has managed to attain great sensuous beauty, but it has scorned to be simple, and it has been too emasculate to be passionate. No wonder it has passed."

## THE REAL IBSEN.

MORE than any other writer, past or present, Ibsen has been misunderstood, says Mr. William Archer. This, he believes, is largely due to the fact that Ibsen writes in the language of one of the "small nations," and that his greatest dramas, "Brand" and "Peer Gynt," are in verse, and are untranslatable. Mr. Archer, who first introduced Ibsen to the English-speaking world, and has himself translated "Peer Gynt," adds that even Ibsen's prose dramas are "incredibly difficult to render with justice. His language, Danish-Norwegian, is spoken altogether by only four and a half millions of people—scarcely more in numbers than half the population of the State of New York—and George Brandes, he remarks, is the only critic of European reputation who reads Ibsen in his own language. It is thus most difficult for the English-speaking world to see anything of the true Ibsen. Mr. Archer examines five popular errors in regard to him: "(1) That Ibsen is lacking in style, in literary form; (2) that he is an inefficient theatrical craftsman; (3) that he is a pessimist; (4) that he has no humor; (5) that he is 'provincial' or 'suburban.'" The first of these errors, says Mr. Archer, "arises not merely from deficiencies of translation, but in some degree from a narrow ideal of dramatic style in the mind of the critic. From the time of the Restoration even to our own day, wit, epigram, a highly artificial surface-polish, has been traditionally regarded as necessary to any dramatic prose that aspired to the dignity of literature. Etherege set the fashion, Congreve perfected it, Sheridan popularized it, and in recent years the 'epigrammatic' imbecilities of the cup-and-saucer school have caricatured it." Ibsen, we are assured, puts the right word in the right place just as unerringly as Congreve, only that, aiming at a different order of effect, he necessarily judges "rightness" by a different criterion. "His style is terse, tense, full of color and character. Where there is room for eloquence, it is eloquent; where there is room for beauty, it is beautiful. And as an inventor of biting phrases and haunting cadences he is without a rival in modern drama."

Mr. Archer is equally positive as to Ibsen's mastery of the technique of the stage. He writes: "If I were asked to name the most consummate instance of technical genius in modern drama, I think I should point to 'Rosmersholm.'"

Is Ibsen a pessimist? Mr. Archer thinks not, and gives his reasons for so thinking as follows:

"Pessimism is the doctrine which holds life to be fundamentally and irremediably evil, pleasure a fleeting dream, pain an enduring reality, and all efforts at the amelioration of human conditions a mere fostering of that illusion which nature has implanted in us to further her own inscrutably sinister ends. Leopardi, one of the greatest and most consistent of pessimists, has summed up the creed in the following sentence: 'Men are mis-

erable by necessity, and resolute in believing themselves to be miserable by accident.' But no one is more resolute than Ibsen in the latter belief. He does not say with Leopardi, 'Life is bad at the best'; he says, 'Life is bad because so many men happen to be knaves and fools; let us correct human knavery and folly, and life will be eminently worth living.' Perhaps this is an overstatement of his position. It would be difficult to bind him down to a positive assertion of the ultimate value of life. But at least he is sufficiently hopeful to have no doubt of its being worth while to correct such evils as are plainly corrigible. Dr. Brandes has long ago defined very exactly Ibsen's attitude toward life, in calling him an 'indignation-pessimist.' Indignant he is at the prevailing paltriness of the human character. He is always and essentially a satirist. But pessimism, in the true sense of the word, leaves no room for satire and indignation. If life is evil to the core, why tinker at the incidental evils on the surface? Every seeming improvement in human conditions merely creates an opening for new life—new sentience, new misery—to rush in. This is the logical position of philosophic pessimism; it is almost entirely foreign to Ibsen."

Nor has the charge that Ibsen is a gross and unseemly writer any basis of truth. "While Ibsen deals firmly, frankly, and boldly with the moral questions arising out of sex-relationships, no writer is more thoroughly exempt than he from any suspicion of complacently dallying with inflammatory topics, stimulating the sensual imagination, or in any way pandering to vulgar pruriency." As for Ibsen's alleged lack of humor, no critic, Mr. Archer says, can make this assertion after reading "An Enemy of the People." Much of the subtler features of Ibsen's humor, however, are obscured in the process of translation. We should ourselves hardly appreciate Falstaff in French. Ibsen has furthermore been called "provincial" and "parochial"; but, says Mr. Archer, this impression is due to the fact that we regard our own particular parish as the hub of the universe, and because Norway, a small and distant country, is unfamiliar to us. In conclusion, Mr. Archer says:

"A master-poet—that term sums up the real Ibsen. He is a great creator of men and women, a great explorer of the human heart, a great teller of stories, a great inventor and manipulator of those 'situations,' those conjunctures and crises, in which human nature throws off its conventional integuments and expresses itself at its highest potency. He is more of a seer than a thinker. He has flashes of intense insight into the foundations of things; but it is none of his business to build up an ordered, symmetrical, closely-mortised edifice of thought. Truth is to him many-sided; and he looks at it from this side to-day, from the opposite side to-morrow. The people who seek to construct a 'gospel,' a consistent body of doctrine, from his works, are spinning ropes of sand. He is 'everything by turns and nothing long.' He is neither an individualist nor a socialist, neither an aristocrat nor a democrat, neither an optimist nor a pessimist. He is simply a dramatist, looking with piercing eyes at the world of men and women, and translating into poetry this episode and that from the inexhaustible pageant."

### Balm for the Editor who Rejects a Manuscript.

—Some months ago we reprinted from the London *Academy* a letter supposed to be written by an editor of the Flowery Kingdom, returning with many oriental compliments a manuscript which he said was "too good to use," since the standard thus set for his paper would be too high. In this and similar stories it is always the author who appears to need commiseration. Now, however, the matter has once for all been put in its true light, in the following circular printed by *Life* and supplied to authors at special rates per thousand:

"The Author to the Editor.

"(A printed circular to be sent on the return of a manuscript.)

"The author regrets the editor's inability to appreciate a Truly Good Thing.

"The rejection of a manuscript, however, does not necessarily imply that the editor is lacking in merit, merely that he is lacking in judgment.

"As many thousand manuscripts are returned to him annually the author can not enter into correspondence with each editor personally concerning the deficiencies of his taste. Nor can the author give his reasons for considering the editor blind to the best interests of the magazine.

"Because, as an editor, he does not meet the present requirements of the author does not argue that he would not be successful elsewhere in some other position. He might make an excellent dry-goods clerk or an entirely satisfactory coal-stoker.

"(Signed) The Author (per Himself)."

## NEW LIGHT FROM BABYLONIAN RECORDS.

PROFESSOR DELITZSCH, who holds the chair of Assyriology in the Berlin University, and is perhaps the leading living authority on Babylonian literature, recently delivered a lecture in the German capital on the recent additions to knowledge made by cuneiform inscriptions, and from this discourse, as reported by the *Kreuz-Zeitung* of Berlin, we give the following outline:

Babylonia is the native land of the clay-tablet literature, of the pictures made in burned clay, of the angels of the Cherubim and the Seraphim. Some of the pictures found on these tablets correspond exactly to our Biblical conception of these beings. Demons, too, and devils are pictured in the most abhorrent shapes and forms. Then, too, contests between the angels of light and those of darkness are vividly pictured. Of inestimable value are the royal libraries which have been unearthed, the royal archives, and other remnants of important literature. On eight- and even ten-sided clay prisms the kings caused the history of their reigns to be impressed; but everything else was described, written by a fine stylus on moist and soft clay, which was then hardened by being burned. The private library of King Shalmaneser shows that the people of that period thought and felt much as we do now. One courtier assures the king that he daily prays for his prosperity and for his life and that of his royal mother. An old servant asks the king, on two tablets, to appoint his son a page, and assures his royal master that, if this wish is granted, he will do obeisance, prostrated on his face.

On the large tablets of the public libraries we have the whole wisdom of the Babylonians. In the epic of creation we have essentially the same ideas that are found in Genesis, and the Babylonian story of the deluge makes the impression of greater originality even than the Biblical report. The same fundamental ethical thoughts, the same wails of sorrow and repentance, the same searching for grace and redemption which we find in the Psalms of the Old Testament we find also in the hymns of the Babylonians. As is the case in the Old Testament, the priest asks the man who is suffering from disease concerning his sins, whether he has approached the wife of his neighbor or has failed to observe the law of love.

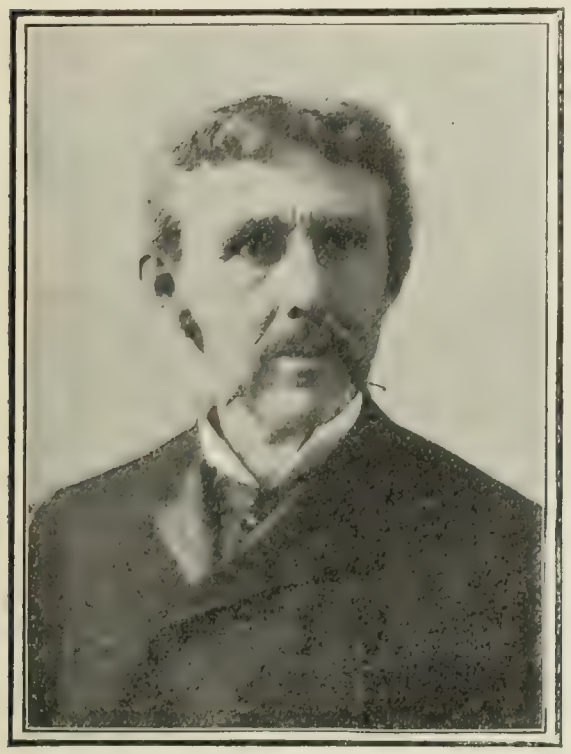
Then we find an abundance of business and marriage contracts, and of learned discourses, which give a clear idea of the culture of that age. We are told that the son-in-law of a man receives not only the daughter, but also a number of head of cattle. House rent at that time was quoted at prices ranging from 12 to 89 marks ($2.94 to $21.80). One of the most valuable finds of art was made in the palace of Nebuchadezzar, namely, of the image of a white lion with a yellow mane burned in clay, the image being formed of a large number of tablets.

Very remarkable is the fact that Babylonian civilization remained practically at a standstill for more than seventeen hundred years. Most remarkable, too, is the fact that the Babylonians, who, like all Semites, were originally monotheists, for more than three thousand years practised the worship of images and the most pronounced polytheism. This is to be attributed to the influence of the Summerians, to whom also we are indebted for the division of the hour into sixty minutes, and for the division of the zodiac into 360 degrees. We can survey the evidences of this culture up to the fifth millennium before Christ by the light of this wonderful cuneiform literature. "As if from the top of the tower of Babel," says Delitzsch in closing his discourse, "we can look upon the nations of the earth; but we see

especially in His heavenly glory that God before whom a thousand years are as one day, which passed as yesterday and as a watch in the night."—*Translation made for* THE LITERARY DIGEST.

## MAURICE THOMPSON.

THE late Edward Noyes Westcott died shortly before his story, "David Harum," was in print and had become the most popular novel of the day. The author of "Alice of Old Vincennes" has been permitted to see his story attain to an equal popularity before his death, which occurred on February 15. The New York *Times* (February 16) gives the following sketch of his life:



THE LATE MAURICE THOMPSON.

"Mr. Thompson was born in Fairfield, Franklin County, Ind., September 9, 1844. His father was the Rev. Matthew Griggs Thompson, a Baptist clergyman. The family moved to Kentucky in Maurice's early infancy, and to 'Cherokee Georgia' when he was eight years old. He was educated principally by a tutor, tho he had various short experiences at different schools. It was a passion with him to study out-of-doors while a boy, and in later years the material for his best works was sorted out and arranged in his mind by the light of a lonely camp-fire. He gained a good knowledge of the dead languages, and also of French, Spanish, and Italian, from his preceptor, and still found much time for hunting and fishing. Robin Hood was a favorite character with him, and the bow appealed to his fancy more than the gun. He became proficient as an archer, and it was largely his writings that twenty years ago brought about such revival of the sport as to cause targets to spring up like mushrooms on fashionable lawns the land over. An English naturalist heard of his prowess as a sportsman and engaged him to get a collection of American birds, including the great black woodpecker, now extinct or nearly so. He forwarded thirteen specimens of this bird before one was satisfactory to his employer. He was to get £10 for the whole undertaking, but wrote for the best gun to be had in England for that amount of money instead. He had obtained a knowledge of civil engineering by the time the war opened, and he went to the front. Sherman's army swept away his father's property, yet he accepted defeat without bitterness, having already concluded that the spirit of the nineteenth century was against human slavery. Then he went to Crawfordsville, Ind., to make his living, and there married Miss Alice Lee, daughter of a prominent railroad man of that place, who survives him with two daughters and a son. He subsequently became chief engineer of one of the Indiana roads, and was for a time a member of the state legislature, and afterward state geologist. His profession took him too much away from home, and he took up the study of law, becoming a successful attorney. He wrote much at this time. This is the first verse of the poem which, forwarded to W. D. Howells, introduced him to Boston and the literary world:

> I heard the woodpecker pecking,
> I heard the sapsucker sing.
> I turned and looked out of my window,
> And lo, it was spring.

"Soon after there followed a collection of newspaper sketches reprinted under the title 'Hoosier Mosaics,' and several papers on archery, including the 'Witchery of Archery,' which appeared in 1878 and started the craze. His novel of 'A Tallahassee Girl,' printed anonymously, served to make the half-forgotten capital of Florida a popular winter resort. When Mr. Thompson confessed the authorship, he received many hearty acknowledgments from the townspeople. 'By-Ways and Bird Notes,' published in 1885, met with great success, and other notable works are 'His Second Campaign,' 'Stories of the Cherokee Hills,' 'Songs of Fair Weather,' and 'Sylvan Secrets.'

"The gathering of material for Thompson's generally considered greatest achievement, 'Alice of Old Vincennes,' extended through four years, and there is historical warrant for every important incident of this story of Col. George Rogers Clark's heroic expedition of 1779. Actual records furnish the incidents of the hero's life being saved by a miniature and the Indian charm which turned the bullet aside from Alice. Present indications are that Thompson's later [?] work, 'The King of Honey Island,' which deals with the war of 1812, will have an even greater sale than 'Alice of Old Vincennes.' Mr. Thompson for many years held an editorial position on *The Independent* of this city, yet did his work mostly at his home, Sherwood Place, Crawfordsville, an old mansion which came down through his wife's family. The building is in sight of the home of Gen. Lew Wallace. Mr. Thompson was a member of the Ouiatenon, a literary society of Crawfordsville. He was a frequent attendant at the Center Presbyterian Church, but the most he asked of the future he embodied in these lines:

> So, when I fall like some old tree,
> And subtle change makes mold of me,
> There let earth show a fertile line
> Where perfect wild-flowers leap and shine."

The Springfield *Republican* (February 16) thus critically comments on his writings:

"Thompson was one of the men who ought to have lived a hundred years, for he was still growing, and there were possibilities of greater humaneness and larger outlook in his nature—for he was a singular estray out of the days of Greece when the satyrs and fauns and nymphs were known, and of the ages of Merrie England, plunged into this present bustling age, and not yet alive to its finer understanding of that nature to which he gave so close an observation and so warm an affection. Much as he enjoyed the mocking-bird, he could draw his bow and shoot it with a clear conscience, unaware that he had violated his own true heart. The toxophilist had to aim his arrows at something that lived, and he could call it sport. This hurts many who enjoy the poet's touch, the naturalist's study, and prize the man as well as his work. . . . . .

"His novels, his short stories, his essays, his verses, and his literary reviews have made him known and admired. As poet he is characterized by what might be called a literalized imagination—not of free sweep, but conditioned. The late Alfred B. Street had something of the same tone, but Thompson possessed a quality of wildness drawn in with his breath in the woods and over the swamps, which transfused his lines. In his poem, 'Lincoln's Grave,' he reached strong utterance. Another notable element in his writing was his classicism, for he was a scholar in this field, and he was also a careful scholar of English, and keen in his criticisms of bad construction."

## NOTES.

AN American writer remarks that if one may judge from the English literary journals, English authors are at present divided into two categories—those who wrote "An Englishwoman's Love-Letters" and those who have written parodies on them.

THIS year the Hyde lectures before the "Cercle Français de l'Université Harvard" are to be given by M. Gaston Deschamps, the well-known literary critic of *Le Temps*, Paris. They are to consist of eight addresses in French on "The Modern French Theater." Later M. Deschamps will lecture before a score or more colleges, as well as at Annapolis and West Point.

In THE LITERARY DIGEST of February 16 (page 198), two lines from the "Ars Poetica" of Horace were very faultily translated (*not* by one of THE LITERARY DIGEST staff). Prof. John Greene, of Colgate University, in calling our attention to the mistake kindly furnishes the following translation:

> Strenuous, wrathful, inexorable, brave,
> Let him maintain that laws were not made for him, let him claim
> everything for arms.

The other quotation from the same poem Professor Greene renders: "Nor let a deity appear unless some coil [arise] worthy such intervention."

# SCIENCE AND INVENTION.

## THE PASSING OF THE "HELLO" GIRL.

THE telephone girl at the central exchange may soon be numbered with the things that were. At least, it has certainly been demonstrated that a telephone-exchange may be operated without her aid; and in this country that which has been proved useless does not long survive. In New Bedford, Mass., as we learn from an illustrated article in *The Electrical World and Engineer* (February 9) by Alton D. Adams, an automatic exchange has been in successful operation since November, 1900. Says this writer:

"It is the distinct feature of the system, compared with manual exchanges, that each subscriber is able to call any desired number by a few simple movements at his own telephone, and is at once automatically connected to the required number by a private line.

"In this series of operations no person save the one calling has any part. If the number called is already engaged with some third instrument, the person calling can not break in on the conversation, but is automatically warned that the desired number is in use.

"The automatic exchange does with machinery exactly what is done at a manual exchange by the operators, that is, it connects the calling telephone to the desired number. The operating-room at such an exchange has no operators, save the little machines that instantly respond to every signal sent over the lines from any subscriber. At New Bedford, only a single attendant is employed in the operating-room to look after the machines, and even he is absent a considerable part of the time. . . . A further important and distinctive feature . . . is the absolute secrecy of conversation over its lines. Not only is it impossible for any third subscriber to break in on, or to overhear, the conversation between any two telephones, but no one at the exchange is in a position to listen to the talk of any subscriber, as an operator at a manual exchange may readily do. If any number called is shown to be busy by the automatic action of a buzzer, the call may be repeated as often as desired without disturbing the parties engaged in conversation, and the desired number may be obtained by a call as soon as it is released, without waiting for the attention of an exchange operator.

"If a certain number of subscribers wish so to connect their telephones that each may hear all that is said by any of the others, as is at times the case with boards of corporation directors or college faculties, this result may be attained by either a permanent or temporary arrangement at the exchange, whereby each subscriber may call and automatically obtain connection to a certain number set apart for the purpose.

"Another special feature is that any subscriber may be limited as to the number of telephones that he can call, or from which a call can come to him. This feature is said to be of advantage in the cases of certain important officials, such as train-despatchers. The cost to an exchange of unlimited is only a little more than that of limited service to its subscribers, because no manual element is involved in the automatic connections.

"If it is desired, however, to limit the service to some subscribers, this can be accomplished by means of a record automatically made at the exchange of the number and duration of calls for each telephone. The savings to be made by limited service include a small amount of wear on telephones and on the exchange apparatus, also the energy required for their operation."

In this system, the writer goes on to tell us, the subscriber does not turn a crank in making a call, but first makes a series of connections, corresponding to the number he desires, and indicated by figures on a small dial. The automatic apparatus at the exchange makes a corresponding series of motions until the number wanted is complete and the connections are made; a pressure of the button on the telephone of the subscriber calling then rings the bells of both the number called and of the one calling. One second is sufficient to make the connection representing any one figure in a numerical series, and one second is also ample time in which to press the button and get a ring at both telephones. Five seconds is thus the average time required to make calls on a system of numbers having four figures each. Conversation over the lines of the automatic system is said to be quite as clear and satisfactory as that to be had through manual exchanges. The writer says further:

"The present state of patent claims on the system do not permit drawings of the automatic machines and line connections to be presented at this time. It should be noted that as this system is made up at the exchange of a number of exactly similar automatic units, any desired extension of capacity can be made by additions of these units, without changes in those already installed. . . . . .

"It is the intention of the Automatic Telephone Company, of New Bedford, to extend its lines to a number of towns within a radius of ten miles at an early date, and also to Fall River, fourteen miles distant, by next spring. At Fall River a Massachusetts corporation has been formed to erect and operate the automatic syst m, with a capital of $135,000."

## THE PHYSIOLOGY OF CLOTHING.

THIS subject is taken up editorially by *The Dietetic and Hygienic Gazette* in a brief article in which we learn that in estimating the fitness of clothing for warm or cold weather there are many other factors to be taken into account besides its conductivity for heat. Says the author:

"A popular author speaks of the 'fatal invention of clothes,' implying that the human race would be better off if the habit and fashion of wearing apparel had never overtaken the race. Like other extreme views, it is an over-statement of the case. The original man was, no doubt, hirsute; in other words, he was clothed without the aid of a tailor, shedding and renewing his glove-fitting suit in the spring and fall, with the horse and dog. Animals indulge their distinct summer and winter suits, thus equalizing the conduction or radiation of heat to comport with the surrounding temperature. Animals inhabiting cold climates are protected to a certain extent by a thick layer of fat under the skin. The fat prevents the too rapid waste of heat by conduction and radiation, and this conserves body warmth.

"The aboriginal man inhabiting temperate and cold climates supplemented this internal or subjective power of resistance by artificial coverings of the furs and skins of wild beasts, or of bark mattings, the evolution of which has developed all our thousands of varieties of textile fabrics.

"Many things affect the rate at which the body evolves and surrenders heat. First, its pose or position has much to do with the question. The overheated fowl spreads its wings, plumes its feathers, admits the air, and thus hastens the dispersion of heat. Some animals erect their hair, or throw themselves into the water, after which evaporation rapidly lowers the temperature.

"Drawing the parts of the body together, that is, by approximating the head and limbs, tends to retain body warmth. The rabbit in winter sits closely crouched behind a tuft of grass or a clump of bushes to economize heat. Experiments show that if a rabbit be exposed to cold with his limbs extended, his internal temperature will rapidly fall several degrees. Children insufficiently covered instinctively 'curl up' in bed. It was a mistake when our Spartan mothers told us we would be warmer if we would 'straighten down like little men.'

"The heat of the body is not, however, derived from clothing. It is the oxidation and conversion of food that evolves animal heat. Clothing merely interferes with its loss or dispersion. In cold climates what we term 'warm clothing' is in a sense the equivalent of food."

In estimating the value and influence of clothing, the writer goes on to say, physiologists have attached too much importance to the single item of its *capacity* for *conducting heat.* It has been assumed that in winter those substances or materials which are poorest conductors are the best material for clothing, and that in summer the conditions are reversed when good conduc-

tors are best. But other considerations must be taken into account. Several of these the author groups as follows:

"1. *Capacity for radiation.* Coarse materials radiate heat more rapidly than fine. But it is a popular fallacy that *color* affects the rapidity of radiation.

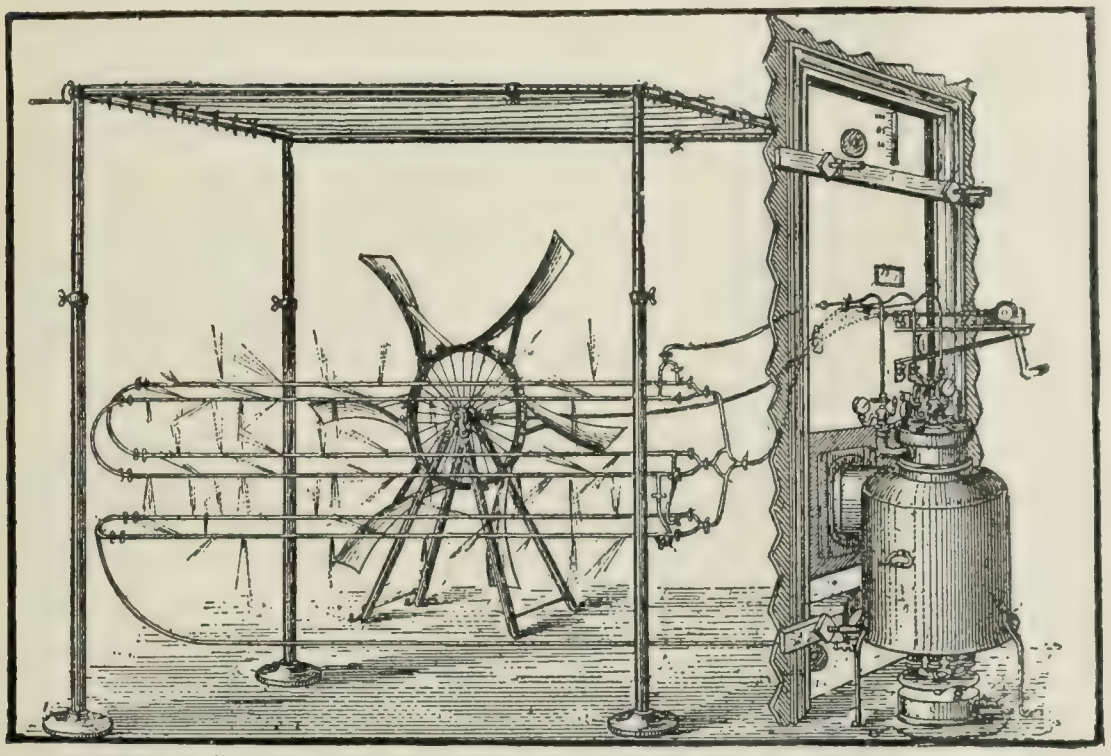
"2. *The relation of the fabric to the sun's rays.* Dark colors absorb more heat from the sun's rays than light colors.

"3. *The hygroscopic properties* of a material bear an important ratio by determining what proportion of moisture from the skin it can take up and carry off by evaporation. The same weight of wool takes up twice as much as linen; but flannel next the skin is not so easily moistened as linen, nor does it favor such rapid evaporation. Thus the non-conducting properties of wool are not the only ones to be considered.

"4. *Permeability to air* is an important factor; in fact, more important than physiologists have been in the habit of conceding. Permeability favors conduction and, *prima facie*, lessens heat-conserving capacity. But contact of air with the integument induces more thoroughly oxidation of the blood and better elimination of toxic refuse; hence, it increases heat-production and indirectly diminishes heat-loss. If the sole object of nutrition were the production of heat and the chief object of clothing to prevent heat-loss, the subject of best materials for clothing would be very much simplified. But this is not the case."

## RECENT INVENTIONS FOR DISINFECTION.

WHAT is the best disinfectant, and what is the best method of applying it? Sanitarians have known for some time that substances and processes long in vogue are of slight if any value, and that methods that are of undoubted efficiency involve the practical destruction of the articles that are to be disinfected. It was to be hoped, writes M. G. Espitallier in *Cosmos* (Paris, January 26), that the recent International Hygienic Congress held in that city would throw much light on this vital question. Altho its record in this respect is somewhat disappointing, one important paper was read before it by M. Eugene Fournier, whose researches on disinfectants and appliances for using them are especially valuable. They are described in M. Espitallier's article as follows. Says the writer:



FOURNIER'S "PORTE-OMNIBUS," WITH ATTACHMENTS FOR DISINFECTING A ROOM.

"We should not wrap ourselves in the false security given by a badly performed disinfection, and we ought therefore to be profoundly grateful to a scientist who, in the midst of numberless difficulties, studies the value of different antiseptics and their modes of employment. . . . . .

"In practise, the operation presents itself in two aspects, according to its application to a very large space with all that it contains, or simply to furniture, clothes, etc., that may be carried to a specially arranged receptacle. . . . When we ask what is the best antiseptic, we may sum up the required qualities by saying that it ought (1) to be as powerful as possible; (2) to have great penetration; and (3) to be perfectly soluble.

"These necessary virtues have been thought to inhere in formaldehyde, which is a good antiseptic and is certainly sufficient for superficial work; but experience has taught us that this agent is incapable of penetrating thick fabrics, especially carpets.

"It is therefore necessary to mix it with a vehicle that will give it this penetrating quality. M. Fournier proposes acetone, which he believes satisfactory in this respect, owing to its great volatility and force of expansion. The mixture, which has been named formacetone, must be regarded as the most powerful known disinfectant, and one of the most active of insecticides. It should be said here that the vapors of formacetone or of acetone are not inflammable, and do not form an explosive mixture with air.

"The property possessed by ammonia, of neutralizing the vapors of formacetone, enables us, after the operation of disinfection has been completed, to absorb these vapors, suppressing all odors and rendering the disinfected place habitable at once."

In using this disinfectant, we are told, we must remember that the amount employed must be proportional to the cubic contents of the space or articles to be disinfected; that all such articles must be moistened before the operation; that the gases must be expelled under a pressure of at least 4 kilograms [about 9 pounds], and that the lower the temperature the longer must the operation last. The last point is very important. At the mean temperature of Paris the disinfection should last not less than twenty-four hours, but at 40° C. [104° F.] the duration need be only six hours, and this is the temperature that is most convenient. At 85° C. [185° F.] one hour would be enough, and this temperature is easy to obtain in an oven when the objects to be disinfected are portable.

To disinfect a room, M. Fournier closes one of its doorways by means of an extensible screen called by him a *porte-omnibus*, having apertures for the passage of the necessary tubing, etc. Just outside this he places his vapor-generator, which is at the same time a heater. Within the room extends the system of tubing for the introduction of the disinfecting vapor, a support for mattresses, clothing, etc., and a huge fan for agitating the air to distribute the vapors and equalize the temperature. The tubing serves also to introduce ammonia gas at the end of the disinfection. Thick mattresses are traversed by sharpened tubes that deliver the vapors in their interior, so that the contact is thorough. M. Fournier has also devised a disinfecting oven for furniture on the same principle, and a simpler apparatus that does not require high temperature, altho the operation takes longer in consequence. The writer concludes as follows:

"We have thought that it would interest the public to call their attention to these very original investigations of M. Fournier in this important branch of hygiene. Experiments are still being carried on by the Faculty of Medicine on the devices that have just been described, and these will enable us shortly to appreciate their value more completely than we can at present."—*Translation made for* THE LITERARY DIGEST.

**Association of Ants with Caterpillars.**—A curious companionship between ants and caterpillars has just been reported to the Swiss Society of Natural Science by Professor Rhomann, of Plantahof-Landquart. He has observed these creatures living together on the leaves of certain plants, the ants running

about over the caterpillars' backs with the utmost familiarity, stroking them with their mandibles without the least appearance of a protest on the caterpillar's part. Says the *Revue Scientifique*, in a note on Professor Thomann's paper: The advantage to the caterpillars appears to consist in the fact that the ants protect them against the attacks of different enemies, especially the ichneumons, as has been noted by other observers in North America. The ants have such respect for the caterpillars that chrysalides may be seen in the passages and galleries of the ant-hills, the ants taking no steps to remove them, tho they are particular to throw out all other obstructions; and the young butterflies issue and grow up without the least molestation. It is evident that in this matter the ants are not actuated by disinterested affection. They are great utilitarians, as every one knows, and their good will is dictated by interest. Their recompense is found in the excretion of a syrupy juice of which they are very fond. On the third ring of the caterpillar is found a small depression, at the bottom of which is a slight valve that gives passage to a drop of a transparent sugary liquid, on which the ants feed. The caterpillars give out this secretion voluntarily. . . . Cases of symbiosis [life companionship] between ants and caterpillars have already been observed in the Indies and in America, but until the present instance it has never been noticed in Europe, and this circumstance gives to the observation of M. Thomann a special interest. According to W. O. Edwards, symbiosis of this kind is almost the general rule in the tropics. . . . When observation has been carried on a little more closely, perhaps other similar examples may be found in Europe."—*Translation made for* THE LITERARY DIGEST.

## DOES ELECTROCUTION KILL?

THIS somewhat sensational question, which was much mooted in the early days of execution by electricity, has been revived of late. The early opposition to the electric chair seemed to proceed mostly from the reluctance of certain electrical firms to allow their machines or their type of current to be used for producing death. A similar attitude might be expected on the part of the manufacturers of some widely advertised medicine if the authorities should administer it in large quantities to poison malefactors. This opposition has slumbered for several years, but now *The Electrical Review* has returned to the charge. It declares that, instead of being painless and instantaneous, death by electricity is really most brutal. In most cases, it asserts, the condemned men are not dead until the current has been finally turned off and they are taken from the chair, and in many instances it charges that death has occurred, not by electric shock, but under the surgeon's knife at the autopsy. It cites the recovery of men who have been shocked by powerful currents and who have been apparently dead, to prove how unreliable the electric current really is. Physical characteristics, too, are different, and what may be instant death to one may be a lingering death to another. In arguing this point the writer cites the cases of linemen who have fallen against live wires. Some die instantly, while others are shocked into insensibility and die from continuous transmission of the current through the body. In commenting on all this the Columbus *Dispatch* (February 7) says:

"Having delivered himself of this declaration, the writer proceeds to state that shooting, hanging, garroting, the guillotine, and the sword are all more certain and humane than the electrical chair. He might have added the Moorish bowstring, Chinese neck-twisting, and other 'humane' forms of getting rid of murderers and others deemed worthy of death.

"It is strange how some people cling to the idea that hanging is a humane and speedy method of inflicting the death penalty. Such believers in the halter should have stood in the Ohio penitentiary annex and at other scaffolds in Ohio and elsewhere and watched a condemned man strangle for ten or fifteen minutes, writhing in horrible contortions, drawing up the legs and struggling to free the hands. If that is a humane punishment, heaven save the mark! And what of the cases, by no means rare, where the rope has broken, allowing the victim to fall to the ground, alive and fully conscious of what was going on? What of the bungling jobs of knot-tying, the minutes that seem ages while the victim is being bound and the rope adjusted? Has the writer ever witnessed any of these sickening, marrow-freezing scenes in the death-chamber?

"He admits that many linemen are killed instantly by the application of a current to some parts of the body, while others are rendered insensible. If a man is instantly rendered insensible when the current is turned on, does he suffer? And is the continuous application of the current inhumane? If, as an electrocution is conducted at the Ohio penitentiary, it only requires seconds to secure the prisoner in the death-chair where by other modes it takes minutes; if the instant the powerful current strikes the victim's brain he becomes insensible,—are these valid reasons for condemning electrocution and returning to the old rope-strangulation mode of torture? So far as the condemned man's consciousness is concerned, he is practically dead when the current makes its first lightning flash through his brain. It does not appear that *The Electrical Review* has made a good case."

So far *The Review* seems to be carrying on the unequal combat alone. Few either of the lay journals or of its professional brethren have thought the subject worthy of note, apparently regarding it as a settled matter.

## THE FOOD VALUE OF ALCOHOL.
